CEYLON

ADMINISTRATION REPORTS,

1901.

PART I.—REVENUE.

CUSTOMS AND SHIPPING.

MEMORANDUM ON THE RETURNS FOR 1901.

Staff.—The only change in the supervising staff during the year was that Mr. F. Bowes, the Landing Surveyor, was promoted in December and succeeded by Mr. F. J. Smith.

Improvements to Customs Premises.—(*a*) Electric cranes were ordered from England, and an agreement made with Messrs. Boustead Brothers for the supply of the necessary current. The cranes have not yet arrived, but the plans for their basements have, however, been received, and the work is now in hand.

(*b*) The two jetties at the Kochchikada grain sheds were each lengthened 30 feet.

(*c*) One-half the approach road to the Kochchikada grain sheds was paved with Jarrah timber as an experiment.

(*d*) A building for the disinfection of plants and fresh fruits was erected at Kochchikada.

(*e*) A station was also erected at the Kochchikada grain shed premises for the due disinfection of passengers, soiled linen, &c., on arrival from plague-infected ports.

(*f*) In the wharfage premises at the Fort—

(1) The quay wall in front of the grain sheds was commenced.

(2) A new iron transhipment shed completed, and of the two jetties to serve the shed, one was completed, while the other approached completion at the close of the year.

(*g*) The new roadway round the back of the wharfage premises was taken in hand and nearly completed at the close of the year. Before it can be utilized, however, the necessary gates and fences must be put up. Further improvements, which directly or indirectly will facilitate Customs work now in hand, are (*a*) additions to the export sheds in the Fort premises, (*b*) the widening of Seashore street, and (*c*) the opening of a new approach road, in the vicinity of St. Anthony's Church, to the Kochchikada grain sheds.

RETURNS FOR THE YEAR.

The returns for the year 1901 show a decrease in the import trade of the Colony. The estimated value of imports, including specie to the value of Rs. 8,576,890, amounted to Rs. 112,626,926·12, and the estimated value of exports, including specie to the value of Rs. 2,658,178, amounted to Rs. 102,840,348, showing a balance in favour of imports of Rs. 9,786,578·12, or, if specie be omitted, a balance in favour of imports of Rs. 3,867,866·12.

Imports show a decrease, specie being omitted, as compared with 1900, of Rs. 10,494,220·29, and an increase as compared with 1899 of Rs. 2,507,815·51.

The value of exports, omitting specie and value of coal, was less than the value in 1899 by Rs. 13,835,509, and in 1900 by Rs. 4,791,370.

The following table shows the value of the trade of the Colony, omitting specie, since 1890 :—

	Rs.		Rs.
1890	106,651,504	1896	162,436,016
1891	117,342,259	1897	168,959,460
1892	123,857,835	1898	181,326,925
1893	139,237,891	1899	213,007,870
1894	147,621,610	1900	220,550,716
1895	161,040,346	1901	204,232,206

The following table shows the annual value of the trade of the Colony for the last five years :—

	Imports. Rs. c.	Exports. Rs. c.	Total Rs. c
1897 ...	85,730,156 92	83,229,303 45	168,959,460 37
1898 ...	87,525,034 97	93,801,890 13	181,326,925 10
1899 ...	101,542,220 61	111,465,649 99	213,007,870 60
1900 ...	114,544,256 41	106,006,460 55	220,550,716 96
1901 ...	104,050,036 12	100,182,170 0	204,232,206 12

The following statement shows the value of imports and specie imported into each Province during 1901 :—

	Rs. c.	Rs.
Value of Imports.		
Western Province ...	94,374,512 6	
Northern Province ...	3,848,570 64	
Southern Province ...	4,616,427 94	
Eastern Province ...	1,210,525 48	
		104,050,036 12
Value of Specie.		
Western Province ...		8,576 890 0
Total Value of Imports for 1901, including Specie ...		112,626,926 12

The revenue derived from Customs Dues shows a decrease in 1901 as compared with 1900 of Rs. 173,625·03, and as compared with 1899 an increase of Rs. 314,955·53.

The following table shows the income from this source for the twelve years beginning with 1890 :—

Gross Customs Revenue for the Twelve Years ended 1901.

	Rs. c.		Rs. c.
1890 ...	3,948,564 11	1896 ...	5,550 971 6
1891 ...	4,302,320 19	1897 ...	6 278,787 49
1892 ...	4,663,562 47	1898 ...	6,714,625 82
1893 ...	4,498,912 10	1899 ...	7,101 851 73
1894 ...	4,931,967 42	1900 ...	7,620,432 29
1895 ...	5,770,241 2	1901 ...	7,446,807 26

The decrease in 1901 is mainly due to the lesser imports of grain, cotton, sugar, and other goods.

Up to 1893 the Customs revenue included recoveries under the head of "Port Dues," which are now shown under a distinct head.

The following table shows the recoveries in each of the Maritime Provinces of the Island :

Revenue of each Province.

	Rs. c.	Rs. c.		Rs. c.	Rs. c.
Western Province.			Brought forward ...	—	7,019,699 9

	110,665 60	Net Decrease ...	173,625 3

The following tables show the collections under the head of "Harbour Dues" at Colombo, and under the head of "Port Dues" in the Provinces :—

Harbour Dues collected during the last Eight Years.

	Rs.		Rs.
1894 ...	706,723	1898 ...	965,347
1895 ...	779,377	1899 ...	1,008,213
1896 ...	838,233	1900 ...	1,146,769
1897 ...	870,685	1901 ...	1,123,428

Port Dues collected during 1900 and 1901 in the several Provinces.

	1900. Rs. c.	1901. Rs. c.
Western Province (Beruwala, Negombo, and Kalpitiya)	693 36	759 14
Northern Province	6,722 64	6,832 48
Southern Province	25,701 58	30,066 74
Eastern Province	3,350 28	3,674 6
Total	36,467 86	41,332 42

Increase.	Rs. c.
Western Province	65 78
Northern Province	109 84
Southern Province	4,365 16
Eastern Province	323 78
Net Increase	4,864 56

The increase is due to a larger number of vessels visiting the Island. In Colombo the decrease in 1901 as compared with 1900 amounts to Rs. 23,340·79, due principally to a decrease in Wharfage Dues. Between 1883 and 1901 the increase amounts to Rs. 744,410·15, or nearly 196½ per cent.

The duty collected on estate products (tea, coffee, cacao, and cinchona) under the "Medical Wants Ordinance" amounted in 1901 to Rs. 134,800·97, as compared with Rs. 137,947·40 in 1900, there being a decrease in the recoveries of Rs. 3,146·43, due to the falling off in the tea exports.

The duty imposed on tea "in order that the proceeds of such duty may be devoted to increasing the consumption of Ceylon tea in foreign lands" amounted to Rs. 287,782·37. It is an export tax self-imposed by tea producers, of which the proceeds are administered by their own representatives, with the consent of the Governor in Council.

IMPORTS.

Arms and Ammunition (including dynamite, detonators, fuse, and blasting powder).—The duty collected shows an increase of Rs. 4,605·79 :—

Articles.	Duty. 1900. Rs. c.	1901. Rs. c.	Increase. Rs. c.	Decrease. Rs. c.
Guns, single-barrelled	7,675 0	5,750 41	—	1,924 59

Cement (exclusive of the quantity imported as Government stores, valued at Rs. 429,634·06).—A decrease in value of Rs. 112,356·40 and in quantity of 1,113 tons.

Coal, Coke, and Patent Fuel.—The quantity imported was 627,728 tons, against 590,099 tons in 1900, an increase in quantity of 37,629 tons. The landings at the two principal ports were as follows :—

	Tons.
Colombo ...	599,588
Galle ...	20,223
Total ...	619,811

Increase 29,720 tons :—

		Tons.	
Colombo ...	1901	599,588	
	1900	582,717	
	Increase		16,871
Galle ...	1901	20,223	
	1900	7,374	
	Increase		12,849
	Total Increase ...		29,720

A noticeable feature is the very considerable increase in the imports from British India, viz., 54,104 tons.

Kerosine Oil.—The following statement gives the results of a comparison of the quantities imported, quantities entered for home consumption, value and duty recovered on kerosine oil in 1901, with the immediately preceding four years :—

	1901.	Compared with 1897. + or —	Compared with 1897. Quantity.	Compared with 1898. + or —	Compared with 1898. Quantity.	Compared with 1899. + or —	Compared with 1899. Quantity.	Compared with 1900. + or —	Compared with 1900. Quantity.

Fish	—	—	46,998 44	1,171 74
Flour, Wheat	—	14,241 53	201,554 22	—
Potatoes	—	3,772 97	244,225 99	—
Curry Stuffs	290,087 48	10,429 43	—	—
Ham and Bacon	—	1,520 26	4,677 57	—
Provisions	—	—	128,247 30	6,205 42
Ghee	—	231 19	30,747 28	—

NOTE.—The apparent falling off in the value of cheese, flour, potatoes, ham and bacon, and ghee is due to a change in the calculation of values. The actual value has been taken this year, while for many years past a fixed—and now excessive—value was given.

Grain.—The following is a statement of rice cleared for home consumption for seven years :—

	Bushels.
1895	8,722,737
1896	7,594,413
1897	8,723,750
1898	9,018,320
1899	9,178,405
1900	9,592,323$\frac{3}{4}$
1901	5,195,154 cwt. 0 qr. 15$\frac{1}{2}$ lb. = 8,951,650$\frac{1}{5}$
Total for Seven Years	69,338,103$\frac{18}{20}$

The duty collected on rice amounted to Rs. 2,597,723·74, and on other grain of all sorts to Rs. 310,388·03, making in all Rs. 2,908,111·77, particulars of which are annexed :—

	Rs. c.
Barley	704 28
Beans	28,319 76
Gram	36,612 70
Oats	5,161 55
Paddy	215,391 14
Peas	21,094 1
Wheat	866 26
Other	2,238 33
	310,388 3
Rice	2,597,723 74
Total	2,908,111·77

Live Stock.—The increase in the value of live stock imported is Rs. 233,617·60 compared with 1900. The number of cattle rose from 26,539 to 29,093, of sheep from 96,330 to 111,733. The number of horses imported fell from 534 to 453. The value set upon live stock is probably fanciful. The 534 horses imported in 1900 were valued at Rs. 199,190, while the 453 brought in 1901 were valued at Rs. 154,850. The value in 1900 was Rs. 373 a head and in 1901 Rs. 342.

Metals and Metalware.—A decrease in value of Rs. 2,040,435·20 is shown by the following statement :—

	1900. Rs. c.	1901. Rs. c.	Increase. Rs. c.	Decrease. Rs. c.
Brass sheets	29,480 57	20,035 49	—	9,445 8

* The fall in value is due principally to a falling off in imports and partly to a difference in the calculation.*

Oils, excluding kerosine oil, show an increase in value of Rs. 197,583·29, due to increased importation in liquid fuel, difference in calculation of values, and an increase of nearly 50 per cent. in the declared value of oil, other, and a decrease in duty of Rs. 1,953·91, as compared with 1900 :—

Oil :	1900. Value. Rs. c.	1900. Duty. Rs. c.	1901. Value. Rs. c.	1901. Duty. Rs. c.
Castor	107,847 9	7,190 83	108,471 34	6,235 86

Whisky	73,634·07$\frac{11}{16}$	691,857 16	385,322 37	79,608·565	520,492 84	409,857 91
Other	51·03	459 84	312 5	40·096	395 88	422 96
	171,045·25$\frac{13}{16}$	1,465,983 93	880,414 4	176,615·867	1,044,634 13	904,892 66

The following table shows the results of a comparison of the importations, quantities entered for home consumption, value and duty recovered on spirits in 1901, with those of the immediately preceding four years :—

	Compared with 1897.		Compared with 1898.		Compared with 1899.		Compared with 1900.	
	Increase or Decrease.	Quantity.	Increase or Decrease.	Quantity.	Increase or Decrease.	Quantity.	Increase or Decrease.	Quantity.
		Gallons.		Gallons.		Gallons.		Gallons.
Quantity imported in 1901 ...	Increase	51,263·338	Increase	57,378·281	Increase	25,799·802	Increase	9,142·743
Quantity entered for home consumption in 1901 ...	Increase	51,246·600	Increase	40,035·070	Increase	24,095·804	Increase	5,570·087
		Amount. Rs. c.		Amount. Rs. c.		Amount. Rs. c.		Amount. Rs. c.
Value of quantity imported in 1901 ...	Decrease	100,150 16	Decrease	42,068 68	Decrease	283,993 60	Decrease	421,349 80
Duty recovered in 1901	Increase	272,879 34	Increase	218,936 63	Increase	104,389 45	Increase	24,478 62

The value on all spirits in 1901 is taken as declared by the importers, while in previous years the lowest rate at which the value was calculated was Rs. 6 per gallon. The apparent fall in value is due therefore to the connection of an anachronism and to no falling off in the trade.

Sugar.—There is a decrease as compared with 1900 in quantity of 12,428 cwt. 0 qr. 15 lb. and in duty of Rs. 34,029·49 :—

	1900.		1901.

Omitting the Harbour and Port Dues and the amounts collected under the Medical Aid Ordinance and on account of the Tea Fund, the collections are distributed as follows :—

	Per cent.
Collected in Western Province	90·26
Do. Southern Province	4·72
Do. Northern Province	4·01
Do. Eastern Province	1·01

The following statement shows the total receipts of the Department:—

	Rs.	c.
Customs	7,446,807	26
Harbour Dues	1,123,428	38
Port Dues	41,332	42
Medical Aid	134,800	97
Tea Fund	287,782	37
Total ...	9,034,151	40

The cost of collection was 1·55 per cent. upon the total collections.

EXPORTS.

The value of exports in 1901 amounted to Rs. 102,840,348, distributed under the following heads :—

	Rs.
Ceylon Produce	85,977,410
Imports re-exported	1,273,700
Specie	2,658,178
Coal for use of Steamers	12,931,060
Total ...	102,840,348

The value of **Ceylon Produce** exported shows a decrease below the figures of 1899 of Rs. 14,118,271 and below 1900 of Rs. 4,891,122. This decrease is mainly attributable to the smaller shipments of tea, the valuation of which has also declined from 36 cents a pound in 1900 to 33 cents in the year under review.

Imports re-exported show an increase of Rs. 99,752 as compared with 1900 and of Rs. 282,762 as compared with 1899.

The value of coal exported for use of steamers fell from Rs. 13,963,980 in 1900 to Rs. 12,931,060 in 1901, the quantities imported having been 590,099 tons in 1900 and 627,728 tons in 1901.

The exports of specie show a decrease from Rs. 2,919,796 in 1900 to Rs. 2,658,178 in 1901.

The value of exports to the United Kingdom has fallen from Rs. 56,295,524 in 1900 to Rs. 50,158,739 in 1901, while there is a rise in the exports to the British Colonies from Rs. 18,086,705 in 1900 to Rs. 18,994,800 in 1901 and to Foreign Countries from Rs. 20,580,046 in 1900 to Rs. 20,755,749 in 1901.

The export of tea to Russia (Asiatic and European) rose in 1901 by 842,386 lb.; but that to the United States shows a decrease of 249,412 lb. The exports to Russia (Asiatic and European) of Ceylon produce were valued in 1901 at Rs. 4,069,415, against Rs. 4,282,500 in 1900. The fall in the value of exports of Ceylon produce to the United States of America in 1901 as compared with 1900 was from Rs. 6,602,935 to Rs. 5,458,167, and is attributable chiefly to cocoanut oil, which shows a reduction from 66,102 cwt., value Rs. 941,960, to 27,122 cwt., value Rs. 434,766.

In the staple articles of export, cardamoms show a decrease of 232 cwt., as compared with 1900; but there is an increase of 553 cwt. as compared with 1899. The quantity of cinnamon has fallen from 41,215 cwt. in 1900 to 39,810 cwt. in 1901.

Coir yarn, fibre, and rope exported from the two principal ports (Colombo and Galle) show an increase of 27,401 cwt. as compared with 1899, and of 1,084 cwt. as compared with 1900.

Copperah exported from Colombo and Galle also shows an increase of 136,038 cwt. as compared with 1899 and of 52,019 cwt. as compared with 1900.

The exports of citronella oil have decreased by 1,920,797 ounces. Of the total value of Ceylon produce exported, the products of the cocoanut palm represent nearly 21 per cent.

Medical Aid Ordinance.—Coffee, cacao, cinchona, and tea are liable to duty under the Medical Aid Ordinance.

Table A shows the quantity and value of these products as compared with exportation of the preceding year :—

Table A.

		Quantity. Cwt.	Value. Rs.			
Coffee ...	1900 ...	10,243 ...	593,634	Decrease	cwt.	1,153
	1901 ...	9,090 ...	537,482	Decrease	Rs.	56,152
Cacao ...	1900 ...	33,696 ...	1,651,146	Increase	cwt.	13,775
	1901 ...	47,471 ...	2,321,331	Increase	Rs.	670,185
		lb.				
Cinchona...	1900 ...	590,692 ...	64,976	Decrease	lb.	90,707
	1901 ...	499,985 ...	49,998	Decrease	Rs.	14,978
Tea ...	1900 ...	149,264,602 ...	53,735,257	Decrease	lb.	4,988,994
	1901 ...	144,275,608 ...	47,610,950	Decrease	Rs.	6,124,307

The duty collected on the foregoing was—

	Medical Aid. Rs. c.	Tea Fund. Rs. c.
At Colombo	134,561 54	287,251 92
At Galle	239 43	530 45
Total ...	134,800 97	287,782 37

The quantity of tea exported to different countries will appear in the Return D appended.

Plumbago.—The royalty recovered on plumbago amounted to Rs. 111,742·23, against Rs. 97,925·38 in 1900, showing an increase in royalty of Rs. 13,816·85 and in quantity of 55,261 cwt.:—

	Quantity. Cwt.	Value. Rs. c.	Royalty. Rs. c.
1900 ...	391,699 ...	9,792,495 0 ...	97,925 38
1901 ...	446,960 ...	9,609,642 0 ...	111,742 23

The shipments from Colombo and Galle in 1901 were :—

	Quantity. Cwt.	Royalty. Rs. c.
Colombo	419,281 ...	104,822 36
Galle	27,679 ...	6,919 87
Total ...	446,960	111,742 23

Table B.

The other staple articles exported from Colombo and Galle, compared with 1900, give the following results :—

		1900.		1901.

Abstract of Exports for 1901, showing Value in Sterling calculated at 1*s.* 4*d.* to the Rupee.

Ceylon Produce.	Value. £ s. d.	Total. £ s. d.
I. (1) ANIMALS, LIVING.		
Cattle	216 17 4	
Elephants	203 6 8	
Unenumerated	1 18 8	
		422 2 8
(2) FOOD AND DRINK.		
Aerated and Mineral Waters	731 0 0	
Bêche-de-mer	1,137 13 4	
Birds' Nests	43 6 8	
Cacao	154,755 8 0	
Cocoanuts—		
Desiccated	154,313 17 4	
Fresh	51,559 8 0	
Coffee—		
Arabian	—	
Native	482 14 8	
Plantation	35,122 12 0	
Liberian	226 16 0	
Confectionery and Preserves	17 16 0	
Curry Stuffs	436 12 0	
Fish, cured and salted	496 8 0	
Fruit—		
Fresh	54 1 4	
Preserved	4 6 8	
Grain—		
Gram	4 0 0	
Rice	12 18 8	
Other	90 12 0	
Honey	12 14 8	
Ice	0 16 0	
Salt	—	
Sharks' Fins	843 0 0	
Spices—		
Cardamoms	46,324 18 8	
Cinnamon—		
Plantation	159,038 4 0	
Wild	81 18 8	
Cloves and Mace	114 0 0	
Ginger	5 14 8	
Nutmegs	295 14 8	
Pepper	2,295 9 4	
Vanilla	55 12 0	
Spirits—		
Arrack	4,805 9 4	
Sugar—		
Palm and Jaggery	543 18 8	
Refined or candied	—	
Tea	3,174,063 6 8	
Unenumerated	725 14 8	
		3,788,696 2 8
Carried over ...	—	3,789,118 5 4

	Value. £ s. d.	Total. £ s. d.

SHIPPING.

The arrivals at the Port of Colombo in the year 1901 numbered 1,804 steamers aggregating 4,111,517 tons, and 543 sailing vessels aggregating 47,608 tons, showing an increase in steamers of 75 aggregating 337,016 tons, and in sailing vessels a decrease of 24 aggregating 10,635 tons, as compared with the preceding year.

The arrivals at the Port of Galle in 1901 numbered 166 steamers aggregating 299,668 tons, and 14 sailing vessels aggregating 982 tons, showing a decrease in steamers of 6 aggregating 25,209 tons, and in sailing vessels a decrease of 2 vessels aggregating 301 tons.

The number of vessels which called to coal at Colombo and Galle during 1901 was :—

	No.	Tons.
Colombo	630	1,390,960
Galle	68	131,133

Compared with the preceding year, this shows an increase in Colombo of 23 vessels, aggregating 81,200 tons, and an increase also in Galle of 10 vessels, aggregating 24,520 tons.

The dues paid by vessels entering the Colombo Harbour for coaling during 1901 amounted to Rs. 66,397·50, an increase over the preceding year of Rs. 1,682·50.

The total collection of Harbour Dues at Colombo during the year 1901 amounted to Rs. 1,123,428·38, a small decrease of Rs. 23,340·95 from the preceding year, the collections of which were abnormally large owing to heavy importation of rice, but a satisfactory increase over the collections of all previous years.

Compared with the collection of the first year (1883), viz., Rs. 379,018·23, the receipts in 1901 show an increase of Rs. 744,410·15, have in fact almost trebled.

The total collections up to last year since the Harbour Revenue was established in 1883 amounted to Rs. 13,987,584·34.

The total number of vessels and tonnage which entered at and cleared from ports in the Island during the year 1901 are as follows :—

Inwards.		*Outwards.*	
No.	Tons.	No.	Tons.
3,367 ...	4,557,607	3,436 ...	4,470,963

Classified as regards the several ports for each Province, the numbers and tonnage are—

	Inwards.		*Outwards.*	
	No.	Tons.	No.	Tons.
Western Province ...	2,389 ...	4,162,772	2,422 ...	4,073,536
Southern Province ...	180 ...	300,650	180 ...	301,647
Northern Province ...	654 ...	55,158	743 ...	70,089
Eastern Province ...	144 ...	39,027	91 ...	25,691

The number of vessels and tonnage for the past three years are :—

	Inwards.		*Outwards.*	
Year.	No.	Tons.	No.	Tons.
1899 ...	3,845 ...	3,721,782	3,840 ...	3,717,423
1900 ...	3,147 ...	4,250,066	3,203 ...	4,237,874
1901 ...	3,367 ...	4,557,607	3,436 ...	4,470,963

The nationality of vessels inwards and outwards during 1901 for the Island is thus made up :—

	Entered Inwards.		*Cleared Outwards.*	
	No.	Tons.	No.	Tons.
British ...	902 ...	2,612,913	929 ...	2,393,662

Dutch ...	1 ...	1,697	1 ...	1,697

Compared with the years 1897, 1898, 1899, and 1900, the result inwards and outwards is as follows :—

Inwards.

1897.—A decrease of 404 vessels, but an increase of 1,190,192 tons.
1898.—A decrease of 184 vessels, but an increase of 951,901 tons.
1899.—A decrease of 478 vessels, but an increase of 835,825 tons.
1900.—An increase of 220 vessels, and an increase of 307,541 tons.

Outwards.

1897.—A decrease of 349 vessels, but an increase of 1,133,631 tons.
1898.—A decrease of 110 vessels, but an increase of 994,028 tons.
1899.—A decrease of 404 vessels, but an increase of 753,540 tons.
1900.—An increase of 233 vessels, and an increase of 233,089 tons.

The total Harbour Dues collected at the Port of Colombo during the year ended December 31, 1901, are shown under the different headings :—

	Rs. c.	
Entering Dues	249,418 50	
Tonnage Dues	366,296 99	
Over-hour Dues	18,108 0	
Wharfage Dues	440,022 99	
		1,073,846 48
Dues collected on Live Stock		49,581 90
	Total ...	1,123,428 38
Total Collection for the year 1900		1,146,769 33
	Decrease ...	23,340 95

The number and tonnage of steamers and sailing vessels entered inwards and cleared outwards during the year 1901, exclusive of those calling to coal and for orders at Colombo and Galle, are shown :—

		Steamers.		Sailing Vessels.		Total.	
		No.	Tons.	No.	Tons.	No.	Tons.
Colombo ...	Inwards ...	1,804	4,111,517	543	47,608	2,347	4,159,125
	Outwards ...	1,808	4,019,266	537	49,767	2,345	4,069,033
	Total ...	3,612	9,130,783	1,080	97,375	4,692	8,228,158
Galle ...	Inwards ...	166	299,668	14	982	180	300,650
	Outwards ...	164	300,397	16	1,250	180	301,647
	Total ...	330	600,065	30	2,232	360	602,297

The number and tonnage of vessels calling to coal during the past three years at Colombo and Galle respectively are as follows :—

Year.	*Colombo.* No.	*Colombo.* Tons.	*Galle.* No.	*Galle.* Tons.
1899 ...	498	1,020,393	24	39,589
1900 ...	607	1,309,760	58	106,613
1901 ...	630	1,390,960	68	131,133

The number and tonnage of vessels calling to coal at Colombo, and the entering dues paid since 1883, the date of the commencement of the levy on account of the Breakwater, were—

Year.	No.	Tons.	Entering Dues. Rs. c.

His Majesty's Customs,
Colombo, February 26, 1902.

W. H. JACKSON,
Principal Collector.

WESTERN PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE HON. THE GOVERNMENT AGENT, WESTERN PROVINCE, FOR 1901.

REVENUE.

THE return of revenue for 1901 unfortunately bears out the prophecy contained in the Administration Report for 1900. The revenue shows a decrease of Rs. 117,600, but is still in excess of that for 1899. The figures are as follows :—

		Rs. c.
Revenue of	1899	2,039,477 70
	1900	2,214 774 92
	1901	2,097,174 85

A return is appended showing the revenue of the Province for the last thirty years (Table A in Appendix IV.). It will be seen that, though the amount recovered in 1901 is lower than the revenue of the previous year, the former still remains the highest revenue collected since 1879, with the single exception of 1900.

A detailed statement of revenue will be found in the Appendix (Table B).

A comparative statement of the expenditure during 1901 and 1900 will also be found in the Appendix (Table C).

The decrease in arrack rents is apparent rather than actual; it is due to the recovery of thirteen instalments in 1900, as was explained in the report for that year.

It will be noticed that the only items of increase which differ by more than Rs. 3,000 from the similar items of last year are—

Customs at Kalutara, which is due to the accidental importation of rice there instead of into Colombo.
Opium Licenses—due to better competition.
Plumbago Licenses—none at all were issued in 1900.
Tolls, which, on the whole, show an increase.
Stamps—due partly to accidental fluctuation, partly to issue of a larger number of distillery licenses.
Unclaimed Deposits—this is due to the number of such deposits, chiefly belonging to the Fiscal's Department, which lapsed in 1901.

The last two items—Crown Lands sold and Premia on Leases—are the only two items in the decrease column which exceed Rs. 3,000. The falling off under the latter head is due to the depression in the plumbago trade; practically the only leases granted are in connection with this industry.

In Land Sales it will be seen that less than one-half of the amount recovered in 1900 was brought to account in 1901. The deficiency in the Colombo District amounted to Rs. 91,085, and in Kalutara to Rs. 30,989. This is explained by the fact that in 1900 the following valuable lots, containing only 12 acres, were sold for Rs. 104,283 at the Colombo Kachcheri :—

No. of Lot.	Extent. A. R. P.	Date of Sale. 1900.	To whom sold.	Purchase Amount. Rs. c.
9,382 ...	8 0 0 ...	April 20 ...	Morgan Crucible Company ...	64,010 0
9,534 } ...	0 0 12·50 ...	July 7 ...	Colombo Hotels Company ...	2,343 75
9,535 }				
9,816 ...	2 0 4 ...	Nov. 13 ...	Benjamin de Silva ...	16,210 0
9,817 ...	1 3 34 ...	Do. ...	H. J. Peris ...	15,720 0
10,229 ...	0 1 8 ...	Dec. 6 ...	Archbishop of Colombo ...	6,000 0
	12 1 18·50		Total ...	104,283 75

It was intended to sell some similar lots in 1901 in the Cinnamon Gardens, but after advertisement the land was withdrawn from sale under instructions from Government.

It will be seen from Statement D that the extent of land disposed of in the Colombo District greatly exceeds the total of any previous return. This remark applies to all the different heads of disposal, but the main increase is under "Certificates against the Crown." This is partially due to the new system of dealing with such disposals. Formerly the land was not entered as disposed of until the fees had absolutely been paid, but now the entry is made when the order has been made authorizing a settlement on these terms. It may be thought singular that persons who have no deed or survey for their lands should decline to pay the trifling sum demanded for a certificate of quiet possession, especially as it is well known that the absence of a documentary title frequently is a great obstacle to the sale of land. The people, however, are not so unreasonable as might be supposed. In the first place, it must be borne in mind that the deed issued is of

no value against any one except the Crown. It does not vest the land in any one, but simply declares that the Crown has no claim. The person who pays for the deed does not therefore obtain a deed in his favour as against other possible claimants, and in many cases people are unwilling to pay for such a limited title. Besides this, though the land may be owned by twenty people, only one deed issues. One man is unwilling to pay the whole cost of a document, which is as valuable to each of the other shareholders as to him, while the nineteen others are unwilling to contribute to the cost as they do not receive the deed. In point of fact, under the new system of village settlement, the final plan will of itself be a certificate of quiet possession to all private landowners, because it contains a certificate that the Crown has abandoned all claim to the lands tinted in a particular colour.

Notwithstanding the falling off in revenue, the progress made has been satisfactory. In the Colombo District the extent of land sold in 1901 was nearly double that sold in 1900, and though Kalutara shows a falling off, the figures for the Province show an increase. Almost the whole of this land was purchased by natives in small lots, only thirteen lots containing 9A. 1R. 32P. passed into the hands of Europeans.

The 1,492 lots sold contained only 3,423 acres, giving an average of 2·29 acres per lot. This is in every way desirable: it opens out the country, promotes agriculture, and increases the number of peasant proprietors.

The Return G is also satisfactory. It shows that settlement is slowly but surely gaining upon surveys, and seems to hold out a reasonable prospect that at no remote time all surveyed land may be settled. This is an object which should never be lost sight of.

During the three years to which the return refers the number of plans in which all lots have been disposed of has increased from 673 to 1,233. The number of plans in which no lots have been disposed of has diminished from 822 to 618, the partially disposed of plans remain about the same.

These returns do not include the cadastral plans, but as will appear by Return H progress has been made with them also. This return only shows the extent of land declared to be Crown, but in point of fact the area actually settled included four villages, and contained 881 acres. In addition to this, seven villages containing 1,678 acres were also finally settled, but as they did not contain Crown land which had to be reserved, no Proclamation was issued, and the lands are not included in G.

Five other villages (Table I) were also partially disposed of, but cannot be dealt with under the Waste Lands Ordinance until the settlement is complete.

The system of bi-weekly sales begun in 1899 has been steadily continued, having been proved to be in every way a success. The amount of work done in connection with land business may be gathered from the fact that during the last four years 10,655 lots have been disposed of, whereas the total for the previous eight years only amounted to 3,490. Much of the success of the system is due to the zeal and industry of Mr. Drieberg, the Office Assistant, upon whom fell the main portion of the work in connection with land sales. I think it right also to record my appreciation of the excellent service performed by Mr. Jansz, the head of the Land Department, without whose constant care and supervision these satisfactory results could not have been attained.

LAND ACQUISITION.

There were twenty-four mandates received during the year for the acquisition of lands for the following public purposes, viz.:—

At Colombo.

(1) Metal quarry at Polpitimukalana.
(2) Site for a fire commander's post.
(3) For Dandugama bridge.
(4) Railway siding at Ragama.
(5) Metal quarries at Ratmalana and Idama.
(6) For improvement of the Kotte-Bope road.
(7) Metal quarry at Nivandama.
(8) Camp at Ragama for Prisoners of War.
(9) For Kelani Valley Railway.
(10) Do.
(11) Station Master's house at Ragama.
(12) Kelani Valley Railway.
(13) Do.
(14) Do.
(15) Do.
(16) Military camp at Ragama.
(17) Burial ground at Galkissa.
(18) Metal quarries at Hewagama.
(19) Kelani Valley Railway.
(20) Do.
(21) Do.
(22) Extension of Mahara quarry.

At Kalutara.

(23) Metal quarry at Panadure.
(24) For widening the Horana-Alutgama road.

The number of lots for acquisition in the Colombo District was 121, equal to an area of nearly 37½ acres. These lots may be classified as follows:—

	Lots.
Compensation accepted	63
Referred to court owing to rejection of offer	—
Referred to court owing to dispute as to title	1
Crown lands	1
Leased in lieu of acquisition	9
Abandoned	14
Pending	33

Of these, the total area taken over during the year for public purposes was as follows :—

	A.	R.	P.
Crown lands	0	0	18
Private lands	16	3	13

and a sum of Rs. 30,957 has been paid as compensation to the owners of private lands. Of the remaining land, it was found advantageous to take on lease 12A. 3R. 17P., and to abandon the acquisition of twelve lots of the extent of 2A. 3R. 4P. The acquisition of the remaining 4A. 3R. 37P. is now in progress?

The system of appraisement referred to in my last report has been continued, with the result that the sums tendered have in all cases been accepted by the claimants, and there has been no reference to court.

It will be noticed that very little of the land taken over was required for the Kelani Valley Railway. The work of acquisition was almost completed in 1900, and nothing now remains to be done.

FOOD SUPPLY.

The food supply of the people was sufficient for their wants. The rice supply is both home-grown and imported; this is supplemented by fish, vegetables, and fruit.

Cases in which death is due to poverty are comparatively rare among the Sinhalese, who are always ready to admit the claims of charity, but it is to be feared that among estate coolies a man who is too old or sickly for work, and who is unable to return to his village in India, often fares badly. It is not uncommon to see persons of this description lying by the roadside, where they remain until the headman or some charitable person takes them to hospital, where they become a constant source of trouble and expense to Government. It is difficult to see how this evil is to be met; it must, it is to be feared, be accepted as one of the drawbacks inseparable from our present system of labour supply.

The price of paddy during the year varied from Rs. 3 to Rs. 5·50 a bushel.

IRRIGATION.

There is nothing to call for special remark under this head. As has been pointed out in last year's Administration Report, the main want of the villager is roads practicable for a loaded cart. This would enable the cultivator to get manure to his fields and to remove his crops to the market.

A statement showing the nature of the principal irrigation works and the work done on them is annexed (Table J).

A scheme has been prepared by the Director of Irrigation for raising the bank of the Kelani, on the side next Colombo, to a considerable height above flood level, and thus protecting the adjoining lands from inundation. The cost of the scheme would be great, and it is not one that should be entered on without very careful consideration. There are a large number of channels on the bank of the river through which the water flows into the adjoining country as the Kelani rises; when it begins to fall, these channels serve as drainage pipes, and convey the flood water back again into the Kelani. It is asserted by some persons that the lands in question are submerged not merely by water from the Kelani, but by that from the Kalu-ganga also. If this is a fact, the closing of the channels into the Kelani might have the effect of retaining the surplus water from the Kalu-ganga without allowing it as now, I find, an exit into the Kelani. The extent of the injury done by these floods is greatly exaggerated. The normal height to which the river rises is thoroughly well known, and is to a great extent regulated by the bar at the mouth of the river. When the river attains a certain height, this bar is cut by the Public Works Department, the river itself, in a very short time, enlarges the channel artificially opened, and relieves the pressure on the river almost immediately. Even if the channel is not cut, the river will itself force an opening when the flood rises sufficiently high. Cases have undoubtedly occurred in which even the enlarged mouth did not discharge enough water and relieve the floods, which have, therefore, risen above the normal height, but these cases are few, and the damage done has not been serious; on the other hand, there can be little doubt that the subsiding flood leaves the land more fertile and better adapted for cultivation than if it had been entirely dependent on rain water.

LEGISLATION.

I am still of the opinion expressed in the Administration Report for last year. What is most required is the revision and consolidation of our laws, together with the removal of whatever experience has shown to be impracticable or inoperative. In connection with the new Vehicles Ordinance, an improved method of numbering and licensing carts has been introduced. Under the old law a cart received a new number each year. This system had several defects. There was no means of checking each cart; the vehicle which paid last year might escape this, as no reference was made to last year's register. The cart got so covered with numbers that it was impossible to discover which belonged to the current year. A man who stole a licensed cart had only to knock off the tin plate and either leave the cart as an unlicensed one or put on a new tin plate. By means of a similar stratagem frauds were committed at the Custom-house and on merchants. A tin plate bearing, say, number 300 was stolen or removed from an old cart and lightly tacked over the proper plate, say, number 1,500. The cart took the load and entered the Custom-house as 300, and this was duly recorded on the books. When the cart left the Custom-house the outer tin plate bearing 300 was knocked off and the number 1,500 was the only one available for identification. Inquiry with reference to cart 300 would only elicit the fact that this was an old broken down cart from which the plate had been stolen.

Each cart will, for the future, always bear the same number, which will be deeply burned with large figures on the side of the vehicle. The system of numbering adopted will show where the cart came from. All villages in the Province are now numbered, and the number assigned to the cart begins with that of the village. Thus, cart No. 1 in village 29 will be number 2901. The last two figures always indicate the number of the cart, and others the village number. If the carts in a village exceed 100, a 0 would be put before the 29, and cart No. 101 would bear the figures 02901. A great deal of time is saved by this arrangement, as a single register lasts for five years or more, a column for date of payment being inserted for each year. The blanks at once disclose the carts which have not taken out a license, and explanation can be called for.

WORKS MOST REQUIRED FOR THE DISTRICT.

As the cost of a house for the Assistant Agent of Kalutara has been omitted from this year's Estimates, this work must again take its place at the head of the list of works required in the Province. To this may be added—

A water supply for Negombo.
Improved communication with Negombo either by tram or rail.
The extension of the telegraph to Minuwangoda, Hanwella, and Ja-ela.

VILLAGE LAND SETTLEMENTS.

The work which would probably be most beneficial to the people generally would be the adoption of means for rapidly effecting land settlements. The villagers in this Province are not averse to such settlements. They are quite willing to pay for lots for which they do not hold a valid title. There is also a keen desire to purchase land in small lots, and it is very desirable that their demands should as far as possible be satisfied. Much good might also be done by putting in small culverts on roads made by the villagers themselves without assistance either from the Road Committee or Gansabhawa. There are many such roads quite practicable for a cart, which, especially in wet weather, become almost useless because some stream or ela is not bridged.

It is to be feared that it will before long be necessary to take further action with reference to cattle stealing, which is in places very prevalent and the cause of serious loss to the poor. A general system of branding and a strict system of supervision over removals would be the best remedies, but the former involves a good deal of labour and some expense, while there is a danger that the latter may be used for purposes of levying blackmail.

HOSPITALS AND DISPENSARIES.

A statement is annexed showing the number of hospitals and dispensaries in the Province and the places where they are situated (Table K).

The arrangements made seem sufficient for the reasonable requirements of the people. In some cases, indeed, it appears that the provision made is in excess of that required. At several places a well-equipped private dispensary is to be found at a short distance from the Government dispensary. Several reasons can be adduced which would seem to indicate that such a state of things is undesirable. In the first place, there seems to be at least a possibility that the supply of drugs for the former institution may be obtained from the latter. It is almost impossible for the Medical Department to keep a check on the issue of free medicine; both dispensaries may realize a substantial profit by either forming a partnership, or by the private dispenser purchasing his supplies at half price from the Government store. If, however, there is a *bonâ fide* competition, it seems both unfair and impolitic that private enterprise should be handicapped by the Government offer of treatment provided gratis or on such payment as the patient chooses to make. Many persons, who might qualify themselves, become efficient dispensers and apothecaries, and do much good work in combating disease, are prevented from embarking in this profession by the certainty of the unequal struggle which they will be called on to undertake. It appears singular that under existing circumstances there are any private dispensaries at all; but the fact is that in this, as in most other things, the villager shows a good deal of natural shrewdness. He values what he receives by what he pays for it, and in many cases prefers to pay a private dispenser, who has to make his living by the success of his efforts, rather than a Government officer, whose personal interests are in no way involved in the results of his treatment of the case. So strong is the view taken in this matter by the people that in some cases the private dispensaries are doing a large business, while the Government institution does little or nothing. In spite of this the latter is still maintained, probably as a matter of principle, and when a new dispensary is applied for, fresh funds have to be found instead of transferring one of the officers whose services are not called into requisition, even when they can be obtained gratuitously.

SANITATION AND HEALTH OF THE PEOPLE.

The towns and villages seem to be in a fairly sanitary condition, and if is not easy to see how they can be materially improved in this respect at anything but a prohibitive cost. It is singular that while such a stress has been laid upon the necessity for sanitary improvement, no specific attempt seems to have been made to make a model village, which would at once reveal both the desirability and the practicability of proposed reforms. It would be very easy to select such a village in the Western Province, and when completed, the system, adopted with such modifications as peculiar circumstances might require, could be applied to greatly extended areas. The experiment could not cost very much, because, if it did, the impracticability from financial reasons of this system of reform would be at once apparent, while the advantages attained would be so manifest as at once to confute the views of those who hold that the ordinary Sinhalese village compares very favourably in point of sanitation with most English and nearly all Irish villages.

The experiences of the last twelve or fourteen months seem to show that the machinery available for dealing with outbreaks of infectious disease is on the whole satisfactory. Cholera broke out at the following places :—

District Mudaliyar's Division.	Village.	Number.		Date of	
		Cases.	Deaths.	First Case.	Last Case.

It will be seen that in each case the disease was rapidly stamped out. There, however, seems to be some reason to doubt whether these were true types of the cholera which is sometimes imported from India. Though the rate of mortality was high and death rapid, the infection did not seem to spread to anything like the extent to which it does in cases of true Indian cholera. In towns much mischief is often done by the concealment of cases, but in the rural districts the people are well aware of their danger, and hasten to communicate with the authorities.

Within the Local Boards of Kalutara and Negombo plague hospitals have been put up and maintained in a state of efficiency. At the following places iron hospitals are ready to be moved at once to any place where they are required:—Horana, Tebuwana, Matugama, Hanwella, Ja-ela, Henaratgoda, Lunawa, Minuwangoda, Negombo, Panadure, Kanatta, Avisawella.

The hospitals can be erected in twenty-four hours, and would supply all accommodation that would in all probability be necessary for a week or ten days. Experience shows that plague does not spread with great rapidity like cholera, when there may be two cases to-day and twenty to-morrow; it establishes itself slowly, but takes a very firm grip. There is no reasonable probability that for the first ten days more than seven or eight cases would have to be dealt with; for these the iron hospital would provide accommodation, while the ten days' interval would afford time for more extended arrangements.

CATTLE STEALING.

There is reason to suppose that in parts of the Province cattle stealing is very prevalent. Steps were taken in the course of the year to introduce the certificate system, and persons who had purchased cattle without certificates were to bring such animals before the Mudaliyars, who were empowered to inquire into the cases, and when satisfied to grant vouchers. In consequence of this the following number of certificates were issued:—

By the Mudaliyar of	Colombo	750
Do.	Salpiti Korale	1,064
Do.	Hewagam Korale	938
Do.	Siyane Korale West	1,100
Do.	Siyane Korale East	590
Do.	Alutkuru Korale South	393
Do.	Alutkuru Korale North	1,955
Do.	Hapitigam Korale	740
Do.	Kalutara	924
Do.	Rayigam Korale	776
Do.	Pasdun Korale West	219
Do.	Pasdun Korale East	134

This, however, can do little good unless the further sale of such cattle is checked by their seizure and confiscation, the owners being at the same time prosecuted and punished. If this is done thieves will be unable to find purchasers for the stolen cattle, and the trade will cease to be profitable. It is not an easy thing to get a fraudulent voucher from a headman, but recent inquiries have shown that many stolen animals were sold at a low price by thieves on the understanding that no certificate will be given. People who wanted cattle for breeding, for agricultural purposes, or for manure found that they could do very well without a certificate, and readily bought stolen cattle at a low price. When inquiries were recently being made into titles, it was not an unusual thing for a man to assert that he had bought the animal in question from a man going along the road; in future such transactions will render the purchaser liable to a fine of Rs. 20, in addition to the confiscation of the animal. These rules will not, however, prevent thieves from removing stolen cattle to other districts, where this system is not in force, and selling them there. Another question that should be looked into is whether the owners of cattle have land on which to feed their animals, especially when the fields are under cultivation. It seems probable that in many cases the cattle owner does not possess a rood of land, and relies entirely on trespass for the maintenance of his stock. As a rule, cattle are allowed to graze anywhere with impunity as long as no harm is done to cultivation. The system is, however, in every way a bad one, and should be checked as much as possible.

CATTLE DISEASE.

The return of cases of murrain during the year is annexed (Table L). There is always considerable difficulty in securing even approximate accuracy in such returns, but the most noticeable feature is the large number of recoveries. After the animal has been attacked little can be done even by veterinary surgeons, except to see that its strength is kept up and that it is properly housed. The recoveries cannot therefore be attributable to treatment, but rather to the fact that the disease was of a mild type. Nearly all the outbreaks were more or less traceable to Colombo, where animals with the germs of disease in them are sometimes landed and removed to different places before the disease appears. These cattle infect others, which during the period of incubation may travel to almost any part of the Province. A scheme has now been fully elaborated by which a quarantine will be imposed on all cattle imported from India. The quarantine station, with a large connected cattle market, will be established near the slaughter yard, so that animals purchased by the butchers can be removed there, but nowhere else, during the quarantine period. The removal of all newly imported cattle from the crowded "galas" and enclosures in the neighbourhood of Wolfendahl cannot fail to be a very great improvement in every way.

THE CAMP OF OBSERVATION, RAGAMA.

The camp at Ragama continued in a state of thorough efficiency throughout the year. The returns are annexed:—

	1899.	1900.	1901.
Numbers of coolies passing through the camp for the year ending 31st December ...	20,905	134,134	45,823
Number of outbreaks of cholera ...	—	11	3
Number of deaths	—	16	5*
Average monthly arrivals	1,742	11,177	3,818

*Of these, one outbreak occurred, not at the camp, but at Polgahawela; the gang were sent back to the camp, where two died.

The largest number of coolies in camp was 662 on 26th June, 1901. The largest number in quarantine was 415 on 9th January.

When coolies arrive from districts in which cholera is reported to be prevalent, it is the practice to place them in quarantine for two or three days, according to circumstances. The advantages of this system became very apparent, as the only two outbreaks which took place at the camp were among coolies thus quarantined. Had the gangs not been detained at Ragama, the cases must have occurred either on the estates or on the road there. In either case the disease would very probably have spread before the measures necessary to check it could have been taken.

In March two cases occurred at Polgahawela among coolies who had not arrived from infected districts. In accordance with instructions issued as to the manner of dealing with such cases, the whole of the gang who occupied the compartment, with the men who were attacked, were sent back to Ragama; there the two persons attacked died, but no other case occurred. Under the tin ticket system the coolies who arrive, say, on Monday will not be despatched till Wednesday morning. This detention is very useful from a sanitary point of view. The cooly would probably take a day to travel from his village to Tattaparai, that is, if he left his village on Monday morning he would be despatched from Tattaparai on Tuesday afternoon, he would arrive at Ragama on Wednesday midday, and would not leave till Friday morning, reaching the estate that evening or the next morning. It thus appears that five days—the full quarantine period—would under ordinary circumstances elapse between the cooly's departure from the infected area and his arrival at the estate. This should afford complete protection from the conveyance of the disease in the coolies' bodies. The germs might of course be carried in the clothing or other property of an individual cooly, in which case the disease might show itself long after the expiration of the period of incubation, but the coolies carry very little, either clothing or property, and this is disinfected at the camp.

A small portable crematorium was put up at the camp, and the corpses of two coolies who died were cremated. The operation was completely successful, the bodies being completely reduced to ashes in about four hours at a cost of about Rs. 15. Both time and expenditure would be considerably diminished if iron plates were fastened on the sides of the crematorium. These would become red hot, add to the heat, and considerably accelerate the process of cremation.

Considerable progress was made with the construction of a new camp (No 6), which will be on the same plan as No. 5. When this has been completed, No. 1 must be rebuilt. The accommodation supplied will then be ample without returning to the old camps 2, 3, 4, which are now occupied by the Boer prisoners.

All the necessary arrangements were made for the introduction of the tin ticket system, which was started on 1st January. The scheme seems to have the cordial approval of the great majority of the planting community, who seem determined to give it a fair trial. No fewer than 67,332 tickets have been issued; 833 estates have been registered. About fifty coolies have passed through on these tickets, all expenses being borne by Government. No difficulty of any kind has arisen, the men being sent on as early and regularly as letters or postal packets. In some cases coolies who had paid their own steamer fares arrived at Ragama without money for their rail fare; in such cases a little delay was necessary in order to obtain instructions from the estate as to whether the coolies were to be sent on or not. The rule laid down is that coolies must declare at Tattaparai whether they are travelling at Government expense or not, but, until the system comes to be thoroughly understood, coolies who have no money on their arrival at Ragama will be sent on to the estate on receipt of instructions to this effect from the Superintendent.

NEW AREAS OF CULTIVATION.

No large areas of land have been opened up for cultivation during the year. As will be seen in the remarks with reference to the sale of lands, only very small lots were disposed of, mainly for the purpose of cocoanut cultivation. The sale of tea land has been stopped, but under any circumstances there was no demand for it. Until better prices can be obtained, it is not probable that any one will be tempted to open new tea estates in this Province.

Returns showing the extent of land dealt with under the Waste Lands Ordinance are annexed (Table 1). The provisions of this law are chiefly used for rendering permanent and legally binding the conditions of the settlement arrived at. When the inquiry has concluded and the claims been disposed of, all land decided to be the property of the Crown is proclaimed under the Ordinance, thus establishing an unimpeachable title in favour of Government. This land can subsequently be either sold or reserved; under no circumstances can a private claim be maintained. Without a proclamation a settlement, even if fully acquiesced in at the time, can subsequently be repudiated by the people. Nor is the process of settlement advantageous to the interests of the Crown alone; the benefits conferred upon the people are at least as great as those obtained by Government. Without payment of any kind the occupants of lands admitted as private are guaranteed against any future claim on the part of Government. Practically, a certificate of quiet possession is issued without payment for all land which is not the property of the Crown. This greatly enhances the value of holdings hitherto occupied on titles, which, to say the least of it, were defective. There seems to be no reason why these settlements should not be pushed on as fast as the block surveys, and the disposal of all land questions in the Province be brought within a measurable distance.

Chena cultivation has not for many years been a source of trouble in this Province. Encroachments are not unfrequent, but the wholesale devastation of a large extent of country in order to plant fine grain is unknown. It is by no means certain that one effect of the recent settlements has not been to increase the cases of encroachment. In the month of February, 1902, it was found necessary to institute 30 cases in order to maintain Crown rights. The people having seen that when a village is settled occupants of land under cultivation are treated with liberality, and almost always are allowed to remain in possession on making a moderate payment, are anxious to secure those terms when the time comes for the settlement of their villages. They therefore hasten to add an acre or two to the extent of their residing gardens, with the intention of claiming the whole land as their ancestral property. As a rule, such cases are met by calling on the claimant to deposit survey fees, but he sometimes refuses to do this, perhaps believing that such payment would weaken his title if he went to court. It is only on such refusal that legal steps are taken.

There is no reason to suppose that any very large extent of land has been sold by the villagers, or that such sales have included houses or fields. Sales of land to which the vendors had insufficient title are rare, because it is well known that when the time for settlement comes such titles will not be recognized.

A considerable portion of my time was taken up in the preparation of a statistical map of the Province. The surveyor supplied a large map, in which all villages were marked by their numbers. A photographic reduction of this map is annexed. Beside the map are hung sheets on which are printed the names and numbers of the villages, with parallel columns containing statistical information of various kinds. A copy of the entries referring to the agricultural statistics of the first twelve villages is annexed :—

The villages are numbered according to their geographical position, so that by addition information can be obtained with equal facility about a village, a peruwa (the district presided over by a Vidane Arachchi), a pattu, or a Mudaliyar's division. At present sheets have been prepared containing General Statistics, Agricultural Statistics, Criminal Statistics, Census Statistics. A copy of heading of each is annexed :—

General Statistics.

Name of Village.	Division No.	Reference No.	Schools.	Churches.	Temples.	Taverns.	Godowns.	Distilleries.	Liquor Shops.	Opium Licenses.	Police Stations.	District Courts.	Police Courts.	Courts of Requests.	Hospitals.	Dispensaries.	Rasthouses.	Toll Stations.	Post and Telegraph Offices.	Railway Stations.	Kachcheries.	Tea Estates.	Cocoanut and Cinnamon Estates.	Crown Forests Reserved.	Population by last Census.

Agricultural Statistics.

Buffaloes.	Black Cattle.	Indian Sheep and Goats.	Horses.	Swine.	Vegetables.	Fruits of all kinds.	Sugar-cane.	Fine Grain.		Tobacco.		Cinnamon.		Paddy.		Tea.		Coconuts.	
					Extent cultivated.	Extent cultivated.	Extent cultivated.	Extent cultivated.	Approximate Yield.	Extent cultivated.	Approximate Yield.	Extent cultivated.	Approximate Crop.	Extent cultivated.	Approximate Crop.	Extent cultivated.	Approximate Yield.	Extent cultivated.	Approximate Crop.

Criminal Statistics.

Offences reported.	Offences committed						Grand Total.	Total Population.	Population paying Road Tax.	Offences committed per 100 Tax-payers.
	Against Person.			Against Property.						
	Punished.	Unpunished.	Total.	Punished.	Unpunished.	Total.				

Census Statistics.

Population.			Age.				Nationality.						Religion.					Persons able to Read and Write.		Persons married.		No. of Houses.
			Persons under 20.		Persons over 20.																	
Males.	Females.	Total.	Males.	Females.	Males.	Females.	Europeans.	Burghers.	Sinhalese.	Tamils.	Moors.	Others.	Christians.	Buddhists.	Hindus.	Mohammedans.	Others.	Males.	Females.	Males.	Females.	

It will seen that when the Census forms have been filled in no fewer than eighty-four statistical facts can be given at once, not only for any village, but for any group of villages or area of any size.

The advantages of having such a small statistical unit as a village are very great. In the first place, the returns are much more likely to be correct, or approximately correct. The headman has little difficulty in giving particulars for the limited area within his jurisdiction; whereas when the returns are entrusted to Mudaliyars, they frequently rely on insufficient information, errors creep in, and, having once been admitted, are never corrected.

In the second place, statistics drawn up on this principle can always be checked by a comparison of averages. Thus, if a death-rate in five villages comes to 1 per cent., and the returns show 3 per cent. in the adjoining village, this will at once lead to inquiry, and the entry can either be corrected or explained.

Thirdly, it is only by the use of small units, such as villages, that statistics can really be made of much practical use. The mere statement that the death-rate in one Mudaliyar's division is higher than that in others is almost useless. It is necessary, in order to apply a remedy, to identify the exact locality in which the increase has taken place. This can at once be done by reference to the village lists.

The map is also very useful for many departments besides those of the Government Agent. Take, for instance, the sheets that are issued with the maps to the Forest Department. Annexed is a statement showing six villages worked out :—

Forest.

	Division No.	Reserved Forest. Area.	Unreserved Forest. Area.	Village Forest. Area.	Forest for Timber Supply. Area.	Forest for Fuel Supply. Area.	Outlet by A—Roads, B—Water.	Plumbago. Mines in 1901.	Plumbago. Mines in 1902.	Tea Factories or Mills.	Reference. A=Abundant. B=Scarce. C=Moderate. Hora.	Del.	Doon.	Milla.	Tea Box Wood.	Altitude above Sea.
Bulatsinhala... ...	821	—	2 326	—	1.326	1,000	B	—	—	—	C	B	C	A	A	300
Delmella		—	2,018	—	1 476	542	B	—	—	—	B	B	C	A	A	350
Yatagampitiya ...	823	—	2,049	—	1,197	852	B	6	—	—	B	B	B	C	B	300
Nikgaha		—	2,465	—	2,130	335	B	—	—	—	B	B	B	C	A	350
Midalana	837	—	1,645	—	443	1,202	A B	14	10	—	C	B	B	A	A	300
Penegala		—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Hedigalla	838	—	3,210	—	1,741	1,469	A	—	—	—	B	—	B	A	A	500
Hewessa	834	—	5,370	—	5,202	168	B	16	5	—	B	B	C	A	A	300

It will be seen that the area available for timber, or fuel supply, or village use is at once apparent, as well as the extent of the reserved forests. If there is a special demand for any particular kind of wood, such as hora, del, doon, &c., by running the eye along the column assigned to that wood the presence of the letter A will disclose the village where the supply is abundant. Another column will show whether the mode of removal is by road or water, and from this an approximate estimate of the cost can be made.

To take another instance. A sample of the sheet provided for the Police Department is annexed. It has been filled in with the actual figures for 1901:—

Crime—Police Department.

It will be seen that the different descriptions of crime in each village, whether reported or committed, are classified and shown as punished or unpunished, while the general state of each village can be approximately ascertained from the last column, which contains the means of checking the correctness of the return and comparing the amount of crime in each village.

In the Department of the Registrar of *Births* and *Deaths* the map and lists are found to be of the greatest use. The lowest unit for which the Registrar-General supplies figures is for a Korale Mudaliyar's division. Annexed is a quarterly return of births and deaths in the first twelve villages of the Province.

Births and Deaths in the Third Quarter, 1901.

Deaths. *Births.*

		Infants under 1 Year.	Cholera.		Small-pox.		Dysentery, Diarrhœa & Bowel Complaints.		Fevers, including Typhoid and Enteric.		Diseases of the Lungs.		Dropsy.		Parangi.		Accident or Violence.		Child-birth and connected Diseases.	Old Age.		Other Diseases.		Births.

The form is filled in monthly from the registrars' returns, and is summarized quarterly and annually. Copies of the quarterly returns are sent to the Principal Civil Medical Officer. From these statements the number of births in any village or group of villages in any month can be given without difficulty; also, not only the number of deaths, but their causes. This return illustrates well the advantages of working in a very small statistical unit. There might be a very heavy mortality in a village, but this need not, and probably would not, be disclosed in the return as supplied by the Registrar-General. Twenty deaths in a quarter might occur in a village containing 200 inhabitants; this very serious state of affairs would not be revealed by any statement dealing with the whole of a Mudaliyar's division. Such a slight increase would not be appreciable in a return showing a total of 800 or 900 deaths. It is doubtful whether in any country in the world the birth-and death-rates per 1,000 of the inhabitants could be given regularly and accurately for such a small area as a Ceylon village.

A map has been prepared for the Public Works Department, but the lists have not yet been filled in. The following are the headings in which, for purposes of explanation, imaginary figures have been inserted :—

Public Works.

		Road Letter.		Length of Road.		Metalled.	Gravelled.	Toll Bars.	Ferries.	Cooly Lines.	Bridges over 80 Feet.	Bridges under 80 Feet.	Culverts.	Supply of Materials. A=Abundant. B=Fairly good. C=Scarce. D=On private land. E=On Crown land.			Opened Quarries.					
				Miles.										Water.	Stone.	Gravel.	Granite.	Distance from Road.	Limestone.	Distance from Road.	Gravel.	Distance from Road.
HAPITIGAM KORALE.																						
UDUGAHA PATTUWA.																						
Udugaha North Peruwa.																						
1	Nallá																					
	Talahena																					
	Giriulla	A	B	1½	9½	A	B	1	1	1	2	3	6	A	AE	AD	CD	½	AE	½	AE	½
	Loluwagoda																					

It will probably be admitted that when the sheets have been completed the Director of Public Works will have at his disposal a mass of useful information to which he can very rapidly refer.

Another form has been drawn for the Surveyor-General :—

		Estimated Extent of Village	Extent.								
			Surveyed.			Disposed of.			Not disposed of.		
		Acres.	Plans.	Lots.	A. R. P.	Plans.	Lots.	A. R. P.	Plans.	Lots.	A. R. P.
HAPITIGAM KORALE.											
UDUGAHA PATTUWA.											
Udugaha North Peruwa.											
1	Nalla										
	Talahena										
	Giriulla										
	Loluwagoda... ...										
2	Kahatapitiya ...										
	Nugadeniya... ...										
	Beddegedara ...										
	Godakalana... ...										
	Kandangomuwa ...										

With these lists attached to the map it could at once be discovered where there was land available for disposal, and what was the proportion of unsurveyed land in each village. They could also be used as progress sheets ; a comparison of two years would show the exact localities and extent of the work done.

The following form shows how the lists might be used for the purpose of enforcing vaccination :—

		Number of Houses.	Population.	Births.								Vaccinations.								Unsuccessful Vaccinations.				No. of Vaccination District.
				1st Quarter.		2nd Quarter.		3rd Quarter.		4th Quarter.		1st Quarter.		2nd Quarter.		3rd Quarter.		4th Quarter.		1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	
				Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Adults.	Infants.	Adults.	Infants.	Adults.	Infants.	Adults.	Infants.					
HAPITIGAM KORALE.																								
UDUGAHA PATTUWA.																								
Udugaha North Peruwa.																								
1	Nalla																							
	Talahena																							
	Giriulla																							
	Loluwagoda ...																							

The registrar's sheets give the births and the deaths under a year old ; a statement of the balance of births in each quarter should enable the medical officers to form an estimate of the number of children who should be vaccinated, say in a year, in any village, district, or korale.

GANSABHAWAS.

The usual Gansabhawa returns are annexed (Table M), but the following have been added :—

Convicted	1,359	
Acquitted	1,350	
	Rs.	c.
Total amount of fines	10,839	51
Average amount of fine per person convicted	7	97

The figures show very little variations from the previous year. The total cases disposed of come to the large figure of—

Civil	2,368
Criminal	5,294
Total ...	7,662

This undoubtedly represents the satisfactory disposal of a large number of complaints. It will be seen that the power of appeal is everywhere known and is freely exercised. Appeals were lodged in 18 per cent. of the cases disposed of on evidence. Three questions with reference to Gansabhawas, at all events in the Western Province, might now with advantage be considered :—One, Is Government bound to perform, as it does at present, the duty of collecting small debts absolutely without charge of any kind ? It seems to me that there should be fees payable for the service of writs, the amount of such payment to be added to the sum for which judgment is delivered. The money should be paid, in the first instance, by the plaintiff, but recovered by him from the defendant, together with the amount decreed in the judgment. This should have two good results. It should induce creditors to settle without issue of writ, and should restrain creditors from taking out writs in cases in which recovery is almost hopeless.

The second question is, Whether appeals, at all events to the Governor in Executive Council, should not bear a stamp? Some of these appeals are based on the most frivolous grounds, and as the returns show very few are successful. The stamp fee might be returned as in Police Court cases when the judgment appealed from is set aside.

The third question is, Whether the criminal jurisdiction of the Gansabhawa might not be considerably enlarged, either by increasing its punitive powers or by adding very considerably to the number of cases triable by those tribunals? The question of the principles on which Gansabhawa and Police Court jurisdictions are defined is one on which a good deal of uncertainty exists. It is laid down in the Gansabhawa Ordinance that its jurisdiction be exclusive, and shall not be exercised by any other tribunal on any plea or pretext whatever. The Gansabhawa can try petty thefts and assaults and also breaches of rules. It has not, however, been authoritatively decided, as far as I know, which tribunal is to take cognizance of an offence that comes within the jurisdiction of both. To take a very common example. Gambling is an offence by Ordinance punishable in the Police Court, but a rule has also been passed in most Gansabhawas making gambling an offence. The man who gambles, therefore, commits an offence punishable in the Gansabhawa, and under the Ordinance no other court can hear such a case. The President, however, has no power to hear charges of breach of Ordinance No. 17 of 1889, and therefore the offence tried in the Police Court is one over which the Gansabhawa has no jurisdiction. In point of fact the question turns on whether the accused is charged with gambling in breach of the Ordinance or with gambling in breach of the Gansabhawa rule. It is, however, quite clear from the clause quoted above that the legislation never intended that election of Gansabhawa or Police Court jurisdiction should be placed within the control of every private complainant. This is not an isolated case; with the exception of rules relating to irrigation customs, there is hardly one that is not meant to deal with an offence already prohibited by Ordinance, and in each of these the difficulty described above must arise.

I myself think that there are a great number of statutable offences with which the Gansabhawa might deal with great advantage. The work of the Presidents would thus be increased, and that of the Magistrate might be diminshed, he being relieved of duties which take up a great deal of his time—time which might with advantage be expended on more important business. The procedure with reference to petty offences would thus be made simpler, cheaper, more expeditious, and therefore more effective. Many useful regulations are now dead letters on account of the difficulties (both to complainant and accused) attendant on a prosecution in the Police Court. I would therefore advocate a considerable extension of the President's powers by authorizing him to dispose of many petty complaints now only triable in the Police Court. In this way the anomaly described above can easily be removed.

After two or three years' trial of the results of extending Gansabhawa jurisdiction in this way, the question of increasing the punitive powers of such courts might be considered. Exceptional circumstances might arise in which it would be advisable to have even a petty case heard by the Magistrate; this could easily be provided for by requiring the Magistrate to hear any case on the certificate of the Government Agent that the matter is one which should be disposed of in the Police Court.

CRIME.

The principal feature of the criminal returns is the great increase in homicide. The Kalutara District gives the same number (14) as in 1900, but the Colombo District shows the very large increase of 17. Strangely enough, the whole of this increase has taken place in the two Siyane korales, east and west. If these were eliminated, the numbers would be the same as in 1900.

The results of the homicides may be summed up as follows:—

Convicted	26
Acquitted	9
Discharged	6
Unknown	4
Pending	5

It will be noticed that in only 7 cases are the offences attributed to drink (Statements O and P).

With reference to serious crime generally, the returns seem to show that in the Colombo District there has been some improvement, the number of offences committed having sunk from 1,230 in 1900 to 824 in 1901. The figures are as follows:—

	1900.	1901.
Punished	447	218
Unpunished	783	606
Grand Total	1,230	824

It will, however, be noticed that the percentage of punished cases has diminished, while that of unpunished cases has increased (Tables Q and R).

The A B C returns for the Province give figures very similar to those of 1900 (Table S). It is singular how, notwithstanding the frequent change of Magistrates and the idiosyncrasies of different officers, the number of terminations per hundred cases shows very little alteration.

Thus, though in 1901 the Police Magistrate of Negombo convicted in only 14·20 out of every 100 cases, the Itinerating Magistrate convicted in 30·47. The average convictions for the Province work out as follows:—

1899	23·3
1900	22·8
1901	20·53

It may from this fairly be reasoned that from 20 to 24 is the percentage of convictions that should be expected in a court. Take another instance (A). The Itinerating Court for 1901 has 9·79 of A's. The Panadure Court for 1901 has 23·90, but the figures for the Province for A for three years are as follows:—

1899	14·8
1900	14·5
1901	15·33

With B's the same :—

Itinerating Court	5·17
Kalutara	32·32

but average for the Province :—

1899	21·6
1900	16·1
1901	17·2

When these returns were originally drawn up, it was intended that they should be compiled for every Magistracy in the Island, and that great divergences of percentages between different courts and Provinces should be inquired into, and the causes, if possible, discovered. This system, if carried out, might prove beneficial to the administration of justice by enabling Government to repress error and promote reform.

The report system has now been fully established in the Province, and it is very desirable that the A B C return compiled by the court should be a similar return as drawn up from the headmen's reports, and as far as possible correspond so as to check each other. At present the statements give different figures, because the A B C is a return of cognizable offences omitting petty thefts, whereas the headmen only report the following offences :—Murder, homicide, grievous hurt, hurt with a knife or dangerous weapon, robbery, house-breaking, arson, rape, abduction, cattle stealing, riot, unlawful assembly, assault with a weapon other than a knife, theft of property exceeding Rs. 20 in value.

Many petty offences, such as drunk and disorderly, voluntarily causing hurt, and committing affray, are cognizable, and are therefore included in the A B C; they are not, however, reportable, as only serious offences are reported.

It seems possible that by slightly enlarging the list of reportable offences and eliminating from the list of A B C cases all that are not serious that it would be quite easy to arrive at uniformity. A special list of offences which are reportable and which are the only ones to be included in the A B C return could be drawn up without difficulty. When the two systems are worked in this way much greater accuracy will be attained, as any considerable error would be at once detected.

F. R. ELLIS,
Government Agent.

APPENDIX I.

REPORT OF THE ASSISTANT SUPERINTENDENT OF POLICE, WESTERN PROVINCE, FOR 1901.

Stations.—During the year three new stations have been established in connection with the Boer Prisoners of War Camp at Ragama. The first to be established was the station within the precincts of the Camp; the second, the station at Kelaniya, bordering the river of that name, the bridge of which is guarded both day and night to prevent any prisoners who might happen to escape from crossing, and thence finding their way into Colombo; the third, at Ragama itself, outside the Boer Prisoners of War Camp. This last it was found necessary to establish during the end of the year, owing to the village headman of the place, while attempting to perform a police duty, having assaulted a military officer stationed at the Camp, partly owing to his misunderstanding his powers as a police officer. I may mention here that all expenses incurred in connection with these three police stations are borne by the Imperial Government. The other stations in the Western Province remain the same as at the end of last year, and are distributed as under :—

Colombo District.	*Negombo District.*	*Kalutara District.*
Colombo Kachcheri	Negombo	Kalutara
Peliyagoda		Kalutara North
Welikada		Panadure
Avisawella		

Drill.—The men have improved in their drill since my last report, especially at Negombo and Kalutara. At the former station the men drill occasionally with the Volunteers. Special attention has been given by me to the drilling of the men when inspecting the stations.

The Force.—In the early part of the year Inspector Vandersmaght was transferred from the Colombo Kachcheri to Batticaloa, and his place at Headquarters was taken over by Inspector Anthonisz from Negombo, the latter station being taken charge of by Inspector Keegel from the Colombo Division. Police Sergeant M. Jayen of Panadure having been repeatedly recommended for promotion by several Government Agents, and especially by the Hon. Mr. F. R. Ellis, was promoted to the rank of Sergeant-Major, the difference in his pay as Sergeant and that of Sergeant-Major being made good to him by Government on the recommendation of the Inspector-General of Police. No extra sergeant was allowed for Panadure, but a constable, who could read and write English, and look after the station generally in the absence of the Sergeant-Major from the station, was transferred to Panadure

from the Colombo Division, in place of a constable from Panadure. The Sergeant-Major, sergeants, and men, numbering seventy-nine in all, are distributed as follows :—

	Sergeant-Major.	Sergeants.	Men.
Colombo Kachcheri ...	—	2	9
Negombo ...	—	2	15
Kalutara ...	—	1	11
Kalutara North* ...	—	—	5
Panadure ...	1	—	6
Avisawella ...	—	1	4
Welikada ...	—	1	4
Peliyagoda ...	—	1	4
Ragama ...	—	1	3
Kelaniya ...	—	1	3
Ragama No. 2 ...	—	1	3
Total ...	1	11	67

* This is really a sub-station of Kalutara, and is in charge of a senior constable, who is under the direct supervision of the sergeant at Kalutara.

Dismissals and Reductions.—I am glad to be able to report that no dismissals took place during the year; and as regards reductions, none took place from one class to another, though there were two or three cases in which constables were reduced a certain number of places in their respective classes.

Habitual Criminals (*Ordinance No. 7 of 1899*).—The identification system has been effectually carried out during the year. The following table gives full particulars of the number of habitual criminals under police supervision, or at large on license, who reported themselves, who failed to report themselves, and who were prosecuted :—

Total number of habituals under supervision proper	32
Total number of habituals who failed to report and were prosecuted ...	6
Total number of habituals who failed to report and evaded arrest ...	5
Total number of license-holders who are at large on license ...	28
Total number of license-holders who failed to report and were prosecuted ...	5
Total number of license-holders and those under supervision ...	60
Total number prosecuted	11
Total number evading arrest	5

Knife Ordinance, No. 3 of 1898. — The prohibition of carrying knives under the above Ordinance was ordered by the courts in forty-eight cases during the year. So far as I have been able to ascertain, there have been no prosecutions for any violations of the orders made under sections 21 and 25 of the Ordinance, nor have any applications been made to the Government Agent for a license to carry a knife under section 26.

Crime.—As the Hon. Mr. Ellis has reported fully on this important subject, the statistics and returns of which have been compiled in this office under my direct supervision, I do not consider it necessary for me to enlarge further on the subject, but would here take the opportunity of stating that the harmony which has existed of late between the regular and rural police in the working of criminal cases could not have been better. The Mudaliyars and Muhandirams of the Province are greatly responsible for this, they having shown at all times their readiness to assist and co-operate with the regular police.

Punitive Police (*Ordinance No. 15 of 1896*).—It was not found necessary to quarter punitive police in any town or village in the Province during the year.

Reward Fund.—During the year Rs. 167·50 was distributed among sixteen sergeants and men by way of reward for special good services.

Recreation Fund.—The total grant allowed, amounting to Rs. 75, was spent in subscribing to papers and magazines and buying suitable books for the Police Library.

Office Work.—The office work for the year was as usual heavy, but the staff, which has been increased by one, got through the work efficiently and well.

Buildings.—All in fair order. The new police station and barracks at Negombo were occupied early in the year, and are a great improvement in every way, especially the site, which is much more convenient for police duties. The quarters provided for the sergeant and men—married and single—are excellent.

Smallpox.—There were a good many cases reported during the year, especially from the Kalutara District, and in all cases the police were employed in guarding the premises of infected houses and keeping isolation. The disease was eventually stamped out.

Vaccination.—The police duties in connection with vaccination have been attended to in the past by the rural police, but on the representation of the Colonial Surgeon, Western Province, I have been obliged to place at his disposal whenever required a constable for the town of Negombo.

J. P. ARMSTRONG,
Assistant Superintendent of Police,
Western Province.

March 31, 1902.

APPENDIX H.

REPORT OF THE ITINERATING POLICE MAGISTRATE OF THE WESTERN PROVINCE FOR 1901.

THE jurisdiction of this court extends over the following korales, viz.; Alutkuru korale south, Siyane korale west, Siyane korale east, Hapitigam korale, and two Vidane Arachchi divisions of Alutkuru korale north.

2. I exercise criminal jurisdiction over all these korales, and civil jurisdiction in Siyane korale east and Hapitigam korale, in all cases where the amount involved does not exceed Rs. 300 in value.

3. My circuit comprises Welisara, Mahara, Henaratgoda, and Pasyala, and at the Colombo Kachcheri on Saturdays I sit to try special cases.

4. There are five proctors practising in my courts, and advocates from Colombo frequently come up on special retainers.

5. The total area under my jurisdiction is 401 square miles, and the population according to the last Census is 258,796.

6. There were 24 criminal cases pending on the 1st January, 1901, and 1,395 cases were instituted during the year. Out of these, 1,370 were disposed of by me, of which 1,057 were offences under the Penal Code, and the remaining 313 under other Ordinances. In these cases 2,640 witnesses were examined by me.

7. In the cases disposed of, there were 1,385 persons accused, out of whom 612 were convicted summarily and 90 were committed for trial before higher courts, namely, 60 before the Supreme Court and 30 before the District Court. Of the 612 summarily convicted, 396 were sentenced to fine only, 94 to rigorous imprisonment only, 6 to rigorous imprisonment and fine, 35 to rigorous imprisonment and whipping, 18 juvenile offenders to caning, while 63 persons were released as first offenders.

8. There were 12 appeals during the year, out of which 10 were affirmed and 2 set aside.

9. The fines and forfeitures imposed during the year amounted to Rs. 4,586·75, out of which a sum of Rs. 721·75 was awarded to the Headmen's Reward Fund as informer's share. The revenue derived from stamps in civil and criminal cases amounted to Rs. 3,116.

10. The following table will show the number of civil cases instituted and disposed of from 1899 to 1901 :—

Year.	Pending January 1.	Instituted during the Year.	Disposed during the Year.
1899 ...	60	... 348.	... 345
1900 ...	63	... 412	... 391
1901 ...	84	... 509	... 519

Only one civil case went in appeal, and it was affirmed by the Supreme Court. There were last year two appeals, and both were affirmed. I have also inquired into and disposed of 52 claims to properties seized under writs during 1901.

11. The following return will show the number of cases in which whipping was ordered under section 18 of Ordinance No. 15 of 1896 :—

Return of Whipping ordered by the Itinerating Police Magistrate, Western Province, under Section 18 of Ordinance No. 15 of 1896, during the Year 1901.

No. of Case.	Date of Offence.	Date of Sentence.	Section of Code.	No. of Persons ordered to be lashed.	Sentence.	Results in Appeal, &c.
10,548 ...	Dec. 25, 1900	Jan. 4, 1901	315	1	3 months and 10 lashes	Confirmed by H.E. the Governor.
10,620 ...	Jan. 12, 1901	Jan. 22, 1901	315	1	3 do. 10 do.	Affirmed in appeal and confirmed by H. E. the Governor.
10,696 ...	Jan. 28, 1901	Feb. 11, 1901	315	1	3 do. 10 do.	do.
*7,631 ...	Nov. 25, 1898	Feb. 18, 1901	315	1	6 do. 15 do.	Confirmed by H.E. the Governor.
10,796 ...	Feb. 23, 1901	Mar. 6, 1901	315	1	3 do. 10 do.	do.
10,852 ...	Mar. 8, 1901	Mar. 14, 1901	315	1	6 do. 10 do.	do.

* The accused was in concealment.

12. I append two statements. Of these, the first gives the number of cases committed to the Supreme Court, and the second to the District Court, with their results :—

Statement of Cases committed for Trial before the Supreme Court by the Itinerating Police Magistrate, Western Province, during the Year 1901.

No. of Case.	No. of Accused.	Section of Penal Code or other Law under which committed.	Section of Penal Code or other Law under which convicted.	Sentence.	Remarks.
10,518	1	296	297	10 years' rigorous imprisonment	—
10,750	1	300 and 317	326	3 do. ...	—
10,654	1	296 and 300	296	Death ...	—
10,635	1	296	—	Discharged ...	Shot at midnight in a paddy field while proceeding to a woman's house.
10,740	1	296	296	Death ...	—
11,044	1	296	297	10 years' rigorous imprisonment	—
10,808	1	300	—	Discharged ...	Father, an old man, shot the son on account of land disputes.
10,971	1	296	296	Death ...	—
10,995	1	317	326	18 months' rigorous imprisonment ...	—
11,101	2	317 and 314	317 and 314	1st accused 5 years' rigorous imprisonment, 2nd fined Rs. 25	—
10,668	1	21 and 22 of Ordinance 32 of 1884	—	Discharged ...	Possessing and uttering forged currency notes; absence of guilty knowledge.
10,729	1	do.	—	do. ...	do.
11,040	2	297	316 and 314	1st accused 3 years' rigorous imprisonment, 2nd fined Rs. 50	—
11,170	1	317	300	5 years' rigorous imprisonment	—
10,793	1	296	—	Discharged ...	The victim is the Police Vidane of the village, stabbed while attempting to abduct a young girl.
11,707	1	296	296	Death ...	—
11,182	1	300	300	5 years' rigorous imprisonment	—
11,206	6	436, 380, 382	380 and 382	2nd, 3rd, 4th, and 5th accused to 15 years' rigorous imprisonment each; 1st and 6th discharged ...	—
10,907	1	296	—	Discharged ...	The victim was stabbed while attempting to take forcible possession of a land.
10,565	1	296	296	Death ...	—
11,153	3	436, 380, 382	436, 380, 382	7 years' rigorous imprisonment each ...	—
11,237	7	443, 380, 369	443 and 380	10 do. ...	—
11,092	1	317	—	Discharged ...	The victim was stabbed in attempting to pluck fruits from a disputed land.
11,410	1	296	297	5 years' rigorous imprisonment	—
10,883	1	456 and 459	456 and 459	7 do ...	—
11,339	3	380 and 296.	316 and 380	1st and 3rd accused 7 years' rigorous imprisonment each. 2nd accused discharged ...	—
11,527	1	296	316	5 years' rigorous imprisonment	—
11,531	1	296	317	5 do. ...	—
11,516	1	296	—	Discharged ...	Victim received a fatal injury in a row which occurred while returning from a Gansabhawa.
11,538	1	296	297	10 years' rigorous imprisonment	—
11,560	1	296	316	5 do. ...	—
11,589	1	296	297	10 do. ...	—
11,561	3	380, 443, 382	443 and 380	1st and 2nd accused 7 years' rigorous imprisonment each. 3rd accused discharged ...	—
11,615	1	296	297	10 years' rigorous imprisonment	—
11,798	1	296	—	—	Accused pronounced insane.
11,593	1	296	296	Death ...	—
11,733	1	300 and 315	—	—	Pending.
11,734	1	296	—	—	Pending.
11,829	3	364 and 102	—	—	Pending.

Statement of Cases committed for Trial before the District Court by the Itinerating Police Magistrate, Western Province, during the Year 1901.

No. of Case.	No. of Accused.	Section of Penal Code or other Law under which committed.	Section of Penal Code or other Law under which convicted.	Sentence.
10,570	1	315	315	18 months' rigorous imprisonment and 10 lashes.
10,694	1	369	369	2 years' rigorous imprisonment.
10,755	1	367 and 368	367 and 368	6 months' rigorous imprisonment.
10,660	1	443	443	2 years' rigorous imprisonment.
10,081	1	316	—	Discharged.
10,897	1	317	317	9 months' rigorous imprisonment.
10,713	2	317 and 316	317	1st accused 2 years' rigorous imprisonment and 15 lashes. 2nd accused discharged.
10,778	1	367	367	2 years' rigorous imprisonment and 2 years' police supervision.
10,898	1	316	—	Discharged.
10,979	5	316, 443, 419	316 and 419	1st and 2nd accused to 3 years' rigorous imprisonment each; 2nd, 4th, and 5th to 4 months' rigorous imprisonment each.
11,321	1	367	367	12 months' rigorous imprisonment.
11,219	1	316	—	Discharged.
11,297	1	443 and 369	443 and 369	12 months' rigorous imprisonment.
11,377	1	316	316	6 months' rigorous imprisonment.
11,188	1	316	—	Discharged.
11,406	1	317	317	18 months' rigorous imprisonment.
11,498	1	368 and 315	368 and 315	2 years' rigorous imprisonment on each count.
11,022	1	316	316	9 months' rigorous imprisonment.
11,232	1	443 and 369	—	Discharged.
11,392	1	316	316	2 years' rigorous imprisonment.
11,812	1	315 and 316	315 and 316	2 years' rigorous imprisonment.
11,139	1	316	316	Accused fined Rs. 10, imprisonment till rising of court.
11,794	2	443 and 369	443 and 369	3 years' rigorous imprisonment each and 2 years' police supervision.
11,767	1	316	316	3 months' rigorous imprisonment.

13. I think the results shown in the returns of cases summarily tried and those by superior courts, both in their appellate and criminal side, are satisfactory.

14. I have to thank the police and headmen for the aid rendered to obtain these results. There can be no doubt that if they are properly directed and controlled, they can be of valuable help in the administration of justice.

15. I regret I cannot speak as favourably of the Inquirers into Crime. They have rendered me little or no assistance in the detection of crime. To instance a recent case. An old man who lived an isolated life was found murdered with his throat cut in his own house. There was no clue to the perpetrator or perpetrators of the deed, and the matter was left in the hands of the police and headmen. Three or four months after an Inquirer of the district sent me notes of an inquiry taken by him. I perused them carefully and found that two men came forward and stated to him that they witnessed the cold-blooded murder while they were on a thieving nocturnal expedition, and mentioned the name of the murderer. I summoned them, and went fully into their character and antecedents. I found that they were both present when I visited the scene the day following the murder, and they were questioned by the headmen, including the Korale Mudaliyar, and denied at the time any knowledge of the murder. They were men without any occupation and ready to swear away any man's life. I therefore rejected their evidence as utterly incredible. However, upon the orders of the Attorney-General, another Magistrate inquired into the case, and on their evidence committed the accused for trial, with the result that the accused was discharged.

16. I avail myself of the wise provision of our law, which I cannot instil into the minds of Inquirers, to go fully into the character and antecedents of a witness on whose evidence the charge is founded. It is essential to find out how far his testimony can be depended on. The object of such an inquiry is to see what reliance can be placed on the credibility of the evidence of a witness, with a view to arrive at the truth or falsity of a charge, and not for any purpose hostile to the witness, as some suppose.

17. There were five undetected homicidal cases within my jurisdiction. They are distributed as follows:—

Siyane Korale West	3
Siyane Korale East	1
Alutkuru Korale North	1

Out of the three in Siyane korale west, in one the deceased, who was addicted to drink and a habitual thief and an ex-convict, was found dead at the foot of a cocoanut tree in a neighbour's land with gunshot wounds. It is probable that the man met with his death while attempting to steal cocoanuts. In the second, the victim, a habitual criminal and a drunkard, was found dead with several stab wounds in a garden some distance from his residence. And in the third, the deceased, who was a lad of about 10 years of age and given to stealing cocoanuts, met with his death by the fracture of the skull, which, according to the medical evidence, may have been due either to violence or fall from a height. It is a case of doubt.

In the case of Siyane korale east, the victim was a litigious character, and was found murdered in a tract of field on his return from the court.

In the case of Alutkuru korale north, a watcher on a cocoanut estate was found stabbed to death in his watch hut. No possible motive could be assigned for this murder.

18. There were 239 petitions referring to disputes presented to me at the different stations during the year, and settlements were effected.

19. The following table will show the number of inquests held by me and by the Inquirers under me :—

Homicide ...	24
Suicide ...	9
Accidental deaths ...	58
Natural causes ...	26
Found dead ...	1
Total ...	118

20. I pointed out last year the inadequacy of my clerical staff, which has not been strengthened as yet. The large number of committed cases which require to be copied with bail bonds, and the various criminal and civil returns that have to be furnished, and the supervision of the work done by 16 Inquirers placed under me, coupled with general correspondence, entail a deal of clerical labour. Out of 35 Police Courts in the Island, my court contributed the largest number of committed cases last year next to Colombo, Galle, Jaffna, Tangalla, and Matara (*vide* Statement XIV. in page A 26 of the Administration Report of the Solicitor-General for 1900). This year the number exceeded that of last year.

21. I have suggested to Government the desirability of vesting me with powers provided under section 152 (3) of the Criminal Procedure Code. It would enable me to dispose of cases which from their nature and circumstances need not necessarily be committed to a District Court. It would relieve not only my court of much clerical labour, but also save expense and inconvenience to suitors.

PETER DE SARAM,
Pasyala, February 28, 1902. Police Magistrate.

APPENDIX III.

REPORT OF THE ASSISTANT CONSERVATOR OF FORESTS.

THE total value of timber and forest produce of all sorts credited in the Colombo and Kalutara kachcheries during 1901 amounted to Rs. 33,393·99, represented by the following details :—

	Rs. c.
Timber of all sorts ...	24,044 33
Firewood and charcoal ...	9,035 96
Bamboos and canes ...	307 70
Minor produce ...	6 0
Total ...	33,393 99

This in no way includes the value of timber disposed of on lands sold with standing timber growing thereon, or for free grants, which amounted to Rs. 193·47 during the year.

The above figures show a falling off of Rs. 10,742·29, as compared with the corresponding total in 1900, a decline due mainly to a lessened demand for timber for mines, consequent on the enormous fall in the plumbago industry, in which a reaction has set in that in some respects is perhaps more to be desired than deplored.

The introduction of imported woods for building purposes and for tea box manufacture has, no doubt, in some degree influenced the disposal of Ceylon woods suitable for these purposes, but it is hoped that this state of things may not react permanently, except in so far as supplying certain wants that the country cannot meet, as, for instance, in teak.

Contrasted with the preceding year, the following table records in detail the items that build up the total forest revenue :—

Heads.	Sold to Public Departments in 1900.	Sold to Public Departments in 1901.	Increase or Decrease.	Sold to Private Persons in 1900.	Sold to Private Persons in 1901.	Increase or Decrease.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.
Timber ...	15,837 73	7,659 82	—8,177 91	23,193 80	16,384 51	—6,809 29
Firewood and charcoal ...	1,885 11	3,355 37	+1,470 26	2,658 43	5,680 59	+3,022 16
Bamboos and canes ...	—	—	—	268 60	307 70	+ 39 10
Other produce ...	—	—	—	292 61	6 0	— 286 61
Total ...	17,722 84	11,015 19	—6,707 65	26,413 44	22,378 80	—4,034 64

A marked increase of Rs. 4,492·42 in sale of firewood to all consumers is a satisfactory proof of the ability of the Department to meet the fuel requirements of the public, and it may be confidently anticipated that in 1902 a further advance in this direction will be recorded.

Notwithstanding a lessened revenue, the surplus on the year's working is very favourable, the revenue having exceeded the expenditure by Rs. 17,519·81, exclusive of adventitious items, such as free grants.

The expenditure of the year amounted to Rs. 17,214·20, so that the revenue is more than cent per cent.—a state of things not altogether deplorable, notwithstanding a year of lower income.

Compared with 1900 the expenditure shows a reduction of outlay of Rs. 6,217·99 owing to improved methods of accounting, as, for example, in railway fuel supply, in which no outlay is shown, that being met out of the receipts by sale of fuel to the Railway, and thus saving an apportionment from the Treasury to meet working expenses.

The demand for hora planking for boats during 1901 fell very considerably, both in respect of price as well as quantity, probably owing to large undisposed of stocks in the hands of traders at the end of last year.

On the other hand, the demand for fuel by private consumers increased by Rs. 3,022·16 over 1900, as estates and factories are now buying firewood from this Department, as it suits their convenience to do so. The Railway is being supplied with increased quantity, and towards the end of 1901 arrangements were concluded with that Department for a supply to running engines at Mirigama; that will secure an important addition to the forest revenue.

As regards the method of supply to the public of timber and fuel, there has been no departure from that of the previous year—that of selling wood from small lots unsuited for reservation or systematic exploitation.

A careful enumeration of hora trees of over 6 ft. in girth was made at the Mitinigala reserved forest, resulting in a total of 1,345 trees. The trees were duly numbered, both in respect to their consecutive order and distinctive compartment number. It is intended, should the demand for hora justify such course, to take $\frac{1}{10}$th annually from this reserve, as it is found that after the maximum size has been reached, hora trees become unsound, and consequently decline in value.

In this connection it might be mentioned that a series of careful measurement of hora trees, extending back over some years, affords valuable information relating to the growth of this species of wood. I have secured figures representing some hundreds of cases, from which may be deduced a law of annual increment in volume or in radial advance.

No work was done in further demarcation of forest areas, these having been already surveyed and mapped by the Survey Department.

A trace of a forest fuel extraction path at Mirigama was made during the year, as well as certain improvements to embankments, to facilitate transport of firewood for the use of the Railway.

The Udugama forest bungalow was re-roofed in 1901 at a cost of Rs. 250, the old roof being past further repair.

The jak plantation at Kalutara was maintained, and presents an even sheet of well-grown trees, in marked contrast to those grown on the "chena" system. The plantation referred to contains 2,454 trees that are very evenly grown and are in a healthy condition.

The Department lost during the year a valuable servant by the death of Mr. G. Rajapaksa, who succumbed to typhoid in November. Mr. Rajapaksa was Forest Ranger at Hanwella, and had served the Department with zeal, intelligence, and faithfulness, and his early death is much to be deplored.

The usual table of revenue and expenditure is appended in detail, as indicating the particulars of departmental working :—

Revenue.	Credited Amounts. Rs. c.
Sold by Government Agency :—	
Timber	7,773 27
Fuel	3,539 71
Sold to applicants and purchasers :—	
Timber	14,605 60
Fuel and charcoal	5,496 25
Bamboos and canes ...	307 70
Minor produce ...	6 0
Drift and confiscated wood ...	1,665 46
Sundry heads :—	
Fines and forfeitures ...	1,108 67
Permit fees and property marks ...	231 35
Total ...	34,734 1

Expenditure.		Disbursed. Rs. c.
On timber sold by Government Agency		6,032 33
Firewood sold by Government Agency		182 50
Drift wood, salvage, and checking station		55 0
Plantation upkeep		450 0
Road traces, embankments, &c. ...		140 12
Repairs to buildings		250 0
Purchase of tools		54 9
Stationery and postage ...		120 11
Sundries		25 20
Salaries: Staff ...	Rs. 4,291·60	
Subordinate ...	Rs. 3,774·92	
		8,066 52
Transport: Staff ...	Rs. 1,127·30	
Subordinate ...	Rs. 711·03	
		1,838 33
Total ...		17,214 20

The table next following indicates the progress of the Forest Department of the Western Province since the year 1890, both in respect to surplus of revenue over expenditure as well as in proportion of such surplus :—

Year.	Revenue. Rs. c.	Expenditure. Rs. c.	Surplus. Rs. c.	Percentage on Outlay.	Deficit. Rs. c.	Percentage on Outlay.
1890	49,877 87	38,299 48	11,578 39	30	—	—
1891	19,129 73	39,450 10	—	—	20,320 37	51
1892	11,280 32	22,834 45	—	—	11,554 13	50
1893	17,758 5	35,846 49	—	—	18,088 44	50
1894	37,389 95	62,433 57	—	—	25,043 62	40
1895	34,136 0	44,871 37	—	—	10,735 37	23
1896	87,701 19	62,284 64	25,416 55	40	—	—
1897	60,314 89	56,193 28	4,121 61	7	—	—
1898	73,974 25	56,974 52	16,999 73	29	—	—
1899	59,588 34	34,381 21	25,177 13	73	—	—
1900	44,859 13	23,432 19	21,426 94	91	—	—
1901	34,734 1	17,214 20	17,519 81	101	—	—

It will be seen by the above that while the revenue indicates a considerable decline, the expenditure is the smallest on record, and the percentage of surplus the highest, since 1890.

March 11, 1902.

FREDERIC A. LEWIS,
Assistant Conservator of Forests.

APPENDIX IV.

A.—Revenue of the Western Province from 1872 to 1901.

Year.	Revenue. Rs. c.	Year.	Revenue. Rs. c.
1872	1,707,824 72	1887	1,599,373 82
1873	1,663,246 69	1888	1,729,858 18
1874	1,719,664 79	1889	1,379,494 28*
1875	1,749,382 41	1890	1,491,968 32
1876	2,012,672 98	1891	1,560,941 10
1877	2,206,085 80	1892	1,622,243 53
1878	2,204,497 2	1893	1,592,339 39
1879	1,842,286 99	1894	1,656,452 44
1880	1,809,537 10	1895	1,614,356 41
1881	1,797,319 43	1896	1,492,590 84
1882	1,693,050 25	1897	1,598,643 31
1883	1,714,011 11	1898	1,776,391 54
1884	1,800,816 19	1899	2,039,477 70
1885	1,738,471 9	1900	2,214,774 92
1886	1,743,154 33	1901	2,097,174 85

* Kegalla and Ratnapura Districts detached.

B.—Detailed Statement of Revenue collected in the Western Province during 1900 and 1901.

Heads of Revenue.	1900. Rs. c.	1901. Rs. c.	Increase. Rs. c.	Decrease. Rs. c.	Remarks.
1.—CUSTOMS.					
Imports.					
Grain	18,630 10	27,586 71	8,956 61	—	Larger imports at Kalutara.
Cotton Manufacture ...	1 15	31 47	30 32	—	—
Other Goods	214 45	252 41	37 96	—	—
Total ...	18,845 70	27,870 59	9,024 89	—	
2.—PORT, HARBOUR, WHARF, AND LIGHTHOUSE DUES.					
Port Dues and Outports ...	435 68	593 95	158 27	—	
3.—LICENSES, EXCISE, AND INTERNAL REVENUE NOT OTHERWISE CLASSIFIED.					
Licenses.					
Arrack, Rum, and Toddy ...	1,414,002 32	1,412,623 72	—	1,378 60	Last instalment of 1899 and 12 instalments of 1900 of the Colombo arrack rents were credited in 1900, as against 12 instalments during 1901. If not for this, there would have been a large increase under this head.
Opium	2,650 0	5,915 0	3,265 0	—	The licenses of 1901 fetched higher prices.
Licenses to dig Plumbago ...	—	4,120 81	4,120 81	—	No licenses were issued in 1900.
Sundries	126 0	156 78	30 78	—	—
Land Revenue.					
Royalty on Cabook ...	267 73	429 97	162 24	—	More licenses issued for removing sand.
Incidental	—	150 0	150 0	—	—
Rents exclusive of Lands.					
Road Tolls	79,954 17	84,631 45	4,677 28	—	Rents for 1901 fetched higher prices, and arrears of 1900 credited in 1901.
Bridge Tolls	55,005 12	53,275 0	—	1,730 12	Rents for 1901 fetched less prices.
Ferry Tolls	4,845 13	4,740 0	—	105 13	Rents for 1901 fetched less prices.
Canal Tolls	35,390 57	37,849 50	2,458 93	—	Rents for 1901 fetched higher prices.

Short Reports on Murder Cases.

1. *Indurugalla, 389.*—The accused stabbed the two deceased persons and two others on the 20th January, 1901, motive being jealousy. The accused was convicted and was sentenced to be hanged.

2. *Heiyantuduwa, 275.*—The deceased was shot on the night of the 15th January, 1901, as he was returning with another man after making search for a stolen bull. The accused, who belonged to a gang of cattle lifters, was on bad terms with the deceased, as he had given information against them to the Inquirer of the place. Accused was discharged.

3. *Nungomuwa, 336.*—The deceased, who was known to be a cocoanut stealer in the village, was shot dead whilst stealing nuts on a tree on the 24th January, 1901. Accused unknown.

4. *Talawatugoda, 493.*—The deceased was stabbed by the accused on the 3rd February, 1901, during a dispute in connection with the reaping of the harvest of a paddy field. Four other persons were injured. Accused was convicted and sentenced to ten years' rigorous imprisonment.

5. *Watinapaha, 103.*—The deceased and a woman who was on intimate terms with the accused started to go to Mabodala Dewale. The accused knowing waylaid them, and inflicted a stab wound on the deceased with a dagger, motive being jealousy. Accused was acquitted.

6. *Kaleliya Webodamulla, 28.*—The deceased, who was the kept mistress of the accused, leaving him, went and lived with another man as his mistress. The accused entering the house of the deceased on the night of the 7th February, 1901, stabbed her. Accused was convicted and sentenced to be hanged.

7. *Dekatana, 401.*—On the 22nd February, 1901, accused, who was under the influence of liquor, went over to one Andris Appu's house. Shortly after the deceased, who was also the worse for liquor, followed him, and arriving at the house blew out a lamp that was burning there, and dragged away Andris Appu's daughter to the road, where the accused, seeing the girl attempting to get rid of the deceased's clutches, stabbed him. Accused was tried and was acquitted.

8. *Helunmahara, 399.*—The deceased was stabbed by the accused on the 1st January, 1901, for not allowing him to remove some vegetables which he had picked from a garden belonging to the deceased. Accused was convicted and was sentenced to be hanged, punishment being commuted to twenty years' rigorous imprisonment.

9. *Pelanwatta, 582.*—The deceased was stabbed with a knife on the 26th February, 1901, by the first accused, whilst the second accused was holding him by the hair, motive being anger caused by a cow which was in charge of the deceased trespassing on a paddy crop belonging to the accused. First accused was convicted and sentenced to five years' rigorous imprisonment, second accused acquitted.

10. *Paddawala, 385.*—On the 22nd March, 1901, accused plucked a jak fruit from a tree which he possessed jointly with deceased. Deceased also asked for a fruit, which the accused refused. An altercation then ensued, and the accused stabbed the deceased with a knife. Accused was tried and was acquitted.

11. *Deenapamunuwa, 356.*—The accused was on terms of intimacy with the deceased woman, but a month prior to the commission of the offence he was subject to unkind treatment by deceased, and being offended stabbed the deceased with a knife on 4th April, 1901. Accused was convicted and sentenced to be hanged.

12. *Kalapaluwawa, 491.*—The deceased had a paramour, who was charged in a cattle stealing case. During the pendency of the case the deceased left her husband and went and lived in the house of a brother-in-law of her paramour. On the 6th April, 1901, the accused meeting the deceased, who was returning from Colombo, stabbed her. Accused was convicted and was sentenced to be hanged.

13. *Panagoda, 482.*—The deceased was killed with a mamoty by accused on 17th April, 1901, while he was sleeping in his house, motive being anger caused by the deceased not paying a debt due to accused when asked for it. Accused was convicted and was sentenced to be hanged.

14. *Walgama, 281.*—The deceased, an ex-Police Vidane of Walgama, who was worse for liquor, entered the house of one Christina, a woman of bad character, on the 20th April, 1901, and struck her. On her screaming out the accused came over with rice pounders and clubs and brutally assaulted the deceased to death. First accused was convicted and was sentenced to three years' rigorous imprisonment, the second was fined Rs. 50, third and fourth accused were acquitted.

15. *Belunmahara, 239.*—On the 21st April, 1901, accused assaulted the deceased with a club, they being on bad terms with each other owing to the deceased having left his wife and children and was living with the mother of accused. Accused was convicted and was sentenced to ten years' rigorous imprisonment.

16. *Bopetta, 367.*—On the 23rd April, 1901, the deceased was returning from the Pasyala Courts, where he attended in connection with a civil action, when he was set upon and murdered by clubbing. Accused not known.

17. *Tunbowila, 576.*—On the 6th May, 1901, the deceased assaulted his wife and children for the loss of an arecanut which he had in his betel bag. His son Siman *alias* Cornelis got out of the house and began abusing him, at which the father being enraged came up to him and gave him a slap, when the accused stabbed him. Accused was convicted and was sentenced to ten years' rigorous imprisonment.

18. *Nugegoda, 519.*—On the 1st June, 1901, the accused, six in number, after failing in an attempt to burglariously break into a boutique kept by a Moorman, went over to the house of the deceased, about 150 fathoms away, and killed a goat there; next they attempted to force open the door of the house, the deceased's wife hearing the noise gave an alarm "thieves," when the deceased got out at once and saw accused were running away with the carcase of the goat. He gave chase, crying out "thieves," and was set upon by the accused and beaten with clubs. He died in hospital shortly after. Four of the accused were arrested; they were convicted and sentenced to be hanged.

19. *Dunagaha, 88.*—On the 15th June, 1901, the deceased, as usual, slept for the night on a "pettagam," a box in which his money was kept, being proceeds of the sales in his boutique. There

were two lads sleeping in the same hall where the deceased was sleeping. The accused, six in number, entered the boutique by boring a hole in the wall, and opening the door murdered the deceased by cutting his throat. They then robbed the contents of the box. Accused were tried and were acquitted.

20. *Kaleliya Welodamulla, 28.*—On the 5th July, 1901, the deceased started from Colombo to Veyangoda by train, and on arrival there he made some purchases at the boutiques and changed some money. One of the accused seeing this followed him with two others, and overtaking him one of them gave him a blow on the head with a club, which felled him to the ground. They then robbed him. First and third accused were convicted and sentenced to ten years' rigorous imprisonment each, second acquitted.

21. *Bomiriya Pahala, 472.*—On the 9th July, 1901, the deceased was stabbed to death by accused in connection with a dispute about some timber. Accused was convicted and was sentenced to ten years' rigorous imprisonment.

22. *Mahara, 303.*—The deceased, an overseer of the Mahara jail, was seriously assaulted with an instrument (a miner's jumper) on his head by the accused, a prisoner, on the 25th July, 1901. The deceased was removed to the hospital, where he died. Accused was convicted and was sentenced to five years' rigorous imprisonment.

23. *Godagedara, 232.*—The deceased, a noted cattle lifter and burglar, was last seen in the company of a fellow villager on the 28th July, 1901, after which nothing was known of the deceased till his body was found the following morning with severe wounds committed with a heavy cutting instrument. Accused unknown.

24. *Kendaliyaddapaluwa, 246.*—The deceased was found by accused removing his bull with two others on the 13th August, 1901, when the deceased attempted to assault the accused with a stick. The accused, who was carrying a gun, fired at the deceased in self-defence. Accused was discharged.

25. *Puwakpitiya, 431.*—A Tamil woman belonging to Elston estate was found murdered by stabbing on the night of the 15th August, 1901. Accused, a kangany on the estate, was discharged, there being insufficient evidence against him.

26. *Siyambalape, 274.*—The deceased and the accused were returning from the Gansabhawa, having attended there as parties in a case. The deceased and his men had gone ahead and were waiting in a garden on the roadside. The accused and his men approached, when an altercation ensued, followed by a free fight. The deceased was badly assaulted with a club by accused. The accused was tried and acquitted.

27. *Pamankada, 518.*—The deceased was shot by the accused on the 23rd August, 1901, at the compound of the house of the Inspector Muhandiram, motive being revenge. Accused was convicted and was sentenced to be hanged.

28. *Maharakurukulawa, 250.*—On the 23rd August, 1901, the accused, a cart driver, returned home drunk and assaulted his wife with his hands and a stick. The accused admitted having done so because he found her with another man on his return home. Accused was convicted and sentenced to five years' rigorous imprisonment.

29. *Welikada, 514.*—On the night of the 21st August, 1901, the accused shot the deceased with a gun while he was taking his night meals at his house, motive being anger. Accused was tried and acquitted.

30. *Mandawala, 394.*—On the 27th August, 1901, the deceased was returning from a boutique where he had gone to buy some provisions. On his way back the accused asked him for some chunam for a chew of betel, the deceased refused to give it, when the accused beat him with a stick. Accused was convicted and was sentenced to ten years' rigorous imprisonment.

31. *Ambagaspitiya, 307.*—On the 24th August, 1901, the deceased and two of his sons were at work in a field, the accused with a gun in hand passed that way, when an altercation took place between them owing to a previous quarrel, and resulted in accused shooting the deceased. Accused was convicted and was sentenced to seven years' rigorous imprisonment.

32. *Baliwila, 296.*—The deceased as well as the accused were returning from a gambling-place with some others, all under the influence of liquor, discussing the gains and losses at the gambling-place. The accused being annoyed struck the deceased with a club. Accused was convicted and was sentenced to five years' rigorous imprisonment.

33. *Kanduboda, 282.*—The deceased and accused were on bad terms owing to land disputes. On the 10th September, 1901, meeting each other on a footpath, an altercation took place, the deceased striking the accused, and the accused in return stabbing him. Accused was convicted and was sentenced to ten years' rigorous imprisonment.

34. *Kannimahara, 389.*—On the 11th September, 1901, the two deceased persons and another were eating young cocoanuts in a garden belonging to accused's father. The accused was a watcher in the garden, and as he came up to them they waved clubs which they had in their hands and approached him; the accused retired and came back with a dagger fastened on to a long pole and charged them with it, inflicting severe wounds. Accused was convicted and was sentenced to be hanged.

35. *Kadirana, 150.*—On the 14th September, 1901, a gang of coolies headed by one Mr. Schrader entered the premises of the Police Vidane of the place, carrying with them dangerous weapons, and broke open the doors of the headman's house, caused him and his wife grievous hurt, and destroyed furniture, &c., motive being anger. After the riot a cooly, who could not be identified, was found dead on the road with severe wounds on his body. Mr. Schrader and his coolies were charged with riot, murder, causing grievous hurt, and house-breaking before the Police Court, but eventually the charge of murder was withdrawn by the Crown, and they were placed upon their trial for the other offences named and were acquitted.

36. *Kamburugalla, 352.*—The deceased was returning home after a bath on the 19th September, 1901, when the accused waylaid and assaulted him with a club on his head, motive being jealousy. Accused was convicted and was sentenced to ten years' rigorous imprisonment.

37. *Ganihimulla, 107.*—The deceased was a watcher of an estate. On the night of the 13th October, 1901, he slept in his watch hut, where he was found the next morning dead with stab wounds. Accused unknown.

38. *Halugama, 16.*—On the 17th October, 1901, the accused stabbed the deceased with a kris on the cart road at Halugama, motive being anger. The deceased died in hospital. Accused was convicted and was sentenced to be hanged.

39. *Asgiriwalpola, 135.*—On 26th October, 1901, accused endeavoured to rescue a woman who was being ill-treated by deceased. On his interfering the deceased attempted to stab accused, and in self-defence the accused knocked him down with a rice pounder. Accused was tried and acquitted.

40. *Pahala Biyanwila, 268.*—On the 14th November, 1901, the accused assaulted the deceased (his wife) with a stone, motive being anger caused by the deceased not returning a match box when wanted by the accused. Accused was convicted and, being insane, sent to the Lunatic Asylum.

41. *Kosgama, 427.*—On the 5th October, 1901, accused stabbed the deceased, motive being anger caused by provocation. Accused was acquitted.

42. *Loluwagoda, 1.*—The accused in the attempt to resist deceased and some others who attempted to oust him from his dwelling-place struck deceased and another with a club. Accused was discharged.

43. *Divulapitiya, 97.*—On the 29th November, 1901, the accused was under the influence of liquor and stabbed deceased, motive being anger due to land disputes. Case pending.

44. *Kotalawala, 473.*—On the night of the 9th December, 1901, the deceased, who was sleeping in his house, was stabbed by the first accused, while the other three were holding him down, motive being revenge in payment of an old grudge. Accused were convicted and were sentenced to death.

45. *Biyagama, 280.*—The deceased on the 10th December, 1901, after his midday meal left the house and was found in the evening dead in a ditch with severe bruises on his body, which might have been caused by a fall from a cocoanut tree or having been struck with a club. Accused was discharged.

46. *Ihala Imbulgoda, 240.*—On the 15th December, 1901, the deceased, who was considered to be a man of unsound mind, having a katty and mamoty in his hands, created a disturbance and cut and injured a certain individual, and attempted to injure another person, when he was knocked down by the accused with clubs. The accused were discharged.

47. *Madelgomuwa, 137.*—On the 17th December, 1901, the deceased was returning home in a hackery with another person, when he was shot by accused, motive being anger due to land disputes. Case pending.

48. *Kattuwa, 48.*—On the 24th December, 1901, the deceased was shot by accused, motive being anger caused by the deceased waylaying accused's brother-in-law and thrashing him. Case pending.

49. *Kotikawatta, 505.*—On the night of the 30th December, 1901, the accused was found by the deceased removing a head of cattle belonging to a relative of the deceased. The deceased stopped him, when accused stabbed him and ran away. Case pending.

50. *Uswetakeiyawa, 167.*—On the 27th December, 1901, a quarrel took place between the accused and another man at a sale of fish by auction; the deceased came and separated them by striking both of them with his hand. The accused went away, and returning drunk struck the deceased with a stone. Case pending.

REPORT ON THE KALUTARA DISTRICT FOR 1901.

Area, 623¾ square miles; Population, 230,045.

1.—REVENUE.

THE detailed comparative statement of revenue for 1900 and 1901 is annexed :—

Detailed Statement of Revenue collected and credited at the Kalutara Kachcheri during the Years 1900 and 1901.

Heads of Revenue.	1900.	1901.	Increase.	Decrease.	Remarks.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.	
CUSTOMS.					
Imports.					
Grain	18,630 10	27,586 71	8,956 61	—	Larger imports.
Cotton Manufacture ...	1 15	31 47	30 32	—	
Other Goods ...	214 45	252 41	37 96	—	
Total ...	18,845 70	27,870 59	9,024 89	—	
PORT, HARBOUR, WHARF, AND LIGHTHOUSE DUES.					
Port Dues and Outports ...	256 40	371 52	115 12	—	Larger imports.
LICENSES, EXCISE, AND INTERNAL REVENUE NOT OTHERWISE CLASSIFIED.					
Licenses.					
Arrack, Rum, and Toddy ...	119,547 58	138,007 9	18,459 51	—	The arrack rents realized more than in 1900.
Opium	520 0	1,870 0	1,350 0	—	The opium rents fetched a higher figure than in 1900.
Rents exclusive of Lands.					
Road Tolls... ...	24,696 68	28,604 45	3,907 77	—	Arrears of 1900 credited in 1901; an instalment in 1900 was erroneously credited at the Colombo Kachcheri; larger rebate in 1900 than in 1901 on account of repairs to Digarolla bridge.
Bridge Tolls ...	4,820 0	3,450 0	—	1,370 0	The rents fetched less than in 1900.
Ferry Tolls ...	2,070 8	2,135 0	64 92	—	The rents fetched more than in 1900.
Canal Tolls ...	6,750 0	6,500 0	—	250 0	The rent fetched less than in 1900.
Stamps.					
Revenue (various Services)...	4,3860 5	50,274 25	6,414 20	—	Increase in the number of distilleries and wholesale dealers' licenses issued in 1901.
Total ...	202,264 39	230,840 79	30,196 40	1,620 0	
Fines and Forfeitures.					
District Courts ...	430 25	1,185 50	755 25	—	More District Court fines and heavier ones.
Courts of Requests ...	—	4 0	4 0	—	
Police Courts ...	11,747 82	11,009 81	—	738 1	Less received from the Kalutara Police Court.
Government Agents ...	35 0	105 54	70 54	—	Misclassification in 1900.
Other Departments ...	520 0	870 76	350 76	—	More fines on road tax defaulters.
Forest Offences ...	150 0	782 2	632 2	—	The increase is due to fines imposed departmentally on account of forest offences (hitherto classified under Sale of Government Property—Timber) being now classified under this head.
Total ...	215,147 46	244,798 42	32,008 97	2,358 1	

Heads of Revenue.	1900.	1901.	Increase.	Decrease.	Remarks.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.	
FEES OF COURT OR OFFICE, PAYMENT FOR SPECIFIC SERVICES, AND REIMBURSEMENTS IN AID.					
Judicial Stamps ...	18,766 30	18,250 10	—	516 20	
Survey Fees	6,347 90	5,701 70	—	646 20	Fees recoverable within the year on a smaller extent of land.
Recoveries on Irrigation Works	848 49	848 48	—	0 1	
Hospital Stoppages ...	27 2	45 80	18 78	—	
Collections at Dispensaries ...	2,947 47	2,562 4	—	385 43	Private dispensaries are competing successfully with the Government institutions.
Medical Aid Dues ...	5,036 96	4,639 7	—	397 89	Less sickness on estates.
Cost of Drugs ...	450 83	516 39	65 56	—	More prompt recovery.
Cemetery Fees ...	—	1 50	1 50	—	Opening of Panadure cemetery late in the year.
Police Rates in Towns and Rural Districts ...	5,250 56	5,370 88	120 32	—	Larger amount of tax due and received.
School Fees	653 4	700 56	47 52	—	Larger attendance of children.
School Books and Stationery	421 58	529 0	107 42	—	More school books sold.
Value of Tools lost ...	—	12 94	12 94	—	
Warehouse Rent ...	1,050 71	1,534 95	484 24	—	Larger imports.
Fees for Title Deeds ...	2,003 29	1,546 38	—	456 91	Fees recoverable during the year on a smaller extent of land.
Sundries	10 0	148 0	138 0	—	
Total ...	43,814 15	42,407 79	996 28	2,402 64	
RENTS OF GOVERNMENT PROPERTY.					
Rent of Buildings and Houses	55 30	52 80	—	2 50	
Garden Rents ...	344 80	—	—	344 80	Misclassification in 1900.
Rents of Lands ...	674 50	830 63	156 13	—	do.
Total ...	1,074 60	883 43	156 13	347 30	
INTEREST.					
On Arrears of Revenue ...	228 94	330 77	101 83	—	
MISCELLANEOUS RECEIPTS.					
Unclaimed Deposits ...	345 7	1,926 95	1,581 88	—	Deputy Fiscal's unclaimed deposits from 1890 to1897 credited to revenue.
Sundries	32 38	28 51	—	3 87	
Total ...	377 45	1,955 46	1,581 88	3 87	
SALE OF GOVERNMENT PROPERTY.					
Timber	15,388 85	11,853 23	—	3,535 62	A smaller demand for timber and misclassification in 1900.
Crops on Crown Lands ...	235 0	288 12	53 12	—	
Sundries	283 71	29 41	—	254 30	Recovery of Rs. 265 in 1900 on account of ground share of illicitly dug plumbago.
Total ...	15,907 56	12,170 76	53 12	3,789 92	
LAND SALES.					
Crown Lands sold ...	136,360 72	49,652 87	—	86,707 85	Balance purchase amount of land sold in 1899, amounting to Rs. 62,302·80, was credited in 1900; less land was sold and granted at half-improved value in 1901 than in 1900 and at a lower average price.
Premia on Leases ...	1,230 0	—	—	1,230 0	No plumbago land leased.
Total ...	137,590 72	49,652 87	—	87,937 85	
Grand Total ...	433,242 98	380.441 61	44,038 22	96,839 59	
Deduct Increase ...	—	—	—	44,038 22	
Nett Decrease ...	—	—	—	52,801 37	

The revenue for 1901 amounted to Rs. 380,441·61, as compared with Rs. 433,242·98 in 1900, showing a decrease of Rs. 52,801·37. The revenue of 1897, viz., Rs. 334,512·64, was the largest ever collected at the Kachcheri up to that year. In the following years the revenue rose as follows :—

	Rs. c.
1898	372,029 64
1899	399,457 56
1900	433,242 98

but, as was pointed out in the report for 1900, there would have been a decrease in that year had not the large sum of Rs. 62,302·80 been credited in January, 1900, as balance purchase amount of land sold late in 1899.

The chief item of decrease in the year under review is under the head Land Sales—Crown lands sold—viz., Rs. 86,707·85. A smaller extent of land was sold at a lower average price per acre. There was practically no demand for land for tea cultivation, and the moderate demand for plumbago land could not be satisfied, as the Government had not decided on what terms such land should be sold or leased. Excluding the sums credited as purchase amount of Crown land, the revenue of 1901 was Rs. 330,788·74, as compared with Rs. 296,882·26 in 1900, an increase of Rs. 33,906·48.

As regards this revenue, the chief increases are those under the heads Customs, Arrack Rents, Opium Rents, Road Tolls, Revenue Stamps, and Unclaimed Deposits.

The Arrack and Opium Rents fetched more than in 1900, but the Road Tolls less, the increase under this head being due to the following causes:—One instalment of Digarolla bridge rent was erroneously credited to revenue at the Colombo Kachcheri in 1900, and till 1901 nothing was credited on account of the instalments of this rent due for the last quarter of 1900, pending the decision of Government as to the amount of rebate to be allowed to the renter for interference with traffic while the bridge was being widened late in 1900 and early in the following year.

The larger Customs revenue was due to the fall in price of Coast rice. More was consequently imported.

The increase under Revenue Stamps is attributable to the issue of a larger number of distillery licenses and of wholesale licenses to deal in arrack, and to the fact that some of the former were issued for 1900 in 1899.

The chief decreases were under Bridge Tolls and Sale of Timber. The former fetched less than in 1900.

There has been a considerable fall in the revenue from timber, which had previously been increasing fast, as the following figures show :—

	Rs. c.		Rs. c.
1898	7,533 31	1900	15,388 85
1899	11,287 71	1901	11,853 23

This is accounted for by the decrease in the demand for timber for plumbago mines and for tea box woods. It may be noted that while arrack and rice contributed to swell the revenue, the unsatisfactory state of the tea and plumbago markets affected it prejudicially.

II.—EXPENDITURE.

The following statement shows that the expenditure was Rs. 24,006·85, as compared with Rs. 25,462·99 in 1900, a decrease of Rs. 1,456·14 :—

Statement of Expenditure for 1900 and 1901.

	1900. Rs. c.	1901. Rs. c.
Personal Emoluments	11,867 56	12,553 30
Pensions	8,002 65	7,244 49
Other Charges :—		
Cart and cooly hire	41 35	60 0
Petty expenses	45 57	82 2
Furniture	31 59	39 95
Binding records	40 0	23 30
Hire of tom-tom beaters	6 0	14 0
Commission to collectors of assessment tax ...	209 15	207 82
Remuneration to police tax assessors ...	135 0	135 0
Stationery	294 29	295 70
Allowance to Friend-in-Need Society ...	300 0	300 0
Allowance to paupers	808 50	855 0
Burying dead bodies	33 80	54 77
For relieving and removing sick and destitute to hospital	28 63	28 50
Travelling allowance to Assistant Government Agent	910 65	1,000 0
Travelling allowance to clerks	733 2	750 0
Conveying and guarding treasure... ...	51 50	11 0
Compensation for local rates on Government buildings, Kalutara	194 0	194 0
Special Expenditure :—		
Pay of watchers on plumbago lands ...	1,454 92	158 0
Clearing Maguru-ganga	274 87	—
Total ...	25,462 99	24,006 85

Personal Emoluments.—The increase is due to (1) increments to clerks' salaries; (2) the fact that the Kachcheri Muhandiram draws a higher salary than his predecessor did; (3) the opening of the Panadure Government cemetery late in the year, involving the employment of a cemetery-keeper and two grave diggers.

Pensions.—The decrease is due to the death of two pensioners.

Pay of Plumbago Watchers on Crown Land.—The watchers, who were employed throughout 1900, were discontinued early in 1901.

III.—LAND SALES.

A return of lands granted and sold during 1899, 1900, and 1901 is annexed :—

	1899.			1900.			1901.			1899.	1900.	1901.
	No. of Lots.	Extent.	Amount.	No. of Lots.	Extent.	Amount.	No. of Lots.	Extent.	Amount.	Average Price per Acre.	Average Price per Acre.	Average Price per Acre.
		A. R. P.	Rs. c.		A. R. P.	Rs. c.		A. R. P.	Rs. c.	Rs. c.	Rs. c.	Rs. c.
Sales ...	459	2605 2 16·25	158866 80	455	1766 0 8	80468 3	492	1194 2 24·75	49484 64	60 97	45 56	41 42
Half-improved value	27	29 2 32	741 19	47	40 0 9	1170 7	76	50 2 30	1413 21	24 96	29 21	27 88
Certificates against the Crown ...	182	301 1 38	—	260	466 3 3	—	545	1102 1 7	—	—	—	—
Under the Minute of August 8, 1844, including lots portions of which have been granted at half-improved value ...	—	—	—	4	23 2 17	714 6	11	31 1 0	326 71	—	30 25	10 45
	668	2936 3 6·25	159607 99	766	2296 1 37	82352 16	1124	2378 3 21·75	51224 56	—	—	—

The number of lots sold was larger in 1901 than in either of the two preceding years, but their acreage and the average price realized was smaller. This price would not have been so small had not the Government temporarily stopped the alienation of plumbago land.

No lot of over 100 acres was granted or sold. A Government Circular forbidding the sale of land for tea cultivation without special sanction was issued during the year.

A larger number of lots was granted at half-improved value than in 1900, and they covered a larger acreage. The settlements on certificate of quiet possession exceeded, in number and in area affected, those of the two preceding years added together. But the lots were small, the average extent being about 2 acres.

The fact that nine-tenths of the purchase amount of land sold was not due till forty days after the sale accounts for the difference between the figures given above as the amount realized by the sales of the year and those shown in the statement of revenue credited in 1901 under the head Crown Lands Sold.

The readiness of the villager to buy small plots of land was shown by the receipt during the year at the Kachcheri of 338 applications for survey, as compared with 155 in 1900.

Statement of Preliminary Plans received from the Surveyor-General since 1888.

Date.	Plans in which all Lots have been disposed of.	Plans in which no Lots have been disposed of.	Plans in which some Lots have been disposed of and some not.
On January 1, 1901 :—			
Plans ...	305	337	151
Lots ...	840	4,633	2,052
On January 1, 1902 :—			
Plans ...	422	268	172
Lots ...	1,188	4,428	2,324

There was greater progress in dealing with the plans than in 1900, but though nearly half of the plans received since 1888 have been finally disposed of, they cover only about one-seventh of the number of lots surveyed.

IV.—REDEMPTION OF CROWN SHARES OF PADDY FIELDS.

Statement of Fields remaining unredeemed at the end of 1901.

	No. of Fields.	Extent.	Redemption Value.
		B. P. Q.	Rs. c.
Kalutara and Panadure Totamunes ...	2	6 0 0	54 0
Pasdun Korale East ...	49	141 0 1	724 17
Total ...	51	147 0 1	778 17

Nothing in the way of redemption was done during the year.

V.—LAND ACQUISITION.

At the beginning of 1901 three acquisitions were pending—

(1) Site for a latrine for the Panadure courts.
(2) Land for the extension of Panadure resthouse premises.
(3) Land for a Public Works Department metal quarry at Panadure.

The latrine has been built, but the mandate for the acquisition of the site adopted had not been received by the end of the year.

As the owner of the land acquired for the extension of Panadure resthouse premises would not accept the compensation tendered, the matter has been referred to the District Court.

For the metal quarry four lots, aggregating 2 roods 15 perches in extent, were acquired for Rs. 1,296·62.

During the year a mandate was received for the acquisition of land required for the purpose of widening the Horana-Alutgama road at a point near the Bentota ferry. An inquiry was held, and the land was found to be worth far more than the Government expected to have to pay for it. The acquisition will probably be abandoned. It is proposed to acquire a small piece of land on Culloden estate for a well that has been made for the use of Neboda hospital.

VI.—THE WASTE LANDS ORDINANCES.

No work under these Ordinances was done.

VII.—CHENA CULTIVATION.

Licenses for chena cultivation of Crown land are not issued in this district.

The number of chenas reported to have been illicitly cultivated was 236. Out of these offences, 160 were dealt with departmentally. The remainder were reported to the Kalutara Police Court, where, out of 70 cases decided, convictions were obtained in 61. Nearly all the illicit cultivation took place in Pasdun korale east. In parts of this korale the scarcity of paddy land tempts the villager to cultivate chenas that belong to the Crown.

VIII.—SALES OF LAND BY VILLAGERS.

No sales, among villagers, of land that includes residential gardens and fields have come under special notice. The Registrar of Lands is unable to inform me how frequently such sales have taken place during the year. At the inquiry into the case referred to in my last report, in which a vendor sold a larger share of a plot of land than that to which he was entitled, it was not found that he had acted fraudulently.

IX.—AGRICULTURE.

Paddy.—The acreage cultivated and the crop reaped were estimated by the headmen at 39,700 acres and 516,000 bushels, as compared with 39,003 acres and 477,272 bushels in 1900. In some parts of Rayigam korale and Pasdun korale east the paddy plants suffered from excess of rain in April.

Other Grains.—There was, as usual, little dry grain cultivation. The crop has been estimated at 3,240 bushels, as compared with 1,760 bushels in 1900. Much of this was grown on the owitas of the Munwattebage pattu of Rayigam korale.

Cocoanuts.—Nearly 100 acres were opened in cocoanuts and oranges by Mr. H. J. Pieris in Rayigam korale. The area under this cultivation increased in the totamunes by about 50 acres. There was a brisk demand for the survey of land suitable for this product among the villagers in various parts of the district. The price of cocoanuts per thousand ranged from Rs. 30 to Rs. 40 in Rayigam korale and the totamunes, and from Rs. 40 to Rs. 55 in Pasdun korale.

Cinnamon.—Mr. B. O. Dias opened about 15 acres at Alutgama in Rayigam korale. A few patches of cinnamon were also planted by villagers of the same korale.

Fruits and Vegetables.—Little fruit is grown in this district. Vegetables were scarce, except in Rayigam korale, where there was a very good crop. The cultivation of fruit and vegetables is beginning to improve in the totamunes.

Betel.—In May a fungus-like growth appeared on betel creepers near the root and killed the plants within a few days.

Tea.—According to the figures published by the Kalutara Planters' Association the crop was 6,655,025 lb., or 433,585 lb. less than in 1900, the reduction being due to finer plucking, which, however, by improving the quality of the tea, raised its price. The area in bearing increased from 15,501 to 15,541 acres. These figures apply to nearly the whole of the tea cultivated in the district. With a view to discouraging the extension of tea cultivation on a large scale in the present state of the market, it was decided that no Crown land should be sold for this product without the special permission of Government. There was, however, as anticipated, little demand for such land.

Para Rubber.—To the annual report of the Kalutara Planters' Association I am also indebted for the following information. Besides about 150 acres planted exclusively in rubber, many trees have been planted in suitable places on estates through the tea and in ravines. Most of the trees have been planted since 1896. Nearly 3½ tons of rubber were shipped to London during the year, and fetched from 3*d.* to 5*d.* more than any other rubber on the market at the same time. One lot of half a ton early in the year realized 4*s.* 1½*d.* per lb. The foreign demand for seed has given way to a brisk demand in the Island. It is evident that the cultivation of this product, which began in the Kalutara District earlier than elsewhere in the Island, promises good results.

X.—WEATHER.

The annexed statement shows the rainfall at Kalutara during each month of the last ten years :—

	1892. Inches.	1893. Inches.	1894. Inches.	1895. Inches.	1896. Inches.	1897. Inches.	1898. Inches.	1899. Inches	1900. Inches.	1901. Inches

The total rainfall for the year under review is the lowest since 1897, and is 1·30 inch below the average for the preceding nine years. But more rain fell in November than in any month of the last quarter of the ten years, except October, 1895.

The next statement compares the rainfall in 1901 (1) at Kalutara, (2) on Gikiyanakanda estate in Pasdun korale east, (3) on Ellakanda estate in Rayigam korale, and (4) on Rayigama estate in the same korale :—

	Kalutara.	Gikiyanakanda.	Ellakanda.	Rayigama.
	Inches.	Inches.	Inches.	Inches.
January ...	7·01	11·87	6·92	17·10
February ...	1·54	3·73	3·60	9·38
March ...	7·80	14·49	10·80	10·95
April ...	5·71	15·40	17·75	19·23
May ...	12·38	23·28	15·36	13·10
June ...	9·63	16·28	15·41	22·92
July ...	6·05	12·12	12·17	14·30
August ...	2·61	5·80	4·90	4·73
September ...	4·04	8·81	6·55	7·98
October ...	3·45	8·59	7·90	7·03
November ...	22·39	20·65	25·06	15·30
December ...	7·25	6·07	3·83	3·96
Total ...	89·86	147 09	130 25	145·98

The fall on Gikiyanakanda and Rayigama estates was rather below the average of recent years. These figures show how much wetter it is inland than near the coast, especially during the south-west monsoon.

XI.—OTHER INDUSTRIES.

Plumbago.—The price of plumbago, which fell heavily early in 1900, remained low in 1901 but rose slightly towards the end of the year. Few pits were opened : many were closed. In October only 36 pits were being worked, as compared with 94 a year before. They were distributed as follows :—

Pasdun Korale East ...	27
Pasdun Korale West ...	6
Rayigam Korale ...	3
Total ...	36

Of this total, 31 are situated in land alienated by the Crown, 3 in land leased by the Crown, and 2 in paraveni land. By the end of the year 14 out of the 27 pits in Pasdun korale east had been closed.

The number of mining declarations received at the Kachcheri fell from 204 in 1900 to 45 in 1901, of which 35 were for land in Pasdun korale east.

Messrs. Skrine & Co., on behalf of Messrs. Reckitt & Sons, Limited, were working during the year the three mines situated on land leased by the Government, viz., Humbuluwa at Liniyawa and Kokkumbura and Nakaulketiya at Migahatenna. By the courtesy of Messrs. Skrine & Co. I am able to append the following observations made by Mr. Gill, the Manager of the mines, on their operations :—

> The work of developing the mines has progressed steadily during the year, and satisfactory results have been obtained. No new shafts have been sunk, but those already in existence have been considerably deepened. The system of work carried on under the previous management has been abandoned, and all operations are carried on in accordance with modern European methods. The native workmen have, on the whole, taken kindly to the system adopted, and a number of them are becoming expert in the English methods of sinking, driving, stoping, and timbering. The system of twelve hours' work instead of twenty-four introduced during the previous year has been adhered to, better work being got out of the men in the twelve hours' shift system. During the past few months, by the order of the directors, only necessary work, such as timbering, has been done during the day shift on Sunday.
>
> The plant of the mines has been considerably augmented during the year, and hand labour for raising plumbago, *débris*, or water entirely superseded by steam machinery. Winding plants are working at Kokkumbura and Nakaulketiya ; a new winding engine is in course of erection at Humbuluwa, and the mines are kept free of water by five powerful steam pumping engines. A light tramway has been laid down at Kokkumbura and another at the Nakaulketiya mine for the removal of *débris*.
>
> The timber for the workings is obtained locally, alubo and hora having been decided on as the most suitable woods.
>
> A dynamite store has been constructed in accordance with the published regulations, new cooly lines put up, and a good bungalow erected at Kokkumbura. A freedom from accidents of a serious nature has been enjoyed, and the labour force of about 200 men resident on the mines is contented and fairly stationary.

* * * * *

The speed at which the mining operations are carried out is steadily increasing, and considerable new developments are projected for the immediate future.

No land was leased by Government during the year for mining purposes. The quantity of plumbago raised in the district is unknown. The only available figures show the quantity transported

by rail from the stations on the Seaside line situated within the district, but they do not exclude produce of the Southern and Sabaragamuwa Provinces. They are as follows :—

1900. Plumbago 3rd Class.		1900. Plumbago 6th Class.		Stations.	1901. Plumbago 3rd Class.		1901. Plumbago 6th Class.	
Weight.	Freight.	Weight.	Freight.		Weight.	Freight.	Weight.	Freight.
Tons cwt.	Rs. c.	Tons cwt.	Rs. c.		Tons cwt.	Rs. c.	Tons cwt.	Rs. c.
15 3	26 82	—	—	Panadure ...	1 4	3 16	61 0	108 15
17 8	69 49	581 0	1,475 41	Kalutara ...	13 5	45 27	244 2	641 96
4 17	21 37	48 2	139 51	Paiyagala ...	0 14	1 58	—	—
0 5	1 19	—	—	Beruwala ...	—	—	—	—
—	—	1,244 19	4,425 78	Alutgama ...	7 10	38 87	858 8	3,178 50
37 13	118 87	1,874 1	6,040 70	... Total ...	22 13	88 88	1,163 10	3,928 61

This statement shows the depressed condition of the industry in 1901. Only one case of illicit digging of plumbago on Crown land was reported during the year.

Arrack.—The number of distillery licenses issued in 1901 was 168, as compared with 157 in 1900. The quantity distilled was 908,955½ gallons, an increase of 157,131 gallons on the previous year's total, and of 322,698½ gallons, or 55 per cent., on the total for 1899. The price per leaguer fell from Rs. 230 in January to Rs. 100 in October and November, but rose in December to Rs. 120.

The quantity removed to be exported beyond seas was 42,566½ gallons, as against 53,422 gallons in 1900.

XII.—FOREST ADMINISTRATION.

The following statement shows the revenue derived from Crown forests and credited at Kalutara :—

	1900. Rs. c.		1901 Rs. c.
Fines in Police Courts for forest offences, including theft of Crown timber	150 0	...	719 25
Fines imposed departmentally for forest offences ...	—*	...	782 2
Compensation recovered without prosecution ...	288 2	...	582 45
Sale of confiscated produce	171 85	...	2 60
Sale of drift wood	11 59	...	—
Sale of right to collect timber in rivers ...	—	...	27 0
Timber sold by Assistant Conservator of Forests ...	13,579 12	...	9,979 15
Timber sold by Assistant Government Agent ...	1,338 27	...	1,262 3
Total ...	15,538 85		13,354 50

* Included in timber sold by Assistant Conservator of Forests and Assistant Government Agent.

The decrease under the head Sale of Timber by the Assistant Conservator of Forests has been explained earlier in this report.

I annex a statement of the prosecutions instituted for forest offences and of the cases compounded out of court :—

Police Court.	Cases pending from 1900.	New Cases during 1901			Total Cases.	Disposed of during the Year.						Cases pending at the close of the Year.
		Unauthorized Felling or Removal of Timber.	Illicit Chenaing or Clearing.	Total.		Convictions.		Acquittals or Cases struck off the Roll.		Total.		
						Cases.	Persons.	Cases.	Persons.	Cases.	Persons.	
Kalutara ...	31	23	76	99	130	75	112	37	89	112	201	18
Panadure ...	—	7	—	7	7	5	14	2	2	7	16	—
Total ...	31	30	76	106	137	80	126	39	91	119	217	18
Compositions ...	—	84	153	237	237	—	—	—	—	—	—	—
	31	114	229	343	374	80	126	39	91	119	217	18

In my report for 1900 the number of cases pending in the Police Court of Kalutara at the end of that year was given as 13 ; it should have been 31. Over two-thirds of the cases decided by the Magistrates ended in convictions.

The large increase in the number of cases compounded out of court, *i.e.*, from 53 in 1900 to 237 in 1901, reflects credit on the Mudaliyars of Rayigam korale and Pasdun korale west, who were very active in reporting thefts of Crown timber and cases of illicit clearing of Crown land.

The following observations made by the Assistant Conservator of Forests, Mr. F. Lewis, on his Forest Administration in this district, show a large surplus on the year's operations, and explain why so much of the forest revenue is not credited at the Kalutara Kachcheri :—

The value of timber sold in the Kalutara District in 1901 is as follows :—

Under Departmental Control.	Rs. c.
Timber sold to Road Committees (sawn)	1,093 82
Fuel sold to the Railway	7,861 94
Miscellaneous timber (sawn)	1,479 5
Total Departmentally sold ...	10,434 81

To Applicants direct.	Rs. c.
Sold by the log	20 25
Sold by the cubic foot	4,773 37
Mine props and sticks	395 54
Firewood sold by the cubic yard	3,721 88
Charcoal sold by the bushel	237 49
Bamboos and canes	15 0
Confiscated forest produce sold	712 23
Total value of Wood ...	9,875 76

The fines recovered by the Assistant Conservator of Forests for forest offences credited at Kalutara amounted to Rs. 423·38.

As pointed out in the Administration Report for 1900, the whole of the foregoing is not credited in the Kalutara Kachcheri, as the incidental expenditure on departmental operations is met at Colombo, and hence the sales of wood and fuel cut departmentally being credited there.

The following table shows the actual working of the Forest Department in the district for the year under review :—

REVENUE.	Rs. c.
Sale of wood Departmentally cut ...	2,572 87
Sale of fuel Departmenally cut ...	7,861.94
Timber to applicants	9,163 53
Confiscated wood	712 23
Fines recovered for forest offences...	423 38
	20,733 95

EXPENDITURE.	Rs. c.
Cost of cutting and delivery of timber	1,813 41
Cost of cutting and delivery of fire-wood	6,473 42
Salary of Forest Rangers ...	1,080 0
Salary of Forest Guards ...	80 0
Salary of Forest Watchers ...	595 0
Salary of River Watchers ...	156 0
Travelling allowance paid to Rangers	537 70
Hire of checking station ...	30 0
Cost of repairs to Departmental buildings	250 0
Pay of Udugama bungalow-keeper	36 0
Pay of one tappal cooly allowed to one Forest Ranger ...	120 0
Upkeep of jak plantation at Palatota	341 27
Miscellaneous charges ...	24 25
Cost of salvage of drift wood ...	27 50
Travelling claim for change of station of one Ranger ...	26 16
Total Expenditure ...	11,634 71
Making a surplus of ...	9,099 24
	20,733 95

In addition to the above sum contributed by the Forest Department, a further sum has been credited at Kalutara during the year of Rs. 1,768·88 by recoveries remitted direct. This is composed of the following items :—

	Rs. c.
Timber sold in log	290 80
Posts, props, and sticks	20 55
Firewood	112 0
Confiscated wood sold	717 48
Fines recovered	628 5
Total ...	1,768 88

The surplus to Government by forest revenue therefore for 1901 amounts to Rs. 10,868·12, as compared with Rs. 13,168·16 in 1900, or a decline of Rs. 2,300·04 during the present year. This decline is chiefly due to the great diminution in plumbago mining operations, as will be seen by comparing the value of mine props and quantity of timber sold by the cubic foot in 1901 as set against the same items in the previous year. There has, however, been a considerable increase in sale of firewood, both departmentally as well as by sale to consumers direct, thus :—

	1900. Rs. c.	1901. Rs. c.
Firewood to Railway	4,503 46	7,861 94
Fuel to consumers	1,731 51	3,959 37
Total ...	6,234 97	11,821 31
Deduct cost ...	3,822 92	6,473 42
Result ...	2,412 5	5,347 89

or a nett increase in 1901 on sale of fuel of Rs. 2,935·84.

While the financial result is below that of 190.), it cannot be regarded as unsatisfactory, and it points to a steady demand for forest produce, though the Kalutara forests are notoriously deficient in first class timber.

XIII.—EDUCATION.

Statement of Schools in the Kalutara District (excluding Private Schools).

Management.	Boys.	Girls.	Mixed.	Total.	Average Daily Attendance.
Government ...	35	21	8	64	4,097
Roman Catholic ...	10	7	6	23	2,031
Wesleyan	3	7	14	24	1,079
Church of England ...	1	1	6	8	963
Church Missionary Society...	1	4	—	5	88
Total ...	50	40	34	124	8,258

Nearly half of the school children attend Government schools, and about half the remainder go to Roman Catholic schools, the remaining half being divided almost equally between the Wesleyans on the one hand and the Church of England and Church Missionary Society on the other. The largest increase in attendance has been in the Roman Catholic schools, where, with two more schools than in 1900, the average daily attendance has risen from 1,576 to 2,031. The Korale Mudaliyars have taken an active interest in the Government schools. The geographical distribution of schools is as follows :—

Korale.	Schools.	Population (excluding Estates).	Population to each School.
Totamunes	76	115,719	1,513
Rayigam Korale	25	49,894	1.994
Pasdun Korale West... ...	15	23,330	1,555
Pasdun Korale East... ...	8	24,062	3,008

The last column of this statement shows the urgent need for more schools in Pasdun korale east. It is believed to be the intention of Government to arrange that such a want shall in future be met out of funds raised by a local cess, instead of as hitherto by expenditure out of the general revenue. Much might be done to increase the number of schools in the inland divisions, if a new set of rules under the Village Communities' Ordinance were passed and vigorously applied.

XIV.—VILLAGE COMMUNITIES' ORDINANCE.

This Ordinance is in force, except in the totamunes, but is almost a dead letter. As just stated, new rules are badly wanted.

The only charges brought before a Village Committee Chairman were four in Pasdun korale west, in which 43 persons were prosecuted for failing to perform labour in the construction of Ittapana Government Boys' School. They were acquitted on discharging their liability.

XV.—FOOD SUPPLY.

The chief article of diet is rice. The amount produced locally has been estimated at 258,000 bushels. As this is consumed by the inhabitants of the district, exclusive of immigrant Tamil estate coolies, the average per head was about 1¼ bushel. But there was no scarcity of rice, the deficiency being supplied by imported rice, which varied in price from Rs. 4 to Rs. 6 a bushel. Imported rice is more largely consumed in the totamunes and in Iddagoda pattuwa of Pasdun korale west than in other parts of the district. In Iddagoda pattuwa, where most of the tea estates are situated, it is used by the Tamil coolies, and distributed in part payment for Sinhalese labour on the estates.

Vegetables, especially jak and yams, contribute largely to the food supply of the people, except in the Iddagoda pattuwa, where vegetable cultivation is neglected. The supply in Rayigam korale was very plentiful. Fruit was scarce throughout the district. Near the coast sea fish are consumed, but most of the fish caught are exported from the district. In Rayigam korale river fish were plentiful.

The number of cattle slaughtered on license was 1,511, of which more than one-half was killed by the Kalutara Local Board butchers. No scarcity of food existed at any part of the year.

XVI.—IRRIGATION.

There is little to record under this head. The Thoragala-ela sluice gates were repaired early in the year. One of the sluice gates of Remuna tank was stolen in May, 1900, but, though the cultivators under the tank have agreed to bear the expense of the repairs, a new one had not been provided by the end of the year.

It is very desirable that, in order to facilitate navigation and to diminish flood damages in Pasdun korale, the banks of the smaller rivers should be denuded of overhanging trees, and that logs should be removed from the river beds. If a sufficient supply of labour can be secured, the Government should be asked to vote money to complete the work, begun in 1899, of clearing the banks of the Maguru-ganga between Badureliya and the junction of the Maguru- and Kuda-gangas. No money was available for this purpose in 1900, but towards the close of the year the right to collect for a period of fifteen months drift and sunken timber from Demodara up the Kuda-ganga as far as its junction with the Maguru-ganga, and thence up the latter river to Badureliya, was sold.

The liability of the low-lying paddy fields of Munwattebage pattu to remain flooded, sometimes for weeks together, is a matter that deserves attention.

XVII.—LEGISLATION.

I have no recommendations to make.

XVIII.—WORKS MOST REQUIRED IN THE DISTRICT.

(1) *Residence for the Assistant Government Agent.*—Though money had been voted for the purpose of building a house for the Assistant Agent on the Fort, and plans and estimates were

prepared and a tender for the work was received, Government decided not to begin building during the year. The question of frontage has been settled. No money has been voted for expenditure in 1902. I hope that provision for this building will be made in the Supply Bill for 1903.

(2) *The Construction of a Bridge over the Kepu-ela at Galpata.*—A revised estimate of the cost of this bridge was made by the Public Works Department. It amounts to Rs. 30,444. In 1900 Government offered a contribution of Rs. 10,000. The District Road Committee has decided that it cannot afford to contribute the balance even in instalments, and intends to submit to Government for approval an estimate for a cheaper type of bridge.

(3) *Telegraph Extension from Kalutara to Neboda.* —This extension has at last been sanctioned, and will be proceeded with as early as circumstances permit. It is not anticipated that there will be any difficulty in getting a suitable house erected for use as a Post and Telegraph Office.

(4) *New Resthouse at Moragala.*—Now that the new resthouse at Matugama has been completed, the Provincial Road Committee should erect a substantial resthouse at Moragala to take the place of the temporary building that has hitherto had to serve the purpose.

XIX.—PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

(1) *Roads.*—In my last report I recommended that three sections of minor road should be handed over to the Public Works Department. The most important of these—the Horawala-Moragala section of the road from Horawala to Pelawatta—was transferred to that Department at the end of 1901.

As during the year the road from Badureliya to the boundary of the Province in the direction of Kukulegama was converted from a principal into a minor road, it is unlikely that Government will consent to the transfer of the Matugama-Badureliya road to the Public Works Department till a revival of the plumbago industry has largely increased the traffic that it has to bear.

Under these circumstances the next minor road that should be made a principal one is that from Nagoda to Matugama, on which there is heavy traffic into Kalutara from the heart of Pasdun korale.

During the year the District Road Committee extended the Tebuwana-Narthupana bridle path towards a point on the Kalu-ganga opposite Anguruwatota. This extension should be completed and the path opened for traffic during 1902.

Progress was made during 1901 in the construction of some small bridges on the Indilanda-Anguruwatota village-road through Neuchatel estate. The District Road Committee should build three bridges required on the section between Neuchatel and Anguruwatota, and an attempt should be made, with the assistance of village labour for earthwork, to get this road opened for cart traffic during the current year.

Much village labour was spent in 1901 on earthwork on the Moragala-Bellana village path with a view to its conversion into a cart road, which will connect the two main thoroughfares of Pasdun korale east. The time has now arrived when the District Road Committee should render assistance by constructing the numerous culverts and small bridges that are required.

(2) *Clearing Small Rivers of Vegetation.*—In this report I have already recommended that the clearing of the Magura-ganga should be continued. When this has been done, there are other rivers in Pasdun korale which will deserve similar attention, in order that the duration of floods may be lessened and navigation be facilitated.

(3) *Schools.*—It has not yet been decided by Government how a local cess is to be levied in rural districts with the object of providing money for the construction of schools among other purposes. Meanwhile the Korale Mudaliyars have been very active in improving the existing Government school buildings, notwithstanding the apathy in many cases of the villager. New schools are most wanted in Pasdun korale east, where the population is much scattered. At present there is in that division only one school to every 3,008 inhabitants. It is generally difficult to induce villagers to build new schools at their own expense. But the closing of the Ratmale Girls' School on account of the refusal of the villagers to provide a suitable building affords an opportunity of getting a boys' or mixed school erected at Bulatsinhala, which will serve the Welgama division of Pasdun korale east, where the inhabitants do appear to be ready to erect the requisite building.

(4) *Dispensaries.*—In view of the gradual establishment of dispensaries by private individuals in different parts of the district, it is not advisable that Government money should be spent on the erection of any more dispensaries at present. But most of the extreme eastern portion of the district is still unprovided for. The matter should receive consideration when the levy of the local cess above alluded to has been authorized.

(5) *Cemeteries.*—The cemetery at Alutgama, though in a populous locality, is not full, and it has been decided that it is not to be closed at present. A new general cemetery was opened at Panadure in December. The question as to whether it is necessary to provide new cemeteries in other thickly inhabited villages along the sea coast still requires consideration.

(6) *Postal Facilities.* — Receiving post offices were opened at Tebuwana, Ingiriya, and Migahatenna on 20th May, 1st June, and 1st July, respectively. The much-needed conversion of a receiving office into a post office at Horana has taken place during the current year.

The Neboda coach ceased to carry the mails in November, and the Postmaster-General had to use runners for the rest of the year. It is to be hoped that arrangements will soon be made that will secure the delivery of the mails at and beyond Neboda as quickly as when they were conveyed by coach.

(7) *Village Communities' Ordinance.*—Since rules under this Ordinance for Ravigam and Pasdun korales were passed, the boundaries of these divisions have been altered, and Pasdun korale has been subdivided into two korales, viz., Pasdun korale east and west. It is believed that new rules should be passed for the existing korales. When this has been done, the Ordinance can be properly worked in these inland divisions, and will, in my opinion, be of the greatest benefit to the inhabitants. Labour or money will then be available for the maintenance of village paths, bridges, edandas, and ferries, for the construction and repair of schools, and for the conversion of village paths into roads 12 feet in width.

The difficulties encountered at present in building new schools or in repairing old ones will disappear. The village roads can hereafter gradually be transferred to the charge of the District Road Committee as soon as the traffic on them has sufficiently increased. And, last but not least, the villager will be taught not to look to Government for assistance at every step.

XX.—SANITATION AND HEALTH OF THE PEOPLE.

The year was not as healthy as 1900, except in a portion of Pasdun korale. The following comparative statement shows the number of deaths registered during each month of the years 1900 and 1901 :—

Month.	1900.			1901.		
	Deaths of General Population.	Deaths of Estate Population.	Total.	Deaths of General Population.	Deaths of Estate Population.	Total.
January	525	56	581	568	57	625
February	406	44	450	471	84	555
March	390	34	424	386	79	465
April	316	35	351	371	72	443
May	361	34	395	361	79	440
June	406	41	447	351	76	427
July	337	45	382	357	64	421
August	405	—	405	385	52	437
September	396	77	473	371	59	430
October	401	70	471	381	54	435
November	434	62	496	414	81	495
December	443	156	599	462	97	559
Total ...	4,820	654	5,474	4,878	854	5,732

The Mudaliyars reported 56 cases of smallpox, 131 of chickenpox, and 34 of measles. In January smallpox was imported from Kotmale and Colombo into the totamunes and spread to Rayigam korale and back again to the totamunes. It was quickly suppressed. But no less than six subsequent outbreaks, chiefly in the totamunes, were traced to Colombo. A pilgrimage to St. Anna's Church was responsible for one case imported from the Chilaw District. Rayigam korale was not free from the disease till May, nor the totamunes till October, except during June. There were 38 cases in the totamunes and 18 in Rayigam korale, with 4 and 2 deaths respectively. 103 of the chickenpox cases were in the totamunes, 13 in Rayigam korale, 8 in Pasdun korale east, and 1 in Pasdun korale west. Measles broke out chiefly in Rayigam korale. As soon as any of these infectious diseases made its appearance stringent measures were taken to isolate the patient, and generally the disease, especially in the case of smallpox, did not spread. 160 cases of dysentery were reported, of which 131 occurred in the totamunes, 17 in Pasdun korale west with 4 deaths, and 12 in Rayigam korale.

The next statement shows the number of patients treated in the Government hospitals and dispensaries, and the collections made from them during the year :—

Situation.	Patients.		Collections.	Prescriptions.
	Indoor.	Outdoor.	Rs. c.	Rs. c.
Kalutara	963	7,251	388 17	150 82
Panadure	625	19,586	393 80	148 1
Neboda	845	6,223	132 74	153 83
Beruwala	—	4,552	226 7	28 20
Horawala	—	2,248	84 58	8 16
Moragala	—	1,335	117 65	6 64
Matugama	—	2,120	129 40	—
Horana	—	6,318	322 7	45 29
Bandaragama	—	5,187	418 12	0 50
Total ...	2,433	54,820	2,212 60	541 45

The totals for 1900 were 2,286 indoor patients, 57,084 outdoor patients, collections Rs. 2,651·90, and prescriptions Rs. 341·85. There has been a decrease in attendance at all the dispensaries, except those at Panadure (increase 4,037), Bandaragama (increase 1,183), and Horana (increase 230). The largest decreases were 3,277 at Kalutara, 1,612 at Neboda, and 1,020 at Beruwala. At Kalutara and Beruwala there are private practitioners, and there is also one at Tebuwana, 3 miles from Neboda. Among Sinhalese villagers there has been an increasing disinclination to resort to the Neboda hospital and dispensary. The impression prevails that they exist only for estate coolies. The attendance of villagers at this dispensary has sunk from 4,744 in 1893 to 1,602 in 1901. The villagers should be assured that they will be welcome at *this* dispensary. Elsewhere in Pasdun korale the diminution in attendance is attributed to an increase in public health as well as to the opening of private dispensaries.

Gikiyanakanda and Halwatura estates have their own hospitals, and Rayigama estate has its own dispensary. There is also one on Vogan estate for Iddagoda and Vogan estates, and one on Pantiya for Ambatenna and Pantiya estates.

The total number of births and marriages registered during 1901 was as follows :—

Births	8,688
Marriages	1,769

The Local Board provides for the sanitation of Kalutara town. The scavenging is let out on contract. The construction of cemented cabook drains along the main thoroughfares of the town was vigorously carried on during the year, and should be continued. Some of the public latrines were improved and a new one was erected. Panadure town seems to get on very well without a Local

Board or sanitary rate. The Mudaliyar of Rayigam korale has induced the boutique-keepers of Horana and Ingiriya to maintain a scavenging cooly at each place. Tebuwana, Neboda, Alutgama, and Beruwala would do well to follow suit.

The sanitary condition of the villages is fairly good. All the villages are reported to have a good and plentiful water supply. In accordance with a suggestion made by the Principal Civil Medical Officer in his Administration Report for 1900, special attention was paid during the year to the drainage of swamps and stagnant pools in the neighbourhood of human dwellings in the totamunes, Rayigam korale, and Pasdun korale east.

Precautions continued to be taken against plague. The plague camp built near Kalutara was repaired at the joint expense of Government and the Local Board. In the villages houses were whitewashed and compounds and drains were cleared.

XXI.—CATTLE DISEASE.

The annexed statement gives the number of cases of murrain and hoof-and-mouth disease, and of deaths and recoveries from these ailments :—

Korale.	Number affected.					Deaths.				Recoveries.			
	Hoof-and-mouth Disease.		Murrain.		Total.	Hoof-and-mouth Disease.		Murrain.		Hoof-and-mouth Disease.		Murrain.	
	Buffaloes.	Neat Cattle.	Buffaloes.	Neat Cattle.		Buffaloes.	Neat Cattle.	Buffaloes.	Neat Cattle.	Buffaloes.	Cattle.	Buffaloes.	Neat Cattle.
Kalutara and Panadure Totamunes	—	12	—	28	40	—	—	—	18	—	12	—	10
Rayigam Korale ...	489		41	98	628	2		30	72	487		—	26
Pasdun Korale West ...	200	47	—	—	247	109	27	—	—	91	20	—	—
Pasdun Korale East ...	853	474	—	—	1327	75	53	—	—	778	421	—	—
Total	1,053	533	41	126	1,753	184	80	30	90	869	453	11	36

Throughout most of the year there was hoof-and-mouth disease of a mild type in Rayigam korale. The few totamune cases occurred early in the year. In Pasdun korale west there were a few cases in February and a bad outbreak in September, which lasted through October. In Pasdun korale east the disease appeared in a mild form in April and disappeared in the following month. Cases also occurred in October and November in this korale.

Murrain broke out in January in a few villages of the totamunes and of Rayigam korale. These divisions were not free from the disease till March and May respectively. No cases occurred in Pasdun korale. The infection was generally traced to Colombo, where it would be well if effective segregation of Coast cattle on their arrival in the Island could be provided for. Each outbreak was vigorously dealt with by the Korale Mudaliyar, who secured the isolation of the diseased animals, and thus prevented the disease from spreading. Inoculation was practised by Stock Inspectors of the Veterinary Surgeon's Department, whose visits to the infected areas were useful.

XXII.—REGULAR POLICE.

The regular police force consists of one sergeant-major, one sergeant, and twenty-two constables, stationed as follows :—

	Sergeant-Majors.	Sergeants.	Constables.
Panadure	1	—	6
Kalutara South ...	—	1	11
Kalutara North ...	—	—	5

This force works under the Assistant Government Agent, and is inspected periodically by the Assistant Superintendent of Police. In my last report I pointed out that this arrangement did not work well. On the promotion of Sergeant Jayen of Panadure to the rank of Sergeant-Major in April, control over all the police in the district was given to him, and he paid frequent visits of inspection by day and night to the Kalutara stations. This arrangement provided the Kalutara Police with closer supervision than hitherto, and should be continued until the Government consents to add to the force an Inspector, who should live at Kalutara and hold the office of Inquirer into Crime. A system of night patrols from Kalutara north to Kalutara south was started during the year, and worked well. It afforded more protection to outlying parts of the town than they had previously enjoyed. On the occurrence of outbreaks of smallpox in the villages police were always employed to secure the isolation of patients. The following rewards were given to policemen for specially good work :—

Sergeant-Major M. Jayen received Rs. 20·50 for special intelligence, pluck, and courage in connection with Panadure P. C. Case No. 11,386.

Police Constable W 3 Babun Appu obtained (1) Rs. 10 for unusual courage in tackling, with the help of P. C. W 51, an armed man, who had shortly before stabbed a police constable (Kalutara D. C. Case No. 1,129); (2) Rs. 10 for special courage in arresting the accused in Kalutara P. C. Case No. 10,277; (3) Rs. 5 for special zeal, while off duty, in arresting the accused in Kalutara P. C. Case No. 10,968, who was armed with a club.

Police Constable W 5 D. Lawrence Appu received Rs. 10 for special zeal in arresting the accused in Kalutara P. C. Case No. 11,432.

Police Constable W 8 Juwanis Appu was awarded Rs. 25 for arresting, with the assistance of Police Constable W 63, outside police limits, a dangerous rowdy, who had been evading arrest on a warrant in Panadure P. C. Case No. 11,048.

Police Constable W 45 P. D. de Silva was given Rs. 9 for special pluck and courage in connection with Panadure P. C. Case No. 11,386.

Police Constable W 51 Ahamadu received Rs. 10 for his share in the arrest of accused in Kalutara D. C. Case No. 1,129 above referred to.

Police Constable W 63 S. Kachie was given (1) Rs. 25 for his share in the arrest of the dangerous rowdy above mentioned (Panadure P. C. Case No. 11,048); (2) Rs. 9 for special pluck and courage in connection with Panadure P. C. Case No. 11,386.

Police Constable W 66 A. Askin obtained Rs. 9 for special pluck and courage in connection with the same case.

Police Constable W 73 Siyadoris was awarded Rs. 5 for special zeal, while on small-pox duty, in seizing a stolen hackery and bull at night and in giving information that led to the arrest of the thieves.

Police Constable W 74 S. Hamido received Rs. 20 for unusual zeal in attempting to quell a brawl. In the attempt he was stabbed in the arm (Kalutara D. C. Case No. 1,129).

XXIII.—RURAL POLICE.

In my report for 1900 I explained that the district is divided into 247 Police Vidanes' divisions, each of which bears a number, and consists of one or more villages. The numbers in the Kalutara District run from 604 to 850, and are applied to divisions in geographical order. They conveniently distinguish villages bearing the same name from one another, and for police purposes are very useful. The Police Vidanes and their supervisors, the Vidane Arachchies and the Korale Mudaliyars, form, with Inquirers, the rural police. The minor headmen and Inquirers do not receive salaries, but their expenses in attending court and Kachcheri and in arresting and producing criminals are refunded to them. The sum so paid for 1901 was Rs. 4,486·86. They also receive money rewards for good work. It is the duty of the Police Vidane to make inquiry on the spot on receiving information that a serious crime has been committed, to make a report to the Magistrate on the subject, whether the crime has been committed or not, and to send a copy of this report to the Inquirer into Crime, who, whenever instructed by the Magistrate, holds a further inquiry. The crime report is forwarded immediately after receipt by the Inquirer to the Korale Mudaliyar, who sends a translation of it at once to the Kachcheri. The Police Vidane has also to arrest all persons charged with cognizable offences without delay, or, if they cannot be found, must give such information in his crime report and subsequently as will enable them to be traced by the Inquirer, Vidane Arachchi, Mudaliyar, Assistant Government Agent, and Magistrate. Where necessary, a full description of the accused is forwarded from the Kachcheri for publication in the "Hue and Cry," and in special cases the permission of the Government Agent is obtained for the offer of a reward for his arrest. In such cases printed reward notices are published throughout the district. The Police Vidane retains in a book a copy of each of his crime reports. These are periodically inspected by the Mudaliyar. The Vidane Arachchi, who is also expected to examine them, has hitherto, with some exceptions, not performed this duty as diligently as he ought to do. But the Mudaliyar brings pressure to bear again and again on his minor headmen to secure the arrest of any person wanted on warrant by the Magistrate. The Assistant Government Agent also inspects every crime report periodically on circuit, punishing the headmen for neglect of duty, and rewarding them for good work, and there is no peace for these village police as long as a person required on warrant is at large. With the production of the accused and of the evidence for the prosecution before the Police Court the Assistant Government Agent's work is at an end. There is no interference with the work of the Magistrate, and consequently no friction between court and Kachcheri. On the whole, crime reports have been promptly forwarded to court and Kachcheri, and much good police work has been done by the headmen. For services performed in 1901 they received money rewards, amounting to Rs. 2,577.

The fact that in only 9 cases of serious crime instituted during the year no accused wanted by the Magistrate has been arrested shows how well the present system has worked. The following special rewards to headmen were given at the end of the year :—

For Good and Long Service.

Name.	Rs.
Prolis de Silva Gunasekara, Vidane Arachchi of Kalutarabadda ...	30
Harmanis Peiris Gunatilaka, Police Vidane (680)	50
Richard Johannes Fernando Gunawardenesuriya, Police Vidane (688)	30
Ismail Lebbe Marikar Omaru Lebbe Marikar, Police Vidane (776)	30
Kalubowilage Don Harmanis Gunatilaka, Vidane Arachchi of Kalupahana	20
Waddiwage Don Salmon, Vidane Arachchi of Kumbuke division ...	15
R. Davit Silva, Police Vidane (668)	15
Haputantirige Don Baron Sinno, Police Vidane (617)	15
Amaratunge Don Juwanis, Police Vidane (631) ...	15
Kalawila Patirage Don Andris, Vidane Arachchi of Migama division	20
Massalage Don Girigoris, Police Vidane (784) ...	10
Katiriarachchige Don Karaneris, Police Vidane (798)	10
Don David Wijegoonawardene, Vidane Arachchi of Welgama division	20
Wappochi Lebbe Isi Lebbe, Police Vidane (836)	15

For Good Service.

Mapitiyage Adrian Peiris Wijesinha, Vidane Arachchi of Panadurebadda	30
Gamage Sadoris Perera, Police Vidane (701)	30
Gikiyanage Don Sadiris Karunaratne, Vidane Arachchi of Horana division	15
Don Harmanis Gunatilaka, Vidane Arachchi of Kalupahana division	15
Pella-arachchige Elias Perera, Police Vidane (646) ...	15
Pahalage Elias Perera, Police Vidane (647)	15
Don John Sinho, Police Vidane (771)	10
John Wijeratne Kotalawala, Police Vidane (799)	10
Kapuliyanage Don Pedrick Carolis, Police Vidane (806)	10
Samaraweeramudalige Don Joronis de Alwis, Police Vidane (808)...	10
Gamage Don Charles, Vidane Arachchi of Bellana division ...	15
Don George Weerakkody, Vidane Arachchi of Warakagoda division	15
Amugodakankanange Don Cornelis, Police Vidane (831) ...	15

During the year the Vidane Arachchi of Bellapitiya division and Police Vidanes 662 and 839 were dismissed from office.

The Vidane Arachchi of Pelpola, Don Sadris Perera Gunatillaka, an energetic headman, and the following Police Vidanes: Siyadoris Perera (Police Vidane 645), Don Allis Perera (Police Vidane 649), Rankoluwage Frederick Marthos (Police Vidane 725), Amaris Perera Senewiratna (Police Vidane 731), died in office.

The following statement shows the number of inquiries held by the Inquirers into Crime (excluding the Korale Mudaliyars and Totamune Muhandiram) during the last four years :—

Name of Inquirer.	1898.	1899.	1900.	1901.
G. P. Gunaratna, Rayigam Korale ...	—	22	111	79
James Kuruppu, Panadure Totamune ...	6	77	50	65
D. F Jayawardane, Kalutara Totamune ...	12	76	58	28
Charles van Royen, Kalutara Totamune ...	—	—	27	12
D. H. Munasinghe, Pasdun Korale West ...	13	23	45	33
G. Wijeyasundara, Pasdun Korale East ...	23	26	18	19
Total ...	54	224	309	236

The figures for 1901 appear to indicate that the Kalutara Magistrates thought it better where possible to hold inquiries themselves than to delegate the power to their subordinates. With one or two exceptions, the Inquirers have, I believe, only been useful during the year in enabling Magistrates to arrive at a conclusion as to whether serious offences alleged to have been committed by unknown persons were or were not actually committed. The work of Mr. D. F. Jayawardana and that of Mr. James Kuruppu, Inquirers of Kalutara and Panadure totamunes respectively, have been appreciated by the Magistrates under whom they worked.

The services of Mr. G. P. Gunaratna were discontinued in August. He was succeeded as Inquirer by Mr. G. P. Perera, retired Muhandiram of Rayigam korale.

XXIV.—SERIOUS CRIME.

The following return shows the distribution according to villages of serious crime, under which term are included homicide, grievous hurt, hurt with a dangerous weapon, robbery, house-breaking, arson, rape, abduction, cattle theft, riot, unlawful assembly, serious assault, and theft of property exceeding Rs. 20 in value :—

Statement showing the Number of Serious Offences reported to the Magistrate and decided within the Year, the Number found to have been committed in the different Villages, the Number which have and have not been punished, and the Tax-paying Population of the Villages.

Division.	Serious Offences reported to Court.	Found		Number of Villages and Offences committed in each		Total Offences.	Of these		Tax-paying Population.	Villages with Eight or more Offences.
		Not to have been committed.	To have been committed.	Villages.	Offences.		Punished.	Unpunished.

				1	12	12	3	9	688	Talpitiya, 697
				1	14	14	5	9	986	Welapura Kalutara, 725
				1	16	16	1	15	302	Remuna, &c., 650
				1	18	18	3	15	1,179	Desestara Kalutara, 717
				1	21	21	3	18	466	Horana, &c., 615
Total ...	1,049	493	556	247	—	556	195	361	50,541	

It will be observed that in more than a quarter of the villages inhabited by nearly one-sixth of the tax-paying population there has been no serious crime, and that in 164 villages inhabited by more than half the tax-paying population only 149 such crimes have been committed. It follows that in about one-third of the villages, containing less than one-half of the population, nearly eight-elevenths of the crime has occurred. As in 1900, the greater part of the district was comparatively free from serious crime.

The figures for villages with eight or more offences show that more than one-fifth of the crime was committed in nine villages inhabited by a little more than a tenth of the entire tax-paying population. Six of these villages are in, or in the neighbourhood of, the towns of Kalutara and Panadure.

The Police Vidane's division that is responsible for the largest number of serious crimes is that numbered 615, consisting of Horana, Wewala, and Mahena. Twenty-one crimes are found to have been committed, *i.e.*, an average of one to every twenty-two taxpayers. Horana is situated at an important road junction, and is the resort of scoundrels from other villages and districts. The village had a bad crime record in 1900. It is proposed to appoint one or two special village constables to keep this troublesome place in order. The Korale Mudaliyar will continue to live in its immediate vicinity.

Comparing this return with the similar one for 1900 given in the Administration Report for that year we have the following figures :—

	1900.	1901.
Serious offences reported to court	953	1,049
Found not to have been committed	355	493
Found to have been committed	598	556
Punished	215	195
Unpunished	383	361
Taxpaying population	54,532	50,541
Villages with eight or more offences	11	9

Though the number of alleged offences reported to court is larger by 96 than in 1900, the number found to have been committed is less by 42. In both years the percentage of convictions to offences committed lies between 35 and 36. The apparent decrease in the tax-paying population is due to the fact that persons who have been exempted from payment of tax or who have died or have left

the village have been properly omitted from the tax-paying population of 1901. These omissions were inadvertently not made in the return compiled for 1900. The distribution of crime through the villages was much the same as in 1900. The volume of serious crime has not increased during the year. It has probably slightly decreased:

The next return discloses the comparative criminality of Mudaliyars' divisions :—

Statement showing the Tax-paying Population and Number of Serious Offences found to have been committed, punished, and unpunished in each Korale, with the Proportion of Offences to Tax-payers and the Number of Taverns and Distilleries and the Number of Tax-payers to each Tavern.

Division.	Total Tax-paying Population.	Total Offences committed.	Punished.	Unpunished.	Number of Offences per 1,000 Tax-payers.	Percentage of punished to Total Offences committed.	Number of Tax-payers to each Offence	Taverns.	Distilleries.	Number of Tax-payers to each Tavern.
Rayigam Korale	12,341	209	54	155	16·9	25·8	59	20	—	617
Kalutara and Panadure Totamunes ...	27,230	254	95	159	9·3	37·4	107	39	166	698
Pasdun Korale West	5,397	59	28	31	10·9	47·5	91	6	2	899
Pasdun Korale East	5,573	34	18	16	6·1	52·9	164	7	—	796
Total ...	50,541	556	195	361	11·0	35·1	91	72	168	702

A comparison of column 6 of this return with the same column of the similar return for 1900 shows that there has been no alteration in the relative criminality of the divisions :—

	Number of Offences per 1,000 Tax-payers.	
	1900.	1901.
Rayigam Korale	14·4 ...	16·9
Pasdun Korale West	11·3 ...	10·9
Kalutara and Panadure Totamunes	10·2 ...	9·3
Pasdun Korale East	6·9 ...	6·1
Kalutara District ...	11·0	11·0

The figures given for 1900 are slightly lower than they would be if the tax-paying population had been calculated in the same way as in 1901.

It will be seen that serious crime has decreased in all the divisions, except Rayigam korale, where it is not only abnormally prevalent, but has increased considerably since 1900.

The following figures demonstrate that this pre-eminence in crime is largely due to cattle theft, and that cattle theft forms a large part of the serious crime of each division :—

	Number of Offences per 1,000 Tax-payers in 1901.	
	Excluding Cattle Theft.	Including Cattle Theft.
Rayigam Korale	10·2 ...	16·9
Pasdun Korale West	7·9 ...	10·9
Kalutara and Panadure Totamunes	7·9 ...	9·3
Pasdun Korale East	5·2 ...	6·1

It has been decided to transfer the post of Korale Muhandiram from the totamunes to Rayigam korale for the purpose of strengthening the Police Administration of the latter korale.

As in 1900, a comparison of column 6 with column 7 of the above statement shows that in the korale where the percentage of crime per thousand tax-payers is lowest the percentage of convictions is highest, and *vice versâ*; and the last column shows that, though the most criminal division is the one which has the largest number of taverns in proportion to the tax-paying population, the division that ranks next in criminality has the smallest number.

As regards distilleries, there are none in the most criminal division, almost all of them being in the division which, though containing an exceedingly dense population, is, with the exception of thinly-populated Pasdun korale east, the least criminal. As was the case in the preceding year, the distribution of taverns or distilleries does not appear to have appreciably affected the volume of serious crime. Whether any connection can be established between the existence of taverns or distilleries and serious crime of any particular kind is another question.

The following statement based on the Magistrates' quarterly returns distinguishes cognizable offences reported during the year into (1) those against person punishable under the Penal Code; (2) those against property punishable under the Penal Code; (3) other offences punishable under the Penal Code and other Ordinances. It does not agree with the village return given above because (1) it includes cognizable offences which do not come under the head of serious crime; (2) it does not

show, as regards trials in the higher courts, whether the cases ended in convictions or acquittals or were pending at the end of the year, or whether, in the case of acquittals, the offences charged were found to have been committed or not :—

	Offences reported to Magistrate.	Offences found by the Magistrate not to have been committed.	Offences not found by the Magistrate not to have been committed.	Offences punished by Magistrate or committed for trial to Higher Court.	Offences unpunished by Magistrate.	Percentage of Offences punished or committed for trial to Total Offences not found by the Magistrate not to have been committed.	Percentage of unpunished Offences to Total Offences not found by the Magistrate not to have been committed.

Total ...	242	281	1	97	33	2	10	36	150	219	271	1,342

The statement shows that out of 1,342 offences reported to the Magistrates 524 were found not to have been committed. This leaves 818, of which—

There were committed to higher Courts	130
Offenders dead or insane	2
Offences compounded with the leave of the Court	36
Convicted in Police Court	271
Total ...	439

leaving a balance of 379 cases in which the offender escaped punishment. These are divided as follows:—

Cannot be arrested	10
Evidence insufficient for conviction	150
Offender unknown	219
Total ...	379

The figure under the head "Cannot be arrested" is that of the number of cases in which the accused were still un-arrested when the quarterly return was compiled. At least one of these men appeared before court later in the year. A large number of acquittals is inevitable where witnesses are so prone to commit perjury. They can do so without much fear of punishment, as this offence is generally a difficult one to prove.

Out of the 219 cases in which the offender has remained unknown, only 2 are for offences against the person. In at least one of these cases there is reason to believe that the injured person knew who the offender was, but refused to give any information on the subject. Out of the remaining 217 cases, all except 5 are for offences against property. Classifying these we find :—

Penal Code Section.	Offence.	Cases.
367 ...	Theft	4
368 ...	Theft of cattle and prædial produce, almost entirely the former ...	63
369 ...	Theft from a dwelling-house	13
380 ...	Robbery	4
419 ...	Arson	4
443 ...	House-breaking (generally burglary)	124
	Total ...	212

The steps that are being taken with the object of making it more difficult for the cattle thief to part with his booty without fear of detection are mentioned later in this report.

Burglary thrives because the chance that the offender is identified is so small. Out of 232 cases of alleged burglary, the Magistrates found that in 66 no offence had been committed. This leaves 146 cases, out of which 17 were committed for trial to higher courts, and 25 were disposed of in the Police Court, 21 ending in acquittals and only 4 in convictions. In all the remaining cases the offenders were unknown, This is no matter for surprise, considering how easy it is for a burglar to break into a village house and how little trouble the villager takes to keep his valuables in as safe a place as possible, or even to ensure that his house shall never be left uninhabited at night. Burglary is likely to flourish as long as the villager is so careless, or until some plan is devised that will give him protection without unduly harassing him.

In Kalutara town a system of police patrols by night was started during the year. It affords some protection against burglars to a larger portion of the town than had hitherto been covered by police beats.

The return shows that the percentage of offences committed against the person in which the offender escaped punishment in the Police Court or committal for trial before a higher court was as low as 16.

In comparing this return with the similar one for 1900, I must mention that the latter included the few offences reported from that part of Salpiti korale which lies within the jurisdiction of the Panadure Magistrate. The figures for 1901 properly exclude them.

Though the number of reports of cognizable offences alleged to have been committed which reached the Magistrates in 1901 exceeded those of the previous year by 89, the offences not found by them not to have been committed were only greater by 10. The offences punished by them or committed for trial to higher courts were more numerous by 25. As regards crimes against the person, the percentage of offences punished was the same as in 1900, viz., 84, but in the case of offences against property it was 23, as compared with 27 in the preceding year.

The number of offences against property was 472, as compared with 542 in 1900, the number of burglaries and cases under section 368 of the Penal Code (almost exclusively cattle thefts) being 171 and 143, as against 212 and 164 in 1900. In 63 cases under section 368 the offender was unknown, the figure for 1900 being 54. One hundred and twenty-four burglars remained unknown, as compared with 168 in 1900.

As regards all cognizable offences, the number of cases in which offenders remained unknown was 219, as compared with 256 in 1900.

The most satisfactory feature of this return is the maintenance of the high percentage, viz., 84, of convictions for crimes against the person.

The next return is that of homicides.

Homicide Return.

[In the cases marked (*a*) the injured person was conveyed to hospital and died there on the date given in column 3.]

No.	Village and Number of Village.	Offence committed.	Body discovered.	Accused apprehended.	Date of Inquest.	Magisterial Inquiry commenced.	Committed or discharged.	Date of Final Trial.	Result.	Punishment.	Instrument used.	Probable Motive.	Attributable to Liquor or not.	Circumstances.

1	Maswila, 663 ...	Feb. 24, 11 A.M.	March 24 (*a*)	Feb. 24	March 24	Feb. 24	April 23	Sept. 12	Acquitted as insane	Sent to the Lunatic Asylum	Paddy pounder	Accused insane	No	The accused, a lunatic, all of a sudden belaboured his grandmother on the head with a paddy pounder, muttering that he was showing her the shortest way to a better world. The injured woman died in hospital a month after the assault.
2	Horawala, 794 ...	Feb. 27, 9 A.M.	Feb. 27	Feb. 28	Feb. 28	Feb. 28	March 16	April 18	Convicted	Death by hanging	Dagger	Anger	No	On 27th February, 1901, Police Vidane No. 734 seeing accused in P. C., Kalutara, case No. 10,489, on the road, called him. As the man approached the Police Vidane attempted to arrest him. He thereupon tried to stab the Police Vidane. The latter's brother Vitanage Baron then attempted to seize the accused, who stabbed Baron in the chest. The injured man fell and died immediately.
3	Madinakanda, 737	March 2, 9 A.M.	March 6 (*a*)	March 4	March 6	March 2	April 1	Aug. 9	Convicted	7 years' rigorous imprisonment	Gun	Anger	No	The deceased, on going to the house of the accused to remonstrate with them about a loss that arose from gambling, was shot in the stomach. He died in hospital.
4	Karannagoda, 811	March 20, 2 P.M.	March 20	March 20	March 21	March 21	May 18	July 30	Convicted	10 years' rigorous imprisonment each	Axe	Anger	No	On the occasion of the felling by both accused of a jak tree claimed by them and by the deceased an altercation arose, in which one of the accused cut the spine of the deceased with an axe.
5	Ihala Neboda, 806	April 11, 8 A.M.	April 11	April 11	April 12	April 12	June 1	Aug. 6	Convicted	10 years' rigorous imprisonment	Knife	Anger	No	The deceased had an altercation with the accused because the latter had charged the former with giving information against him regarding the illicit sale of toddy. In the course of the quarrel the accused stabbed the deceased in the chest with a knife, chased him, and stabbed him again in the neck. The injured man fell on the road and died immediately.
6	Marakkalahawatta, 747	May 22, 2 P.M.	May 29 (*a*)	May 22	May 29	May 23	June 29	Aug. 15	Convicted	5 years' rigorous imprisonment	Iron bar	Revenge	No	Owing to the refusal earlier in the day of the deceased, a toddy-drawer, to give some toddy to accused, the latter quarrelled with the deceased and struck him on the head with an iron rod. The injured man died in hospital.

7	*Mahayala, 634* ...	*June 30, 5.30 P.M.*	*June 30*	*June 30*	July 2	July 2	Aug. 7	Oct. 16	Convicted	10 years' rigorous imprisonment	Knife	Anger	No	When the accused was on his way to court to answer a charge of cattle theft, the deceased, a relative of the complainant in the case, seized the accused by the hair, knocked him down, and kicked him on the ground. Thereupon the accused stabbed the deceased several times. The injured man died at once.
	Walagedara, 773 ...	July 11, 4 P.M.	July 13 (*a*)	July 11	July 13	July 12	Aug. 3	Oct. 21	Convicted	Death by hanging	Knife	Anger	No	When the deceased was walking along the road from Alutgama to Matugama, the accused tried to snatch his umbrella. As the deceased resisted, the accused stabbed him in the stomach. The injured man died in hospital.
								1902.						
9	Uduwa, 614 ...	Aug. 26	Aug. 28	Aug. 26	Aug. 27	Aug. 27	Oct. 19	March 6	Convicted	One accused was sentenced to 1½ years' rigorous imprisonment, another died in jail before the trial	Katties and clubs	Anger	No	In a dispute about the right to reap a crop, in which several persons on both sides were hurt with clubs or katties, the deceased sustained injuries from which he died on the way to hospital.
								1901.						
10	Potuwila, 740 ...	Aug. 30, 7 P.M.	Sept. 2 (*a*)	Aug. 31	Sept. 2	Aug. 31	Sept. 23	Oct. 22	Convicted	Death by hanging	Knife	Anger	No	The accused, who had for four months been evading arrest on a charge of stabbing his wife, suddenly returned to the village and stabbed her in the stomach. She died in hospital.

In every case of homicide the offenders have been arrested. In three cases the murderers were hanged. In six, sentences of imprisonment varying from eighteen months to ten years were passed. In the remaining case the accused was acquitted on the ground of insanity and was sent to the Lunatic Asylum. In seven out of the ten cases a knife or other sharp cutting instrument was used. In one case the victim was shot. Only two of the offences were connected with land disputes. None of these crimes were committed by persons in a state of intoxication.

A monumental brass plate has been affixed at the Kachcheri by the Government in commemoration of the brave conduct of Vitanage Baron, the victim of the Horawala murder.

The distribution of homicides in 1900 and 1901 was as follows :—

	1900.	1901.
Rayigam Korale	2	3
Kalutara and Panadure Totamunes	7	3
Pasdun Korale West	3	3
Pasdun Korale East	2	1

It is satisfactory that the number of homicides has fallen from 16 in 1899 to 10 in 1901, and that none of the offenders of 1901 have escaped punishment.

The following statement shows on the A B C classification the number of reports in which injuries by a knife or other sharp cutting instrument are alleged to have been inflicted :—

Division.	A.	B.	D. + A.	D. + Ff.	E. + Ff.	F. a	F. b	F. d	F. e	F. f	Pending.	Total.
Rayigam Korale	11	3	—	1	1	—	—	4	—	14	7	41
Kalutara and Panadure Totamunes	18	36	2	7	2	1	1	9	2	41	15	134
Pasdun Korale West	3	9	—	3	3	—	—	4	—	10	5	37
Pasdun Korale East	2	1	—	3	2	—	—	1	—	2	1	12
	34	49	2	14	8	1	1	18	2	67	28	224

Deducting from this return the columns A, B, D + A, and "Pending," the remainder gives the number of such offences found to have been committed, thus :—

Division.	Punished.	Unpunished.	Total.
Rayigam Korale	16	4	20
Kalutara and Panadure Totamunes ...	50	13	63
Pasdun Korale West	16	4	20
Pasdun Korale East	7	1	8

In two out of the twenty-two unpunished crimes the offender remained unknown to the police. In only one case has a man charged with such an offence escaped arrest. Offences of this nature number six more than in 1900. The percentage of convictions to offences committed is 80, as compared with 56 in 1898, 64 in 1899, and 84 in 1900. The 63 cases in the totamunes may be subdivided thus :—

Division.	Punished.	Unpunished.	Total.
Kalutara Totamune	32	6	38
Panadure Totamune	18	7	25

It will be seen that the percentage of convictions is lowest in the Panadure totamune, where in 1900 every such crime was punished. Kalutara totamune, which contains 30 per cent. of the tax-payers of the district, is responsible for 34 per cent. of these crimes, as compared with 62 per cent. in 1900. In Pasdun korale west, with little more than a tenth of the tax-paying population, 18 per cent. of the offences were committed, as compared with 20 per cent. in 1900.

In this division offences committed against the person with a knife or other sharp cutting instrument were most numerous in proportion to the tax-paying population. In the same division taverns are proportionately least numerous, and there are only two distilleries; but let us examine the figures for the totamunes, where almost all the distilleries and a number of taverns slightly above the average are situated, and which, in respect of offences of this kind, is, next to Pasdun korale west, the most criminal division of the district.

In this division 63 such offences were committed in forty villages, which contained 107 distilleries and 22 taverns, and were inhabited by 14,060 tax-payers, *i.e.*, a little more than half the total number of tax-payers. The remaining sixty-one villages, containing 59 distilleries and 17 taverns, were therefore free from such crime. The forty villages in which the offences occurred may be classified thus :—

	No. of Villages.	No. of such Offences.	Tax-paying Population.	No. of Tax-payers to each such Offence.
Villages in which there was no distillery or tavern ...	10	13	1,817	140
Villages in which there was at least one distillery, but no tavern ...	10	21	2,599	124
Villages in which there was at least one tavern, but no distillery ...	8	12	3,300	275
Villages in which there was at least one distillery and one tavern ...	12	17	6,344	373
Total ...	40	63	14,060	223

The last column of this statement shows that in these forty villages such crime was commonest where there was at least one distillery but no tavern, and rarest where there was at least one distillery and one tavern, and that it was nearly twice as prevalent in villages without a tavern or distillery as in villages with at least one tavern but no distillery. Classifying the 101 villages of the totamunes in the same way, we have :—

	No. of Villages.	No. of such Offences.	Tax-paying Population.	No. of Tax-payers to each such Offence.
Villages in which there was no distillery or tavern ...	43	13	7,949	611
Villages in which there was at least one distillery, but no tavern ...	21	21	5,634	268
Villages in which there was at least one tavern, but no distillery ...	18	12	5,605	467
Villages in which there was at least one distillery and one tavern ...	19	17	8,042	473
Total ...	101	63	27,230	432

The last column shows that in the 101 villages such crime was commonest in villages in which there was at least one distillery but no tavern, and rarest where there was neither tavern nor distillery. In the villages where there was at least one distillery and one tavern the proportion of offences to tax-payers was below the average.

These figures do not establish any connection between the distribution of distilleries and taverns and the existence of crimes committed with a knife or other sharp cutting instrument. But it is probable that a perusal of the 63 Police Court cases would show how many of these crimes were actually attributable to the consumption of liquor obtained at a tavern or distillery.

The District Judge and the Police Magistrates continue to make little use of their power to prohibit convicts from wearing a knife after their discharge from jail. Such orders were made in only 7 cases during the year. It is probable that the prohibition has little or no effect.

The next statement shows the distribution of alleged cattle thefts reported to the Magistrates during the year:—

Division.	A.	B.	D. + B.	D. + F*.	D. + F†.	E. + F†.	F.				Pending.	Total.	Number of Cattle Thefts committed per 1,000 Tax-payers.
							b	*d*	*e*	*f*			
Rayigam Korale	19	2	3	—	—	1	2	35	31	14	14	121	6·7
Kalutara and Panadure Totamunes ...	11	24	—	1	1	—	2*	9	21	5	8	82	1·4
Pasdun Korale West	3	25	—	—	—	—	—	7	8	1	5	49	3
Pasdun Korale East	5	28	—	—	—	—	—	2	1	2	6	44	·9
	38	79	3	1	1	1	4	53	61	22	33	296	2·8

* The accused person in one of these cases surrendered before the end of the year.

Deducting A, B, D + B, and "Pending," the cattle thefts found to have been committed were as follows:—

Division.	Punished.	Unpunished.	Total.
Rayigam Korale ...	15	68	83
Kalutara and Panadure Totamunes ...	6	33	39
Pasdun Korale West ...	1	15	16
Pasdun Korale East ...	2	3	5
Total ...	24	119	143

The cattle thefts found to have been committed only exceed in number those of 1900 by one, but the percentage of convictions to offences committed has fallen from 27 in 1900 to 17 in 1901. Out of the 143 cases, there were no less than 61 in which the offender remained unknown, and in 53 more the evidence was insufficient to secure conviction. This is unsatisfactory, but it is worth noting that out of 129 cases that came before the Police Magistrates of Kalutara they found that in 88 cases no offence had been committed, and out of the remainder they only acquitted the accused for want of evidence in 13, and found that in 22 cases there had been an offence, but that the offender was unknown; whereas the Police Magistrate of Panadure, who dealt with 134 cases, came to the conclusion that in only 29 cases no offence had been committed, and out of the remainder recorded acquittals in no less than 43 cases, and found that in as many as 39 cases an offence had been committed, though the offender was unknown. It is very probable that if the Panadure cases had been tried by the Kalutara Magistrates, one of whom was an officer with over twenty-two years' judicial experience, they would have come to the conclusion that no offence had been committed in many cases in which the Panadure Magistrate held the opposite opinion.

It is nevertheless a fact that in Rayigam korale, which is within the latter's jurisdiction, cattle theft is peculiarly rife. It reflects credit on the Korale Mudáliyar, Mr. J. V. G. Jayawardana, that in 29 per cent. of the cases tried by the Magistrate convictions were secured.

As stated in my report for 1900, the neglect of the villagers to take proper care of their cattle, and the facility with which the animals can be removed at night across the Kalu-ganga into another korale or across the boundary of the Kalutara District into another district, enable the cattle thief to evade detection. I am glad to say that in many of the Rayigam korale cases the animal was recovered.

During the second quarter of the year certificates of ownership were issued under rules framed under Ordinance No. 10 of 1898 for all acquired cattle the owners of which had not already such documents in their possession, and animals with defaced brandmarks were branded with steel brands that denoted the korale to which they belonged. The number of certificates so issued amounted to 2,053.

Under the same rules it is now intended to compel the production of all cattle claimed to have been acquired, but for which the possessors hold no certificates, and to sell all such animals as the possessors cannot show to have been legally acquired. It is now an offence to possess an acquired head of cattle without a certificate or a certificate without the animal to which it relates. There is reason to believe that most of the cattle stolen hitherto were not slaughtered, but were sold at lower prices than if the vendor had held a cattle voucher showing how he acquired the animal. It will be interesting to note whether cattle theft is diminished by this attempt to render the possession of stolen cattle dangerous. Everything depends on the activity of the village headmen in compelling the production of uncertificated cattle.

XXV.—CENSUS.

The Decennial Census was taken on the night of 1st March. It was preceded in February by a Preliminary Census, which contributed largely to render the Final Census accurate. I believe that a very close approximation to the actual population of the district was obtained. In a special report made to the Superintendent of Census I have examined the figures in some detail. Here it will be sufficient to place on record the following facts.

The total population of the district increased during the decade from 183,717 to 230,045 persons, i.e., by 25·2 per cent. The population, exclusive of that of estates and shipping, rose from 179,442 to 212,955 persons, an increase of 18·7 per cent. The estate population increased from 4,190 to 16,974, i.e., by 305 per cent.

The inhabitants of Kalutara town within Local Board limits rose in number from 10,864 to 11,499 persons, *i.e.*, by only 5·8 per cent.

The Kalutara District, whether the estates be included or not, ranks sixth in number of inhabitants among the districts of the Island. It has a larger population than that of any other district administered by an Assistant Government Agent, and even than that of either Uva or the Eastern or the North-Central Province.

The area of the district being about 624 square miles, the density of population has increased from 294 to 368 persons per square mile. The density in the totamunes is 1,350, but in Pasdun korale east only 97 persons per square mile.

The Census shows that the number of males was 120,004 and that of females 110,041, *i.e.*, 522 out of every 1,000 persons were males. The proportion in 1891 was 510 males per 1,000 persons. The males exceed the females in Kalutara town and in every Mudaliyar's division, except the totamunes, even if the estate population be left out of consideration. From the totamunes there is much male emigration to other parts of the Island.

The Sinhalese form only 85·57 per cent. of the population, as compared with 90·16 per cent. in 1891. The Tamils have increased from 2·43 to 7·2 per cent., while the Moormen have decreased from 7·2 to 6·84 per cent.

To the Korale Mudaliyars it is mainly due that the arrangements for securing the numbering of the village population, indoors and out of doors, were so complete and that the Census was so well taken.

XXVI.—DUTIES OTHER THAN ROUTINE.

Till the beginning of March much of my time was occupied in completing the arrangements for the Preliminary and Final Censuses of the district. Towards the end of April and during May I made a special circuit through the district for the purpose of issuing certificates of ownership for cattle claimed to have been acquired without issue of a cattle voucher, and for branding cattle bearing defaced brandmarks with a korale brand.

Throughout the year I devoted much time on circuit to ascertaining the condition of each village as regards serious crime. Neglect of duty on the part of Police Vidanes was punished, and good police work was rewarded. The efforts made to trace offenders who had escaped arrest and to capture them or to force them to surrender to court were very successful. I availed myself of every opportunity of travelling over minor roads in order to inspect the improvement that the new Superintendent of Minor Roads, Mr. Gunaratne, was making in their condition.

Schools, hospitals, and dispensaries were visited, and land inspections were made when necessary.

In Kalutara town the upkeep of the roads and the construction of drains often required careful attention on the spot.

XXVII.—EVENTS OF INTEREST.

On 23rd January news of the death of Her Majesty Queen Victoria reached Kalutara. Public offices were closed on that day, and remained shut for the rest of the week. On the 28th a resolution of condolence with the Royal Family was passed at a public meeting. On the 2nd February, the day of the funeral, the public offices were again closed. Memorial services were held in different parts of the district alike by Christians, Buddhists, and Mohammedans, and at public meetings at Kalutara, Panadure, Bandaragama, Horana, Matugama, Agalawatta, and Alutgama, an Address of Condolence was read, and speeches appropriate to the occasion were delivered in various languages. The address was signed by persons of all creeds and races. The expression of deep grief and of loyalty to the Crown was universal.

On 1st March a Census of the population was taken.

On 12th April the Assistant Government Agent and the Mudaliyars and Vidane Arachchies of the district took part in the demonstration at the landing of Their Royal Highnesses the Duke and Duchess of Cornwall and York in Colombo.

On 2nd December an election of Unofficial Members of the Local Board was held for the years 1902 and 1903. The existing members were re-elected.

Later in the month the Government Agent, Mr. Ellis, accompanied by Mrs. Ellis, paid his farewell visit to the district. In honour of the occasion there were public demonstrations at Horana and Kalutara, and addresses were presented expressive of gratitude for the benefits conferred by him on the district during his tenure of office.

During the year the Kalu-ganga Navigation Company were making arrangements for running daily on the Kalu-ganga, between Kalutara and Anguruwatota, a steamer for goods and passengers. Landing stages were selected, and a steamer was imported in sections from Europe. It has been fitted together during the current year, and the inhabitants living near the banks of the river are already deriving benefit from the enterprise of the Company.

Change of Officials.

The District Judge, Mr. G. C. Roosmalecocq, left the district on 5th October on retirement on pension from the Public Service. He was succeeded on 21st October by Mr. C. Eardley-Wilmot. In the interval I performed the duties of District Judge, in addition to my other duties.

Mr. W. F. H. de Saram assumed duties as Additional Police Magistrate of Kalutara on 1st January.

On 10th December Mr. P. B. Godamune succeeded Mr. M. S. Pinto as Police Magistrate and Commissioner of Requests, Panadure.

At the beginning of the year Mudaliyar R. S. Wijesekara was promoted to the post of Totamune Mudaliyar rendered vacant by the retirement of Mudaliyar Liveris Fonseka on pension. The post of Mudaliyar of Pasdun korale east was at the same time conferred on Mr. J. A. Weerasinghe, hitherto Muhandiram of the Kalutara Kachcheri.

In February Mr. S. T. Gunawardana, Mudaliyar of Pasdun korale west, was granted three months' leave. His place was filled up by Mr. E. J. Gunasekara, Totamune Muhandiram.

In September Mr. A. D. S. Rajapakse, who had held the post of Shroff of the Kalutara Kachcheri for seventeen years, vacated it on well-deserved promotion.

H. O. FOX,
Assistant Government Agent.

April 26, 1902.

CENTRAL PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE HON. THE GOVERNMENT AGENT, CENTRAL PROVINCE, FOR 1901.

REVENUE.

THE amounts brought to account at the three Kachcheries of the Province during 1901, as compared with the preceding year, were :—

	Kandy. Rs.	Matale. Rs.	Nuwara Eliya. Rs.
1900	3,449,250	28,205	83,093
1901	3,403,527	35,519	95,292

2. The following statement gives particulars of the revenue brought to account at the Kandy Kachcheri :—

Head of Service.	1900.	1901.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Licenses, Excise, and Internal Revenue not otherwise classified	806,416	713,351	—	93,065
Fees of Court or Office, Payment for Specific Services, and Reimbursements in Aid	96,510	100,546	4,036	—
Post and Telegraph	46,258	64,929	18,671	—
Rents of Government Property	5,350	5,866	516	—
Interest	4,502	5,015	513	—
Miscellaneous Receipts	5,391	1,797	—	3,594
Sale of Government Property	70,522	74,037	3,515	—
Land Sales	34,074	15,238	—	18,836
	1,069,023	980,779	—	88,244
Government Railways	2,491,525	2,553,559	62,034	—
Total ..	3,560,548	3,534,338	—	26,210

3. The most serious decreases are to be found under the heads of Licenses, &c., and Land Sales, viz., Rs. 93,065 under the former and Rs. 18,836 under the latter.

As regards the former, there was a falling off of Rs. 5,643 from sale of Revenue Stamps, and Rs. 2,816 59 under the head Road Tolls, and Rs. 88,211·14 under Arrack.

The sale of the tolls realized Rs. 48,109, as against Rs. 46,754 in the previous year, but owing to the instalments at the close of 1901 not having been credited till 1902, there was an apparent decrease in the amount credited.

4. The following is the statement of sale of Revenue and Judicial Stamps at each Kachcheri in the Province during the last three years :—

Revenue Stamps.

Kachcheri.	1899. Rs. c.	1900. Rs. c.	1901. Rs. c.
Kandy	81,209 0	77,737 50	72,094 0
Matale	6,263 71	5,884 26	6,749 98
Nuwara Eliya	—	8,288 5	7,954 0

Judicial Stamps.

Kachcheri.	1899. Rs. c.	1900. Rs. c.	1901. Rs. c.
Kandy	59,730 50	50,693 50	53,332 50
Matale	3,732 15	3,589 95	4,092 60
Nuwara Eliya	—	799 0	1,810 0

5. The explanation of the decrease under Land Sales is to be found in the fact that there is practically but little Crown land left which, having regard to forest and village interests, is available for sale, while the special attention given to the settlement of land claims in 1899 and 1900, when two extra clerks were allowed to deal with arrears, left but comparatively little for attention under this head in 1901.

In Udunuwara, Yatinuwara, Tumpane, Harispattu, the greater part of Pata Dumbara, Udapalata, and Uda Bulatgama there is really no Crown land left for disposal of any extent or value. In Uda Dumbara there would be a considerable demand for land if the requirements of that district in irrigation were met, and the final settlement of the Kelani Valley reserve would release some land for disposal in Uda Bulatgama, but not much.

The cadastral survey in the vicinity of Gampola resulted in the preparation of preliminary plans with a total acreage of 2,363A. 1R. 30P., of which, however, only 907A. 2R. 38P. are available for sale or settlement. The balance represents lands in the possession of villagers and others, for which, being surveyed in block, it is impossible to issue any certificates of quiet possession until the claims and titles of the numerous owners have been settled on separate surveys, a work obviously in which Government is not interested.

6. The annexed statement showing the acreage sold and settled at the Kandy Kachcheri during the last ten years will be found of interest. The large amount realized in 1892 includes a sum of Rs. 58,500 paid for two lots of land in the Nuwara Eliya District sold at this Kachcheri. One-third of the amount realized in 1893 was from sale to Europeans of land in the Udapalata division. In 1896 one sale of 60 acres in Udapalata realized Rs. 6,150, out of the total amount Rs. 6,618 credited in that year. In 1899 a sum of Rs. 10,150 was obtained from the sale of a block of 243 acres of forest in Uda Dumbara for the cultivation of cardamoms to European planters. In 1900 there were again further sales to Europeans in Udapalata amounting to Rs. 6,626. There is now no demand from Europeans for land in the Kandy District which can be met without, as stated above, encroaching on Government and village reserves.

7. The large sums credited in 1893 and 1896 on account of settlements are accounted for by recoveries from estate owners in the Udapalata, Pata Hewaheta, and Uda Bulatgama divisions for encroachments made by them on adjacent Crown land and the sale of stream reservations to them. There is naturally not much to be recovered in the future in the Kandy District on this account.

Statement of Acreage sold and settled, with Amounts realized by "Sale and Settlement" of Land, in the Kandy District for the Ten Years 1892 to 1901.

Year.	Sales.		Settlements.		Total Acreage sold and settled.	Total Amount realized.
	Acreage.	Amount realized.	Acreage.	Amount realized.		
	A. R. P.	Rs. c.	A. R. P.	Rs. c.	A. R. P.	Rs. c.
1892 ...	417 3 35	61,161 0	74 1 27	2,481 24	492 1 22	63,642 24*
1893 ...	415 2 4·75	12,121 57	136 1 34	13,753 67	551 3 38·75	25,875 24

1901 ...	109 0 20	4,559 0	81 1 11·25	2,043 74	190 1 31·25	6,602 74

* Includes two lots of land in Nuwara Eliya District—244 acres—sold for Rs. 58,500 at Kandy Kachcheri.

Year.	Sales.			Settlements.		
	Total Number of Lots sold.	To Europeans.	To Natives.	Total Number of Lots settled.	On Europeans.	On Natives.
1892	32	9	23	26	16	10
1893	61	19	42	36	19	17
1894	30	13	17	39	6	33
1895	28	25	3	34	13	21
1896	9	3	6	76	25	51
1897	9	2	7	3	—	3
1898	12	10	2	11	3	8
1899	86	9	77	41	11	30
1900	62	17	45	65	5	60
1901	29	8	21	36	13	23

8. It is satisfactory to observe the increase under Post and Telegraph and Government Railways, which would appear to indicate increase of prosperity and greater use of the luxuries throughout the district.

9. For purposes of reference a comparative statement of the revenue collected in the Kandy District during the last ten years is submitted :—

Comparative Statement of Revenue collected in the Kandy District during the Years 1892 to 1901.

Head of Service.	1892.	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.	1901.

Arrears outstanding on 31st December, 1901 ...	Rs. 2,524	Rs. 1,260	Rs. 360	Rs. 4,144
Percentage on one year's assessment ...	20	15	14	18
Collections in 1901	Rs. 13,838	Rs. 7,758	Rs. 2,238	Rs. 23,834
Percentage on one year's assessment ...	111	96	89	104
Arrears on 31st December, 1901	Rs. 1,118	Rs. 1,567	Rs. 637	Rs. 3,322
Percentage on one year's assessment ...	9	19	25	14

13. The returns of births and deaths registered in each district, with percentage of birth- and death-rate to the population, and of Kandyan marriages registered and dissolved in each district during 1901, are appended :—

Statement of Births and Deaths in the Central Province in each Quarter of the Year 1901.

District.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total.	Percentage.
Births.						
Kandy	3,439	2,821	2,908	3,825	12,993	5·85
Matale	999	876	893	1,033	3,801	5·75
Nuwara Eliya	917	673	811	939	3,340	6·75
Total ...	5,355	4,370	4,612	5,797	20,134	—
Deaths.						
Kandy	3,274	3,035	3,060	3,098	12,467	5·61
Matale	917	790	787	845	3,339	5·05
Nuwara Eliya	814	647	696	756	2,913	5·88
Total ...	5,005	4,472	4,543	4,699	18,719	—

FOOD SUPPLY.

14. There has been no scarcity of food during the year in any part of the Kandy District, and prices have remained normal. The Ratemahatmayas furnish the following information regarding the area of cultivation and yield of crops :—

Division.		Extent sown. Acres.	Yield. Bushels.
Udunuwara		3,763	115,730
Yatinuwara ...	Paddy	3,719	74,880
	Fine Grain	221	2,210
Tumpane ...	Paddy	2,235	44,700
	Fine Grain	659	9,885
Harispattu ...	Paddy	5,084	101,680
	Fine Grain	967	9,670
Pata Dumbara ...	Paddy	13,010	130,100
	Fine Grain	4,201	33,601
Uda Dumbara ...	Paddy	6,660	133,200
	Fine Grain	1,476	23,616
Pata Hewaheta...	Paddy	2,591	82,912
	Fine Grain	1,230	9,840
Uda Bulatgama...	Paddy	920	18,400
	Fine Grain	95	2,375
Udapalata ...	Paddy	3,796	113,880
	Fine Grain	182	4,186

The crops were good, and harvested in favourable weather throughout the district. The prices were, generally, of country rice Rs. 4 and of imported rice Rs. 4·50, of kurakkan Re. 1·25 per bushel, of amu Re. 1·50. Indian corn, the many vegetables grown in the gardens and chenas, with dry fish, supplement the above staples of food in the villages, and are grown in great abundance. The state of the Municipal markets in Kandy every Tuesday and Friday testifies to the flourishing trade in native vegetables in the vicinity of Kandy, large quantities being brought in for transport to other bazaars in the Province by rail on those days.

With so large an estate population in the Province, it is impossible to form any approximately accurate estimate of the quantity of imported rice consumed by the village population, but it is certainly one-fifth of the amount brought in.

The cultivation of vegetables is extending in the districts near Kandy, which command facilities of transport to the markets, and is a source of considerable profit to the villagers. The village registers referred to in my report for last year have now been distributed to all the headman, and will much facilitate, if properly checked by the Ratemahatmayas, the preparation of more accurate statistics under this head. Duplicate registers are kept in the Kachcheri, which are entered up annually from the information supplied by the headmen.

IRRIGATION.

15. I append copy of my report on this subject to the Central Irrigation Board, and have to renew my regret that, while full attention is being given to what the Director of Irrigation terms "schemes of ancient origin and magnificent conception" in other parts of the Island, the minor irrigation works in the older Provinces, of equal importance to paddy cultivation in the villages, still fail to receive adequate attention and support.

Irrigation Report, 1901.

The Provincial Irrigation Board held four meetings in 1901, prior to the abolition of such Boards, under the provisions of the Amending Irrigation Ordinance, No. 10 of 1901.

2. The matters that principally engaged its attention and consideration were :—

(1) The appointment of a Sub-Inspector of Irrigation Works in the Kandy District.
(2) The restoration of Bodi-ela in the Nuwara Eliya District.
(3) The survey of the Waduwawala-ela in the Nuwara Eliya District with a view to its repair.
(4) The extension of the Lamesuriyagama-ela in the Nuwara Eliya District.
(5) The improvement of the Bowatenna-ela in the Matale District and construction of suitable head works.
(6) The survey and improvement of minor irrigation elas throughout the Central Province so essential to the maintenance of paddy cultivation.
(7) The proposals submitted by the Assistant Government Agent, Matale, for the restoration of the Dewahuwawewa and other large tanks in the Kandapalla pattu of Matale north.

3. The appointment of the Sub-Inspector for the Kandy District was finally sanctioned on 25th February, 1902.

4. The Bodi-ela was at last inspected by the Director of Irrigation and Mr. Parker in November, 1901. Their report shows that the channel in part of the first mile had been completely destroyed by landslips, permanent reconstruction being impossible except at prohibitive cost; that the masonry in the ela had been well built; that near the Kurunduoya road and between the 2nd and 4½ mileposts in many places the channel had disappeared.

They found out of the 866 acres under these 4½ miles that 30 were under cultivation for the first mile and 110 acres at the 4th mile by local rainfall, 250 acres being suitable for asweddumization.

They found the channel for a large part of its length entirely silted up and in some places requiring entire reconstruction, while its maintenance would be extremely expensive.

From 4½ to 5½ mile 72 acres are available for cultivation on continuation of channel. At the 5½ mile the Eli-oya meets the Bodi-ela, and in the next mile of its course provides water for cultivation of 86 acres in Pallewella and for 16 acres is called Bodiwewa.

Beyond this point no use is made of the Bodi-ela, though at the 8¾ mile there are 60 acres under it now cultivated by local rainfall.

From the 5½ mile to the 9½ mile they report there are 1,100 acres of land asweddumizable, and that the channel in this section is not in such a ruinous condition as in the former sections, and is capable of restoration at a not exorbitant rate, although its maintenance might be costly; but the supply of the Eli-oya would have to be supplemented from the Ma-ela to meet the requirements of cultivation of so large an acreage.

They agreed in recommending the abandonment of the section of the Bodi-ela above the 5½ mile.

Steps are now being taken to carry out the recommendation of the Director of Irrigation as regards surveys preliminary to the consideration of the question of the restoration of the lower section of this ela, and the question of the sufficiency of the water in the Ma-ela for the requirements of the agriculturalists in Gannewa korale will also have to receive careful attention in connection with this subject.

5. Progress was made in the survey of Waduwawala-ela in the Nuwara Eliya District and the preparation of plans and estimates for extension of the Lamesuriyagama-ela, which I inspected with the Assistant Government Agent in June, 1901, and consider deserves favourable consideration, all available land under existing ela having been taken up and the landowners having given their consent to repay cost of extension in ten annual instalments.

6. In addition to the works, the Sub-Inspector of the Nuwara Eliya District Mr. Caspersz has given much attention and assistance to the villagers in upkeep of the minor irrigation elas and survey of such as require professional attention. Copy of his annual report is annexed.

7. In the *Matale* District the annexed report of the Inspector of Village Tanks details the work done in Matale north and east during 1901.

8. The improvement of the Bowatenna-ela in this district and the construction of the necessary head works is a work demanding early execution. The land is favourably situated with a good cart road adjacent for transport, the water supply is abundant, and those who bought the land from Government have not yet been able to asweddumize it owing to the present ela being insufficient to carry the full supply of water required for even the existing fields. Eraula tank should also be completed.

9. As regards other works in this district, I invite attention to the annexed extract from Mr. Alexander's Administration Report for 1901, and especially urge the restoration of one at least of the larger tanks in the Kandapalla korale of Matale north to meet the requirement of the population of that portion of the district. I trust that proposals of the Assistant Agent under this head will receive the favourable consideration of the Central Irrigation Board, but it will be necessary first to secure a complete survey of the tanks and of the drainage of that area. There is sufficient population to take up the cultivation, and the completion of the cart road between Kurunegala and Dambulla provides an admirable outlet for disposal of the surplus produce.

10. In the Kandy District but little has been done of necessity in the absence of any Sub-Inspector to make the necessary surveys for the preparation of estimates for the repairs of the many elas which have so long required attention, though originally constructed by Government. This work will receive attention in 1902, and I hope the following year will see the necessary work of execution of repairs put in hand.

11. The statement of expenditure on maintenance and construction has already been forwarded.

I made an irrigation circuit in the Matale and Nuwara Eliya Districts during the past year. There are many schemes in each district requiring attention, which have been repeatedly and urgently brought under notice by the Revenue Officers in charge of those districts, but which, from want of the officers to make the necessary surveys, have not yet been prepared for the acceptance of those concerned, or for the consideration of the Central Irrigation Board.

There is everywhere a demand for more paddy land, especially in Walapane of the Nuwara Eliya District and under the tanks in Matale north and east. These districts cannot be developed till the requirements of the villagers in this direction have been met. What is wanted is the appointment of an irrigation officer to this Province, who will assist the Government Agent in the development of the many irrigation works throughout it, and at the same time supervise the repair and maintenance of the numerous village amunas and elas, which are so vital to the native agricultural interests. If this policy were steadily pursued in each Province, the excess population of its villages would assuredly overflow into the new areas available for irrigation and extend steadily the circle of cultivation. But Kandyan villagers will not take up land in other Provinces; there is plenty of land irrigable in the Central Province, and sufficient population to asweddumize it.

LEGISLATION.

16. *For this Province.*—The difficult question of illicit drawing and sale of toddy is now under consideration of Government, and undoubtedly deserves early treatment. In the vicinity of estates the sale is a very serious evil, the cause of incessant trouble to headmen and prosecutions of villagers, while it demoralizes the coolies on the estates. The severity of the fines imposed and the ease with which they are paid testify to the extremely remunerative nature of the occupation. I am inclined to think that the remedy is to be found in the application of local rules under the Village Communities' Ordinance rather than in any general enactment applicable to the whole Island, which is rendered difficult by the varying conditions of the demand for, and the sale of, toddy in each Province and the interests of the renters. I have submitted my views and recommendations more in detail to the Government.

THEFT OF PRÆDIAL PRODUCTS.

17. This virtually in this Province affects only two products under cultivation, cacao and cardamoms, both of which, from the extensive manner of their cultivation, it is so difficult to protect before they can be gathered.

RURAL POLICE ON CACAO ESTATES.

18. During the past year applications for rural police, under section 15 of Ordinance No. 16 of 1865, for protection of cacao plantations, were made by the following estates and districts :—

District.	Estate.	Approximate Acreage.
1. Wattegama ...	Goonambil	280
	Maria	140
	Meegama	300
	Eriyagastenna (included in Goonambil) ...	—
	Gilbury	70
	Longford	10
	Inchestelly (included in Goonambil) ...	—
		800
2. Pallekele ...	Pallekelle	4,797
	Ambecotta	
	Rajawella	
	Warakettiya	
	Kilmarnock	
	Victoria	
3. Matale ...	Wariyapola	600
	Sudu-ganga	468
	Bandarapola	224
		1,292

The number of police sent to each of the above districts were respectively :—

No. 1 ... Two constables.
No. 2 ... One sergeant and five constables.
No. 3 ... Four constables.

The period during which they were occupied in such duty was respectively in each district :—

No. 1 ... 15th October, 1901, to 15th January, 1902.
No. 2 ... 1st November, 1901, to 1st February, 1902.
No. 3 ... 15th November, 1901, to 20th January, 1902.

The cost to the estates during such time was in district—

	Per Mensem. Rs. c.
No. 1	36 0
No. 2	68 50
No. 3	44 50

at the rate of 2 cents per acre of estates protected.

The number of prosecutions conducted by the police on account of theft of cacao within each area during the above period was in district—

	Prosecutions.	Convictions.
No. 1	4 ...	1
No. 2	4 ...	2
No. 3	3 ...	1

19. The instructions given to the police at each district were :—

(1) To make themselves thoroughly acquainted with the locality, so as to know all the estate roads, village paths, native gardens, and boutiques where cacao was offered for sale.
(2) To learn by heart Ordinance No. 9 of 1885, and to study the habits of cacao thieves and traders and methods of detecting cacao thefts. (With this object they were instructed for a fortnight before being sent up to the estates.)
(3) To co-operate with the headmen, and by continually patrolling the estates and surrounding villages with them to ascertain—
  (*a*) The names of all growers of cacao in the district, the extent of their plantations, and the quality of cacao grown in each.
  (*b*) How these growers disposed of their produce, and whether they appeared to sell more than their plantations could produce.
  (*c*) Who the buyers of cacao in the neighbourhood were, and from where they bought cacao. (They were ordered to question all strangers found on estates, especially at nights, and not to allow native hawkers to frequent villages adjacent to estates.)

The sergeant in charge had daily to report himself to the superintendent of the estate and obtain information and advice. He visited the estates and villages by day and night, and was responsible for sending out patrols at different hours of the day and night, and to be particularly vigilant between the hours of 4 A.M. and 8 A.M. and 4 P.M. and 8 P.M., and to send immediate report to headquarters on receipt of information of the occurrence of any theft in his district as well as to the Ratemahatmaya of the division.

20. The police force in the Matale District was under the direct supervision of the Assistant Agent and the occasional inspection of the Superintendent in Kandy. The police at Pallekelle were placed under the immediate supervision of Mr. Dowbiggin, Assistant Superintendent of Police, Central Province, and those at Wattegama were controlled by the Superintendent of Police, Kandy.

21. Lists of traders and owners of cacao property adjacent to the estates in each case were prepared prior to the establishment of the police, and beats for the patrol of the estates and neighbourhood were personally arranged between the police officers and the superintendents of the estates benefited. The headmen of the adjoining villages were instructed regarding their duties, and a roster was prepared for one headman to accompany the police on patrol every night. The headmen so employed were paid 50 cents a night out of Headmen's Remuneration Vote, and those who had done good work were specially rewarded on close of this special duty. Copies in Sinhalese of sections 2 and 4 of the Ordinance No. 9 of 1885 were given to each headman regarding persons loitering on estates and purchase and barter of estate produce by labourers. Removal of cacao by night was prohibited. Inspection of chenas near estates was constantly made by the headmen. Boutiques of suspected receivers were watched at night, and itinerant hawkers were not permitted to buy cacao within certain areas.

22. The rural police and village headmen worked together extremely well, and the result of their co-operation in carrying out the instructions given is shown in the annexed letters from the superintendents of the estates protected, and in annexed extracts from reports of the Assistant Agent, Matale, and the Assistant Superintendent of Police :—

Letters referred to.

The Assistant Government Agent, Matale.

Suduganga, Matale, February 13, 1902.

SIR,—I HAVE the honour to acknowledge your letter No. 289, dated 9th instant, with reference to the special police in the protection of my crop, and in reply I beg to state that I have been satisfied with their conduct and the manner in which they discharged their duties. As far as I am aware there has not been a single theft on this estate during the time the police were employed.

I am, &c.,
J. FARLEY ELFORD,
Superintendent.

The Assistant Government Agent, Matale.

Wariyapola, Matale, February 21, 1902.

SIR,—I HAVE the honour to acknowledge yours No. 288 of 9th February. The police in question have done good work, but this is chiefly due to the favourable position of the group of estates they patrolled being so close to Matale. They had the benefit of the personal supervision of the Assistant Government Agent. They also had the assistance of the various village headmen. The headmen, I believe, were only employed while the police were stationed here (on extra pay for day and night duty) in connection with them.

I would suggest that whether police are stationed here or not the Assistant Government Agent and headmen exert themselves as much as they did during the time of the police being here, and if this were done, I am of opinion that less stealing would take place, and there would be not so much need of our having to employ special coolies.

I am, &c.,
J. A. BURMESTER.

The Assistant Government Agent, Matale.

The Bandarapola Ceylon Company, Ltd.,
Bandarapola, Matale, February 20, 1902.

DEAR SIR,—I DULY received your letter No. 290 of the 9th instant asking my opinion of the rural police, and for any suggestions I may wish to give on the subject.

With those employed here I was perfectly satisfied. They were always about, and I think did all that could have been expected of them.

While they were employed here I had only one report of cacao theft, which turned out to be a false case, got up by my own watchman, who got fined in court as well as by myself and turned off this estate.

In giving these men full credit for all they did, as well as the headmen of the district generally for their increased activity, ably kept up to the mark by your good self, there is one fact that must not be lost sight of, and that is the low price of cacao this year, so low that the usual buyers of stolen cacao could not afford to offer sufficient inducement to the thieves to run much risk in stealing, and I think it is in some measure on this account that there has been so much less stealing this year than last.

I do not think it would be possible to patrol and watch every cacao estate in the Island as this estate was watched. Nor do I think it right that Government and estate owners should be put to all this expense to protect an industry, when it might and could be done by a simple and inexpensive registration of buyers, and prohibiting the moving of cacao before sunrise and after sunset.

These were, if I recollect rightly, the main features of the old Coffee Stealing Ordinance, under which I never heard of any one ever having been oppressed; and I am strongly of opinion that until some such law is passed cacao stealing will never be put down, when it is worth while to steal it.

I am, &c.,

J. ANDERSON.

Extracts referred to.

From the Assistant Government Agent, Matale.

IMMEDIATELY prior to the employment of the cacao police, I went carefully over the estates with the Superintendents, Ratemahatmayas South and East, Koralas, Arachchies, and the Police Sergeant, to discover how the estates could be best protected. I then held a meeting of the Superintendents. They agreed with me that the constables should patrol *not* on the estate, but on those points where the thief would be almost sure to cross either on his way to or from the estate. We arranged the beats to ensure that each estate should have its fair share of protection. Acting upon your orders I gave directions to the headmen to accompany the constable during his beat in their respective divisions, and to patrol (when he went on) all the paths between the estates and the villages.

The Koralas and the Ratemahatmayas were given an exact copy of the beats which had been arranged, and were directed to supervise them. I further gave directions to the police sergeant to change the men constantly from one beat to another, and also to supervise them.

The constables were turned out before 4 A.M. each morning and proceeded to their several beats. They returned about 8 A.M. They were sent out again about 4 P.M. and returned about 8 P.M. A woman was caught by one of them with a few pods and admitted the theft.

They did not discover any other cases, because there were, I believe, no cases of theft to discover. No cases of "receiving" were instituted by them. I do not believe that there was any cacao "received" from those estates. No complaints were made against them.

The total cost of each estate was as follows:—

	Rs.	c.
Wariyapola	62	0
Bandarapola	23	14
Suduganga	48	36

It is difficult to compare the districts where police were employed with those where police were not employed. But I have no hesitation in saying that given the same men and a good sergeant, and given an alarum instead of the beat constable to wake them up, they would be just as effective away from my immediate control. I did not supervise them very much, and I have no doubt I could exercise quite sufficient supervision over them anywhere in the district for them to give as good a result. I think, therefore, they could have been very profitably employed at Marukona, where a good many cases occurred as usual, and at Yatawatta and Hilton, which also suffered in a similar manner.

In my Administration Report I have stated the secret of their success. They are a guarantee that effectual watching will be provided at those times which are most favourable to theft, and at those places which are most exposed to it.

[For Statement see page C 10.]

From the Assistant Superintendent of Police, Central Province.

Pallekelle Cacao Police.

DURING the recent cacao season a police force of one sergeant and five men was stationed on Pallekelle estate in Pata Dumbara from 1st November, 1901, to 1st February, 1902.

The Pallekelle Group consists of six estates, with the total acreage of 4,797 acres, the proprietors of which pay a moiety of Rs. 68·50 per mensem towards the upkeep of the force.

The men employed on this duty were picked men of the Central Province Police, and included 3 Sinhalese, 1 Tamil, and 1 Bengali.

They were brought into Kandy from their various outstations in the middle of October, and during the following fortnight were carefully instructed in the manner in which they should perform the special duties allotted to them, and were sent out to make themselves acquainted with the district, and acquire information concerning the local thieves and receivers. Meanwhile the headmen of the district were similarly instructed, and prepared lists of native estates adjacent to the Pallekelle Group, and also lists of suspected thieves and receivers in their wasams; a complete register of native estates, thieves, and receivers was then prepared, and copies issued to the police and headmen. Each constable and headman was also furnished with a copy of the Prædial Products Ordinance, and special instructions to headmen in their own language.

Theft of Cacao from Suduganga, Bandarapola, and Wariyapola between November and December, 1901, and January, 1902.

Quantity and Value.	Date of Theft.	No. of Case.	Name and Village of Accused.	Description of Accused.	Estate.	Ratemahatmaya.	Korale.	Arachchi.	Result.	Complainant.	Action taken by Headmen and Police.
	1901.										
Theft of 120 pods cacao, Rs. 12	November 4	19,583	(1) Sundara ...	Villager	Godapola	Matale south	Udasiya pattu	Warapitiya	Acquitted	Mr. Anderson	Arrested upon warrant
			(2) Punchi Naide, both of Nawaragoda	Not arrested	—	—	—	—	Not arrested	—	Not arrested. True case, but evidence insufficient
Theft of 18 pods cacao, Re. 1·80	December 7	19,733	Loku Banda of Bandarapola	Villager	Bandarapola	do.	do.	Bandarapola	Acquitted	Mr. Anderson	Arrested by Police and Arachchi. Complainant fined Rs. 5 Crown costs
Theft of 3 pods cacao, 30 cents	December 10	19,750	P. Menika of Owilikanda	Villager	Wariyapola	do.	Kohonsiya pattu	Ukuwela	1 week's rigorous imprisonment	Mr. Burmester	Produced by Ukuwela Arachchi. Caught in the act by patrol

Quarters were provided for the police on Pallekelle estate by the proprietors, and active work was commenced on 1st November. Patrol routes had been arranged, and a regular system of patrols organized. Three patrols were sent out daily, each consisting of one constable and one headman, who went on an eight hours' round, and were so arranged that there was always a patrol at work night and day. Boxes were placed at various intervals on their rounds, into which the patrol men had to put tickets showing the time each box was reached; the tickets were collected daily, and an excellent check kept on the patrols.

During the three months there were only 4 cases of theft of prædial produce, viz., 2 of cacao, 1 of coffee, and 1 of cocoanut, in all of which the stolen property was recovered and the accused arrested and taken to court. In two of these cases convictions were obtained, but in the remainder, though the charges were true, the watchmen gave contradictory evidence in court, and the accused were discharged. All these cases occurred in November, but during December and January there was not a single case of theft of cacao in this group.

Taking into consideration the fact that the Pallekelle Group of estates is surrounded on all sides by small native estates, and that the neighbouring villages of Kengalla, Hurikaduwa, and Attaragala bear a bad reputation and harbour habitual criminals and thieves (this part of the country being formerly an active centre of the cacao stealing trade), the result achieved is exceedingly satisfactory. I attribute this success to—

(1) The co-operation of the headmen with the police and the assistance afforded by the superintendents of the estates.
(2) The system of patrols, in which the police and headmen did excellent work together.
(3) The constant supervision of the bad characters and thieves in the neighbourhood.
(4) The discipline and good order of the force, for which the sergeant is mainly responsible.

With reference to the latter, it only remains for me to say that on the frequent occasions I visited the station at various hours of the day I always found the men on the alert and the patrols out at work. There were no complaints made against them, and the Manager of the Group expressed himself satisfied with the way in which they had worked. I would recommend both sergeants and men for a substantial reward.

A summary of cases is forwarded herewith :—

[For Statement see table I. on page C 12.]

Wattegama Cacao Police.

THERE were four cases of thefts of cacao on these estates during the three months the force was stationed in this district. In three cases the accused were arrested and taken to court, in one of which the accused was sentenced to three months' rigorous imprisonment, but in the remaining two cases the accused were discharged for lack of evidence. In one case no clue was obtained, in two cases the accused were Sinhalese cultivators, and in one watchmen of the estate. So that during the three months there were only three cases of theft by Sinhalese villagers. The result is satisfactory, inasmuch as it proves that cacao stealing, which was at one time so prevalent in the district, has largely decreased.

Complaint, however, was made that the two constables employed on this duty were not energetic and zealous in the performance of their duty, and that they failed to obtain any clue in one case. This is not a matter of surprise, and I attribute this to the lack of the constant supervision of a sergeant.

Constables whenever sent out by themselves in plain clothes on special duty are trusted to work on honour, but this is generally the case for only a few days at a time; but it cannot be expected that two constables on an estate will keep up to the mark and work as if under the constant supervision of a sergeant for a period of three months.

I consider that this system is an impracticable one, and hold that a cacao police force should consist of at least one sergeant and four men, and be worked similarly to the Pallekelle police force.

The result, however, is as good as can be expected under the circumstances, and shows a satisfactory decrease in cacao stealing.

A summary of cases is annexed :—

[For Statement see table II. on page C 12.]

General Return of Theft of Prædial Products, including thefts of Cacao, Tea, Coffee, and Cardamoms, in the Kandy District during 1901-02, and Comparative Return of 1901-02 with 1900-01 :—

	1900.	1901.
Total number of cases	27	29
Convictions	17	19
Acquittals	8	9
No clue	2	1
Accused absconded and not arrested	—	—
From estates owned by Europeans	17	18
Convictions	11	13
From native estates	11	11
Convictions	6	6
Number of cases in which accused were villagers ...	24	22
Coolies and watchmen employed on the estates ...	3	6
Moormen traders and others.	—	—
Percentage of cases in which accused were arrested ...	92	96

I.—Theft of Cacao in the Pallekelle District during the Months of November and December of 1901 and January of 1902.

Quantity and Value.	Date of Theft.	No. of Case.	Name and Village of Accused.	Description of Accused.	Estate.	Ratemahatmaya.	Korale.	Arachchi.	Result.	Complainant.	Action taken by Headmen and Police.

Coolies and watchmen employed on the estates ...	13 ...	10
Moormen traders and others	10 ...	11
Percentage of cases in which accused were arrested ...	91 ...	94

23. I am of opinion that these results clearly establish that, when there is co-operation and unanimity between the superintendents of the estates concerned and the rural police and village headmen, working under the directions of the Government Agent and his Assistant, the provisions of the existing law, Ordinance No. 16 of 1865, afford ample protection to cacao estates at a very reasonable cost, and that no sufficient cause for special legislation has been established.

24. Mr. Alexander has gone fully into this matter in his report. He has given much personal attention to the subject, and his efforts have certainly been rewarded with a marked diminution in cacao theft in the Matale District, if not by the appreciation locally that he deserves. I do not agree with all his recommendations (especially as regards the forced keeping of accounts), but they no doubt deserve careful consideration.

WORKS MOST REQUIRED FOR THE PROVINCE.

25. Referring to the list of those in my report for 1900, I have to notice that provision has now been made for the following therein specified :—

(2) and (3) *Additional Government Offices in Kandy.*—By the purchase of the premises known as "The Grand Hotel," near the Railway Station, which I was able to effect at a Fiscal's sale in August, accommodation has been secured in one building for (1) the Post and Telegraph Department, with the residential quarters for the Postmaster and his Department and many subordinate officers; (2) the Public Works Department; (3) the Colonial Surgeon and staff; (4) the Superintendent of Surveys, and other minor Departments, leaving quarters still available for the Postmaster-General and other Government officers on inspection duty in the Province; while the transference of the Post and Telegraph Department to this building has enabled us to provide part of the accommodation so long needed for the police in Kandy. By these arrangements Government is saved the charge of Rs. 4,964 per annum for rent previously paid for the use of private buildings scattered over Kandy occupied by the above Departments (except the Post and Telegraph Office, which was a Government building), and all the Government Departments are now centralized in two places in Kandy, viz., the Kachcheri, District and Police Courts, and Fiscal's Office near the Dalada Maligawa, and those noted above in the late "Grand Hotel," near the Railway Station.

(4) The widening of the road and bridge between the Dalada Maligawa and the United Service Library and completion of the Buddhist wall round the lake have been completed.

(6) Improvements to the police stations named have been partly executed, viz., at Pussellawa and Gampola.

The Ulapane grant-in-aid road has been at last commenced.

26. Of works still required in the Kandy District, I consider the following as the most pressing :—

(1) Improvement of the hospital at Glencairn in the Dikoya district. Plans have now been made, and I trust the work will be put in hand upon the vote of Rs. 8,000 taken on account last year, and completed in 1903.

(2) Improvement to the hospitals at Uda Pussellawa and Madulkele. In both the old wards are no longer fit for use and should be re-constructed, while a proper residence for the Medical Officer at Uda Pussellawa is urgently needed.

(3) Bridge over the Mahaweli-ganga to serve the traffic on the road to Teldeniya, Rangala, Nitre Cave district, and Uda Dumbara.

(4) New police stations at Teldeniya and Deltota.

(5) Extension and connection of the following roads :—

(1) Deltota road and Rahatungoda road.
(2) Norwood-Upcot road and Maskeliya road at Glenugie.
(3) Railway Gorge road with Nanu-oya road.
(4) Uda Pussellawa road and Kurunduoya-Haragama to Kandy road.

(6) Ambalam at Kandy near Police Court (Provincial Road Committee to contribute one-half).

(7) Alterations at Fiscal's Office, Kandy, to secure the "Queen's Palace" for Kandyan Art Museum.

(8) Grants in aid towards cost of providing pure water supply and drainage in towns in the Central Province under the operation of the Small Towns Sanitary Ordinance.

(9) Grant towards extension of road from Nugatenna through Bintenna to Alutnuwara on the Mahaweli-ganga. A contract for Rs. 14,300 for the extension of 3 miles of this road under previous grants was signed on the 19th June, 1901, and work commenced in July, 1901. There remain 9 miles and 37 chains yet to be constructed, but 5 miles of them are through the level country at the foot of the steep hill down which the road is now being carried.

(10) Light railway into Dumbara from the Main line at Katugastota.

(11) Grant for extension and improvement of the public recreation ground at Bogambara in Kandy, a work benefiting not only Kandy, but the Island generally, and beyond the means of the Municipal Council to entirely provide.

27. In the Matale District the works most required appear to me to be :—

(1) Improvement to Police Station, Matale.
(2) Water Supply for Matale town—a work for the Local Board.
(3) Bridge over the Pallepola-oya, at the 28th mile, on road from Palapatwela to Galewela.
(4) Permanent buildings for dispensaries at Pallegama and Galewela.

28. In the Nuwara Eliya District, in addition to the roads I have specified above, the *Assistant* Agent recommends the continuation of the cart road from Sangilipalam to Ulapane railway station through Kotmale Valley and three bridges over the Kotmale-ganga.

The villagers of Walapane are much in need of the proposed cart road from the Kurundu-oya bridge to Ragala to enable them to put their produce on the new railway, to which this road will be an important feeder.

PLANS FOR IMPROVEMENT OF THE DISTRICT.

29. In districts so fully developed as those lying immediately round Kandy there is really little further required, except careful maintenance of existing village amunas and the upkeep of the ancient irrigation elas for the protection of paddy cultivation, the prevention of crime and vigorous prosecution of offenders, the progress of vernacular education, and the extension of the cultivation of industrial products and the introduction of new wherever practicable.

There is practically no Crown land left in the divisions adjacent to Kandy available for sale, and in those more remote, such as Dumbara, cultivation must go hand in hand with irrigation until advantage has been taken of the ancient irrigation schemes in this division. A large proportion of the population must be dependent on the unsatisfactory system of chena cultivation, with its attendant deleterious consequences on the health and energy.

30. Much attention has been paid to the improvement of attendance at the vernacular schools, and the new rules adopted upon the conference between the Government Agents and the Director of Public Instruction in 1900 have worked most successfully in securing direct attention from the Presidents to the monthly reports of defaulting parents by the teachers. The accompanying table shows the average attendance of children at the different schools in the Kandy District :—

Statement showing the Attendance at each Government School in the Kandy District during the Year 1901.

Division.	School.	Number on Register.	Average Attendance.
Udunuwara	Handessa	172	127
Do.	Petiyagoda	208	119
Do.	Wattapola	147	97

Do.	Tulpegoda	155	87
Udapalata	Hindagala	82	36
Do.	Udahentenna	106	56
Uda Bulatgama	Rambukpitiya	78	44
Do.	Yatiganhulaha	113	46

31. The District Road Committee and Village Committees exercise a steadily growing influence in the improvement of the district in securing the opening of the country by better roads, ensuring more frequent and better communication with centres of life and business, which cannot be overrated; and the numerous Village Committees also have a beneficial influence in supervising under their rules the many phases and activities of village life and maintaining ancient customs.

32. Among minor and local administrative improvements may be mentioned the preparation of an alphabetical and numerical register of all villages in the Central Province, which is now in the hands of the Government Printer; the issue of the village register referred to above; and the adoption of a

uniform system for the registration of cattle throughout the Province, based upon the numbers now attached to the different villages, and recognizing the rule that no animal can be branded more than once.

For the further improvement of many villages of the Kandy District, of the greater part of the Matale District, and of the Walapane and Uda Hewaheta divisions of the Nuwara Eliya District, we must wait for the execution of the irrigation works under consideration in each locality.

THE SANITARY CONDITION OF THE PEOPLE.

33. This has received the careful and constant attention of the Board of Health throughout the year, more especially in the twenty towns now under the operation of the Small Towns Sanitary Ordinances. Of these, sixteen were so proclaimed from the 1st January, 1901, and the sanitary rate was recovered within them during the year. The following statement shows the balances to credit of each town on the 31st December, 1901:—

Statement of Balances to credit of Board of Health Towns on 31st December, 1901.

No.	Name of Town.	Amount. Rs. c.	No.	Name of Town.	Amount. Rs. c.
1.	Hatton-Dikoya ...	574 77	11.	Kotagala ...	114 79
2.	Wattegama ...	396 0	12.	Talawakele ...	1,802 44
3.	Pussellawa ...	925 69	13.	Agrapatana ...	452 77
4.	Norwood ...	618 82	14.	Pundalu-oya ...	98 32

8.	Lindula	251 96	18.	Padiyapelella ...	211 30
9.	Tillicoultry ...	514 54	19.	Rattota ...	116 43
10.	Dimbula	88 26	20.	Dambulla ...	86 84

34. The Board of Health held nine meetings during the year, its fixed day for meetings being the third Wednesday of every month.

35. The Provincial Engineer has submittted to the Board a preliminary report on the drainage and water supply of each town, with approximate estimates of cost of constructing the former and securing the latter. These estimates and reports have been laid before Government, and it is hoped that a grant will be made in each case from general revenue to enable the Board of Health to meet the heavy expenditure, the principal roads in nearly all cases passing through these small towns and bazaars. Under the provisions of Ordinance No. 11 of 1900, the Board has the power of raising a loan for the execution of certain public works on security of the rates and taxes, and the Board will, where expedient, exercise these powers. The funds collected during 1901 will enable the Board to make provision in 1902 for the more pressing sanitary requirements in each town, *e.g.*, the erection of Horbury latrines, the payment of contractors for scavenging the towns, the erection of slaughter-houses, and the sinking, where possible, of wells.

36. In the larger towns previously under the operation of the Ordinances considerable sums were spent during the year in sanitary improvements. At Hatton and Dikoya Rs. 1,200 were spent on drain construction, Rs. 600 on Horbury latrines, and Rs. 2,628·75 on scavenging; at Talawakele Rs. 305·57 on Horbury latrines, Rs. 522 on wells, and Rs. 412·37 on scavenging. Exclusive of above sums, a total of Rs. 2,326·73 was spent during the year in scavenging in the smaller towns under contract or in payment of coolies under police supervision.

37. Full statements of revenue and expenditure during 1901 in each town were published in the *Government Gazette* of 7th February, 1902.

38. I have to express the thanks of the Board to the proprietors and superintendents of the estates, in which many of these bazaars are situate, for their ready co-operation and assistance in carrying out the object of the Ordinances. I feel sure that when the necessary drainage has been completed, and a pure water supply provided for the occupants of these bazaars, the landlords will reap their reward in the improved sanitary condition of the bazaars and the resultant increased value of their property.

39. At the close of the year the Board decided that the towns of Hatton and Dikoya were of such size and importance, and the revenue available so large, that the inhabitants were entitled to a more direct voice in the administration of their own affairs, and recommended that these towns be brought under the operation of the Local Board Ordinance. This recommendation was accepted by Government, and from the 1st January, 1902, these towns have had the advantage of being administered by their own Local Board.

40. The important question at Hatton is the provision of a pure water supply. During the year a scheme was carefully considered by the Director of the Public Works Department, and the necessary surveys and gaugings of supply from the springs on the Kuda-oya estate were taken. An approximate estimate was submitted, and will be dealt with by the Local Board in 1902.

41. The provision of a cemetery for the town of Hatton has also been a matter of urgency. The land acquired, 10½ acres in extent, was too large for the purpose, and much of it quite unsuitable for the purpose, while the expense of enclosing so large an area with a wall or fence was prohibitive. A portion of the land, in extent 4 acres and 6 perches, has now been set apart, and a sum of Rs. 2,859 for fencing the same with a wire fence will have to be provided by the new Local Board in 1902, when the necessary apportionment among the different communities of Hatton and Dikoya can be effected and the cemetery definitely opened for public use. Rules for regulation of burials in it have already been approved by the Governor in Executive Council. Much remains to be done at Hatton to secure the better drainage of the town, especially in the railway premises and behind the boutiques erected by the Hatton Company. Dikoya bazaar has been much improved in this respect during the year. Spaces for recreation are much required in each of these towns, especially at Hatton. The condition and drainage of cattle galas in these towns also received attention, and the owners have duly carried out the alterations and improvements required by the Board. A new slaughter-house at Hatton is required, and a separate one for slaughter of sheep and goats. It is intended to provide public markets in each town.

42. At Kadugannawa considerable improvement was effected by the construction at half cost of the Government and Railway Department part of a broad open paved drain along the principal road between the bazaar and the railway line and of a concrete drain with approaches to the boutiques on the other side of the road. A well in the bazaar, which a Moorman had attempted to appropriate and include in his own boutique, was acquired with the house, and is now reserved for public use of the bazaar. A public market is much needed here, and I hope the Railway Department will give me a site for it on a portion of the land in its possession. An estimate for a slaughter-house and exposure shed has also been considered by the Board. The Board took exception to the construction of a block of railway cooly lines immediately opposite the large Government boys' school at Kadugannawa, but it was powerless to prevent completion and occupation of the building. It is necessary, I think, that more power should be given to the Board of Health in each Province to control the erection of buildings within the limits of the towns under the operation of the Ordinances.

43. The town of Nanu-oya is at present one of the most insanitary in the Province, but until the railway works now in progress have been completed, and the future lines of this town finally settled, it is difficult for the Board to take any definite action, and the scavenging of the town can only at present receive attention.

44. The Board consented to some alteration of the limits of Lindula and Tilicoultry bazaars at the request of the proprietors. The latter bazaar is most insanitary, and there is much need of better drainage and flushing throughout it.

45. An Inspector of Nuisances within the towns of Hatton and Dikoya was appointed by the Board in June upon a monthly salary of Rs. 30.

46. As regards the villages, the health of the people during 1901 has been very good. There was no outbreak of cholera in the Province. The chief rural bazaars are frequently inspected by the headmen and Ratemahatmayas, and the sanitary by-laws enforced. Upon orders given all houses were whitewashed twice a year, viz., in February and August. Hospitals and dispensaries are now within reach of all villages. A new dispensary was built at Madugoda to meet the needs of the remote villages of Uda Dumbara. The Ratemahatmaya of Pata Hewaheta has represented that one should be opened in the centre of his division, which is at present only served by those on the boundaries of Pata Hewaheta at Kandy and Deltota.

47. As regards district hospitals, immediate attention should be given to provision of more and better accommodation at the following places:—(1) Glencairn in Dikoya; (2) Madulkele; (3) Uda Pussellawa. Especially for the Dikoya hospital, which serves a large area, the present building is quite impossible, and admits of no improvement short of removal.

48. The Matale District was free from cholera throughout the year.

49. Sites for the erection of plague hospitals were kept clear during the year, and attention given to the proper condition of the hospital frames and equipment stored at the different places throughout the Province. There was, happily, no need for their erection and use during the year.

50. I annex a statement showing attendance at the different hospitals and dispensaries throughout the Province in 1901:—

Number of Persons treated during the Year 1901 in Hospitals and Dispensaries in the Civil Branch, Central Province.

CRIME.

51. I annex a statement showing the number of cases of murder, attempted murder, and number of cases in which the knife was used in this Province during 1901 :—

Statement showing the Number of Cases of Murder or Attempted Murder in the Central Province during 1901.

Kandy ...	77	77	48	29
Total ...	180	177	95	81

Statement of all Cases tried at the Police Courts of the Central Province during 1901 and lettered D, E, F*b*, F*d*, F*e*, or F*f*, in Kandy, Matale, Panwila-Urugala, Hatton-Gampola, Galagedara, and Nuwara Eliya.

Offences.	No. of Cases.	Convictions.	Percentage.
All Offences ...	2,147	1,593	74
Serious Offences ...	891	385	43
Trivial Offences ...	1,256	1,208	96·18

The village headmen have worked well in the detection of crime, and there were but few occasions in which it was necessary to punish any headmen for default. The crime report books of the Koralas are examined in the Kachcheri every month on division days, in addition to the occasional inspections by the Government Agent on circuit and at renewal of acts, and instances of default or unsuccessful prosecutions are promptly noticed, the payment of the Korala's salary being dependent on the efficiency displayed by him in the criminal work during the quarter. The regular and rural police have worked together harmoniously.

52. The statement annexed is satisfactory in the number of convictions secured out of the 15 murder cases brought to trial, and also in the proportion of convictions obtained in cases for use of the knife, about half of which, it will be noticed, occur in the Kandy District.

53. The number of orders made by the Magistrates under section 21 of Ordinance No. 3 of 1898, forbidding the use of the knife, was 17.

CATTLE STEALING.

54. There were 70 cases throughout the Province during 1901, showing that, although this offence has materially decreased in some parts, it is still unfortunately prevalent, especially in Udapalata, where, however, the Ratemahatmaya has done his best to secure convictions and been successful in 4 out of 6 cases. In Harispattu there were 13 cases, of which the Ratemahatmaya reports 11 to be true. There were 6 cases in Tumpane, and a few in other parts of the district. It is

difficult to get the owners and headmen to take sufficient interest in the prosecution of these cases, and if there is good evidence, it is generally ruined by being supplemented by additional false evidence to the loss of any chance of conviction.

55. The Kandy District was entirely free from cattle murrain during the year, and, with the exception of slight outbreaks in Pata Hewaheta, Pata Dumbara, and Harispattu, almost equally so from hoof-and-mouth disease.

NEW AREAS OF CULTIVATION.

56. The Ratemahatmayas of the Kandy District report the opening of the following new areas of cultivation during 1901 :—

Division.	Extent.	Crop.
Udanuwara	5 amunams	... El-wi
Yatinuwara	587 acres	... Chenas
Tumpane	424 do.	... do.
Harispattu	120 do.	... Cacao
Do.	22 do.	... Cocoanuts
Do.	967 do.	... Chenas
Do.	382 do.	... Vegetables
Pata Dumbara	1,000 do.	... Tea, tobacco, and cacao

I have not been able to scrutinize these figures, and probably in the case of chenas they represent merely lands that have been cultivated previously with fine grain, &c. I have noticed myself a large increase in the area of tobacco cultivation in Dumbara, Harispattu, and Pata Hewaheta, and undoubtedly the villagers find this an extremely profitable product to cultivate. There has also been extension of cardamom cultivation, especially by planters in the Nitre Cave and Rangala districts, but I have no return of the actual acreage.

WORKING OF THE WASTE LANDS ORDINANCES.

57. A statement is annexed showing the extent to which these Ordinances were put in motion in the Kandy District in 1901, and the results obtained :—

[For Statement see next page.]

FOREST CONSERVANCY.

58. I annex information showing the working of the Forest Department as at present constituted in the Central Province in each district during the year :—

General.—In this Province the more important forests are under the direct control of the Conservator. No steps were taken towards proclaiming any new reserved forests, except in the case of Campbell's land in the Matale District. Little demarcation has been done this year. In several cases it was found necessary to call upon private parties to define their boundaries, and in the case of Udawattakele all persons who owned land adjoining it have opened their boundaries. All that is now required for demarcating this forest is the verification of the boundaries by the Survey Department. There have been no surveys made this year. The depôt at Nawalapitiya was closed.

Udawattakele.—Allusion has already been made to the demarcation of this forest. It is an important work, and one that is urgently required, as the boundaries, from want of supervision in past years, have become quite untraceable. Improvement fellings have been carried out, vistas opened and paths kept clear, and dead or fallen trees removed. There has been, as there always must be in a forest so close to Kandy, a certain amount of pilfering of firewood, but the thefts have diminished since the appointment of a watcher in June, 1900.

Nuwara Eliya.—As was the case last year, the Hill Reserves met nearly all the demand for timber and firewood. 700 applications for chena permits from Walapane and 37 from Uda Hewaheta were received, to cultivate 558½ and 57 acres, respectively. Receipts for the year amounted to Rs. 1,703·16, and the expenditure to Rs. 1,317·84, leaving a surplus of Rs. 385·32 of receipts over expenditure.

Matale.—There were 93 chena applications covering an area of 403 acres, as against 119 applications for 497 acres in 1900. Campbell's land was finally settled under the Forest Ordinance. Demarcation lines were completed for 12 miles in the Welikanda forest, and was begun in the Pellanda forest. An experiment was made of cutting a tract for half a mile 2 ft. by 2 ft. If this lasts as a permanent landmark, it may be found useful to carry along all the demarcation lines. The revenue for 1901 was Rs. 2,766·59, the expenditure Rs. 1,830·45. Value of Pallegama ebony sold in Colombo Rs. 7,054·50. The depôt was closed in July. The Forest Clerk was transferred in July to Kandy, and the Forest Overseer to Nuwara Eliya in October. No one has yet been appointed to act in their places.

General Protection.—In Udapalata there is a tract of jungle awaiting settlement. Until survey has been made and plans received nothing can be done.

Comparison of the Two Years 1900 and 1901.—The most noteworthy feature is the closing of the two depôts at Nawalapitiya and Matale. It is probable that Kandy depôt will be closed next year.

Staff.—At Nawalapitiya Mr. Ferdinands is in charge of the Gampola and Nawalapitiya districts; at Teldeniya Mr. H. P. Ratnayake is in charge of the Uda and Pata Dumbara districts, where there are some large forests, and he supervises the chena cultivation. Each of my Assistants has a Ranger. In July Mr. Goonetilleke, the Forest Clerk, Kandy, was transferred to Colombo. His place was taken by Mr. Tisseweresinghe.

Statement of Work done under the Waste Lands Ordinances in the Kandy District in 1901.

Village.	Name of Land.	Extent. A. R. P.	Date of Survey.	No. of Preliminary Plan and Lot and Name of Licensed Surveyor and No. of Plan.	Date of first Notice under the Waste Lands Ordinance.	If claimed, Name of Claimant.	Date of Final Order.	Term of Final Order.	No. and Date of *Gazette*.	No. of Kachcheri File.	Remarks.

CHENA CULTIVATION.

59. An extent of 87 acres was allowed for chena cultivation on Crown land in Uda Dumbara in the Kandy District, as against 172 acres in 1900. Every care is taken to limit the extent allowed, and to confine the cultivation to lands previously used for this purpose.

The system of chena cultivation in the Matale District, which I found defective on my first visit in 1900, was revised and placed under closer supervision and restriction.

Until more attention is given to the requirements of irrigation in this Province, Crown lands must be allowed in many parts to provide the necessary food supply of the villagers.

SALE OF LAND BY VILLAGERS.

60. Except the sale referred to by Mr. Alexander in his report on the Matale District, no case of alienation of lands by the villagers has come to my notice during 1901.

EVENTS OF INTEREST.

61. The Census of the population of the Central Province was successfully taken on the 1st March. The headmen and enumerators had been carefully instructed by Mr. Thaine on circuit and by myself, and thoroughly understood what was expected of them. I have every confidence that in the villages the results entered are accurate. It is not so easy to feel confident regarding the results on the estates, and I think in future years this Census should also be taken by paid Government enumerators.

62. The principal events of the year were, however, connected with the Royal Family. The announcement of the death of the beloved Queen Victoria, which reached Kandy at 8.30 A.M. on the 23rd January, was the occasion for widespread and sincere grief among all classes, which, if possible, was more fully and deeply evinced on the day fixed for the observation of the funeral ceremonies, the 2nd February, not only in Kandy, but in all the principal towns and in every village in the Kandyan District. The day was kept as one of solemn mourning, and every sign of respect shown to the memory of the great Queen.

The accession of His Gracious Majesty King Edward VII. was proclaimed throughout the Province with proper ceremony.

The visit of Their Royal Highnesses the Duke and Duchess of Cornwall and York to Ceylon on their tour round the British dominions beyond the seas enabled them to make a somewhat prolonged stay in Kandy to the joy of all classes, and to the special delight of the Kandyan chiefs and villagers, who flocked into Kandy in large numbers to welcome them. The following is a brief account of their stay in Kandy on the 12th, 13th, and 14th April :—

April 12 : Arrival of Their Royal Highnesses in Kandy.—Their Royal Highnesses the Duke and Duchess of Cornwall and York arrived at Kandy railway station at 5.30 P.M., and were received by Her Excellency Lady Ridgeway, His Excellency the Governor travelling in the train with Their Royal Highnesses from Colombo. A Guard of Honour of the 9th Madras Infantry was present. Their Royal Highnesses were conducted to a dais on the platform, where an Address of Welcome from the Municipal Council was read by the Chairman, and the Chairman and the Councillors were presented to His Royal Highness. Their Royal Highnesses drove to the Pavilion escorted by the Ceylon Mounted Infantry, the road being lined by the Police and Volunteers as far as Sir Henry Ward's statue, and from thence to the Pavilion gate by the Registrars, Koralas, and Arachchies of the Kandy District.

After dinner at the Pavilion the chiefs of the Kandy District conducted a Royal perahera into the Pavilion grounds at 9.45 P.M. There were 63 elephants, and much attention had been given to the equipment of the dancers, attendants, &c., so that the general effect was very good. His Royal Highness was pleased to say that it was a much better perahera than the one he saw on his last visit.

Mr. Dunuwille, the Dewa Nilame (C. B. Nugawela), the Ratemahatmaya of Pata Hewaheta (L. B. Yatawara), as senior Ratemahatmaya, were presented to His Royal Highness, who thanked them for the perahera. The perahera left the Pavilion grounds at 11 P.M.

April 13 : Their Royal Highnesses in Kandy.—At 12 o'clock His Royal Highness received the deputation of the Planters' Association, who presented an address in a valuable ivory casket set with Ceylon precious stones (Rs. 4,500).

His Royal Highness presented the Order of C.M.G. to the following members of the Civil Service in Ceylon :—

Hon. Mr. F. R. Ellis, Government Agent, Western Province.
Hon. Mr. F. A. Cooper, Director of Public Works.
Mr. J. H. de Saram, District Judge of Kandy.

The afternoon was spent in witnessing native jugglers and the Veddahs brought from the Eastern Province, and at 4 P.M. His Royal Highness presented the new Colours to the Ceylon Mounted Infantry in front of the Pavilion.

In the evening Her Royal Highness the Duchess of Cornwall, accompanied by Her Excellency Lady Ridgeway, went out for a drive round Lady Horton's road and Upper Lake road.

At 9.45 Their Royal Highnesses attended the Audience Hall for reception of the Kandyan chiefs, all the Kandyan Provinces being well represented, except the North-Western Province, which had presented an address at Polgahawela. After the Kandyan chiefs had been presented, representatives were presented from the low-country Sinhalese, Tamils, and Mohammedans.

The Audience Hall was brilliantly lit with electricity, and in the pandals on either side 620 spectators were accommodated with seats in raised tiers, all classes being thoroughly represented. The Koralas and Arachchies filled the spaces between the carved pillars at the lower half of the Hall.

Their Royal Highnesses then proceeded to the Dalada Maligawa, where the tooth-relic and jewels were exhibited in the room at the foot of the staircase to the Udamaluwa. The hall of the temple was filled with Buddhist priests, who recited a verse of the Jaya Mangala as Their Royal Highnesses entered.

After inspection of the jewels, &c., Their Royal Highnesses proceeded to the Octagon, where the Librarian showed some of his books and presented His Royal Highness with three ola books. They then witnessed the illuminations and fireworks from the verandah of the Octagon, leaving at 11.45 to drive round the lake for a better view of the illuminations, and returning to the Pavilion shortly after 12 o'clock.

There were no accidents, although the town was densely crowded, and the police worked hard and well.

April 14.—Their Royal Highnesses attended Divine Service at St. Paul's at 11.30, the Bishop of Colombo preaching. The choir was augmented by drafts from the Cathedral and St. Michael's choirs, assisted by the Band of the Duke of Cornwall's Light Infantry.

At 4 P.M. Their Royal Highnesses drove out to Peradeniya and visited the Royal Botanical Gardens, and planted a tree and witnessed elephants bathing in the river. The road from Kandy to the Gardens had been decorated throughout by the householders on either side and looked well.

April 15: Their Royal Highnesses leave Kandy.—Their Royal Highnesses left Kandy at 12.30. A Guard of Honour of the Ceylon Volunteers was present at the station, and the 9th Madras Infantry and police lined the road.

Before leaving His Royal Highness graciously expressed himself thoroughly pleased and gratified with his reception and with the arrangements made, and desired me to convey his thanks to the Kandyan chiefs and others who decorated the streets, which I have done.

Mr. De Saram, Superintendent of Police, was presented to His Royal Highness at the station by His Excellency the Governor, and was complimented upon the admirable manner in which the police had controlled the crowds in the streets.

Their Royal Highnesses left amid loud cheers, and so ended an historical visit.

There was no rain in Kandy throughout the whole visit, a unique record for these dates in April. The scene in the ancient Audience Hall on the night of the 14th April was one of exceptional brilliance, and will not be easily forgotten by those who witnessed it.

63. In the month of June I made a long circuit with the Assistant Government Agent in the Nuwara Eliya District, visiting some of the most outlying portions of the Uda Hewaheta and Walapane divisions, and in July I visited the Matale District, spending much time with the Assistant Government Agent in the tank districts of Matale north and east, having special regard in each district to the requirements of the villagers in irrigation, and finding them, as already explained, much in need of assistance.

64. The new hospital at Craigie Lea, erected at a total cost of Rs. 86,494, was opened for use in November, 1901.

65. A new resthouse at Peradeniya, for which a sum of Rs. 15,137·18 was voted in the Supply Bill of 1901, was also commenced, and will be open for use early in 1902.

66. The time of the Government Agent is fully occupied in the third week of every month with the meetings of the Provincial and District Road Committees, the Municipal Council, the Board of Health, and the Local Boards at Nawalapitiya, Hatton, and Gampola. The remaining time at his disposal is employed in giving personal attention on circuit to the many requirements of this important Province, in attendance at the Legislative Council, and in the disposal of the various and often complicated questions which daily come before him.

Kandy, June 23, 1902

HERBERT WACE,
Government Agent.

REPORT ON THE MATALE DISTRICT FOR 1901.

Area, 926 square miles; Population at Census of 1901, 92,300.

REVENUE AND EXPENDITURE.

THE following comparative statements show the revenue and expenditure brought to account at the Matale Kachcheri during 1900 and 1901:—

Revenue.

Head of Service.	1900. Rs. c.	1901. Rs. c.	Increase. Rs. c.	Decrease. Rs. c.
Licenses, Excise, and Internal Revenue not otherwise classified.				
Stamps.				
Revenue (various services) ...	5,884 26	6,749 98	865 72	—
Fines and Forfeitures.				
Police Court... ...	2,045 50	3,146 0	1,100 50	—
Government Agents ...	21 0	3 0	—	18 0
Other Departments ...	37 25	256 25	219 0	—
Forest Offences ...	236 84	165 40	—	71 44
Fees of Court or Office, Payments for Specific Services, and Reimbursements in Aid.				
Judicial Stamps ...	3,589 95	4,092 60	502 65	—
Survey Fees... ...	406 11	573 51	167 40	—
Recoveries on Irrigation Works	375 4	343 35	—	31 69
Hospital Stoppages ...	5 25	—	—	5 25
Collections at Dispensaries ...	840 38	802 15	—	38 23
Police Rates in Towns and Rural Districts ...	2,278 82	2,338 50	59 68	—
School Books and Stationery	252 35	302 10	49 75	—
Fees for Title Deeds ...	107 61	125 42	17 81	—
Sundries	—	8 14	8 14	—

Head of Service.	1900. Rs. c.	1901. Rs. c.	Increase. Rs. c.	Decrease. Rs. c.
Post and Telegraph.				
Postage Stamps ...	4,519 68	7,720 86	3,201 18	—
Rent of Government Property.				
Rent of Lands ...	727 5	670 76	—	56 29
Miscellaneous Receipts.

Crops on Crown Lands	120 72	1,502 73	1,382 1	—
Sundries	520 0	113 34	—	406 66
Land Sales.				
Crown Land sold ...	2,700 85	4,602 8	1,901 23	—
Premia on Leases ...	251 50	251 50	—	—
Total ...	28,205 23	35,518 55	10,459 61	3,146 29

Expenditure.

	1900. Rs. c.	1901. Rs. c.		Rs. c.
Personal Emoluments ...	16,680 19	15,709 40	Assistant Government Agent ...	13,312 50*
			Rural Police	1,784 40
			Forest Department ...	612 50
Other Charges ...	6,027 85	4,900 97	Assistant Government Agent ...	3,683 2
			Forest Department ...	1,217 95
Pensions ...	4,766 64	5,232 64		
Total Expenditure ...	27,474 68	25,843 1		
Total Revenue collected ...	28,205 23	35,518 55		
Excess of Revenue	730 55	9,675 54		

* Exclusive of salary and exchange compensation of Assistant Government Agent, which is paid by the Treasurer.

It is satisfactory to be able to record during the second year of my administration in the Matale District that the revenue for the year 1901 exceeded that of the previous year by Rs. 7,313·32, whilst the expenditure was Rs. 1,631·67 less than that of 1900. The noteworthy increase of Rs. 3,201·18 realized by the sale of postage stamps is an encouraging sign of the increasing prosperity of the district. The increase of Rs. 865·72 under the head Revenue Stamps and Rs. 502·65 under the head Judicial Stamps is also satisfactory, and is partly due to a new and more enterprising stamp vendor. The property in Matale is slowly increasing in value as the increase in police rates shows. The increase in the sale of school books, although it does not involve a large amount, represents an additional number of school books in circulation among the various schools. Police Court fines bring in an additional Rs 1,100·50, and there is an increase of Rs. 219 on the fines levied on road tax defaulters. The additional Rs. 1,382·01 realized by crops on Crown lands is partly accounted for by the seizure and sale of crops illicitly sown on Crown land without permits, and partly by the recovery of rents for the cultivation of the beds of tanks. The increase from the sale of lands is due to the sale of a large block at Puwakpitiya, now known as Ambanganga estate, to Major Gordon Reeves.

The only noteworthy decrease, viz., Rs. 2,518·73, is in the sale of timber. This is accounted for by the closing of the depôt.

The following is a comparative statement of revenue which was derived from this district, but credited in other districts, for the years 1900 and 1901 :—

	1900. Rs. c.	1901. Rs. c.
Postage stamps in Colombo ...	6,853 36	4,842 96
Tolls in Kandy	14,602 0	14538 67
Telegraph stamps in Colombo	3,680 36	5,476 69
Value of timber in Kandy ...	1,388 27	—
Value of fuel in Kandy	242 53	—
Value of ebony in Colombo	254 25	—
Value of Pallegama ebony in Colombo ...	1,485 81	7,054 50
Survey fees in Kandy for certificate of quiet possession ..	15 0	2 50
Total ...	28,721 59	31,915 32

The arrack rent of this district is sold conjointly with the arrack rent for the rest of the Central Province, and separate figures cannot be given.

I.—Food Supply of the People.

From all three divisions of the district—north, south, and east—reports have been received of a good season for both the paddy crops and for the chena crops. The rainfall in Matale south was heavier than usual, and no serious droughts were experienced in the other divisions. The villages of

Kandapalla korale, Inamaluwa korale, and Wagapanaha Pallesiya pattu are entirely dependent upon their small village tanks for their supply of paddy. Of late years the rainfall has been more abundant than it was in the early nineties, but it must always be remembered that a drought such as then occurred might recur. The restoration of some of our large tanks is therefore a necessary precaution against a famine in those korales. In Matale south paddy is the staple article of diet. In Matale north the consumption of paddy about equals that of kurakkan. In Matale east, except in Pallesiya pattu and a few favoured villages watered by the streams flowing from the long range of hills which shut off Laggala and Gangala pattus, kurakkan is the chief article of the food of the people. In all three districts sufficient paddy, kurakkan, dry grains, curry stuffs, and vegetables are grown for the consumption of the Kandyans themselves, except where they have sold away their lands. The cultivation of paddy extends slowly, and in almost exact proportion to the gradual increase of the Kandyan population. The Kandyans are unfortunately entirely devoid of any commercial spirit. They have a constitutional aversion to trade. They seldom grow to sell. They practically never buy to sell again at a profit. All the rice, therefore, required by the coolies in this district continues to be imported.

II.—THE PROGRESS OF IRRIGATION DURING THE YEAR AND VIEWS AS REGARDS THE FUTURE.

No substantial progress can, I regret to say, be recorded for 1901. Only one tank has been added to the list, which now comprises 150 tanks. It is not the fault of the villagers that there has been no material progress. They have been well disciplined by having had to perform compulsory katty work for the past ten years, and now recognize the advantages which it has brought to them. Their standard of comfort has been raised, and they are now eagerly awaiting the restoration of one or more of the several large tanks in the district, such as Dewahuwa, Kalundewa Mahawewa, Kandalama Mahawewa, Wannigamawewa, Pekulamawewa, and others. I have been pressing the claims of Kandapalla korale to have the Dewahuwa tank restored. It is situated in the middle of a well-populated district, and applications have been received to purchase 1,536 acres under it, should its restoration be sanctioned. In three days I could get all the labour force necessary for the work of restoration, and a very willing labour force it would be, for the Kandapalla korale people are extremely anxious to start work on it. Some such restoration on a large scale is necessary to save Matale north from the possibilities of a famine, which is never far remote where the food supply has to depend upon a succession of small village tanks. I put Dewahuwa first because its restoration was very nearly sanctioned less than ten years ago, and I think that the cost of its restoration would be soonest repaid out of the sale of lands beneath it and out of the fees recoverable as water-rate.

I do not advocate pushing irrigation much at present in Matale east, because there is not a sufficient population to take up the work of restoration or to contribute to repay its cost. However, I hope to be able to receive the sanction of Government to the restoration of Helambagahawatta tank in Gangala Pallesiya pattu. It would bring a constant supply of food into the poorest part of that district. The villagers of Pubbiliya, Maragomuwa, and Kongahawela, as well as the villagers of Helambagahawatta would furnish a sufficient and ready labour force, and would take up Crown lands below it. The plans have not yet been received from the Sub-Inspector of Village Tanks. Further improvements are also contemplated for the Bowatenna irrigation scheme. The Sub-Inspector, after considerable delay, partly due to want of suitable instruments, made a survey of the proposed new dam and channel last September. The question of their construction is now before the Central Irrigation Board.

In Matale south a survey was made and plans were furnished for a new anicut at Kurukola-oya, but no further irrigation work was undertaken.

What the Matale District now requires is a special irrigation officer to make a thorough survey of all the large tanks which have yet to be restored, and to write full reports on them. All the large tanks are easily accessible, and most of them are situated in well-populated districts.

I append extracts from the Sub-Inspector's annual report:—

The number of village tanks on the list is 150, situated as follows:—

	Matale East.			
Laggala Pallesiya Pattu ...	...	...	...	
	Matale North.			
Udugoda Pallesiya Pattu ...	...	...	...	5
Wagapanaha Udasiya Pattu	...	...	...	7
Wagapanaha Pallesiya Pattu	...	...	...	36
Kandapalla Korale ...	...	...	...	68
Inamaluwa Korale ...	...	...	...	33

Work done by the Villagers.—The quantity of earthwork done by the villagers during the year is 8,875 cubes. In addition to the above earthwork, the villagers had to trace out leaks in bunds caused by the rotting roots of trees felled at the beginning of the restoration of village tanks about the year 1887, and to re-form the bunds with puddle in order to stop further leaks. about twenty-seven such leaks were stopped during the year. The villagers had also to clear 165,000 feet tank bunds of jungle and weeds, and stems and roots were also removed and burnt. They had also to cut and clear 34 miles tank roads.

Maintenance of Village Tank Sluices.—Thirty-two tank sluices were provided with new leather washers, and several with bolts and nuts. Several cement pipe sluices were found to be leaking, and fresh pipes had to be laid down. It is advisable to replace the cement pipe sluices with 6-in. iron pipes. The former do not last long, and are constantly getting out of repair. It is impossible to mend them when the tanks are full, and a good deal of water is wasted. In many cases the leakage cannot be discovered without cutting through the bund.

Cement Pipe Factory at Dambulla.—The following is a list of pipes used and balance in hand on 1st January, 1902 :—

	Balance on January 1, 1901.	Issued in 1901.	Balance on January 1, 1902.
Horizontal pipes, 2 ft. long and 6 in. diameter	132	132	—
Do. 2 ft. do. 4 in. do.	286	169	117
Vertical pipes, 1 ft. do. 6 in. do.	61	61	—
Do. 1 ft. do. 4 in. do.	159	97	62
Cement blocks, 6 in.	6	6	—
Do. 4 in.	19	14	5

A vote is required for the manufacture of cement pipes in 1902.

Maintenance Estimates of Tanks, &c., restored by Government.—Minor repairs under these estimates were carried out on Pelwehera tank, Eraula tank, Karavilahena tank, Wiragahapelessa amuna, Elahera amuna, and Nadeniya amuna.

Surveys.—A survey and section for a proposed amuna across Kurukola-oya and of a channel were made, and plans and estimates submitted. A survey and section of the proposed dam across the Amban-ganga at Bowatenna were made, and plans submitted. A survey and sections were made of the Helambagahawatta tank. Plans and estimates and a report showing the probable extent of irrigable lands under the tank will be forwarded as early as possible.

Damages by Flood.—No serious damage occurred. Both Bambaragaswewa and Pahala and Kuda wewas breached, but were speedily repaired by the proprietors of fields below the tanks.

The extent of default in katty works in each korale was as follows :—

	A.	P.	K.
Udugoda Pallesiya Pattu	11	1	5
Wagapanaha Pallesiya Pattu	12	2	7
Inamaluwa Korale	9	2	1
Kandapalla Korale	9	3	0
Total ...	43	1	3

III.—LEGISLATION REQUIRED.

Under the heading of "The Cacao Question," I have advocated that the law which requires a pass for the removal of forest produce should be extended within a defined area to the removal of cacao, and that the traders in cacao should be legally compelled to keep proper accounts and file the headmen's passes with their accounts.

I also think that the law relating to Kandyan marriages requires amendment. It might have been thought that the looseness of the marriage contract and the facilities for obtaining a divorce under the Kandyan Law by mutual consent or by separation for a year would have attracted intending parties to take an easy chance of wedded life. But it is only with the greatest pressure upon the headmen that the Kandyans can be reluctantly brought to register their marriages. Under the immediate exercise of pressure several unions were at first registered, but the people have learnt that there is no legal force behind the pressure, and they will not take the trouble to register their marriages. They even argue that the contract is not a sufficiently binding one for them to bother themselves to undergo the legal form of marriage by registration, and they are quite content with their ordinary informal custom. This would not matter so much, except that the offspring of such informal unions are illegitimate in the eye of the law, and are debarred from their inheritance, because registration is the only proof of marriage among the Kandyans. I think that it would be advisable to extend to them the presumption of marriage, which is accorded to lasting and fruitful unions among the low-country Sinhalese. Kandyans are still debarred from contracting the more binding marriage ties under the General Marriage Ordinance. This has been recognized to be a mistake, and is, I believe, about to be altered.

IV.—THE WORKS MOST REQUIRED.

I am indebted to Mr. Pigott, the District Engineer, for the following suggestions :—

Roads.—The defective drainage at the 21¾ mile of the road from Balakaduwa to junction of Trincomalee and Anuradhapura roads requires to be remedied. A special estimate for this work has been sanctioned for 1902. Galas are much required along this road. [I have had galas built at suitable halting-places all along the road, and am only waiting for a general proclamation of all the Public Works Department roads to compel the carters to take their carts off the road when they require a halt.—E.B.A.]

An estimate has been sanctioned for improving the Rattota road by putting down more road metal, and the upkeep provision has been increased for 1902. [This is urgently required, as it has been clearly shown by figures supplied by Mr. Westland that the traffic has doubled during the past ten years.—E.B.A.]

The first mile and a half of the road from Palapatwela to Galewela has been bottomed and metalled on a special estimate this year. The next section requires to be improved in the same manner. The new bridge over the Talwatu-oya on the 33rd mile and a smaller one on the 35th mile have been completed. A bridge is required over the Pallepola-oya on the 28th mile. The river is a perennial one, rises very rapidly, cuts off traffic, and causes great inconvenience. [I heartily endorse Mr. Pigott's suggestions showing the necessity for the continued improvement of this road up to the Pallepola-oya and the necessity for a bridge over the Pallepola-oya. No one can travel along the road and fail to note the considerable extent of estates and gardens which are rapidly being opened up all along the road. Between Paldeniya and the Pallepola-oya Mr. Barber has opened up a promising estate of several acres. Metalling will be absolutely necessary to prevent the road being damaged by traffic. The bridges beyond the Pallepola-oya and further removed from the Matale market are now

complete. The District Road Committee has just put in the last bridge on the connecting Maningomuwa road. It is only consistent that the important Pallepola-oya bridge should be constructed to complete the road, and that the want of this bridge should no longer be allowed to discount the improvements made beyond it.—E.B.A.]

Seventeen culverts were built this year on the road from Kalawewa to Galewela, and the drainage has been much improved.

The two rivers which remained unbridged on the road from Beligama to Mirisgoni-oya have now been bridged. Twelve additional culverts are to be provided in 1902. The road will then be completed from end to end.

An estimate has been prepared for the Matale town drains, and, if approved, the work should be done in sections.

A sum of Rs. 12,000 has been voted for 1902 for the improvements, additions, and alterations to the Matale hospital, urged since 1900.

An estimate of Rs. 15,000 towards the building of police barracks on the land opposite to the police station has been approved for 1902. The land has already been acquired.

The question of a water supply for Matale town has not yet been settled, but it has been definitely established that the soundest scheme is to bring water by pipes from Wiltshire stream down about 2,000 feet into the Matale reservoir. The reservoir would then require to be materially strengthened and possibly enlarged. This scheme will probably be adopted, if some reasonable arrangement can be made with the proprietary company. The company has for some time been in a state of reconstruction, and there has apparently been no one with sufficient authority to give a definite answer to my several letters on the subject during the year. I trust that the reconstruction will soon be completed, and that a decision will be arrived at in 1902.

The further improvement of the Sigiri road is urgently necessary. Its condition has been described as "disgraceful," and the epithet unfortunately applies. Mr. Bell, the Archæological Commissioner, and his staff are put to a great deal of inconvenience and extra expense in transport, and in wet weather visitors find they have to walk and wade nearly 6 miles there and 6 miles back through mud, as it is impossible to travel along it in a cart. No vote was allowed last year, and the road had therefore to remain in a half-formed condition. I hope for better things in 1902, when a vote has been promised, and I trust that the completion of the road will be handed over to the Public Works Department.

Permanent buildings for dispensaries are urgently required at Pallegama and Galewela. The apothecaries, who for a very small remuneration spend their lives amid most uncongenial and, in these cases, unhealthy surroundings in performing unrecorded acts of humanity, deserve to be treated with every consideration. Their health should be safeguarded. Unhealthy and uncomfortable quarters must have an unfavourable reaction upon their work and render it less efficient. And it must be remembered that the health of the people depends to no slight extent on the health of the apothecaries. Besides, the cost of repairing the present temporary buildings is yearly very great, and it would probably be an economy in the long run to establish permanent buildings.

Wells are urgently required. No vote was allowed for 1901. But a vote of Rs. 300 has been allowed for 1902. With this and a considerable additional vote from the Gansabhawa funds, I hope to have several good wells built in Matale north and east during the coming year.

I repeat from last year's list :—

(1) Extension of Public Works Department road beyond Rattota to Laggala on grant-in-aid system.

(2) Either a bridge or a ford across the Amban-ganga at Elahera.

(3) Matale town : improvements to drainage ; houses for Government clerks, who are put to a good deal of hardship in having to pay abnormally high rents.

(4) Making a new road from Elahera eastwards to join the Topawewa road and connect East Matale by a short cut with the North-Central Province.

V.—PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

My first and foremost desire for the improvement of the district is to see one of our famous old tanks, preferably Dewahuwa or Kalundewa Mahawewa, restored in the near future, and the others taken up in their turn. When so much money has been voted for irrigation, it would be extremely discouraging if the Matale District, with its wonderful resources of water, were left entirely neglected. It is not as if water were to be brought into an unfruitful desert. Matale north is well populated. The soil is fertile. The people are anxious to work on the tanks, and are skilled in such work. Importation of labour would be unnecessary. The cost of the work would be practically limited to the masonry. Applications for land would be unlimited.

The Yoda-ela, from Elahera in Matale east to Minneriya in North-Central Province, has already been surveyed, and can therefore be brought on to the irrigation programme when necessary. An offer has been made to purchase 1,000 acres under the Yoda-ela about 1 mile from Elahera, and the intention of the applicant is to asweddumize the land by Tamil labour. The experiment might be productive of important and far-reaching results.

Matale east is badly off for roads, but the rivers make roads impossible, except at a prohibitive cost. I should like to see the Kongahawela-Kaikawela road converted into a cart road, but the project cannot be thought of unless new estates are opened up along the road. A beginning has been made by the opening up of Clodagh estate, and the road is in fair order for 3 miles. An application has been received by me for the purchase of a block of lands at Hunuketela, on the other side of the Amban-ganga, further down the road ; and with the settlement of the Andawala lands, still further down the road, a fresh and large area of land suitable for cultivation will become available for sale within a few months. At the 12th mile the Amban-ganga has again to be crossed, but from that point it is possible to drive from Bowatenna to the Naula-Elahera road. The Kaikawala-Kongahawela road runs parallel with the North road, 3 or 4 miles east of it.

Over the other side further east, in Laggala and Gangala pattus, the only existing cart road is that from Elahera to Pallegama. The villages are too scattered and the roads too steep to think of

constructing cart roads for some years to come. I have made the Amban-ganga passable in flood at Elagomuwa by a wire dandu-maruwa, and an edanda of 120 ft. has been thrown across the Kalu-ganga at Pallegama in 1901. Some means of crossing the Amban-ganga at Elahera during the frequent floods is still required, but is beyond the limited resources of the Road Committee and the Gansabhawa. In 1902 the road from Kambarawa to Pottotawela, Puwakpitiya, and Gammaduwa will be converted into a bridle road.

An exchange in the administration of certain roads has been proposed, which will be of great advantage to the district, and which will, I hope, be accomplished in 1902. It is proposed that the Public Works Department should hand over to the District Road Committee the last section of the Naula-Pallegama road, viz., that between Elahera and Pallegama, and that that Department should take over the old Kandy road, now called the Balakaduwa minor road, and the Kalalpitiya minor road, and that it should also complete the road to Sigiriya. Now that the lease to the Pallegama Association has expired, the Elahera-Pallegama road has sunk into insignificance, and the exchange is what any sensible man would naturally advocate.

A vote of Rs. 300 has been allowed to this district for wells in 1902, and I hope to supplement it by a considerable sum from the Village Committee funds. Orders have been sent to the Ratemahatmayas north and east to direct the headmen and villagers in villages without proper wells to prospect for suitable sites for wells in the next few months. I shall then be in a position next June or July to invest our funds with every chance of success. No one can travel during the dry season in the low-country of Matale north and east without being horrified at the foul water which some of the villagers are compelled to use for drinking as well as bathing purposes, water in which cattle wallow and which breeds the germs of parangi and other loathsome plagues by which the population is diseased and disfigured.

The advisability of making Ambana a part of Pallesiya pattu, Matale east, with which it is geographically connected, has been placed before the Government Agent. The headmen and villagers are put to much inconvenience by their attachment to Matale south.

The advisability of dividing Pallesiya pattu into two korales has also been urged. It is, I think, too big a charge for one man to undertake properly. It comprises fourteen Arachchi wasams, whereas most pattus have less than seven. It is very extensive, and travelling is difficult. It contains a great number of important estates and divergent interests. Crime also is an unpleasant factor, which constantly protrudes itself in the neighbourhood of Rattota. The inconvenience of having only one registrar was found to be so great that two were appointed for the Pallesiya pattu. The inconvenience of having only one Korala is no less strongly felt.

VI.—SANITATION AND HEALTH OF THE PEOPLE.

The Assistant Colonial Surgeon kindly reports as follows :—

> The sanitary condition of the district was, on the whole, satisfactory. I am glad to say that there were no cases of smallpox or cholera during the year. The most prevalent diseases were those originating from the effects of malarial poisoning. The district is, I think, well provided with the facilities for medical aid. To stamp out malaria is a difficult problem, as the ordinary native will not understand that a single bottle of medicine will not cure his fever, nor render him harmless to his neighbours. I think that there should be systematic visits to villages with the view of giving quinine to those requiring it, and instructing headmen in the dealing with swamps and ponds with petroleum or carbolic acid. In the town of Matale the bazaars should be better drained. I feel sure that any money expended in this direction is money well laid out.

The Medical Officer, Rattota, reports that the sanitary condition of the estates and villages in his charge was satisfactory; but that there was room for improvement in Rattota town, where two or at least one public latrine should be built. The water supply in the districts is good; that in Rattota town is also good, but scarce. There were no epidemics.

The Medical Officer, Elkaduwa, reports that there was a good deal of sickness among the coolies from influenza, fever, and other ills, chiefly due to the extremely wet weather which prevailed during the year. Otherwise the health of the villagers and the coolies was satisfactory. There were no epidemics.

The Mausahiriya Apothecary reports that dysentery prevailed in six villages during the rains of November and December. There were no epidemics. The sanitary condition of the villagers was fair, but the condition of the lines in the three estates in his charge was not satisfactory.

The Kongahawela Apothecary reports that out of a total of 5,801 cases treated by him 1,166 were fever cases. The sanitary condition of the villages was in some cases not satisfactory. He urges the requirement of a local hospital with 12 beds.

The Galewela Apothecary reports that, as compared with other years, the district was comparatively healthy, but malarial fever and parangi still prevailed. The former was rampant in November, December, and January. The mosquitoes are most numerous at the beginning of the rains, and less troublesome during the continuance of the rains. They disappear in the drought. He advocates the establishment of a parangi ward. He remarks on the overcrowding of the villages tending to difficulties of sanitation and ventilation.

The sanitary rate collected in Rattota and Dambulla was not used in 1900, the first year of its collection. In Dambulla it will be spent in filling up the low swamps below the tank and forming a small esplanade. In Rattota it will be spent either on improving the water supply or in the construction of latrines. Next year scavenging will be systematically undertaken in both towns.

Precautions against Plague.

The sites chosen for the erection of hospitals and camps were cleared. Precautionary measures were taken in having all houses whitewashed and wells, drains, and compounds cleansed at intervals. This work was supervised by the Assistant Colonial Surgeon, the Medical Officers, Ratemahatmayas, and Presidents.

Return of Patients treated at Various Dispensaries in Matale, exclusive of Estates Branch.

VII.—CRIME.

The following report upon the crime of the district has been kindly furnished again this year by Mr. W. Dunuwille, the Police Magistrate of Matale :—

Remarks on Crime.

I attach the usual tabular statements of murder, culpable homicide not amounting to murder, and the number of criminal cases heard and decided by me during 1901 :—

Murder Cases.

No. of Case.	Section.	Date of Offence. 1901.	Village.	Result.
18,154	296	Jan. 16	Illagoda estate, Matale South	Accused discharged in Supreme Court.
19,048	296	July. 28	Ukuwela, Matale South	1st, 2nd, 3rd, and 4th accused discharged in Police Court ; 6th accused was discharged in Supreme Court ; 5th accused sentenced to 4 years' rigorous imprisonment.
19,232	296	Sept. 11	Kahawatta estate.	2nd and 3rd accused discharged in Police Court ; 1st accused was sentenced to death.

Culpable Homicide.

No. of Case.	Section.	Date of Offence. 1901.	Village.	Result.
18,842	297	Sept. 9	Pahalawewa, Matale North	Accused sentenced to two years' rigorous imprisonment in Supreme Court.

Number of Criminal Cases disposed of during the Year 1901.

Disposed of criminal cases other than cases of quitting service :—	
Total	1,352
Average per month	112·66
Such cases disposed of after receipt of evidence :—	
Total	516
Average per month	43
Such cases disposed of without receipt of evidence :—	
Total	836
Average per month	69·66
Number of cases which were sent in appeal	14
Result in appeal :—	
Affirmed	12
Set aside	2

There have been only three murder cases and one of culpable homicide, all of which cases were brought to trial. Whilst in my last report I stated that the district was on the whole free from serious crime, I am glad to be able to say the same as regards the past year.

Knife Cases.—There were 33 cases under this head, the majority of them being cases of a trivial nature. All these cases were brought to trial, with varied results, but in no case did I feel justified in inflicting corporal punishment.

Toddy Cases.—144 cases were instituted for breach of Ordinance. Convictions were obtained in 126, and the amount realized by fines amounted to Rs. 1,201. I have no reason to believe that offences of this kind could be put down, except by fresh legislation.

Cacao Stealing.—In my last report I reported that cacao stealing-cases were greatly on the increase, but it is a satisfaction to me to be able to say that there has been a marked decrease during the last year, which I attribute to the co-operation of the rural police with the headmen. At the commencement of the crop and just at the start a number of cases were instituted, but as soon as the rural police were established and worked in combination with the village headmen there was a considerable reduction in the number of cacao stealing cases. In a previous report to Government I had occasion to state that the difficulty of putting down cases of this kind was owing to the employment by planters of dishonest watchers who connived at the thefts, and my opinion on this point was confirmed by the institution during the past year of several cases of theft against the watchers themselves by their employers.

I think it also right in this connection to state some particulars in regard to a cacao stealing case that has come before me. On a report made of a theft of cacao on an estate, and the offenders not being known, the Assistant Government Agent ordered the Ratemahatmaya to proceed. He went to the estate with some of his headmen. On reaching the estate he found a number of men engaged in plucking cacao pods in broad daylight, who the Ratemahatmaya thought were estate coolies, but to his surprise, on their seeing him and his men, they took to their heels. His suspicions being roused he and his men ran after the thieves, who were captured, afterwards tried, and convicted. There was of course at the time much noise and commotion, but the Ratemahatmaya did not see a single watcher about the place or at any distance from it. It appears that until the Ratemahatmaya saw the superintendent and reported the theft to him, neither he nor any person connected with the estate knew anything about it.

Cattle Stealing.—There was a larger number of cases instituted than in 1900, but the majority of them were found to be false and without any foundation. There is in fact no cattle stealing to speak of in this district.

The headmen have done their work during the year most satisfactorily, and I have received valuable assistance from the Assistant Government Agent of the district in the detection of crime, and the present satisfactory state of the district is mainly due to the great interest taken in it by him.

VIII., IX.—CRIME (*continued*).

A great deal of attention was paid to "crime" during the past year, and it is encouraging to find that crime has decreased.

The following is a comparison of the totals of A B C returns of important cases in 1900 and 1901:—

1900.		1901.	
First Quarter.		*First Quarter.*

The total number of true important cases in 1900 was 361, as against only 245 in 1901. The percentage of convictions in true cases was 67 in 1900, as compared with 64 per cent. in 1901.

Special pains were taken to instruct the "Inquirers into Deaths" in the proper manner of reporting deaths. A careful report of the aspect, condition, and position of the dead body (as required by the Criminal Procedure Code) will serve to give an immediate lie to false rumours and petitions of foul play spread by malicious persons too late to either prove or disprove their assertions. A very troublesome case of this nature occurred in 1900. On my recommendation a special Inquirer into Crimes, under the immediate supervision of the Police Magistrate, was appointed for Matale south. Under standing orders he is required to send in a report within three days of his instructions to hold an inquiry, and a final report later if necessary. He has done his work in a thorough and energetic manner, and I hope that the experience of the past year will bring him greater success this year.

Every serially reported crime was submitted to my notice in a daily list, and each case was followed from start to finish. A new register was also started by me, which shows the number of each Korala's report, its date, the date of the offence, the nature of the offence, and the result of the case as indicated by the Magistrate's letter. This has made it possible to see at a glance in what village crime is prevalent, and where it requires to be checked, and how the Koralas and headmen have co-operated in the prevention and detection of crime. Next year I shall extend this register to similar cases reported by the police.

In Kohonsiya pattu, Matale south, 24 true cases of serious crime were reported, resulting in 9 convictions. This does not speak well for the Korala. But he was ill for some time. The Arachchi of Purijjala acted for him, when he went on leave, with conspicuous success, and I prolonged his term through the cacao crop season. He showed himself extremely active. As Arachchi he was given a reward of Rs. 50 for arresting an accused in a murder case at Tibbotuwawa, when he was running away from the scene of the murder with a knife in his hand. The Wariyapola Arachchi has also given proof of his ability. No serious crime was reported from his village. He practically stopped all theft of cacao from Wariyapola estate. He was also given a reward of Rs. 50 for arresting two cacao thieves from another village and for arresting an accused who had been "wanted" for three years, in a rape case.

There were 8 true serious cases reported from Medasiya pattu. At the beginning of the year there was an epidemic of house-breaking and theft in this and the neighbouring pattus. The culprits seem to have been a gang of coolies from Elkaduwa estate. On the information of Mr. Lennox Conyngham, and subsequent prompt action on the part of the Korala and Arachchi, two of the gang were brought to justice, and the thefts immediately ceased. The Bowatta Arachchi was of great assistance at that time. The Kaduwela Arachchi received a reward of Rs. 25 for prompt action and report in a murder case, in which he gave considerable assistance to the Police Magistrate. The Ukuwela Arachchi received a reward of Rs. 15 for proceeding to Wattegama and arresting a cacao thief. The 8 cases produced convictions in 3 cases.

Udasiya pattu had only 7 true cases, with 5 convictions. The village of Neluwakanda was responsible for 4 of these cases, and I had to have the Arachchi removed and a stronger man appointed after holding inquiries in the village. It is a difficult village to govern, as that wasam possesses 36 convicts; whilst there are only 24 convicts in the rest of the whole pattu. I regret that we are now about to lose the old Korala, who has sought an honourable retirement after long and faithful service under Government. None of the Arachchies were rewarded for special services, but the Warapitiya and Bandarapola Arachchies have done exceptionally good work.

Gampahasiya pattu had 11 true serious cases, in which convictions were obtained in only 3 cases. I had to suspend both the Udugama and Imbulandanda Arachchies in connection with cases of cacao theft. The Dombawalá Arachchi was dismissed. None of the Arachchies were rewarded for special services. The Dorakumbura Arachchi is perhaps the best of the Arachchies in this pattu. I think that the Korala did his best, but that he was not sufficiently supported by the Arachchies.

Asgiriya Udasiya pattu had 7 true serious cases, in which 4 convictions were obtained. The Korala of this pattu is a man of good family and position, and cacao stealing is almost unknown and unheard of. All the Arachchies have done well, and best of them is perhaps the Pamunuwa Arachchi.

Asgiriya Pallesiya pattu had 6 true serious cases, resulting in 2 convictions. One of the 6 cases was, I think (*contra* the Police Magistrate), false, a case of alleged incendiarism. The Korala of Yatawatta and the headmen have been a good deal bothered, but have worked patiently and, on the whole, very successfully, and I am pleased with the good spirit which they have shown. With the Acting Ratemahatmaya they detected a very bad case of cacao theft on the Kurunegala border, proceeded across, and after a long hunt arrested most of the accused. The Udasgiriya Arachchi received a reward of Rs. 25 for prompt action in a case of house-breaking.

Matale North.—There were no true cases of serious crime reported from Udugoda Udasiya pattu, Inamaluwa korale, Wagapanaha Pallesiya pattu, and Wagapana Udasiya pattu. A case of theft occurred in Udugoda Udasiya pattu, in which the accused was convicted. There was a murder case in Kandapalla korale, in which the accused was committed to the Supreme Court.

The best korale is the Wagapanaha Udasiya pattu, in which crime has not been known for years. The Korale is very active, and very well supported by the Arachchies. The Korala of Wagapanaha Pallesiya pattu has also shown himself exceptionally active. All the other Koralas and most of the headmen have done good work, except the Korala of Kandapalla and some of his Arachchies. There are, I fear, a certain number of concealed cases of cattle stealing in this korale due to the propinquity of Kandapalla korale to the notorious Seven Korales and the carelessness of the cattle owners.

Matale East.—Matale Pallesiya pattu had 16 true serious cases, in which convictions were obtained in only 3. This unsatisfactory state of affairs is due partly to the evil influence of bad characters from the low-country in Rattota, partly to the enormous extent of the pattu, partly to the difficulty of tracing thefts on estates, which are generally committed by the coolies and their friends, and partly also to the ill-health of the Korala, who has now resigned.

The Pallegama Arachchi received a reward of Rs. 25 for catching a thief stealing cacao, arresting him, producing him before the court, conducting the case, and securing a conviction. The Mousagalla Arachchi received a reward of Rs. 25 for prompt action and arrest in a cattle stealing case. I am also pleased with the work of the Dankanda Arachchi, who was appointed to act for the Korala towards the end of the year.

Laggala Udasiya pattu was responsible for 3 true serious cases, all of which were conducted successfully. The Korala is active and well supported.

Laggala Pallesiya pattu was free from crime. The Korala was active; but the headmen do not take much interest in their duties. They are so cut off by distance from each other and the world that they have little interest outside their immediate surroundings.

Gangala Udasiya pattu was also free from crime. The Korala is active and well supported. The people are generally very happy and contented with their surroundings.

Gangala Pallesiya pattu was also free from crime. This korale possesses an active and intelligent Korala and a good set of headmen. The Elagamuwa Arachchi had to resign for slackness, partly the result of old age.

All three Ratemahatmayas deserve great praise and credit for the good criminal results of the past year.

I am satisfied with the way in which the police stationed in Matale have done their work under Sergeant Omar. The staff was reduced, and it was often difficult to arrange for the proper protection of the town at night. They did a good deal of hard, steady, and inconspicuous work, without achieving anything very brilliant. P. C. Kalu Banda's knowledge of the district was often found useful. But the staff lacked any one of much detective ability, with the exception to some extent of Sergeant Omar himself.

X.—CATTLE STEALING.

There is practically no cattle stealing on any serious scale anywhere in the district, except a little in Kandapalla korale, which is carefully concealed by the cattle owners as well as the thieves. There is an occasional case in the neighbourhood of Matale town and the Moorish villages of Warakamure and Nikagolla.

XI.—CATTLE DISEASE.

There were no cases of murrain or rinderpest. A few cases of hoof-and-mouth disease were reported from all three divisions, and for some time the removal of cattle to the patanas had to be stopped. Special instructions for the treatment of this disease were received from the Veterinary Surgeon, and were circulated to the Medical Officers and Ratemahatmayas for attention. The measures advocated in those instructions were adopted as far as possible, and the disease was effectually checked.

XII.—NEW ACREAGE BROUGHT UNDER CULTIVATION.

The following figures carefully collected by Mr. Storey, and kindly forwarded by him to me, have already been published in the reports of a meeting of the Matale Planters' Association, and are inserted by me in my Report:—

Tea.

Total acreage	Acres	19,566
Bearing	,,	17,345
Reported abandoned in 1901	,,	407
Opened in 1901	,,	71
Crop secured in 1901	lb.	7,252,215
Yield per acre	,,	418

Number of estates from which figures were collected, 79.

Cacao.

Total acreage	Acres	9,627
Bearing	,,	7,922
Opened in 1901	,,	194
Native gardens, estimated	,,	400*
Crop secured in 1901	Cwt.	14,026
Yield per acre	,,	1¾

Number of estates from which figures were collected, 52.

* Included in total.

Cardamoms.

Total acreage	Acres	1,515
Bearing	,,	1,013
Opened in 1901	,,	141
Crop secured in 1901	lb.	77,408
Yield per acre	,,	76

Number of estates from which figures were collected, 23.

With respect to the figures for cacao, Mr. Storey's figures are very different from the official figures. The discrepancy is chiefly explained by the fact that the planting district, upon which Mr. Storey's calculations were based, is not conterminous with the Revenue District of Matale.

For the last Census I received 61 returns from 77 estates, some of which were reported upon in groups by the superintendent in charge of the group. The total acreage of cacao there given was 7,478 acres. The total acreage of native gardens taken from the list, which was compiled for the Kandy District Planters' Association, and has since been revised, is over 2,000 acres. Add the new acreage in 1901, viz., 194 acres, as stated by Mr. Storey, and the total acreage appears as 9,672 acres.

From the registers now kept by each village headman, I hope next year to give some reliable figures for the extension of other products as well as cacao among the Kandyans.

XIII.—Waste Lands Ordinance.

A block of 208 acres of land at Ambokka was dealt with under the Waste Lands Ordinance during the year. There being no claimant, the land was declared to be the property of the Crown. Two other blocks of 160 acres at Unagolla and 47 acres at Palle Aswedduma in Rattota were surveyed to be dealt with under the Waste Lands Ordinance. The survey was also ordered of another block of about 1,000 acres at Bulanawewa. Preliminary plans of Ussattawa and Raitalawa villages were sent to the Surveyor-General for tracings, with a view to bringing them under the operation of the Waste Lands Ordinance.

XIV.—Chena Cultivation.

The number of permits issued in 1901 was 93, as compared with 119 in 1900. Permits were only issued in absolutely necessary cases. The extent chenaed was 404½ acres, as compared with 484 acres in 1900.

XV.—Sales of Land by Villagers.

A block of 182 acres 11 perches was purchased by Major Gordon Reeves from a President (who has since resigned), who purchased from a notary, who purchased from the Puwakpitiya villagers. The Crown title was admitted to 86 acres 3 roods and 3 perches, and it was subsequently granted to Major Reeves at Rs. 30 per acre, the usual upset price of land in the neighbourhood. There have been no other sales on a large scale, either to planters or others, reported elsewhere.

XVI.—Work other than Routine and Miscellaneous.

The Census provided plenty of additional work all round, but I think that all those who had anything to do with it, estate superintendents as well as the supervisors and enumerators, not only did not grudge the labour and time spent on it, but even found it interesting. The publication of preliminary totals certainly contributed to make it more interesting. It was found that the estate population had increased 60 per cent., the population of Matale town 15 per cent., and the Kandyans 7 per cent.

The whole district was profoundly agitated by the news of Her Majesty's death on 22nd January. The public memorial services of every creed and the memorial meetings of every race held on 2nd February testified to the wonderful personal devotion inspired by Her late Majesty in all classes of her subjects.

The new market was opened on 1st January.

A rifle range was built in the early part of the year, and a number of competitions have encouraged and improved the rifle shooting of the Matale section of the Ceylon Planters' Rifle Corps.

A new boys' school was built by the Roman-Catholic Church in Matale at a cost of Rs. 3,500, and was opened on 30th September.

XVII.—Land Sales.

The extent of Crown lands sold during the year 1901 was 188A. 0R. 5P., against 117A. 3R. 8P. in 1900; and the amount realized was Rs. 4,641, against Rs. 2,531·33 in 1900. The averageprice realized per acre was Rs. 24·68, against Rs. 21·48 in 1900.

A sum of Rs. 339·11 was credited on account of different instalments of lands sold under Sir Henry Ward's Minute.

XVIII.—Statement of Kandyan Marriages and Divorces from 1890 to 1901.

Year.	Marriages.	Divorces applied for.	Divorces allowed.

XX.—WORK DONE UNDER ORDINANCES NOS. 23 AND 24 OF 1889.

A meeting was held by the Ratemahatmaya of Matale north under section 35 of chapter VII. of Ordinance No. 23 of 1889 at Wahakotte on 17th September, 1901, to determine whether it was expedient to construct a masonry spill. Owing to the objections of the proprietors of the fields above the tank, and to dissensions among the proprietors below the tank, the motion to construct a spill was defeated. A masonry spill is not necessary, but would save a certain amount of manual labour yearly.

A meeting was held by the Assistant Agent at Yatawatta on 29th November to determine whether it was expedient to construct an anicut and channel at the Kumbala-oya. The majority of fieldowners were present and unanimously voted for their construction, were agreed that Government aid was necessary for the masonry work, and resolved that the expense of construction, if sanctioned, should be repaid by an annual water-rate. Specifications, plans, and sections were forwarded to the Government Agent.

It was only necessary to issue one authority to the Ratemahatmaya of Matale North to seize the land of a defaulter under Pelwehera tank under section 54 of chapter IX. The amount due was promptly paid, and sale was unnecessary.

No formal proceedings were taken in any case under sections 60 and 61 of chapter X., owing to the generous manner in which superintendents of estates met the needs of the villagers. There was some trouble over the Dehipitiya-ela. Mr. Malcomson of Clodagh estate consented to give the villagers Rs. 60 for the first year and Rs. 40 for each succeeding year to clear the ela. The whole of the Rs. 60 was immediately spent, and the ela was in as bad a state as ever after the next rains. The villagers then petitioned again. Mr. Malcomson then consented to waive the former agreement (by which he lost Rs. 60) and promised to construct spouts to carry the water from the estate drains over the ela. After some further trouble I procured the consent of the various owners of the different sets of fields to allow channels to be cut through their fields. This long-standing difficulty was thus finally settled.

The following is a return of irrigation cases decided by the Ratemahatmayas under section 26 of chapter VI. of this Ordinance :—

Return of Irrigation Cases instituted and decided under Ordinance No. 23 of 1889 during 1901.

	Matale North.	Matale South.	Matale East.
Number of cases instituted during the year ...	44	23	42
Number of cases decided during the year ...	40	23	41
Number of cases in which convictions were obtained ...	16	15	17
Number of cases dismissed or otherwise disposed of ...	24	2	6
Amicable settlements	—	5	16
Number struck off	—	1	2
Number of cases pending on 31st December, 1901 ...	4	—	1

I annex returns of the work done by the Presidents North and East under chapter V. of Ordinance No. 24 of 1889 and of the Chairman, Village Committee, South, under chapter VII. of the same Ordinance. There were 18 appeals in civil cases from Matale north. Judgments were affirmed in all except one, in which judgment was set aside, and in another judgment was modified. Of the 35 appeals in criminal cases, judgments were affirmed in all except one, in which judgment was set aside. Fines were reduced in 5 cases. There were 10 appeals in civil cases from Matale east. In 2 cases the judgments were set aside. There were 37 appeals in criminal cases. In 7 judgments were set aside,

in 2 more judgments were set aside as against some of the accused, and in 2 more cases the fines were affirmed. The rest were affirmed. There were 8 appeals from Matale south. In one the fine was reduced. Judgments were affirmed in the rest:—

XXI.—THE CACAO QUESTION.

The cacao question has during the past year been the subject of so much "vigorous" correspondence and has taken up so much of my time, thoughts, and attention that it deserves more than the usual notice in the Administration Report of the Matale District.

There are in this district 84 estates over 20 acres in extent, and an innumerable number of small native gardens of less than 20 acres. The difficulty of protecting these estates may be imagined when it is considered that many of the estates straggle over 5, 6, and 7 miles of country, in close villages and native gardens, and are intersected by main, minor, and village roads. The estates are unprotected by any walls, hedges, or fences. Parts of the estate are in some cases not only out of sight of the estate buildings and cooly lines, but are even 2 or 3 miles distant from any dwelling whatever. To protect these estates a few watchmen are employed, whose duty is to range over certain areas and to blow their horns at intervals. That they actually do cover these areas after dusk and in the earliest hours of the morning is quite uncertain. Even if the superintendent were awake after a hard day's work in the field, the outlying portions of the estate, viz., those which are most exposed to theft, and which require the presence of watchmen most, are usually too far away for the sound of the horn to be carried to the bungalow. Personal supervision of the watchmen at such times is a matter of almost physical impossibility, as any one who has even a slight acquaintance with these estates will readily admit.

These difficulties are inseparable from cacao growing. It is impossible to alter the size of the estates, the direction of the roads, and the situation of the villages. The cost of fencing is prohibitive. In many cases the lines cannot be scattered owing to the scarcity of water; but, especially in opening new estates the advisability of spreading them over the estate should be seriously considered.

The difficulty in detecting theft is also very great. A well-grown estate offers deep cover, in which the thief can carry on his depredations unseen. The pods and beans cannot be identified, and, even though it may be certain that they are stolen, the thief in whose possession they are found cannot be punished so long as they are ripe. To secure a conviction the thief must be caught in the act of stealing. Moreover, among traders who are not characterized by their honesty, and who keep no written accounts, the facilities for the disposal of stolen produce are everywhere abundant.

Notwithstanding these difficulties, there does not seem to have been much stealing during the past season. Some of the planters have informed me that not only have there been no cases of theft on their estates, but there have not even been any of the usual traces of theft, *e.g.*, they have not seen cut up pods under their trees, their trees do not seem to have been stripped, accumulations of pods have not been found by them on the borders of their estates. I have invited the planters to report to me all such apparent traces of theft. I have also made constant verbal inquiries in order that I might be in a position to know if, and where, stealing was prevalent. I doubt very much whether there has been any suppression of evidence or omission to report any material facts pointing to thefts having taken place on any estates in this district.

In order, further, to ascertain whether any appreciable amount of cacao was being stolen from the estates and finding its way to the bazaars, I occasionally made rounds, and had rounds made of the bazaars, and took notes of the amount of cacao received in them. There never seemed to be a larger quantity than could have been produced by the native gardens in the neighbourhood. Although the London reports made it appear likely that the price of cacao would go down, *the price in the local bazaars for native cacao was*, I was informed, *the same as the price last year.*

Although, as I said above, it is impossible to convict a thief unless he is actually caught in the act of theft, yet the law does provide substantial checks against stealing. Even if the actual theft cannot be proved, a charge of criminal trespass would lie against the trespasser. The Ordinance No. 9 of 1885 forbids the sale or purchase of estate produce by or from estate coolies. It makes it an offence to loiter on a plantation, and requires, under a severe penalty, a satisfactory account for the possession of green cacao. The last provision is the chief deterrent of cacao theft by night. Even ripe cacao, when it can reasonably be suspected to be stolen property, can be taken before the Police Court and confiscated by the Magistrate. These provisions were carefully explained to the Arachchies.

It is upon the Arachchies that the brunt of the work of the suppression of cacao thefts has fallen. The patrolling from 4 to 7 A.M. and P.M. daily during the most unhealthy hours of the most unhealthy season of the year, in addition to all their other work, constitutes no light physical strain on untrained men. Their services are rendered gratuitously, and the success which has rewarded their efforts is very creditable to them. They received orders at the beginning of the season to patrol *not* on the estates, but on the paths leading to and from the villages and the adjoining estates, and to watch the boundaries of such estates on the side of their villages between the hours of 4 and 7 A.M. and P.M. They were also ordered to constantly inspect the chenas and patches of jungle on the borders of the estates. They were further required to keep lists of all native gardens in their wasamas, to visit those gardens constantly, and to see that the cacao which found its way into the possession of the native proprietors did not exceed what could have been fairly produced in their gardens. In these duties they were supervised by the Koralas and Ratemahatmayas. From the reports which reached me from various superintendents, as well as from my personal observation, I believe that this system was, on the whole, regularly carried out.

Special police were employed to protect Wariyapola, Suduganga, and Bandarapola estates. To their usefulness the Matale Planters' Association has lately testified. It may be of some general interest to show in detail the method of working the special police in co-operation with the headmen and its advantages.

After application for the police was made, I went carefully over the estates with the superintendents, the police sergeant, the Ratemahatmayas, and Koralas, to see where the beats should be fixed with a view to secure the greatest protection. The superintendents then arranged to meet me at the Kachcheri, when the beats were finally settled. We agreed that the constables should patrol as little as possible within the estates, but that they should watch those points most accessible to the thief. Acting upon the orders of the Government Agent, I further arranged that each constable should be accompanied by the headman in whose division the beat was fixed. The constables were awakened at 3.30 A.M. daily by the constable on beat in Matale town and were promptly despatched to their several beats. (In places removed from the town an alarum clock could take the place of the beat constable.) They returned about 8 A.M. They were sent out again at 3.30 P.M., and returned about 8 P.M. *Thus, effective watching was guaranteed during the hours most favourable to stealing and at the places most exposed to it.* Care was taken to change the constables from one beat to another. Their movements and actions and those of the accompanying headmen were entered in detail, morning and evening, in the Police Information Book, which is submitted to the Assistant Government Agent daily. I paid them an occasional surprise visit, and they were constantly visited by the Acting Ratemahatmaya South and the Ratemahatmaya East. The mobility of the former was greatly increased by his having learnt to ride a bicycle. The result of this system was that there were only two actual cases of petty theft, and no traces of any more cacao having been stolen from these estates.

So much for the past year. With respect to suggestions for the future, it has been proposed at various times to introduce a system of registration of all cacao estates, whereby every owner would be legally bound to send in a correct return of his acreage and an estimate of his crop. A very slight experience of the difficulty of getting in returns and reliable estimates from European superintendents shows that this system would be absolutely unworkable with respect to the innumerable cacao gardens, both European and native, in Ceylon. Many of the native owners are illiterate, and would find some difficulty in making out the returns. Many of the small gardens are leased out on verbal agreements, and it would be therefore somewhat difficult to fix the responsiblity for sending in the returns. The extra amount of correspondence and the work of checking the returns would require the services of a staff of clerks. Finally, the returns would probably not be received till the cacao crop was over.

It is quite sufficient if the headmen are departmentally ordered to keep a list of all gardens in their divisions and to note down issues of cacao. These lists should be open not only to the inspection of the Government Agent and the Assistant Government Agent on circuit, but also to the inspection of the proprietors. Any dispute as to the acreage, number of trees, &c., could be easily settled by the Government Agent or the Assistant Government Agent.

Proposals have also been made to license the dealers, but this appears to me to be unnecessary now that the hawkers have been suppressed during the crop season and the number of traders is limited to

those living in the bazaar, all of whom are well known. The popular belief that there are scattered about a few dishonest traders who are notorious receivers of stolen cacao, and who suborn thieves to bring it to them, is, I believe, erroneous. At all events there is practically no evidence of it. If it were merely the case of a flagrant crime confined to a few individuals, it is hardly likely that it would not have been detected, punished, and checked. As a matter of fact, I am convinced the evil goes deeper. All the traders in the bazaars, under the stress of competition and under the present conditions of the law, deal for all practical purposes in the same way. It is unnecessary and risky for them to be actively dishonest. They simply buy cacao from any one who brings it to them, and are careful to ask no questions. They are not bound to do so by law, and if they did they would only drive away their trade to their next door neighbours. Till I told them that I should consider their omission to keep accounts as evidence of dishonesty, they kept no written accounts showing from whom they had bought their cacao.

This indiscriminate receipt of cacao is a distinct encouragement to theft, and is the prime cause of all the anxiety and *uncertainty* which hampers this much-vexed cacao question. To remedy it, I do not think that any general and sweeping change of the law is necessary, such as would create a presumption of guilt or curtail the liberty of the subject unduly. But I am inclined to strongly recommend the simple extension, within a defined area, to cacao, of the law which now requires a headman's pass for the removal of forest produce. There are many points of similarity between the two, viz., difficulty of protection, difficulty of identification, facility of theft, facility of transport, facility of disposal.

A pass or "tundu" system (which, I believe, is greatly accountable for the paucity of theft) did in fact spring up last season in this district. All it requires to make it more effective is legal sanction. At the beginning of the season, when circulars were issued to the headmen requiring them to exercise a strict supervision over native gardens under 20 acres in extent, some proprietors came to me and asked me to order the headmen to issue passes to them for the removal of their cacao, so that they might be above suspicion. The system so started spread rapidly. On the one hand, it protected all honest growers from any suspicion of dishonesty. On the other, as the headmen themselves discovered, it was absolutely impossible without this system to keep any check on the disposal of cacao. If people were allowed to remove their cacao for sale without the knowledge of the headmen, how could the headmen possibly say whether more cacao than was grown in their gardens was not finding its way into the possession of such people?

The obvious objections to this system are that it might afford opportunities to the headmen for levying blackmail on the native growers, and might cause the latter inconvenient delays in disposing of their produce. To meet these objections I strongly insisted that the passes should be given free, and that there should be no delay in issuing them. It must be remembered that there are a very great number of natives who have a proportionately large stake in cacao. The fact that I did not receive a single complaint (except from an old woman, who declined to weigh the cacao for which she demanded a pass, and she received her "tundu" the next day) seems to me to be fairly conclusive proof that the system not only did not harass the native growers, but was found by them to be advantageous to them. It is no doubt to their interest that their property should be secured from falling into the hands of thieves instead of coming into their own hands; and for this, these headmen's passes furnish the best possible security.

In addition to this suggestion, I think that the traders should be legally required to keep proper accounts and to file headmen's "tundus" with their accounts, in order to account for the possession of the cacao received by them.

It would be sufficient to make the maximum penalty for not having a pass or not keeping proper accounts a fine of Rs. 100, or in default six months' rigorous imprisonment.

I append a brief summary of the system now suggested, which corresponds closely with the system in force with respect to forest produce and cattle, thefts of which were at one time of frequent occurrence and difficult to detect, but which were after the introduction of a system of passes considerably reduced.

Summary.

Arachchi to draw up list of estates and gardens and to enter amounts issued and dates of issue against each. These lists to be open to the inspection of proprietors.

Books of passes in foil and counterfoil, stamped with the Assistant Government Agent's stamp, to be issued to the Arachchi. Each pass to expire within three days' date of Arachchi's signature, to give quantity for which it was issued, in whose favour, from what estate or garden, to what place, for sale to whom, and date.

Arachchi to keep a register giving particulars of each pass, showing quantity for which it was issued, in whose favour, from what estate or garden, to what place, for sale to whom, and date.

Traders to keep accounts showing date of receipt, quantity received, from whom, from what garden, and number of Arachchi's pass, and to keep a file of all such passes.

E. B. ALEXANDER,
Assistant Government Agent.

Postcript.—After further consideration of this subject I am inclined to advocate that dealers in cacao should be licensed as well as compelled to keep accounts. To this end, if legislation were hereafter considered advisable, sub-sections 5, 8, 12, 13, 14, 15, and 17 of the Grenada Act XVII. of 1889 might be incorporated into a new Ordinance. I fully agree with the Ceylon Commissioners of 1895 in considering that the other provisions of the Grenada Acts are totally unsuited to the conditions which prevail in Ceylon.

With respect to the old "Coffee-stealing" Ordinances of Ceylon and the Madras Act VIII. of 1878, our Commissioners noted that they were found to be inoperative to a great extent. The reason for this has been stated by the Hon. the Chief Secretary to the Government of Madras. They "impose no adequate check upon the dealings of receivers of stolen coffee who own small patches of land planted with coffee in the vicinity of large estates and account for the possession of large quantities of coffee by the statement that it is grown on their own land." I think that my "tundu" system would check this evil. An enormously abnormal excess could never be removed as no pass would be granted for it. I am also of opinion that the Magistrates could convict such persons for not having a "tundu" if they could not account for such an excess by either pointing out the trees from which the cacao came or by the production of a "tundu" for it, just as a conviction could be sustained against a person who had in his possession a quantity of timber for which he could not account either by showing the stumps of the trees on his land or by the production of a pass.

E. B A.

REPORT ON THE NUWARA ELIYA DISTRICT FOR 1901.

THE revenue for the year amounted to Rs. 95,291·87, the largest ever collected. It has for some years been steadily on the increase, as will be seen below :—

	Rs.	c.		Rs.	c.
1897	45,447	0	1900	83,092	0
1898	89,023	0*	1901	95,291	0
1899	65,684	0			

N.B.—These figures do not include the revenue derived from arrack and tolls, which is collected in Kandy.

* Large land sale.

Timber shows the largest increase (Rs. 12,000 odd), due in great measure to the supply of firewood to the Boer Camp. Both revenue and judicial stamps showed substantial advance, denoting general prosperity. Under Land Sales there was a decrease of Rs. 8,430. Only one building site in Nuwara Eliya was sold, and no new land in the district was sold for tea cultivation. Police Court fines are again reduced, this time by nearly 30 per cent. In 1899 they were Rs. 1,447 ; last year they were Rs. 696.

FOOD SUPPLY.

To the crop return given in my Report for 1900, I add the figures for 1901 as follows :—

Return of Area and Crop of Paddy and Fine Grain.

Division.	Paddy.				Fine Grain.							
					Crown.				Private.			
	1900.		1901.		1900.		1901.		1900.		1901.	
	Extent cultivated.	Crop.	Extent cultivated.	Crop.	Extent cultivated.	Crop.	Extent cultivated.	Crop.	Extent cultivated.	Crop.	Extent cultivated.	Crop.
	Acres.	Bushels.	Acres.	Bushels.	Acres.	Bushels.	Acres.	Bushels.	Acres.	Bushels.	Acres.	Bushels.
Kotmale ...	2,711	81,330	2,714	84,420	—	—	—	—	53	371	55	—
Uda Hewaheta ...	13,201	144,120	13,257	145,134	84	—	57	—	906	—	1,005	—
Walapane ...	4,912	35,412	4,955	35,710	427	2,562	563	—	1,960	11,760	1,652	—

There was no scarcity of food during the year. The town bazaars and estates depend on imported rice, *i.e.*, 80,000 to 100,000 persons, out of a total population of 125,000. The villagers consume home-grown grain. They mainly cultivate paddy, dry grain, and vegetables, the latter forming a not unimportant item in the food supply of the district.

Tea is of course the principal industry, and supports four-fifths of the population. Cardamoms are cultivated by villagers (about 1,000 acres), and the cultivation is on the increase. Cocoanuts and arecanuts are grown in small quantities, and in and around Nuwara Eliya English vegetables are grown and sent to the low-country.

Prices ruled as follows :—Paddy, Re. 1·50 ; kurakkan, Re. 1·37 ; Indian corn, Re. 1·37 ; village rice, Rs. 4 ; imported rice, Rs. 6 ; cocoanuts, Rs. 6 to Rs. 7.

IRRIGATION.

While there is much to be done in the district under this head, chiefly in small village works, little was accomplished during the past year.

The Bodi-ela scheme was examined on the spot by the Director of Irrigation Works and his Assistant Mr. Parker, and was for the most part condemned.

The Ma-ela, the second largest scheme in the district, was maintained in fair working order, and an estimate for its much-needed improvement was framed, and is now under consideration. This is the only work in the district for which water-rate is paid.

The Waduwawala-ela was surveyed, and an estimate for its repair is under preparation. It is in very bad order, and, though there is an ample water supply, the ela will not carry enough water to cultivate all the fields, much less new asweddumas. The shareholders must be made to pay for its repair as soon as the estimate is ready.

Mulhal-ela.—This ela was kept in fairly good order, but the present system of upkeep is very unsatisfactory. The guardian is paid out of the Irrigation Fine Fund, and the shareholders contribute nothing. The ela should be surveyed and repaired at the expense of the shareholders, and provision for its upkeep made by them.

Lamasuriyagama-ela.—Plans and estimates for the repair, improvement, and extension of this ela are under the consideration of the Central Irrigation Board. The shareholders have undertaken to repay the cost by annual instalments.

The above are the principal irrigation works in this district. There are numbers of smaller works which require repair and improvement, and considerable effort was made last year to advance matters, but there is so much machinery to be put in motion in irrigation matters before any actual work can be carried out that villagers become discouraged. I have for a long time advocated District Irrigation Committees for small works on the lines of District Road Committees. It is the only way that I can see of getting small works carried through without unreasonable delay.

The working of the irrigation rules had attention last year, and more systematic work was enforced on elas than has hitherto been the case. There is still much to be done in this direction.

As regards irrigation headmen, I repeat my remarks of last year. The Ela- and Vel-vidanes of this district receive no remuneration for their services, as they do elsewhere, in the shape of a small

percentage of the crops, and there is no incentive therefore beyond a full share of water for their own fields, and the odd chance of some day being promoted as Arachchi for good and useful work.

The huwandiram system is not a pleasant or easy one to introduce for the first time into a district, but it has been done everywhere else with good results, and there seems no reason why this district should not follow suit. Until it is done we cannot expect much from a class of men whose usefulness in the cause of irrigation cannot be over-estimated. There is still great opposition to the huwandiram system, and I do not yet see my way clear to its introduction.

LEGISLATION.

I have nothing to add to my remarks of last year under this head, which run as follows :—

"The Board of Improvement requires, in the interest of the town generally, increased powers in the matter of erection of new buildings. It is natural enough for private landowners to claim the right of putting up on their own land what buildings they choose, but the rights of the general public in the preservation of the natural beauty and appearance of the town are also real ones and cannot be ignored.

"Legislation is, in my opinion, required in the matter of the slaughter of cattle and other animals. The present system of slaughtering, which prevails, I believe, almost everywhere in the Island, is cruel, disgusting, and demoralizing to those who have to take part in the work. Numbers of cattle are tied up together in the slaughter-house, and a man goes round and butchers them one after the other before the eyes of their companions in misfortune.

"The game laws require amendment. It has been held that it is no offence under the existing Ordinance to hunt game in gangs with loaded guns and a pack of hounds. The Ordinance begins to work only when game is shot or killed.

"The chief headmen of the district are strongly of opinion that the Village Tribunal should be empowered to deal with illicit sale of toddy and cruelty to animals.

"The Ratemahatmaya of Uda Hewaheta also points out the desirability of imposing a stamp fee of 5 or 10 cents on all civil suits in the Village Tribunal. He urges that low-country boutique-keepers and Moormen trading in the bazaars in no way contribute to Village Council funds, while they largely use the court for the collection of their debts. He considers it a grievance also that the unpaid headmen should be made to serve all Village Tribunal process, as being derogatory to their position and office, and I am inclined to agree with him."

WORKS REQUIRED.

The following progress has been made since last year's list of works was compiled :—

Town Works.

(1) Railway construction. In progress.
(2) The park. Good progress.
(3) Model dwellings. Complete.
(4) Water supply. Original scheme complete. Extensions in hand.
(5) Esplanade. Great improvement.
(6) The lake. Path complete. Dredger ordered.

District Works.

(7) Bridle road from Ramboda Pass to Rookwood. Complete.
(8) Bridle road from Ramboda Pass to Pundalu-oya. Complete.

The following works are still to come :—

Town Works.

(1) Improved drainage.
(2) Prevention of overcrowding and better dwellings for the poor.
(3) Widening of the town bridge.
(4) Completion of United Club buildings.
(5) Telephones.
(6) A shelter on Pedro.

District Works.

Kotmale.

(1) Cart road from Sangilipalam to Ulapane railway station through Kotmale Valley.
(2) Road from Railway Gorge road to Nanu-oya through Lorne and Dessford.
(3) Bridges at Morape, Maswela, and Kadadora over the Kotmale-ganga.

Uda Hewaheta.

(1) Junction of the Rahatungoda and Deltota cart roads.
(2) Outlet for Kurundu-oya Valley estates.
(3) Second class cart road to Maturata hospital.
(4) Repair and extension of the Ma-ela.
(5) Repair of Waduwawala-ela.
(6) Extension of the Lamasuriyagama-ela.
(7) Galaboda irrigation scheme.

Walapane.

(1) Extension of the Kandy-Mulhalkele cart road to Ragala.
(2) The Bolagandawela irrigation scheme.
(3) Small irrigation works.

PLANS FOR IMPROVEMENT.

I repeat my remarks of last year. First and foremost comes the development of Nuwara Eliya. To quote Mr. Davidson from his Report for 1899 :—

Nuwara Eliya should be supplied with all that is necessary to equip it as a mountain home for Europeans, as a sanitarium for those whose health has been debilitated by prolonged residence in the tropics, and for the rearing and education of young children.

"Much has already been done in this direction, thanks to the assistance of Government, much is in progress now, much still remains to be done.

"A good water supply has been secured; a railway has been commenced; a park is being laid out; a cricket ground, second to none in the Island, is nearly completed; recreations of all kinds have been provided; drives and walks have been constructed; model dwellings are being erected; slums removed; sanitation enforced.

"The first and great want now is a comprehensive sewerage scheme to arrest the damage now being done to the lake, and to save it from becoming, as it undoubtedly will do, a source of danger instead of a valuable contributor to the health of the town.

"The Board with its limited funds can hardly deal with such a scheme, nor is it fair that the comparatively limited number of residents should be called upon to find the money for a work which affects the interest of the whole Island, as the sanitary condition of Nuwara Eliya undoubtedly does. An appeal therefore has been made to Government in this important matter.

"As regards the district, improved irrigation is the first need, and should engage the largest share of the attention of the officer in charge, but strangely enough there is no department in which he has so little power as in the Irrigation Department. His existence is in fact, so far as the departmental regulations go, completely ignored. A little more decentralization in irrigation matters would, I am convinced, bear good results. There is ample water for the needs of the district running to waste, and there is plenty to occupy the attention of the revenue and scientific officers of the district in devising schemes for its utilization in both large and small works for many years to come.

"As regards roads, there is much to be done in effecting connections between existing cart roads.

"Ragalla and Mulhalkele (the terminus of the Kandy-Hanguranketa road) could be joined with little trouble and expense. They are only about 8 miles distant from each other, and the trace runs through two important estates, which should join in the work, as affording them an easy outlet to the railway.

"Maturata, now that it is to be the seat of a district hospital, should be connected with the Kandy road on the one side and with the Uda Pussellawa road on the other *via* Mahakudugala.

"The Deltota and Rahatungoda roads should also be joined up."

As regards the sewerage scheme for Nuwara Eliya town referred to, the Director of Public Works, after full examination, has arrived at the conclusion that the cost of the scheme would be out of all proportion to the advantages derived. Attention is being paid therefore to the lake itself, and a dredger has been ordered for its improvement.

The chief headmen of the several divisions make the following suggestions :—

Kotmale.

(1) A police force for Kotmale.
(2) A dispensary at Mawela.
(3) A receiving office at Maswela for the Kotmale valley.

Uda Hewaheta.

(1) The Galaboda scheme.
(2) Minor irrigation works.

Walapane.

Minor irrigation works and village wells.

SANITARY CONDITION.

The health of the district during the year was unusually good. There were no epidemics. One case of smallpox occurred in Gonapatiya estate; matters were taken in hand at once, and there were no other cases. Fever, chickenpox, measles, &c., were not above the average.

The town of Nuwara Eliya was healthy throughout the year.

The following bazaars in the district are now worked under the Sanitary Rates Ordinance :— Nanu-oya, Talawakele, Tillicoultry, Lindula, Agrapatana, Dimbula, Kotagala, Pundalu-oya, Kandapola, Ragalla, and Padiyapelella. There has not of course been time for material improvement in their condition. Funds must first accumulate and schemes be devised and estimated for. A good deal has, however, already been done in the way of proper drainage and latrine arrangements, and schemes for the water supply of Talawakele and Nanu-oya are under consideration.

The medical wants of the district are fairly well met. There are well-established hospitals at Nuwara Eliya, Uda Pussellawa, Mulhalkele, Maturata, Sangilipalama (Ramboda), Lindula, and Kotagala. There are permanent outdoor dispensaries at Hanguranketa, Pundalu-oya, Watagoda, Nanu-oya, Agrapatana, and Nildandahinna. Gonagama and Lamasuriyagama are visited weekly. The only parts of the district insufficiently served are some of the outlying villages in Uda Hewaheta and Walapane.

I annex a statement of the number of persons treated during the year at the various medical estates :—

Statement of Persons treated at the various Hospitals and Dispensaries during 1901.

Hospital or Dispensary.	Average Number of Inmates.	Number treated at Outdoor Dispensary.
Nuwara Eliya hospital	34·60 ...	2,412
Uda Pussellawa hospital	18·72 ...	1,720
Mulhalkele hospital	20·13 ...	2,698
Lindula hospital	65·22 ...	6,035
Ramboda hospital	30·82 ...	4,591
Agrapatana dispensary	— ...	3,040
Dimbula hospital	21·22 ...	4,334
Padiyapelella dispensary	— ...	2,258
Maturata dispensary	— ...	3,544
Watagoda dispensary	— ...	1,111
Nildandahinna dispensary	— ...	1,323

On the subject of cholera the following remarks in my report of last year will bear repetition in view of the importance of the subject:—

"As regards cholera, the numerous outbreaks that occurred last year in different parts of the Island shows the necessity of keeping a trained gang of hospital orderlies and coolies accustomed to cholera work always ready at hand.

"Little difficulty is experienced in dealing with an outbreak on an estate: isolation is easy, and Tamil coolies not being afraid of the disease labour is plentiful and efficient. In a Sinhalese village the case is entirely different, and the uselessness of depending on village labour for stamping out cholera was well exemplified during the recent outbreak at Gonagampitiya. The villagers fled to the jungle, leaving the sick and the dying uncared for in their houses, and it was not until a gang of Tamil coolies, kindly lent for the purpose by the Kandy Municipality, arrived on the spot that any headway was made towards stamping out the disease. The ordinary Sinhalese villager does not take kindly to cholera work. No offer of liberal pay will tempt him, and when an unwary wretch is caught by the headman and forced into the work, he is of course perfectly useless. He will not enter an infected room. He will touch nothing, except at the end of a long stick, and as soon as one's back is turned he decamps.

"It is obviously absurd to depend on labour of this kind in dealing with cholera. People are dying, and the disease is spreading, while the headmen are running about trying to catch people, who when caught are absolutely useless.

"The medical authorities should, in my opinion, have at their disposal a staff of orderlies and coolies trained to cholera work, and available for despatch at a moment's notice to the required spot."

CRIME.

I annex statement showing the number of murder and knife cases in the usual form:—

Statement of Cases, including Homicides, in which the Knife has been used during 1901 in Nuwara Eliya Division.

Reported	4
Brought to trial	4
Convictions obtained	1
Acquitted	3
Pending	Nil

The headmen have, as a rule, co-operated satisfactorily in the prevention and detection of crime, though the Kotmale headmen might have done better than they did. No headman has particularly distinguished himself, while at the same time there have been no cases of glaring neglect of duty or of connivance with offenders. The year, so far as the judicial district of Nuwara Eliya is concerned, was uneventful in the matter of crime. There were no murders or attempted murders, and only 10 knife cases, none of which were very bad cases; one case only went before the Supreme Court, a case of burning a boy by an estate kangany, resulting in a conviction.

The Police Magistrate expresses himself as, on the whole, satisfied with the work of the headmen. The work of the regular police has also been satisfactory. Sergeant-Major Ramasamy has well maintained his reputation as a careful and trustworthy officer, and rendered excellent service in the Orient Company's theft case, the recovery of about Rs. 5,000 being largely due to his energetic action. There have been few complaints against the police by the public during the year, and none of them were serious. The system of night patrols has been attended with excellent results, and there has been a remarkable absence of house-breaking, and in fact of all night offences throughout the year.

Ordinance No. 15 of 1896: Inquirers.—There are three Inquirers in the district. They have not been largely used, in fact there has not been any great use of their services, but they have done the little they were called upon to do satisfactorily, and it is, in my opinion, an undoubted advantage to have men of reliability and intelligence available when required for the investigation of crimes in remote parts of the district, which the Magistrate himself cannot visit without interfering with his ordinary work and causing great public inconvenience. I am opposed to the office of Inquirer being held by a President, Village Tribunal, on the ground that he is liable to be sent off at any moment's notice with a long trial roll unattended to. No punitive police were imposed during the year.

Ordinance No. 3 of 1898.—As already reported, there have been only 10 knife cases during the year, and none of a very serious nature. The above Ordinance therefore has had little scope, and no orders prohibiting the wearing of knives have been made by the Magistrate.

Ordinance No. 7 of 1899.—The identification system has been effectually carried out. No criminals have been sentenced to police supervision, and no licenses have been issued. I have no improvements in the system to suggest.

Cattle Stealing.—As seen in the annexed statement, there were only 7 cases reported during the year, and the district may consequently be considered as almost free from this form of crime, in view of the fact that in, say, half of these cases the motive was not beef, but spite or revenge. Cattle stealing as a trade did not exist, and the condition of the district in respect of this crime was highly satisfactory:—

Statement of Cases of Cattle Stealing during 1901 in Nuwara Eliya District.

Reported	7
Brought to trial	7
Convictions	3
Acquitted	4
Pending	Nil

DISEASE AMONG CATTLE.

There was no outbreak of murrain proper during the year, but in July a disease described by the Ratemahatmaya as "adappi" (a puffing of the stomach and discharge from the mouth) broke out among cart bulls on the Kandy road between Hanguranketa and Padiyapelella, and out of the 9 animals attacked 7 died. The Veterinary Surgeon of Kandy went to the spot, and thanks to his aid the disease did not spread to the interior. There was an outbreak of hoof-and-mouth disease of a severe type in February in the Maturata district; there were 55 cases and 10 deaths. In other respects the year was a healthy one for cattle.

NEW AREAS OF CULTIVATION.

The extent of Crown land sold during the year was as follows :—

	A.	R.	P.
Kotmale	31	2	31
Walapane	63	0	34·31
Uda Hewaheta	27	1	0

No new land was sold for tea cultivation. Most of the above were lands already under cultivation under lease to villagers.

The headmen return the actual extent newly brought under cultivation during the year as follows :—

	Acres.		Acres.
Tea	12	Paddy	43
Cardamoms	62	Tobacco	15

WASTE LANDS ORDINANCE.

There were no proclamations under this Ordinance during the year. At Wetalawa in Kotmale some low-country men have revived a long-abandoned claim to about 150 acres of waste land by taking transfers from villagers, and the lands will shortly be proclaimed. In other parts of the district the land claim question is not acute.

CHENA CULTIVATION.

The cultivation of Crown chenas has been kept within the reduced limits arrived at in 1900. The area cultivated during the last four years is as follows :—

	1898.	1899.	1900.	1901.
Kotmale ...	Nil	Nil	Nil	Nil
Uda Hewaheta ...	60½	58½	82	35
Walapane ...	626	391½	434½	558½

Care is taken that only those actually in need are allowed Crown chenas. If the Bolagandawela and Galaboda irrigation schemes are taken up, the above area would be still considerably reduced.

SALES OF LAND.

No sales by villagers to which exception can be taken have come to my notice during the year; the Wetalawa transfers alone alluded to took place a year or two ago. The incentives to such sales, viz., the opening out of new land and speculation in shadowy claims, are happily absent in this district.

WORK OTHER THAN ROUTINE.

The prison labour force in Nuwara Eliya has been maintained as nearly as possible at its full strength (thirty) throughout the year, and much useful work has been done. The force has been divided between the Nuwara Eliya plain and the public park, both of which now present a greatly improved appearance. Prison discipline has been satisfactorily maintained, and in spite of daily and to some extent interesting work out of doors, the Nuwara Eliya prison is by no means a popular one among prisoners, who constantly apply for transfer to a warmer climate. The supervision of this force occupies considerable time.

The Ceylon Fishing Club had a good season as far as fishing is concerned, but the result of the ova importation was disappointing; a splendid consignment of 15,000 rainbow ova proved a total failure, owing to their having been despatched before they eyed. A small consignment of 5,000 brown trout ova, presented to the Club by the Denbigh Fisheries, hatched out, and about 25 per cent. and over 1,100 fry were distributed in the rivers leased by the Club.

MISCELLANEOUS.

On 2nd February all public business was suspended. Religious services were held by each community in memory of Her late Majesty the Queen, and the Address of Condolence was read, passed, and numerously signed at a largely attended meeting of the whole community. Similar meetings were held all over the district.

On 1st March the Census was taken, with the following result :—

	General.	Estates.
Houses	10,824	4,665
Males	27,014	54,169
Females	21,764	45,036

The increase during the decade is—

Houses	462	—
Males	2,256	14,323
Females	2,730	19,054

In April Nuwara Eliya residents flocked to Kandy to welcome Their Royal Highnesses the Duke and Duchess of York. The headmen of the Nuwara Eliya District took a prominent part in the decorations.

In May Mr. A. Stanley Colls, District Engineer, went on leave, and Mr. R. W. Smith assumed duties.

In June there were unusually heavy gales and floods.

In July Mr. E. Rosling was appointed to represent the ratepayers on the Board of Improvement.

In September a large portion of the bank notes stolen from the Orient Company was found by the police in possession of a Mr. Don, an apothecary of Nuwara Eliya, who was subsequently convicted of receiving with guilty knowledge.

In October the new east windows in Holy Trinity Church were erected; the three centre lights being in memory of Her late Majesty the Queen, the three on left of the late Mrs. Baker, and on the right to the late Mr. and Mrs. C. Liesching and the children of Mr. and Mrs. S. M. Burrows.

I took over the command of the Nuwara Eliya section Ceylon Planters' Rifle Corps towards the close of the year. There were eighteen members, and all who were not on leave of absence in England made themselves efficient. The shooting average was good.

The acquisition of land for the Uda Pussellawa Railway occupied much time and attention.

Nuwara Eliya Kachcheri,
March 27, 1902.

E. M. DE C. SHORT,
Assistant Government Agent.

NORTHERN PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, NORTHERN PROVINCE, FOR 1901.

PRELIMINARY REMARKS.

IT is satisfactory to be able to continue to give a favourable account of the year under review so far as the food supply and climate influences are concerned. And although both cholera and smallpox appeared in two places in the peninsula, the outbreaks were confined to the localities of origin and did not spread, while the general health of people and of cattle was no cause of anxiety.

REVENUE.

The revenue returns show an increase of Rs. 149,238 in the gross revenue collected in 1901, as compared with the revenue collected in 1900 :—

1900	Rs. 636,106
1901	Rs. 785,344

Deducting from the above collection on account of—

	1900. Rs.	1901. Rs.
1. Passage money of immigrants	126	13
2. Sale of Delft horses	1,165	1,675
3. Salt for export out of the Island	1,420	—
Total ...	2,711	1,688

the collection on account of ordinary revenue is Rs. 633,395 for 1900 and Rs. 783,656 for 1901, added to which the sums collected under the Thoroughfares Ordinance (in 1900 Rs. 79,480 and in 1901 Rs. 80,031) give the total contribution by the people to public objects in 1900 Rs. 712,875 and in 1901 Rs. 863,687.

The following statement gives the actual ordinary revenue due and collected on account of 1901 as compared with 1900, excluding passage money of immigrant coolies and sale of Delft horses and receipts under the Thoroughfares Ordinance :—

	Rs.
Total ordinary revenue collected in 1900	633,395
Deduct arrears of 1899 do.	2,837
	630,558
Add arrears of 1900 outstanding on December 31, 1900	3,892
Total ...	634,450
Total ordinary revenue collected in 1901	783,656
Add arrears of 1901 outstanding on December 31, 1901	2,927
Total ...	786,583
Real ordinary revenue of 1900	634,450
Do. 1901	786,583
Increase ...	152,133

All the revenue of the two years has now been collected with the exception of the following :—

Rs. 2,926 on account of police rates of 1901.
„ 1 on account of water-rate of 1900—Vavuniya.

Rs. 2,927

The increase in the real ordinary revenue has been chiefly—

	Rs.		Rs.
Customs imports ...	90,032	Police Court fines ...	518
Port dues	20	Survey fees	883
Arrack and toddy rents ...	19,500	Collections at dispensaries ...	126
Salt rent	150	Warehouse rent ...	9,017
Salt for retail ...	864	Fees for title deeds ...	217
Salt for released districts ...	36,344	Postage stamps ...	4,680
Bridge tolls	993	Forest produce ...	481
Ferry tolls.	406	Land sales	1,247

Whilst decrease in the real ordinary revenue has been chiefly—

	Rs.		Rs.
Export of chanks ...	2,092	Judicial stamps ...	5,171
Stamps, revenue ...	1,898	Timber	5,927
District Court fines ...	1,746	Firewood	902

Increases.

Customs, Port Dues, and Warehouse Rent.—The increase is due to large importation of grain.
Arrack and Toddy Rents.—To higher amounts realized at the sale of these rents.
Salt for Retail.—To good fishing season at Mannar and Mullaittivu.
Salt for Released Districts.—To failure of salt formation at Hambantota.
Bridge and Ferry Tolls.—To higher amounts realized at the sale of these rents.
Land Sales.—To increasing prosperity of the people.

Decreases.

Stamps, Revenue and Judicial.—The revenue from stamps is fluctuating for some years past.
Timber and Firewood.—The decrease is due to the crediting of the proceeds sale of timber and firewood in Colombo.

The increase or decrease under other heads of real ordinary revenue does not call for special remarks.

The total receipts under the Thoroughfares Ordinance were as follows :—

	1900. Rs. c.	1901. Rs. c.
Jaffna	65,620 17	65,764 13
Mannar	8,076 89	8,390 36
Mullaittivu	5,783 76	5,876 93
Total ...	79,480 82	80,031 42

Expenditure under the Thoroughfares Ordinance was as follows :—

	1900. Rs. c.	1901. Rs. c.
Jaffna	65,261 82	63,527 66
Mannar	8,727 55	8,100 81
Mullaittivu	5,686 1	5,610 35
Total ...	79,675 38	77,238 82

Excluding from the above such casual receipts as value of trees cut down on roadsides, refund of charges overdrawn, &c., the actual contribution by the people in the shape of taxes under Thoroughfares Ordinance was as follows :—

	1900. Rs. c.	1901. Rs. c.
Jaffna	60,224 0	64,955 0
Mannar	7,577 50	7,745 0
Mullaittivu	4,915 0	4,905 0
Total ...	72,716 50	77,605 0

Number of persons who actually paid the taxes under the Thoroughfares Ordinances during 1900 and 1901 :—

Year.	Jaffna.	Mannar.	Mullaittivu.	Total.
1900 ...	58,861 ...	6,055 ...	3,910 ...	68,826
1901 ...	64,343 ...	6,189 ...	3,913 ...	74,445

WEATHER.

The rainfall registered in the Jaffna District was 40·11 in., while that registered for 1900 was 57·33 in. About the same quantity was registered in the Mullaittivu District, while in the Mannar District only a quantity of 29·10 in. was registered. The distribution was very irregular. In the Jaffna District the rainfall was considered sufficiently satisfactory for the health of people and agricultural operations.

CROPS.

The grain crops of the Jaffna District for the year 1901–1902 were very satisfactory, and would have been more but for the untimely rain during the harvest season. In the Vanni the case was otherwise, as the cultivation suffered for want of timely rain and from long droughts, especially in such portions of the Mannar District as are not served from the Giant's tank reservoir.

FOOD SUPPLY.

According to the headmen's reports the outturn of the paddy crop of the Province was estimated at 876,545 bushels of paddy, which would produce 438,273 bushels of rice.

The varago crops amounted to 20,310 bushels, and the other dry grains yielded about 103,800 bushels, making in all 1,000,655 bushels local crop.

The imported grain amounted to—

	Cwt.		Bushels.
Paddy	648,575	=	1,513,342
Rice	95,056	=	166,348
Other grains	8,951	=	17,902

and those exported—

Paddy	18	=	42
Rice	2,634	=	4,610
Other grains	73	=	146

The Province therefore consumed of both home-grown and imported— Bushels.

Paddy	2,390,045
Rice	161,738
Other grains	17,756

Taking the usual estimate of two bushels of paddy to one of rice, these figures show a quantity of 1,356,765 bushels of rice available for consumption during the year. (This, however, does not include the balance rice in stock at the end of the preceding year, nor does it exclude the balance at the end of the year under review.)

To this should be added kurakkan, paddy, gingelly, &c., brought from the Vanni and from the North-Central Province by land, the quantity of which is unascertainable.

The yield of cocoanuts was good, but there has been an increase in the demand.

The supply of garden produce, vegetables, fruits, fish, turtle, &c., was satisfactory; but there has been a continuous rise in the price of vegetables, fowls, and eggs for some years past, owing chiefly to the large export of these articles to Colombo and other places.

The yield of palmirah produce was as good as in the previous year.

The following statements connected with food supply have been furnished by the Collector of Customs.

There was an increase in the local consumption of salt, which is attributed to the larger purchasing power of labourers on the railway works; and it means that many of them had two substantial meals a day instead of only one.

The following statements give statistics connected with food supply:—

HEALTH OF PEOPLE.

Fever, which generally prevails during the latter part of the year, was less virulent than in the previous years.

There were 12 cases of smallpox at Kayts in September and October, 1901, of which two proved fatal. One case was reported from Valvettitturai in April.

Towards the close of the year cholera broke out at Achchuveli, a village halfway between Jaffna and Point Pedro, and later on at Kayts. Fortunately the disease was confined to the localities where it appeared. The cases were 95 in number at Achchuveli and Kayts. In the former village 23 persons died and 37 in the latter, including a police sergeant on duty in charge of the party told off to assist the Medical Department.

During the existence of cholera at Achchuveli and Kayts many unfounded rumours of cholera in various places gave trouble in investigation, but I am glad to say that all were found by the medical officers to be merely ordinary cases of illness. Tamils have at first a horror of cholera quite out of keeping with their seeming contempt of precaution and carelessness about it once the disease has spread.

The medical authorities and headmen were unable to decide how cholera was introduced into Achchuveli.

The quarantine regulations were duly enforced in the Province. They are undoubtedly irksome and a hindrance to trade. As no cases of plague have occurred south of Salem District, I think the Plague Committee may consider the advisability of removing the prohibitions in 1902, if the state of health in South India warrants this.

SANITATION.

Under the Board of Health the usual sanitary measures were carried out in the peninsula, with special precautions at the places of pilgrimage; and the measures required by the Plague Committee continued throughout the Province. In connection with plague precaution, rats were destroyed at Jaffna to the number of 3,338 in 1900 and 6,305 in 1901, total 9,643.

The following is an extract from a report of the Superintendent of Police, Mr. Rudd :—

> Went to Vannarponne on inspection. Visited all the crowded localities there and the Moor quarters. The rain has raised the usual odours from the saturated soil and from the decaying palmirah leaf fences and screens. It is not clear how even a Municipality could deal with these last-named. In dry weather they are dry as tinder and a menace from fire, in wet weather they gradually decay as they stand.
>
> Fortunately their rapid decay necessitates frequent renewal. When torn down they are dug into the fields as manure. The palm leaves used as the thatch of houses make excellent manure when removed to the fields, as they have soot adhering to them from the wood fires, which makes an excellent fertilizer.
>
> The fencing of compounds by high fences of cadjans and palmi leaves, which is the custom of Jaffna universally and of all Jaffna people wherever they go, makes the details of sanitation quite as difficult for a town council as in those towns where the houses are substantially built.
>
> Proceeded to Karaiur, Pasiur, and Colombogam fishing villages. The last is the least crowded, and the huts are mostly surrounded by deep sand, which speedily absorbs, and under the great heat of the sun desiccates all filth. Karaiur, in the heart of Jaffna, is probably the most saturated soil in this Province. We keep the surface clean as far as possible, but no more can be done at present.

I agree with Mr. Rudd's remarks. Nothing but clearing out the existing population will be of any real use. But this is "a large order," which the Cholera Commission found it impossible to carry through. All that was possible was done in cutting roads through the village and letting in more ventilation, but the congestion of population remains and increases.

In the early part of the year there was much agitation for and against a Municipality for Jaffna. The decision of Government was that the time had hardly come for such establishment, although it must be almost certain to come in the near future. The opening of the railway in 1902 will most probably be the incentive to local taxation for local needs.

The sanitation of the town of Jaffna is maintained by a Sanitary Officer and a staff under him, with a vote of Rs. 4,000 allowed by Government for the purpose.

The towns of Point Pedro, Valvettitturai, Mannar, and Mullaittivu have been brought under the Small Towns Sanitary Ordinance, and the funds have been allowed to accumulate until a sufficient amount is in hand to erect permanent latrines and provide for a scavenging staff.

The sanitation of the villages was enforced through the headmen, who were occasionally urged to give their best attention to the subject. As a rule, the villages are very clean, excepting fishing villages.

Complaints were received by me from certain villagers that their dwelling compounds had been flooded at times of heavy rains, and steps were immediately taken to drain them and provide permanent drainage culverts where they were indicated.

The water supply of the villages was very satisfactory. It is derived solely from wells.

TOBACCO CULTIVATION.

Next to food supply, this industry ranks highest in this Province. The following is the statement of tobacco exported beyond sea and coastwise :—

	Beyond Sea.			Coastwise.		
	Quantity.	Value.		Quantity.	Value.	
	Cwt. qr. lb.	Rs. c.		Cwt. qr. lb.	Rs. c.	
1900	42,519 0 17	981,665 5	...	25,932 2 12	602,070 25	
1901 ...	28,269 2 4	673,061 68	...	51,220 2 12	583,660 60	

It is important to note that the export to Travancore has fallen, while the local trade to Colombo and other parts has more than doubled. The Travancore trade has fallen off from the successful competition of Coimbatore tobacco, and the price has fallen. It is a matter for the serious concern of the local producer to find outlets for his tobacco. This can only be done by improvement of the process of manufacture. It will, I hear, take a long time before the grower realizes this, and meantime he must be content with less profit and reduction of crop. During the close of the year Jaffna was visited by Mr. Mac D. Gibson, who is said to have large experience of tobacco growing in Sumatra and elsewhere, and he expressed his opinion that the locally-grown leaf is of excellent quality, and the methods of planting and irrigation are sound; but the plucking is erroneous, and the curing injurious to flavour. The leaf is actually made rotten, and hence the difficulty in keeping the cigars for any length of time. He was unsuccessful in inducing any local capitalist to take up new methods. The idea here is that when such methods are introduced by other people's money, the local grower and manufacturer will learn the methods without expenditure. Meantime I am rather discouraged at the prospects of this important branch of trade. The great increase in export coastwise cannot be maintained without heavy fall in prices, for the market is now glutted, and there is little or no possibility of local expansion for the class of cigar now produced.

It is possible that Government may grant a concession of land in the Vanni for experimental cultivation of tobacco under proper guidance. I think this would be useful, for if the people see that tobacco cured in the modern methods fetches a higher price, it may induce them to follow these methods and obtain a more extensive market. But no initiative can be locally expected.

CATTLE.

The following is an account of cattle in the Jaffna division :—

Buffaloes	3,552
Black cattle	163,911
Sheep	77,236
Goats	57,284

There was no cattle disease in the Jaffna District during the year, and the condition of the cattle was, on the whole, good.

An experiment was made, through the local Agricultural Association, with fodder seeds obtained from Queensland. I regret to say it was altogether a failure, as the seeds did not germinate. Another attempt will be made after request for special care in selection of fresh seeds.

An irrigation wheel, which can be easily made locally and worked by a pair of bulls, was procured from Cyprus. It has not been tried experimentally pending receipt of some information, which has been asked from Cyprus.

AN AGRICULTURAL ASSOCIATION FOR JAFFNA.

An Association to improve the agricultural condition of the Province was started at Jaffna during the early part of the year, and it is hoped that this body will materially help to promote the objects in view, which are the introduction of machinery for irrigation, the improvement of tobacco produce, the introduction of new products and fodder seeds, and the general interests of agriculture.

IMMIGRATION.

The immigration route continues to be closed from the early part of January, 1900. But during the year a relaxation of the plague regulations was made in respect of the coolies for the Giant's tank works, and 42 coolies were landed at Pesalai from South India, the number of emigrants being 15.

The whole question of immigration and the best route for coolies into Ceylon must soon be well weighed and considered. This consideration will be forced on the local Government when the South Indian Railway system has been extended from its present terminus on the mainland to the proposed harbour on Ramisseram island. It will then be a question whether the steamer lines are to run direct to Colombo, where the Ragama Camp is used, or be taken to a similar camp on the mainland of Mannar and on to Madawachchi railway station. A road tram line would probably afford the best means of transport from the landing-places to the camp and onwards. The camp would probably be formed somewhere near Murunkan, and between the 10th and 14th miles from Mannar, for a sufficient supply of good water for a large camp is not procurable nearer to the points of landing.

A steam ferry would probably replace the sailing ships in conveying the coolies to Vengalai and Pesalai according to the monsoon seasons. Possibly a road tram from Dutch Bay to some convenient point on the Kurunegala-Anuradhapura section of the railway might be better. No doubt the two routes will be considered in the view of cost, convenience, and time of transit. But any reversion to the old system of road travelling for coolies is to be most earnestly deprecated.

TIMBER AND FIREWOOD.

Revenue from Released Areas.—The annexed is a statement of revenue derived from released areas during 1901 in the Northern Province :—

	Rs. c.
Rough timber	197 44
Firewood	14 10
Bamboo and canes	2 0
Minor forest produce	1,748 63
Total	1,962 17

The following statement of revenue of the Forest Department was furnished by the Assistant Conservator, Northern Circle :—

			Rs. c.
By sale of timber, &c., removed by Government Agency :—			
Timber			20,914 26
By sale of timber, &c., removed from forests by purchasers :—	Rs. c.		
Timber	324 77		
Firewood	1,793 24		
			2,118 1
By drift, waif, and confiscated produce			5 32
By miscellaneous receipts			25 49
By value of timber supplied to Public Departments, the value of which was credited on paper			4,891 47
By amount due at the close of the year on firewood supplied to Railway Department			572 40
By value of timber, &c., lying in depôts on 31st December... ...			8,109 80
		Total ...	36,636 75

Free Grant of Timber.—Eight free grants of timber were issued during the year for common timber and jungle sticks to the value of Rs. 144·30. Most of these were for dwelling-houses to people who were given exchange of lands on account of the Giant's tank settlement.

Prosecutions on account of Forest Produce.—Two prosecutions were entered during the year for offences under the Forest Ordinance, and the parties were convicted and fined.

Firewood.—The supply of firewood to the town of Jaffna is carried out by dealers, who lease the Crown land formerly used as a firewood depôt by the Forest Department. These dealers get their supply from the Forest Department, and they also bring in any wood they get from private parties. Two licenses were issued by me on stamps of Rs. 50 each to collect firewood in the released areas for the supply of the town of Point Pedro.

Forest Reserves.—No forests were reserved during the year, but steps were taken for reserving the Vettakkachchi, Kilinochchi, Chunnavil, Maha Rambaikkulam, Mamadu, and Tonigal forests, and the work was completed early in this year.

SALT.

The season was not very favourable for the formation and collection of salt. The following quantity was collected :—

25,923 cwt. of manufactured salt at Chiviateru salt pans at a cost of 26·13 cents per cwt.
31,842 cwt. of self-formed salt at the Karanavai leeways at a cost of 12·52 cents per cwt.

The total charges incurred during 1901 on account of salt were as follows :—

	Rs. c.
Cost of collecting and storing salt	11,035 45
Watching and destroying salt unfit for collection	1,036 96
Cost of establishment	3,255 0
Commission to headmen on salt sold	2,571 90
Transfer of salt from one store to another within the Province ...	1,934 81
Repairs of salt stores	424 35
All other miscellaneous charges	164 16
Total	20,422 63

The value of salt sold during 1901 was as follows :—

Quantity. Cwt. lb.	Particulars.	Amount. Rs. c.
— ...	Amount of the rent of the monopoly of the retail sale in the Jaffna District	56,400 0
29,183 0 ...	Sold in Jaffna to the renter at 40 cents per cwt. ...	11,673 20
11,212 0 ...	Sold at Mannar and Mullaittivu by retail at rates varying from Re. 1·61 to Rs. 2·07 per cwt., and by wholesale to fishers and tavalam at Rs. 2·36 per cwt.	21,902 14
40,395 0		
	For Export.	
28,750 0 ...	To released districts	67,850 0
111 56 ...	Short delivered by the contractor and paid for at Rs. 2·36 per cwt.	263 14
69,256 6	Total ...	158,088 48

The receipt and issue of salt during 1900 was as follows :—

Particulars.	Quantity. Cwt. lb.	Total. Cwt. lb.
Balance on December 31, 1900	123,083 0	
Collected during 1901	57,765 0	
		180,848 0
Sold for local consumption	40,395 0	
Quantity short delivered by contractor	111 56	
Sold for released districts	28,750 0	
Sent to the Eastern Province	26,125 0	
Sent to the Southern Province	22,250 0	
Wastage	3,543 0	
		121,174 56
Balance on December 31, 1901 ...	—	59,673 56

DESTRUCTION OF WILD BEASTS.

This item is more important in the Vanni and Mannar Districts. For the Jaffna District rewards were paid for the destruction of ten leopards and three bears in the mainland divisions But since more is paid by traders for skins than can be obtained in the official reward, the figures in no way represent the actual killing of these animals.

WORKING OF THE PROVINCIAL AND DISTRICT ROAD COMMITTEES.

Abstract of Money spent by the Provincial and District Road Committees on Minor Roads, Buildings, &c., in 1901.

	Treasury Money. Rs. c.	Road Ordinance Funds. Rs. c.	Market Funds. Rs. c.	Total. Rs. c.
Jaffna ...	—	17,751 1	515 56	18,266 57
Mannar ...	450 0	2,101 90	—	2,551 90
Mullaittivu ...	493 96	1,946 25	—	2,440 21
Total ...	943 96	21,799 11	515 56	23,258 68

The resources of the Committees barely provide for the upkeep of the existing network of roads which makes the Jaffna peninsula so easy of access throughout. The minor roads are generally in first class order and a paradise for cyclists. The time has come when the commutation rate of Re. 1 per head must be raised, if the present standard is to be maintained. Money has flowed in to the benefit of the labouring class. Wages have risen by 50 per cent., and the present commutation rate is a loss to the Committees where paid labour has to be used.

The only work beyond upkeep during the year was the construction of the new road from Point Pedro towards Chempian pattu, which, it is hoped, will soon be connected with Pallai station by a railway feeder road, which is being traced by the Public Works Department.

The resthouses and madams were kept in good order during the year. The question of sites of the existing resthouses on the North road will now come under consideration in connection with the future railway stations, as they will be inconveniently placed to serve the public when the line is opened southwards. A new resthouse at Vavuniya will be necessary.

No works of construction were carried out by the Markets Committee during the year, but as the balance in hand now permits of this, estimates have been framed for the erection of markets at Chavakachcheri and Kaikulateru in 1902. A loan has been applied for (and obtained) for the erection of shops in Chankanai bazaar, which will be useful to traders and a convenience to the public.

The following is a statement of the accounts :—

Jaffna Markets Fund.

Statement of Receipts and Expenditure on Account of the Market Fund for the Year ended December 31, 1901.

RECEIPTS.	Amount. Rs. c.	Total. Rs. c.
Balance on January 1, 1901 ...	—	4,504 40
Rent of Grand Bazaar market, Jaffna	768 0	
Rent of Changanai market ...	420 0	
Rent of Chunnagam market ...	472 20	
Rent of Point Pedro market ...	672 0	
Rent of Chavakachcheri market ...	540 0	
Rent of Elephant Pass market ...	120 0	
Rent of Tolpuram market ...	39 0	
Rent of sheds in Chunnagam market	24 0	
Rails	3 0	
		3,058 20
Value of land sold for the railway	—	57 50
Proceeds sale of trees standing on market grounds ...	—	38 25
Refund of advance ...	—	100 0
Total ...		7,758 35

EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.
Pay of market-keepers and sweepers	794 0	
Hire of market watchers ...	68 50	
Cost of scavenging ...	1,320 0	
Cost of works carried on in market	515 56	
For regulating the town clock ...	130 0	
Proctor's fee	52 50	
Miscellaneous	12 0	
		2,892 56
Balance on December 31, 1901 ...	—	4,865 79
Total ...		7,758 35

PILGRIMAGES.

These annual gatherings at various shrines, both Hindu and Christian, were as popular as ever. The assembly at the Madu church near Vavuniya is said to have been a record one, 29,300 heads were counted, and 30,000 would not be an unreasonable estimate. The usual sanitary and police precautions were taken in the case of each assembly, with satisfactory results.

CRIME.

Caste disputes, combined with the religious question, are a fertile source of trouble to any department charged with the "keeping of the peace." Great changes are going on in Jaffna native society, which are bitterly resented by the conservative part of the population. The (so-called) "low castes" are becoming more rich, and having acquired property most of them naturally decline to follow the old customs, by which they were prohibited from wearing jewels, riding in carriages, using tom-toms for marriages, and other social functions. Many of the low caste Nalavals and Covias become converts to Christianity, and the Vellalas know that the next step in the progress of the converts will be that of wearing jewellery and assuming Vellala customs. Hence arises petty persecution and squabbles and cases in court and demands for police protection, and often real riots and bloodshed.

The majority of cases for the Supreme Court Sessions in the first quarter of 1902 will be found to originate in caste disputes.

Annexed is a statement showing the number of cases of murder or attempted murder and of those in which the knife has been used :—

	Number of Cases.			
	Reported.	Brought to Trial.	Convictions obtained.	Pending.
Murder ...	2	2	1	—
Attempted murder	—	—	—	—
Manslaughter ...	3	3	2	1
Hurt with knife	29	29	22	—
Grievous hurt with knife	4	4	4	—

There were no executions during the year 1901 at Jaffna.

Return of Cases of Cattle Stealing for the Year 1901.

Number of cases	18
Accused known	7
Convictions obtained	4
Number of accused convicted	10
Cases pending	—

A great many cases of cattle stealing are reported, but most of these are cases in which the cattle stray away owing to the carelessness of the owners when turned loose to find their living.

A beast which has damaged cultivated produce and has been seized is generally described as having been "stolen."

The headmen, with few exceptions, co-operated in the prevention and detection of crime.

The Police Vidahn of Madduvil South received a reward of Rs. 25 for prompt work done in a case of grievous hurt.

The police, regular and rural, have discharged their duties satisfactorily, with no exceptions of any consequence. The police and headmen have worked well together.

CASTE AND RELIGIOUS DISPUTES.

The most noteworthy of these were the riots and disputes, assaults, &c., at Allaippiddi. These took place in April, 1901, between Vellalas and Mukkuvas. Some individuals of both factions were Roman Catholics, but each backed his own caste. These riots occurred in regard to a disputed path to a burial ground used by Mukkuvas. The path runs through the Vellala quarter. Ten of the Vellala section were convicted by the District Court and sentenced to nine months' rigorous imprisonment each. This sentence was in appeal reduced to three months' rigorous imprisonment each by the Supreme Court.

In two cases of robbery committed during these riots the accused were committed for trial before the Supreme Court, and five were convicted.

In May, 1901, a Roman Catholic bride and bridegroom of the Nalava caste of Nallur wanted to return to their house from church in a horse carriage. A large number of Vellalas, goldsmiths, and coppersmiths of the locality attempted to prevent the carriage from proceeding through their quarter on the ground that it was against the country custom. The police proceeded to the spot timely and dispersed the crowd with some difficulty. Forty-four persons were charged with being members of an unlawful assembly and were fined.

In June, 1901, the Vellalas of Mirusivil ordered the Palla women not to wear ear-studs similar to those worn by the Vellala women, as it was against the custom of the country. The Pallas would not yield to this demand. Some of the Vellalas seized, by way of retaliation, a quantity of paddy brought in a cart by a man of the Palla caste. The Police Vidahn of Mirusivil, who failed to inquire into this matter promptly and report the offence to court, was dismissed. The Palla was not able to prove his case at court, but the value of the paddy was made good to him through the influence of the Maniagar of Tenmaradchi.

The disputed burial ground question between the Hindu and Roman Catholic Pallas of Navanturai has now been settled by the purchase of a new burial ground at Thukumarankadu for the Hindu Pallas, who are but very few in number. This new burial ground will be proclaimed shortly.

The feud between these religionists has not, however, subsided. A Roman Catholic Thurumba (or dhoby of the people of the lower caste) died on the 7th December, 1901. The burial ground of these Thurumbas and other low caste people is a hillock surrounded on all sides by paddy fields belonging to Hindu Vellalas. These objected to the Roman Catholic corpse being removed through their fields, which were under cultivation at the time.

There was also a riot at a Palla wedding at Pandateruppu in December, 1901, when the Hindu Chandas of that village attempted to prevent the Roman Catholic Pallas from wearing jewellery similar to that used by Vellalas. Seven of the Chandas were convicted in the Supreme Court and sentenced to various terms of imprisonment.

Regarding false cases, the Superintendent of Police remarks in his diary, after personal inquiry into two cases of "grievous hurt" :—

> "Both cases were false. In one a lad died of lockjaw, and the usual liars came forward averring they saw him murdered. In the other the complainant's mother and uncle fought and pulled each others hair, and the son flung a cocoanut at the uncle and knocked down his mother, breaking her collar bone. This case, properly manipulated, is made to settle a civil dispute about a garden. If we could only lash for perjury and lying, it would do more good than for cutting and wounding."

PROPOSALS IN REGARD TO PUBLIC WORKS.

Under instructions I repeat the list of former years so far as they remain to be dealt with :—

(*a*) Water supply for Jaffna.
(*b*) Reclamation of the Karaiur tidal flat.
(*c*) Road to Mullaittivu from Parantan.
(*d*) Road to Tunukkai from Parantan.
(*e*) Completion of the Madawachchi-Mannar road and its continuation from Mannar to Talaimannar.

(*f*) The repair and completion of the new trace on the Mannar Coast road from Mantai to Illuppaikadavai.
(*g*) Annual vote for wells.
(*h*) Improvement of the road from Vavuniya to Parayanalankulam.
(*i*) A road from Pallai to Chempianpattu.
(*j*) Side drains for Chavakachcheri and Kodikamam bazaars.
(*k*) A new resthouse for Vavuniya.
(*l*) Extension of the telegraph to Kayts.

(*a*) This matter has not been lost sight of. During the year an examination of the most suitable places for boring experiments was made by the Hon. Mr. Cooper, C.M.G., Director of Public Works, and experiments have been carried out. I am not yet in a position to say what have been the results obtained by these experiments.

(*b*) This work, as I explained in last year's report, must await the completion of the railway before any definite proposals can be made. I hope that it may be possible to retain it as an open space for a recreation ground and promenade for the people of Jaffna.

(*c*), (*d*), (*e*), (*f*), and (*h*) These roads have all been submitted by estimates for improvement and construction by sections, and I hope that Government will deal liberally with them, as the requests for works in this Province are moderate and confined to actually pressing needs.

(*g*) By an annual vote for wells much benefit is given to villages remote from roads in both repair and construction. The usual vote is Rs. 1,500.

(*i*) At my request last year a survey is being made for a road to connect Pallai with the minor road which the Committee is now making through the roadless and sandy division of Vadamaradchi east. There are flourishing villages and cocoanut estates, and a large trade in dry fish from this division, which now has to go north by sea to Point Pedro. It is hoped that the construction of this road will prove a useful feeder by providing an outlet to the Pallai railway station.

(*j*) Side drains for these two bazaars are very necessary for proper sanitation and to carry off flood water.

(*k*) The provision of a new resthouse at Vavuniya appears to be indicated as necessary. The existing resthouse is small, and inconveniently situated as regards the railway station. It is next door to the hospital premises, and as the Medical Officer must sooner or later be provided with proper accommodation, the obvious course would be to hand over the resthouse to the hospital and build one (of four rooms), with possibility of extension, on a site near the railway station.

(*l*) The port of Kayts, the most important in this Province, is still the only one unconnected by wire, although the line is available as far as Manippay. This extension is a most necessary and urgent one for both the trading community and for official correspondence regarding Customs and quarantine. During the recent epidemic of cholera at Kayts its want was specially felt.

The following abstract shows the amount expended on public works in the Province during the year :—

		Government Money.		Committee Money.	Total.
	Public Works Recurrent.	Rs. c.		Rs. c.	Rs. c.
1.	Maintenance of roads	76,871 15	...	29,718 74	
2.	Maintenance of inland navigation ...	3,500 0	...	—	
3.	General	96 53	...	—

WORKS MOST REQUIRED AND PLANS FOR IMPROVEMENT.

I have no special works or measures to recommend beyond the general policy of improvement of roads in the mainland and the pressing on of the restoration of village tanks.

I have had several proposals presented for *causeways* to connect The Islands with Jaffna. The difficulties, natural and financial, are great, but may possibly be overcome later on. At present, in view of the great expenditure on railways and irrigation works for the benefit of the mainland, I hesitate to press for expenditure in the peninsula, where so much has been done in past years, while the mainland has, I will not say, been neglected, but where little expenditure in comparison has been made.

EVENTS.

1. First in importance was the news of the death of Her Most Gracious Majesty the Queen. Curiously enough this reached Jaffna before it was received in Colombo, as the telegram of the Viceroy of India was sent direct from Paumben. All classes and creeds equally testified their sorrow and loyalty by attendance at the religious services, a public meeting on the esplanade, and general display of mourning throughout the town.

2. Upon the date fixed a meeting was held on the esplanade, where the address to the King was read in English and Tamil, the Royal Standard was hoisted, and a Royal Salute was fired in honour of the Accession of His Most Gracious Majesty King Edward the VIIth, *R.* and *I.*

3. In March Jaffna was visited by His Excellency the Governor, who proceeded to Mankulam, and thence rode to Mullaittivu and along the Coast *via* Kokilai to Trincomalee. This was notable as being the first time a Governor of Ceylon has gone by land from Mullaittivu to Trincomalee for nearly one hundred years.

4. A notable feature was the residence of Boer Prisoners of War on parole, who were given accommodation in the Fort. I am glad to say that during the year under review these gentlemen gave absolutely no trouble or cause of official complaint, while they expressed themselves as being most grateful to Government for the consideration shown them.

5. The Small Tenements Ordinance (No. 11 of 1882) was introduced by Proclamation to meet the wants of landowners, who begged to have its provisions extended to Jaffna.

6. On the complaint of the fishermen a Proclamation was issued, by which the use of certain drag nets within defined areas was declared to be illegal.

7. I have to record with much regret the death of Mr. S. Bastiampillai, Kachcheri Mudaliyar, who had long and faithfully served. He was succeeded by Mr. Chit. Kailasapillai.

8. During the year Mr. J. N. Sandrasegara, Superintendent of Minor Works, was obliged, from age and ill-health, to retire, and the Provincial Committee duly recorded its appreciation of his long service of over thirty years.

9. Mr. Vaithivelu, Adigar of Mantai, retired from office after long and good service, and was succeeded by his son Mr. Pirasudi.

10. In the Provincial Administration Mr. G. S. Saxton acted as Government Agent during my absence at the end of the year, and Mr. Schrader succeeded Mr. Murty as Assistant Agent, Mullaittivu.

11. On the occasion of the visit of His Royal Highness the Duke of Cornwall and York, a deputation of the Chief Headmen of the Northern Province were present at Colombo to pay their respects to His Royal Highness.

CHENAS.

Permits were given only to ten cultivators under the Olumadu tank in the Jaffna District to chena an extent of 20 acres of old chena. The tank having breached, and the repair being under consideration for some time past, I found it necessary to allow the cultivators to chena a small extent this year as paddy cultivation was not possible.

In Mullaittivu District chenas were only given to the people of Pudukudyiruppu (45 acres) and in a few others where the crops had failed and to clear the beds of tanks.

No chenas were asked for or granted in Mannar District.

NURSERY GARDENS.

There are none in the Jaffna District, except one which has been with difficulty maintained by Mr. Rudd for many years past at the Police Station near the Kachcheri from sale of dead trees and branches. It has done admirable service in distribution of ornamental trees and shrubs and grafted mangoes throughout the Province. A small grant from Government for its continuance seems very necessary.

The nursery garden which I established at Vavuniya has done good work, as will be seen from the report of my Assistant. That at Kanagarayankulam proved a failure from the difficulty of irrigating it from the tank. I propose to abandon it and concentrate into one garden at Vavuniya.

NORTHERN RAILWAY.

Statement of Lands acquired for the Northern Railway during the year 1901.

Number of lots acquired	860
Extent	112A. 1R. 33·77P.
Amount paid for lands	Rs. 42,573·81
Total amount incurred for the acquisition	Rs. 45,686·64
Number of cases referred to the District Court for settlement of disputes among parties	8

The acquisition of land within the peninsula was practically finished during the year. The figures in the above statement are for additional extents required where the land originally acquired was found to be insufficient.

In only one lot was the award disputed, and the judgment of the District Court in favour of the Crown was affirmed in appeal.

IRRIGATION.

Village Tank Restoration.—The annual labour due by the shareholders was performed during the year. The number of village tanks is as follows :—

District.	Tanks in 1900.	Tanks in 1901.
Jaffna mainland	30	32
Mannar	179	179
Mullaittivu	282	290
Total ...	491	501

There is an increase of ten tanks on the roll, of which eight are in the Mullaittivu District and two in the Jaffna District.

The number of days' labour equal to 59,472 days, which at 37½ cents a day is equivalent to Rs. 22,302.

On the whole the work done was satisfactory, and there was less default than in previous years. The greatest progress has been made in the Musali division of the Mannar District. In the diary (August) I made the following remarks:—

I may here summarize my opinions on inspection of the village tank works in Musali and Nannatan divisions. I have not seen these tanks for three years. I made several attempts, but as there are no roads, and rain makes the place impassable, as it is a succession of tanks and fields, I was prevented from getting into the district.

I was simply amazed at the extent of work done. When I first saw these tanks (about five years ago) it seemed hopeless to think they would ever be restored. The bunds were more like paddy field ridges than those of tanks, and extend more than a mile long in most cases.

I calculate that at least 20 miles long of solid broad and substantial earthwork has now been done. Several of the tanks I saw will be completed next year, and most of them within three years, if the present state of progress is maintained. In no Province or district have I seen so much good work done. This is, I think, entirely due to the exertions and influence of the Adigar of Musali, who is Sub-Inspector of Irrigation for his division. He has got the Moors to work three times more (annually) than the rules provide.

Four permits were issued during the year for restoration of abandoned Crown tanks. One tank, Munaimadu, near Vavuniya, was taken up for restoration in 1900, and it has been so successful that I expect 200 acres will be open for rice cultivation in 1902.

Sluices.—The Chief Irrigation Inspector reports that the cement concrete pipes worked well, and 71 of these sluices were fixed during the year.

Tanks already restored by Government.—These tanks, eight in number, were transferred from the charge of the Public Works officers to that of the village tank staff.

Irrigation, General.—The most important event of the year was that the works on the Giant's tank were so near completion that water was supplied to the villages below and a famine was averted. On the south side of the river which supplies Giant's tank, the Musali pattu tanks were dry, and there was much hardship. Many of the cultivators had to go and work under the Giant's tank villages, and others earned a precarious substance in elephant catching.

On my representation of this to Government the examination of the water supply of Musali pattu by the old channel to Akattimurippu has been sanctioned. I hope that some prospect of relief may be found in prosecution of this irrigation scheme. I have referred to this scheme in previous Administration Reports, and it is referred to in the report by my Assistant at Mannar, which accompanies this report. The people in this division are industrious and willing to pay irrigation interest, if water is supplied to them. It is therefore no speculative work, and the great success of the restoration on the north side of the river shows what can be equally well done on the south side. The water-rate on the lands irrigated from Giant's tank is at present about Rs. 13,500 per annum at Re. 1 per acre.

Proposed Works.—I am glad to say that the Karaichchi irrigation scheme, after examination during the year by the Director of Irrigation, has been definitely decided upon by the Central Irrigation Board. It has been admitted to be a promising scheme from the time His Excellency Sir Henry Ward visited the locality, and has been recommended in succeeding years by Sir William Twynam and by myself.

In this division nearly 10,000 people from the peninsula are annually employed in the wet season in cultivating about 5,000 acres of land with rain water, while a river runs to waste through the plain. It is proposed to utilize this river and afford two crops, in place of one, to a much-extended area of waste Crown land, and including that already in cultivation.

Other works which are under the consideration of the Director of Irrigation and his staff are the survey of Vavunikulam and Pavatkulam, two large tanks, through which rivers run, lying about 8 and 10 miles west of the railway trace in the Vanni.

It is encouraging to notice that at a recent sale of Crown land under a tank restored by Government (Vavuniya) Rs. 50 per acre was realized.

The working of the Ordinance No. 23 of 1899 may be said to materially help the restoration and maintenance of the village tanks and also to a certain extent the sanitation of the jungle villages. The provisions of the Ordinance are mostly carried out in this Province by the Government Agent and his Assistants instead of Village Councils. The system of hearing and adjudging complaints on agricultural matters by Village Councils in the Peninsula of Jaffna is attended with good results.

VILLAGE TRIBUNALS.

There is only one establishment at Vavuniya, which replaced the Police Court of that place when the Assistant Agency was transferred to Mullaittivu.

The rules under section 6 of the Ordinance No. 23 of 1889 have not yet been framed, and I wait to see the working of the Tribunal before the rules are framed. Village Tribunals and Committees have not hitherto existed in this Province, and should be introduced carefully and in such places as they appear to be desirable.

The mainland of the Province and the island of Delft have been proclaimed under the Ordinance, which may be brought into operation gradually as indicated.

The statistics for the Vavuniya Tribunal, which appears to work satisfactorily, will be found in the report of my Assistant at Mullaittivu.

LEGISLATION.

Beyond repeating what has been said in previous years about Hindu Temporalities, I have no suggestion to make.

WORK OTHER THAN ROUTINE.

Railway Land Acquisition.—This work, which engaged my time to a great extent, may be said to have been brought to a close during the year. The assessment of the lands was personally supervised by me, and the result was satisfactory, both to Government and the public. The cost was less than I anticipated, and there has been only one reference to court on account of under-valuation.

CENSUS.

A Census was taken on the night of the 1st March, 1901, and I append below a comparative statement of the Censuses of 1881, 1891, and 1901 of the Jaffna District :—

	1881.	1891.	1901.
Jaffna ...	40,057	43,236	45,677
Valigamam east ...	20,462	21,187	24,406
Valigamam north ...	36,326	40,499	44,402
Valigamam west ...	38,974	42,681	45,854
Vadamaradchi east ...	4,218	4,077	4,246
Vadamaradchi west ...	43,531	45,910	48,543
Tenmaradchi	35,462	37,922	37,645
Pachchilaipaly ...	6,501	5,780	6,076
Karaichchi	2,541	1,789	2,879
Punaryn	5,283	4,769	4,820
The Islands	25,970	28,960	32,659
Delft	2,637	2,826	3,905
Tunukkai	777	689	638
Total ...	266,739	280,325	301,750

The work of the Census was very carefully done, and the chief and minor headmen cordially co-operated. I have referred to the significance of the figures elsewhere in this report, in connection with those for the Vanni and Mannar. The actual population of the Province was 342,109.

LAND SALES.

The following is the statement of land sold in the Jaffna District in 1901 :—

Description of Land.	Extent. A. R. P.	Price. Rs. c.
Fit for paddy	103 0 25	8,027 0
Fit for garden	86 2 14	1,824 0
Fit for cocoanut	419 3 34	1,336. 0
Total ...	609 2 33	11,187 0

There were six sales held during the year.

The following statement shows the approximate extent for which applications were sent to the Surveyor-General for survey in 1901 :—

	Acres.		Acres.
January	100	November	389
March	172	December	113
April	52		
May	69	Total ...	944
July	7		
October	42		

Of the lands sold, 159 acres were in Punakari division on the mainland and the rest in the peninsula; and of the extent applied for, 230 acres are in Punakari.

Very few private lands are sold by owners.

The Waste Lands Ordinance is not in operation in this Province, as no need for its provisions has yet arisen.

HORSE ESTABLISHMENT, DELFT.

The following figures give the statistics of the establishment :—

	Rs. c.
Revenue	1,675 0
Expenditure	832 97
Net Revenue ...	842 3

There were 32 births during the year, of which 9 died, chiefly of weakness caused by the mothers being old. Eight brood mares died during the year of old age, and they have been replaced by young fillies from Iranativu.

There were at Delft on the 31st December—

Stallions	2
Brood mares	60
Foals	33
And at Iranativu under three years old	26

From the commencement of the experiment in 1898 the total expenditure has been Rs. 5,140·36 and the revenue Rs. 7,839·80, giving a net profit of Rs. 2,699·44. The expenditure includes, besides the annual staff expenses, the building of enclosures and the purchase of stallions. The experiment has so far been a success financially, but I do not so much regard the making of revenue as the protection and improvement of these ponies, which are so hardy and useful in a climate like north Ceylon, where Australians cannot be kept.

From the breeding point of view the experiment has been successful, and the cross of the Delft with the Arab has produced a very much improved young stock, which is now coming on for sale. After another year all the young stock will be either half-bred Arab or half-bred Indian.

The only drawback has been an excessive mortality, which has arisen in two ways :—(1) Anæmia and "poverty" among the young foals on Delft arising from "tics"; (2) the mortality on Iranativu among apparently healthy fat young horses, the cause of which we have been unable to ascertain. During the months of August to October we have lost about 25 per cent. of the stock.

(1) This has, I think, now been controlled. By the advice of Mr. Sturgess, Government Veterinary Surgeon, the foals have been rubbed fortnightly with an oil mixture, and since 1899 very few foals have died from preventible causes. It is now proposed to build a bath, and drive the foals through a solution in the manner used in Australia and South Africa, for hand rubbing is impracticable where a large number have to be dealt with. I am indebted to General Olivier for some valuable suggestions as to the methods used in South Africa.

(2) The mortality at Iranativu is still unexplained. Last year Mr. Sturgess found the ponies suffered internally from parasitic worms, and we attributed the death to this cause. The disease disappeared by treatment, but although the water-holes were carefully cleaned and fenced, the same mortality occurred at the same time. One of the finest colts was seen, apparently quite well, in the morning by the Stock Inspector, who was on the island, and was found rolling on the ground in the evening, and died before any treatment could be applied. Unfortunately the intestines were too far gone for post-mortem purposes by Mr. Sturgess.

The occurrence of some poisonous plant at this time of year seems to be indicated, and a botanical examination of the island becomes very necessary. I shall be glad to have the help of a botanical expert, whose researches might be able to throw light on this hitherto obscure cause of mortality. It is noticeable that there is no mortality among the cattle, sheep, or goats, which graze freely over the island at this time, nor does it appear in Delft.

If the mortality could be controlled, the profits would be very largely increased, as well as the supply for the public, which at present falls short of the applications.

I have written at length on this subject, which, though a trivial one in administration and revenue, is of great interest and real value to persons who have need of such animals. The experiment has proved a success, and it may be extended now, with satisfactory results. I was unwilling to ask for any considerable expenditure until I could show that the business was on a sound basis, and for this experiment was necessary. I have now no hesitation in recommending that Government should take up the business in earnest, and if carried on upon the lines that experiment has proved to be successful, and with regard to economy, I believe The Islands will be a source of both revenue and public advantage. Indeed, if this establishment pays its way without profit, it would be sufficient. But I must admit I prefer to conduct it on "business principles."

I observe that country and Indian "tat" ponies are now being advertized as "Delft" ponies. No ponies under 13 hands are now sent out for sale; most of them run to 13·2 to 13·3 hands, and they are not "cow hocked" like "tats." It can therefore be easily seen whether the description is correct.

CATTLE BREEDING.

I am very anxious to improve the cattle in Delft. As cattle disease never occurs there, it is quite an ideal place for raising a good breed. But from over-numbers the cattle have greatly deteriorated in the last fifty years, and the island cannot support the 14,000 heads which are at present on it.

The people are very ignorant and suspicious, but I hope by means of village rules for limiting numbers and castration or sale of poor-quality animals, and the introduction of Scinde bulls, to show the people that they can get more profit from even half the number.

During the year (1901) 831 animals are reported to have died on the island from insufficient grass and water. Such (preventible) mortality is shocking.

I have received good accounts of the Scinde bulls placed at Mannar, Vavuniya, and Iranativu. At the end of the year I placed two Scinde bulls on "Delft."

This breed is excellent for milk produce, but the bulls are rather too small in height. I think we should try some other, possibly South Indian breed. The difficulty about these, however, is that they deteriorate unless highly fed.

I annex the Administration Reports of my Assistants at Mannar and Mullaittivu. The latter assumed duty at the close of the year, and has not yet had time to make himself acquainted with the district and its requirements.

Mr. Constantine's remarks on Mannar District are carefully considered, and as he has had experience of Mannar, they are worth attention, especially under the important head of "Sanitary Condition of the People."

The decrease in population is a grave matter. Formerly there was a continuous decrease in the Vanni districts from the commencement of last century, but I am glad to say that this has now improved, and the figures show that there has been an arrest of the declension:—

	1881.	1891.	1901.
Mullaittivu-Vavuniya	15,569 ...	15,501 ...	15,768

Why Mannar should be less salubrious than the Vanni is not easy of explanation. One would naturally suppose that the Vanni village, buried in forest, and depending on the often precarious supply from a small tank, would be more malarious than the Mannar village on the open plains, over which the sea breeze blows freely. Nor can it be said that the Vanni is less troubled by mosquitoes. Indeed, at certain times life is almost impossible of late years at Mullaittivu from this pest. In the Mannar District Government has done all that is possible.

I quote from Mr. Saxton's diary when acting as Government Agent (in my absence) in December:—

"I may note here some of the improvements I notice in the station and district, where I served fourteen years ago:—

The Giant's tank work.
Three new resthouses at Murungan and Parayanalankulam and Mannar.
Metalling of Pesalai, Madawachchi, and Illupakadavai roads begun.
Old cemetery walled.
Fort well kept up. [Date 1686.]
Small Towns Sanitary Ordinance introduced into Mannar.
Causeway much improved and a good ferry boat.
New hospitals at Mannar and Puliyadi-irakkam.
Library and District Engineer's quarters at Mannar.
A proper irrigation system, irrigation officers to supervise earthwork, Molesworth sluices and cement pipe sluices supplied.

All this is excellent, and shows real progress in a district once said to be fit only "*for crows and Moormen.*"

R. W. IEVERS,
Government Agent.

Jaffna, March 22, 1902.

REPORT ON THE MANNAR DISTRICT FOR 1901.

Area, 943¼ squares miles; Population, 25,062.

I.—REVENUE AND EXPENDITURE.

THE revenue of the year amounted to Rs. 54,595·17, showing a decrease of Rs. 444·19. The chief items showing an increase were—

	Rs.	c.
Customs Exports, Elephants	1,400	0
Salt	190	12
Ferry Tolls	306	0
Police Court Fines	282	69
Other Forest Produce	537	·65

Seven out of nine elephants captured in the Mannar District in 1901 were exported to South India. As licenses for capture are issued once in five years, this item of revenue figures only occasionally in the returns.

The increase in the sale of salt shows a good average fishing season.

The only toll is the Mannar ferry toll, and the increase in the rent is due to extra traffic caused by the completion of the Mannar causeway and the provision of a proper ferry boat, by which access to Mannar island has been made easy.

The revenue under Other Forest Produce is mainly from the sale of the right to collect averam bark, which realized much above its normal value through the accident of its being competed for by two rival merchants, each determined to oust the other irrespective of any loss he might sustain.

The decreases in the revenue were mainly—

	Rs.	c.
Customs Imports, Grain	822	95
Judicial Stamps	666	90
Survey Fees	301	69
Land Sales	1,262	43
Passage Money of Immigrant Coolies	113	50
Arrack and Rum	353	25

As noted last year, the closing of the ports to South India, except after quarantine at Kayts, is checking imports from there, whilst coastwise trade, which pays no duty at Mannar, is increasing.

The decrease in Judicial Stamps is due to the institution of only 14 civil cases in the District Court, against 39 in 1900. The reason for the decrease is that in 1900 debts due by the net owners in Mannar island were sued for by a Colombo "Parava" merchant, who was financing them, and the Sinhalese arrack renter, and fresh agreements were drawn up with the arrack renter (who has ousted the Colombo firm), which covered the whole of 1901, and will be sued on again in default of payment in 1902 or 1903.

The decrease under Survey Fees and Land Sales is due to the fact that no surveys were made in this district during 1900, and of surveys made during 1901 only a few plans were received in time for a land sale at the close of the year. The one-tenth paid down on the date of sale alone appears in the revenue for 1901, and the revenue from Land Sales for January, 1902, is more than the total for 1901.

The heading of Passage Money for Immigrant Coolies is finally disappearing from the returns of the Mannar District.

There was no revenue under the heading Arrack and Rum, as under instructions from Government no arrack was sold at Arippu or Silavaturai from February to April.

A sum of Rs. 7,745 was paid under the Thoroughfares Ordinance, in addition to the ordinary revenue.

The amount paid by the people of the district for Customs duties and under the head of Licenses, Excise, &c. (including the duty on paddy and rice imported coastwise and credited elsewhere than in Mannar), amounts to Rs. 51,638·76, or Rs. 2·06 per head of the population.

The expenditure on votes allowed the Mannar Kachcheri amounted to Rs. 76,344·32. Of this, Rs. 8,346·04 was paid on account of Inspection of Pearl Banks, Rs. 50,247·51 on account of Immigration (the votes of the Mannar Kachcheri include the expenditure at Paumben and Tataparai), and Rs. 949·33 on account of Pensions.

II.—WEATHER.

The total rainfall for the year as registered at Mannar was 29·10 in., against 36·39 in. in 1900, distributed as follows :—

	Inches.
First Quarter	7·10
Second Quarter	5·83
Third Quarter	0·18
Fourth Quarter	15·99

No rain fell at all in June, July, and August, and only ·18 in. in September. There was a drought lasting for 109 days from 21st May to 7th September.

III.—AGRICULTURE AND FOOD SUPPLY.

The paddy harvest of 1901 was a moderately good one. The headmen's estimate is 113,000 bushels, against 135,484 bushels in 1900. The deficiency was due to insufficient rainfall at the sowing season at the end of 1900, especially in the Musali division, and unseasonable rain during the reaping season in March, but was not sufficiently serious to cause any anxiety about the food supply of the district. The imports of rice were 33,763 bushels, and the exports of paddy were 7,360 bushels, against an export of 21,276 bushels in 1900.

The amount of rice consumed in the district cannot be ascertained, as no account can be taken of the quantity of paddy brought into it from the North-Central Province and the Vanni, but was probably about 92,000 bushels of rice, or about 3·7 bushels per head.

The yield of tobacco was a little less than in 1900, the estimate being 9,380,000 leaves, against 9,960,000 leaves in 1900, but the prices obtained were higher, and more profit was made out of the cultivation.

Fruit and vegetables were, as usual, scarce and dear.

The fishing industry had a good year, and there was no distress at any time in the district, which has had a succession of good harvests since 1895 and fairly good fishing seasons.

The outlook, however, at the end of the year, owing to the scanty rainfall, is gloomy in the Musali division, and would have been so in Mantai and Nanaddan divisions, but for the Giant's tank.

IV.—SANITARY CONDITION OF THE PEOPLE.

The death-rate for the year was 47·6 per mille, against 40·5 in 1900. The birth-rate was 37·8, against 41·6 in 1900. The deaths exceeded the births by 243.

The Mannar District has the unwelcome honour of being the only district to show a decrease in the Census. The decrease is explained by the following table of births and deaths since 1891:—

	Births.	Deaths.		Births.	Deaths.
1891 ...	891 ...	951	1898 ...	929 ...	875
1892 ...	655 ...	1,401	1899 ...	968 ...	1,185
1893 ...	830 ...	618	1900 ...	1,059 ...	1,031
1894 ...	757 ...	727	1901 ...	942 ...	1,185
1895 ...	692 ...	615			
1896 ...	728 ...	1,095		9,302	10,550
1897 ...	851 ...	867			

The apparent increase in the Census is due to the inclusion of Panankamam and Metkumulai divisions in the Mannar District, but the decrease in the real resident population is explained by the excess of deaths over births.

The district is an unhealthy one, and the abnormal weather conditions of the past year have made it more unhealthy than usual. January and February are unhealthy months, with a heavy fall of dew, making the nights cold and causing chills, and the percentage of sickness drops in the hot months from March onwards. But last year there was hardly any hot season, and instead there was a constant drizzling in March and April, which continued the fever season. Then, when the south-west wind began, there was no rain at all for three months, and practically none for five months, and the hot weather, combined with a constant strong wind, was provocative of pneumonia and fever. The water supply is bad throughout the district, and was made worse by the drought.

The unhealthiness of the district was reported to Government and a report submitted by the Medical Department, which ascribed the sickness "to drought and the scarcity of good water, and owing to the villagers resorting to native medical treatment, among whom the deaths were due to improper treatment, especially in the cases of chest complaints."

The chief cause of the ill-health is malarial fever. Every man expects to have fever, and looks on its coming and going as one of the ordinary incidents of life.

I annex extracts from the various reports of the Apothecaries.

The Medical Officer at Puliadyi-irakkam reports—

> The diseases that prevailed most among all classes of people were malarial fevers and their *sequelæ*. These fevers were endemic in this district and prevailed throughout the year, having been most severe during the first two or three months and the last three or four months of the year, due to the heavy fall of dew and the marked fall of temperature at nights and to the setting in of the north-east monsoon. The great majority of the patients treated, both indoor and outdoor, were the coolies employed in the Giant's tank works, and the noted unhealthiness of the district, accelerated by the vicissitudes of the weather, has to a considerable extent affected the Giant's tank labour force.

The Apothecary at Vankalai reports—

> The disease that most prevailed among the patients, who were natives of the district, was malarial fever, due to malaria, excessive dew, and rains.

The Apothecary at Uyilankulam reports—

> The diseases that prevailed most among the patients seen at the dispensary were (*a*) malarial fevers and their *sequelæ* (of which there were 376 cases), due to malarial poison, drinking unwholesome water, exposure to heat and cold, improper food, and other usual causes; (*b*) disorders of the digestive organs (52 cases) caused by atmospherical changes, malarial attacks, improper food, drinking brackish or unwholesome water, &c.; (*c*) various sorts of skin diseases and ulcers (62 cases), these were due to improper food, uncleanliness, bad water, neglect of timely treatment, &c.

The Apothecary at Silavaturai reports—

> The disease that most prevailed among the people is malarial fever. The district itself is malarious, and their dwellings are low, damp, ill-ventilated, and surrounded with water during the rainy season.

The Apothecary at Vidattaltivu reports—

> (*a*) Malarial fevers and their sequels (1,257 cases), due to malarial poison, unwholesome food, exposure to cold and heat, overcrowding, inattention to personal hygiene, and the use of dirty water.
>
> (*b*) Bowel complaints and digestive disorders (450 cases), due to malarial attacks, errors in diet, atmospherical changes, and the use of filthy water.
>
> (*c*) Skin diseases and ulcers (425 cases) caused by bad water, improper food, and uncleanliness.
>
> (*d*) Respiratory diseases (7 cases) caused by exposure to cold and rains.

The Apothecary at Pesalai, reports—

Diseases prevailed most are malarial fever, ulcers, and other diseases of digestive system; the causes are malaria, improper food, and want of cleanliness.

The Apothecary at Talaimannar reports:—

The disease that most prevailed among the natives of the district was malarial fever of an intermittent type due to malaria.

The Apothecary at Mantota reports—

The diseases most prevalent among the natives of the district were malarial diseases, dysentery, diarrhœa, and skin diseases. Principal causes are malarial poison and impure water.

It will be seen how each of them puts malarial fever as the chief disease of the district, and even if it is established that mosquitoes are responsible for malaria, the problem of a remedy is as far from being solved as ever seeing that the main industry of the people is paddy growing and their houses stand in the middle of paddy fields, which are under water for several months in the year.

The means of medical help are within reach of all the villages in the district, except in the Illuppaikadavai and Panankamam pattus, and in these divisions quinine has been given the headmen for free distribution to the villagers. Pamphlets have been circulated showing the cause and remedies of malarial fever, but the remedies of mosquito curtains and living away from stagnant water are beyond this district, and the only hope is in quinine, which is now within reach of every village, and which is now prescribed for fever by every village "parikari."

Except Mannar town, which has a force of scavenging coolies, there are no villages so large that the present primitive scavenging arrangements are insanitary, and attention has been paid to keeping the villages clean and clear of jungle for the prescribed distance round them.

Parangi is not very prevalent in this district, and is, I think, growing less on the mainland. But it is reported to be on the increase at Talaimannar in Mannar island, and I have asked for the Medical Officer of Mannar to be sent to report on it and if it is spreading. The immigrant hospital at Pesalai, now little used since the closing of the Mannar cooly route, should be utilized as a parangi hospital, and all the sufferers from parangi, said to be about twenty in number, induced to go there for treatment. Talaimannar is a fishing village, and the reason for the increase of parangi may be the unwholesome diet usual there of fish, palmirah roots, and toddy. No chena cultivation is asked for or allowed in the district, and rice, except in parts of the Mannar island, is now the staple article of diet, and hence perhaps the decrease in parangi cases.

The precautions against the introduction of plague have been detailed in former reports.

A new dispensary has been opened at Irana Illuppaikulam during the year, and is much appreciated by the Metkumulai villagers.

I annex the usual statement showing the various hospitals and dispensaries and the use made of them:—

Name of Hospital or Dispensary.	Number of Patients treated.		
On the Island.	Indoor.	Outdoor.	Total.
Mannar hospital	302	2,520	2,822
Pesalai hospital	54	1,538	1,592
Talaimannar dispensary ...	—	1,308	1,308
On the Mainland.			
Mantai hospital	306	1,802	2,108
Vidattaltivu dispensary ...	—	2,778	2,778
Vankalai dispensary ...	—	1,301	1,301
Chilavaturai dispensary ...	—	3,699	3,699
Marichchukaddi dispensary ...	—	1,057	1,057
Uyilankulam dispensary ...	—	597	597
Murunkan dispensary	—	3,034	3,034
Puliyadi-irakam hospital ...	216	799	1,015
Total ...	878	20,433	21,311

V.—HEALTH OF CATTLE.

Except for an outbreak of foot-and-mouth disease at the beginning of the year, the health of cattle was good throughout. The severe drought of five months was a very trying period, and a considerable number died of starvation. The demand for cattle for the up-country markets was not so brisk as in 1901, and hence the decrease in the sale as shown by the number of cattle vouchers executed, which was—

1898	2,634	1900	5,141
1899	3,823	1901	4,076

The number of cattle as reported by the headmen was—

	1898.	1899.	1900.	1901.
Buffaloes	9,848	13,503	13,521	15,693
Black cattle ...	22,564	31,823	22,521	23,337

VI.—IRRIGATION.

The one event of the year which overshadows everything else has been the restoration of the Giant's tank. During the year the bund of the tank and the sluices were sufficiently advanced to make it possible by the time the river began to flow to supply all but two or three small tanks high up the Alavakkai. On 22nd October the river began to trickle down the main channel to the tank, but there was no appreciable flow till 3rd November, when a flood came down, and there was from that date a continuous flow till the head sluices were shut on the 3rd or 4th January, as the tank was becoming too full.

The channels from the tank are still to be made, and hence the water flowed down to some of the tanks slowly and with much waste of water. But the tanks gradually filled till at the beginning of January, with the help of one day's heavy rain, all the tanks under the sluices were filled.

The work was completed just in time to save the district from a famine year. The rainfall in the last quarter of the year brought little water into the village tanks, and without the help of the Giant's tank very little land could have been sown. The headmen have furnished lists of the amount of land

sown, and also an estimate of the amount of land that could have been cultivated with the local rainfall without the help of the Giant's tank, as follows :—

	Actually cultivated. Bushels.	Estimate of probable Cultivation with Local Rainfall only. Bushels
Mantai North	1,995	287
Mantai South	2,391	449
Nanaddan West	2,045	810
Nanaddan East	1,992	634
Total ...	8,423	2,180

Unfortunately the flow of the river was very late, and this, combined with the delay due to the want of channels, made the supply of water to the village tanks very late ; and as sowing for the "kalapokam," harvest is done from September to December, and not after December as a rule, and as according to the experience of the district the later the sowing the less the yield, not only was the water in many tanks received too late to cultivate all the fields, but the yield is expected to be less than usual, and the benefit this year from the Giant's tank less than it would have been had the channels been completed and the Giant's tank holding up water before November.

As it is the Giant's tank has enabled over 3,000 acres of land to be cultivated that could not otherwise have been cultivated, and estimating the yield at the low yield of five-fold, the saving to the people will be 15,000 bushels of paddy, or Rs. 22,500, and this on one harvest before the final completion of the work. This estimate takes no account of loss saved on tobacco cultivation and the benefit of having water in many ways, such as in saving cattle from starvation.

The people in the Musali division, who are now suffering from want of water, are envying the divisions on the other side of the Aruvi-aru, and have memorialized Government for the construction of a channel to take water from the south side of the Aruvi-aru, corresponding to the channel on the north side, which takes water to the Giant's tank. Such a channel would do for the Musali division what is now done by the Giant's tank for the Mantai and Nanaddan divisions. In the absence of surveys the cost of the channel cannot be given, but has been roughly estimated by Mr. Parker at Rs. 100,000. The water-rate from the 2,960 acres under the channel would be Rs. 2,960 at Re. 1 per acre. The people are willing to pay water-rate even at Rs. 2 an acre, and there is little doubt that the Akattimurippu scheme would not only be of immense benefit to the people, but also yield a fair return to Government on the cost incurred.

This is the most pressing irrigation work in the district, and after it is undertaken, the Kurai scheme, which would irrigate parts of Illuppaikadavai and Perunkalli pattus, should be taken up.

Village Tanks.

I annex the report of the Sub-Inspectors of Village Tanks of Musali and Mantai divisions :—

Report of the Sub-Inspector of Village Tanks, Musali and Nanaddan Pattus, for 1901.

The year opened with all the tanks in my division full, except those in the Marichchukaddi group of villages in the extreme south, where cultivation had to be considerably abandoned for want of water. In the rest of the Musali division, too, the lateness of the rain had a prejudicial effect on the crops. In addition to this, the rain did the people another bad turn by coming down in a continuous downpour at the reaping season, damaging the paddy in the fields and making it unfit for seed paddy. The tanks began to dry about the middle of the year, and work could have been commenced in Musali, but the people put it off as they had the occupation of elephant catching in hand, and cases had to be instituted against them before they could be made to commence the work : but when the work was once begun, it was carried out rapidly and completed satisfactorily. The turfing has not turned out quite successful through scarcity of rain and will have to be repaired again.

There was no scarcity of Jaffna labour available for earthwork in Nanaddan, although it was at one time feared that the railway works would have a deterrent effect on the labour supply from Jaffna. All the earthwork has been satisfactorily completed, and the turfing here has, I am glad to say, turned out well.

The year under review is a famine year, the monsoon rains having altogether failed. There is no cultivation in Musali, except in some of the tank beds, and the Nanaddan division has been saved from such a fate only by the river water let out of the Giant's tank.

One hundred and thirty-seven sets of cement pipe sluices were transported from Puliadi-irakkam to the different village tanks in my division as well as in Mantai.

I annex a statement showing the length of bund completed in each tank since I took charge of the work in 1896 :—

Statement showing the Length of Bund completed in each Tank from 1896 up to 31st December, 1901.

V. VRASPILLAI,
Sub-Inspector Village of Tanks.

Report of the Sub-Inspector of Village Tanks, Mantai, &c., for the Year 1901.

1. Total number of tanks under restoration in the Mantai, Illuppaikadavai, and Perunkalli pattus is 67, and the number of days' labour due on them was 21,001, equivalent to Rs. 7,875·37½, at the rate of 37½ cents for a day's labour.

2. The quantity of work contributed by the proprietors during the year was 227 cubes, equivalent to Rs. 170·25, and the extra work done by them was 200 cubes.

3. Total amount of work done by hired labour was—

Earthwork	6,432¼ cubes
Turfing	3,192 squares

4. Total number of tanks under restoration in the Metkumulai and Panankamam pattus is 39, and the number of days' labour due on them was 2,073, equivalent to Rs. 777·37½, at the rate of 37½ cents for a day's labour. The quantity of work done during the year by the proprietors was 924 cubes, and the extra work done by them was 125 cubes.

5. *General Remarks.*—Twenty-eight sluices have been inserted during the year to the following tanks in Mantai south and north, viz., Parankisirukkulam, Nakattalvu, Kalayaperumalkulam, Pallankulam, Choddiarkandal, Kollankulam, Uyilankulam, Mutalaikutti, Manatkulam, Nilasenai, Nochchikulam, Alikandal, Kalimoddai, Siruvilankuli, Munkilmurichchan, Ittikkandal, Palaikuli, Vannakulam, Kattankulam, Vaddakkandal, and Kannaddi. Some of these had two sluices inserted and some only one.

In Mantai north and south almost all the tanks that urgently required sluices have been provided this year. One sluice has also been inserted in Siraddikulam in Panankamam.

In Perunkalli and Illuppaikadavai pattus there was rain shortly after the pipes had been taken to the different tanks from the depôts, which prevented their insertion. The pipes are in charge of the several Kama Vidahns, and will be inserted at the first possible opportunity.

Works for the most part in Illupaikadavai and altogether in Panankamam and Metkumulai were carried on by the proprietors, and the earthwork they did was very well done.

Extensive jungle clearing in the spills has been done during the year in almost all the tanks in Metkumulai.

Water was let out to all the tanks in Mantai north and south from the Giant's tank, and the tanks are all full. If not for that water there would be no cultivation.

In inserting the sluices labour was contributed by the villagers.

There were no breaches in any of the tanks, and the bunds withstood well the strain.

V. PIRASUDI,
Acting Sub-Inspector of Village Tanks.

The important work of restoring village tanks has made satisfactory progress during the year. The usual figures are given :—

	Days.	Value. Rs. c.
Labour due	46,452 ...	17,419 50
Commuted	28,331 ...	10,624 13
Done by villagers	16,747 ...	6,280 12
Cases instituted for	1,374 ...	515 25

VII.—WORKS MOST REQUIRED.

For Mannar Island.

(1) A water supply for Mannar town.
(2) Metalling of the remaining 5 miles of road from Mannar to Pesalai and the continuation of the road to Talaimannar.
(3) The building of quarters for the medical officer and dispenser at the Mannar hospital.

For the Mainland.

(4) The Akattimurippu irrigation scheme.
(5) The completion of the Mannar-Madawachchi road.
(6) The improvement of the Coast road from Illuppaikadavai to Silavaturai.
(7) The Kurai irrigation scheme.

(1) A water supply for Mannar town is an urgent necessity, but no method of obtaining it without prohibitive expense appears feasible. The two wells which supply the town were emptied daily towards the end of the south-west monsoon, and water carts had to wait their turn to take the water as the spring slowly sent it in.

(2) During the past year a further 2 miles of the Mannar-Pesalai road have been metalled, and a vote for a further 2 miles has been sanctioned for 1902. The continuation of the road to Talaimannar is very desirable, as giving access to the cocoanut gardens of Mannar west, and as letting daylight into villages which are perhaps the least civilized of any in the district.

(4) and (7) For the Akattimurippu scheme and the Kurai scheme see under the head Irrigation.

(5) and (6) The necessity for these roads has been recognized by Government, and votes given for them for 1902. The completion of the Mannar-Madawachchi road has been awaiting the restoration of the Giant's tank till the trace could be definitely settled, and of the 6 miles still to be made, 2 will be finished in 1902. The Silavaturai-Illuppaikadavai road runs through the district from north to south, and is much wanted to make traffic easier between the villages along the sea coast.

VIII.—CRIME.

There has, as usual, been little violent crime. There was one case of causing grievous hurt with a stick under provocation, which resulted in a conviction. Two knife cases were reported, and in each case the accused was convicted, one being a Sinhalese man, and in each case the injuries were trifling.

A dead body was found hanging from a tree in scrub jungle in a lonely spot in Mannar west, which must have been unnoticed for two or three months, and could not be identified. At the inquest a verdict of suicide was returned, but the finding of the body gave rise to two charges of murder. In one the informant was convicted of perjury by the District Court of Mannar, while in the other the informant was sentenced by the Police Court of Jaffna for giving false information to the police.

One case of cattle stealing occurred during the year.

The police force in Mannar town of one sergeant and seven constables have done their routine work well, and have had no opportunities of distinguishing themselves.

The headmen have had little work to do in connection with crime, but have done satisfactorily what work they had to do.

The statement of the year's court work is annexed :—

	1900.	1901.

IX.—LEGISLATION.

I have no proposals to make.

X.—WASTE LANDS ORDINANCE.

The Waste Lands Ordinance has not yet been put in motion in this District.

XI.—TRADE.

The total value of imports and exports, both over sea and coastwise, amounted to Rs. 599,186·06. The principal items were—

	Rs.	c.
Imports.		
Arecanuts, 884 cwt. 3 qr.	11,575	50
Arrack, 6,897 cwt.	32,441	0
Beverage of kind, 103 cwt. 2 qr. 2 lb.	2,293	0
Bricks and tiles, 13,406 cwt., No. 3,000	1,058	0
Cement, 2,765 cwt. 1 qr.	11,063	0
Cocoanuts, No. 127,045	4,949	50
Coir yarn, 440 cwt. 3 qr.	2,924	72
Copperah, 360 cwt.	3,324	0
Cotton goods, 381 cwt. 1 qr. 12 lb., yds. 185	65,067	58
Curry stuffs, 982 cwt. 0 qr. 19 lb.	10,294	94
Fish, dried and salted, 17 cwt. 2 qr. 8 lb.	224	0
Furniture, 123 cwt. 1 qr. 14 lb.	1,051	0
Rice, 19,293 cwt. 0 qr. 8 lb.	130,295	46
Paddy, 2,065 cwt.	6,453	0
Metal, ironware, 172 cwt. 2 qr. 20 lb.	1,698	0
Cocoanut oil, 3,956 gallons...	5,802	0
Kerosine oil, 2,178 gallons	1,740	0
Oxen and bulls, No. 9	495	0
Salt, 6,530 cwt.	15,410	80
Sugar, 128 cwt. 3 qr.	1,440	0
Tobacco, 357 cwt. 0 qr. 3 lb.	9,050	81
Stones, metal, 642½ cubes	3,280	0
Exports.		
Bark, tanning, 1,210 cwt.	4,440	0
Bêche-de-mer, 274 cwt. 2 qr.	6,280	0
Chanks, 7,310 cwt. 3 qr. 14 lb.	55,550	0
Cocoanuts, No. 4,750	133	75
Ghee, 382½ gallons	1,520	0
Fish, dried and salted, 19,451 cwt. 1 qr.	141,052	25
Firewood, 187 cwt., No. 46,000	1,773	50
Rice, 413 cwt. 3 qr.	3,177	0
Paddy, 3,154 cwt.	10,779	79
Palmirah odials, 1,003 cwt. 3 qr.	4,034	50
Palmirah roots, 1,875 cwt. 1 qr.	5,691	0
Palmirah laths and rafters, 338 cwt., No. 100	216	0
Tobacco, 2,045 cwt. 0 qr. 10 lb.	42,557	0

XII.—NEW AREAS OF CULTIVATION.

Fifty acres of land have been planted with cocoanuts during the year, and six acres were cleared for tobacco and four for paddy.

XIII.—CHENA CULTIVATION.

No chena cultivation was asked for or allowed.

XIV.—SALES OF LAND BY VILLAGERS.

There were the ordinary sales among themselves. No instances were reported of sales of land to which the vendors had insufficient title.

XV.—WORK OTHER THAN ROUTINE.

The chief work other than routine was connected with the Giant's tank. The specifications for the recovery of water-rate were published during the year.

The Census also entailed a large amount of work, the chief headmen of the district receiving the thanks of Government for the work they did in connection with it.

XVI.—EVENTS OF INTEREST.

The Madu festival passed off successfully in July, with an attendance of 30,000 people. After the close of the festival a row of cadjan boutiques caught fire accidentally, and several thousands of rupees' worth of goods were burnt.

A memorial service was held to commemorate the death of Her late Majesty Queen Victoria, and a large and influential meeting also held, at which an address of condolence to His Majesty the King was adopted.

B. CONSTANTINE,
Assistant Government Agent.

Mannar, February 7, 1902.

REPORT ON THE MULLAITTIVU DISTRICT FOR 1901.

Area, 1,154¼ square miles; Population, 15,161.

I.—REVENUE.

THE total collected for the year was Rs. 17,517·38, as against Rs. 20,840·16 for 1900. In both cases the value of the arrack rent is not included, having been credited at Jaffna. This represents an additional Rs. 11,329·92, which added to the amount collected in the district makes the real revenue Rs. 28,847·30.

The decrease of Rs. 3,322·78 this year is due to one item, viz., value of Timber sold, which was only Rs. 307·45, as against Rs. 5,822·90 in 1900. This was an adventitious item in the revenue for 1900, being the result of an extensive sale of timber by the Forest Department, which has not been repeated. With this exception, and of Land Sales, which show a slight decrease, there is a tendency to rise all round :—

	Rs. c.
Sale of Salt shows an increase of	979. 65
Sale of Revenue Stamps do.	682 24
Sale of Judicial Stamps do.	197 15
Survey Fees do.	318 42
Police Court Fines do.	481 50
Collections at Dispensaries do.	39 45

Land Sales show a decrease of Rs. 347·01. More sales were held, and the decrease is accounted for by the fact that the amount collected for 1900 includes the $\frac{2}{10}$th purchase amounts of lands sold in 1899, while the same cause has exactly the reverse effect on the revenue of 1901, as three land sales held in December, 1901, will go to swell the revenue of 1902.

The total revenue exceeds that of 1899 by Rs. 2,633·92, and is almost the same as that of 1898. Comparison with previous years is not easy owing to the arrack rents being previously credited here.

In addition to the ordinary revenue, Rs. 4,905 was collected from the people under the Thoroughfares Ordinance.

II.—EXPENDITURE.

The expenditure on Provincial Administration for the district was Rs. 18,134·81, being Rs. 10,712·49 less than the total revenue. The chief items of expenditure are Personal Emoluments Rs. 12,718·88, Travelling Allowances Rs. 1,730·44, Maintenance of the Experimental Gardens at Vavuniya and Kanagarayankulam Rs. 668·90, Charitable Allowances Rs. 627·31, and Salary of Resthouse-keepers Rs. 588.

III.—WEATHER AND CROPS.

The rainfall return is as follows :—

	Mullaittivu. Inches.	Vavuniya. Inches.	Nedunkeni. Inches.	Mankulam. Inches.
First Quarter ...	9·46	6·87	31·15	1·35
Second Quarter ...	2·05	4·99	18·03	4·63
Third Quarter ...	3·89	8·29	33·96	5·09
Fourth Quarter ...	24·83	25·73	89·18	20·50
Total for 1901 ...	40·23	45·88	172·32	31·57
Total for 1900 ...	42·85	44·31	98·58	71·62

The distribution was thus very irregular. An abnormal quantity of rain fell at Nedunkeni, always the wettest place in the Vanni, more than half of which came in the last quarter, while a remarkable falling off of 40 inches is seen in the return for Mankulam. In spite of the long drought the deficiency in water supply was partly made up in the months of November and December, but this only goes to benefit the agricultural operations of next year. The last quarter of 1900 also showed a great deficiency, so that it is apparent how little rain the people had for the cultivation of 1901.

CROPS.

It is only natural that the drought should have adversely affected the outturn of paddy. With a larger extent under cultivation the gross produce was very much below that of previous years, the average yield per acre being much reduced. The figures are—

		Acreage.	Crop in Bushels.	Yield per Acre.
1901	... ...	10,570	107,258	10·14
As against 1900	... ...	10,028	157,350	15·69
As against 1899	... ...	10,953	179,196	16·36

Therefore, with an increased acreage of 542 acres under cultivation, the yield is less than last year's by 50,092 bushels, which represents a very serious failure in the cultivation. It was only the kalapokam that gave any considerable return; the idai and sirupokams contributed hardly anything to the total, the tanks rarely having sufficient water to enable a second cultivation.

The comparison of the yield under the tanks restored by Government with that of the previous year is equally gloomy. The figures according to districts are—

District.	Acreage sown.	Produce in Bushels.
(1) Vavuniya South	208	1,750
(2) Vavuniya North	173	1,600
(3) Maritime Pattus (no tanks)	—	—
(4) Sinhalese Division	537	13,940
Total ...	918	17,290

as compared with 1,416 acres sown and a yield of 33,990 bushels last year.

Other Grain.—The necessity for dry grain cultivation has decreased. The opportunity given to the villagers of cultivating paddy on Crown lands on payment of the survey fees and upset price in four instalments has almost abolished the need for chena cultivation. The return is therefore year by year decreasing. For 1901 it is—

Number of acres	117½
Gross produce, bushels	760

Tobacco.—This important product is rising into favour, and an increased extent of land was cultivated. Unfortunately want of rain has had a marked effect upon the crop, many of the leaves drying up and withering. The figures for the last four years are—

	Acreage.	Crop in lb.	Yield per Acre.
1901	243½	121,750	500
1900	192	172,325	897
1899	186	92,496	495
1898	197	98,500	500

The increase in acreage has been slow and gradual since 1881, when it was 156. The marked increase this year must be due to the exceptionally good crop which was gathered in 1900.

Cocoanut and Palmirah Cultivation.—This has remained normal, and is gradually extending.

IV.—FOOD SUPPLY.

Grain is the chief article of food, supplemented by the produce of the garden and the natural bounty of the jungles, tanks, and, in the maritime pattus, of the sea.

An estimate of the amount available for food is annexed :—

Description of Grain.	Raised.	Imported by Sea.	Exported.	Used for Seed.	Balance.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
Paddy	107,258	6	7,481	26,427	73,356
Rice	—	2,458	3	—	2,455
Dry grain	760	79½	101	11	728

Two bushels of paddy are usually taken to answer to one bushel of rice. Thus we get 36,678 bushels of rice raised, 2,455 bushels imported, and 728 bushels of dry grain raised, giving a total of 39,861 bushels for a population of 15,161, or barely 2⅝ bushels per head. This is a very insufficient quantity, and amounts almost to starvation diet, and many villages are actually suffering from want of food. Generally speaking, the Sinhalese population were best off, as they raised 24,070 bushels, giving an average of about 20 bushels per head.

Prices ruled higher than last year. Paddy was sold at from Re. 1·50 to Rs. 2 a bushel, rice at Rs. 4 to Rs. 5, kurakkan at Re. 1·25, and varaku at 75 cents. The purchase of the first two articles would be beyond the means of the bulk of the population.

V.—IRRIGATION.

The progress made in this Department during the year was sound. The subject was one in which my predecessor took a keen interest, which bore good fruit in the advancement of the plans for the improvement of irrigation in the district. By the exercise of firmness in dealing with the too numerous earthwork defaulters, by refusing to accept pleas of task done after the Irrigation Officer has measured the work and taken it over, and by bringing pressure to bear on the Udaiyars charged with the collection of the outstanding fines and so expediting their recovery and reducing arrears, the way was paved to better things. There were this year fewer defaulters, fewer cases, fewer fines. Rs. 4,642·88

of fines were collected during the year, reducing the amount outstanding at beginning of the year by Rs. 1,776·60. The imposition of fresh fines accounts for the difference. By adherence to this policy I hope the people will be taught the advantages of discipline, method, and regularity in carrying out their tank work over the slipshod or half-hearted endeavours to which many of them have been accustomed.

The following table, compiled from figures supplied by the Chief Inspector, shows the amount of village labour called out and that actually done on village tanks during the year.:—

	No. of Days' Labour. Called out.	Done.	Percentage to Total Labour due.
Annual labour ...	21,762	17,370	
Extra work on breaches ...	164	164	
Extra work on spill and bund clearing ...	6,383	5,459	
Extra work on turfing bunds ...	3,932	2,720	
Total ...	32,241	25,713	79·75
Number of days remitted	—	200½	0·62
Do. commuted ...	—	427	1·33
Do. in default	—	5,900½	18·30
Total ...	32,241	32,241	100·00

Larger schemes have received their fair share of attention.

Mr. T. B. Ralapanawa, Ratemahatmaya of the Sinhalese division of Vavuniya, was engaged in the months from March to June in following up the trace of an old Yoda-ela starting from Mahagalkadawela in Anuradhapura District and connecting with Pavatkulam of this district. He has traced it, he believes, throughout its course. The traces of five channels exist, but they are not all separate systems.

Another Yoda-ela leading from the Kanadara-oya was also traced for 12 miles up to near Kartankulam, but abandoned in favour of the more important investigations mentioned.

Levelling along the bund and the channels and about the contour of the tank Pavatkulam, which it is proposed to restore, has been proceeding under the supervision of Mr. Bradley.

A sum of Rs. 22,299·73 was expended on the Kanukkeni tank in excavating earthwork, laying concrete in foundation, fixing stone masonry in cement, in excavating the high and low level channels, and fixing distribution gates and culverts. The work is nearing completion. Mr. Sanmukam is the officer in charge.

A statement of irrigation recoveries made during the year is given :—

	Due. Rs. c.	
Vavuniya tank ...	83 64	All recovered.
Iratperiyakulam ...	255 30	
Mainadu ...	243 2	
Madukanda ...	213 86	
Kanagarayankulam	59 40	
Maha Irambaikkulam	215 95	
Venkalacheddikulam	123 71	
Periya Olukkulam	48 13	
Periyakulam ...	109 11	
Total ...	1,352 12	

VI.—LEGISLATION.

I believe legislation would be beneficial on the subject of Hindu Temporalities. The management of temple property is in some cases absolutely under the control of the incumbent. There are no trustees, he renders no accounts, he utilizes the produce as he thinks best, he neglects the temple, allows it to fall into disrepair, perhaps scandalizes his religionists in his personal conduct, and they have no voice in his removal, no power to appeal to. *J'y suis, j'y reste* is the motto of the worthy Brahmin, and he is accountable to no man.

My short experience of the district will not allow me to say that legislation is necessary on this head, but my belief that reform is required is countenanced by the opinion of Mr. Ievers expressed in his Administration Reports for the Northern Province of 1898 and 1899.

The question whether the Tesawalamai applies to this district or not does not require legislation, I think, before the Supreme Court has pronounced an opinion on the point.

VII.—WORKS REQUIRED.

I follow the recommendations made by my predecessor :—

(1) The improvement of the road from Mankulam to Mullaittivu. Much has been done of recent years, and this year there was undoubtedly a great improvement. But it is very bad to travel over in wet weather. Good culverts are needed, and the time will come when the road should be metalled. But that is not yet.

(2) The improvement of the road from Mullaittivu to Puliyankulam by means of small bridges and culverts.

(3) Improvement of the road from Mullaittivu to Jaffna *vid* Putukkudiyiruppu and Parantan.

(4) Nedunkeni is worthy of a more permanent dispensary and quarters for the dispenser. The importance of the dispensary to the villagers of the interior is paramount; 4,000 visits were paid in the year, and the place is now the headquarters of the District Mudaliyar and on the road to a future railway station.

(5) A landing jetty at Mullaittivu.

(6) More wells are required to be sunk.

VIII.—PLANS FOR IMPROVEMENT.

With but a very brief experience of the district I speak with diffidence concerning the plans for the future. None have presented themselves to me with distinctness.

The two powerful factors in the future of the Vanni will be (1) irrigation; (2) the railway. The first is the end, the second the means. The prospects of paddy cultivation with the scanty and variable rainfall are not so attractive as to be likely to cause an immediate or even rapid influx of the population of the peninsula after the establishment of the railway. The process of settlement will continue to be gradual. But rapid communication will give the necessary encouragement—and as it were guarantee—to enterprising Jaffnese to undertake the restoration of the numerous tanks that now remain untouched. *Bonâ fide* applicants should be encouraged. They will supplement the efforts of the existing population, who at present have more tanks than they can manage, more land than they can cultivate, and no inducement to industry, and yet have not stood still. In 1891 the population was 13,925; in 1901 it is 15,161, and improvement of the tanks has been proceeding in the interval. This steady progress should in the future be helped on by the accession of *bonâ fide* settlers from without, in the same way as the Sinhalese of the North-Central Province have settled under the good tanks near Vavuniya to the benefit of the district.

The danger is that the new element may eliminate the old, and that the Vannians may be induced to part with their lands and sink into a class of serfs of the wealthier and more energetic newcomers from the North. This is not the direction in which to look for the return of the ancient prosperity of the Vanni. It is rather to be hoped that the attractions of the district will not be such as to draw the attention of the capitalists, so much as that the opportunities it affords for work will induce the settlement of poorer families in these pastures new. Labour is what we want.

Roads are another essential to the development of the district. A good coast road is wanted from Mullaittivu to Kokkulai through that fertile country, and the purchase of land and cultivation of the cocoanut would rapidly extend. The flourishing estate of the Roman Catholic Mission at Chilavattai is an example of what can be done in that direction. The minor roads cannot be much improved until the population is greater.

The larger schemes of irrigation which Government has in hand have already been referred to.

IX.—HEALTH AND SANITATION.

The sanitary condition of the people is not satisfactory. Their manner of living is opposed to the laws of health. They live in small, low, unventilated dwellings, have insufficient and poor food to eat, bathe and wash clothes in the same water as they drink, (the villager prefers tank water to a well if there is one), and in the wet season they are unprotected from the universal damp and swampiness of the ground around. Their scanty numbers make it a difficult task to always keep clear the village reservation, and situated as their hamlets are in a malarial jungle district, it is hardly matter of surprise that in health and sanitation they are very backward.

The birth and death figures show how far these conditions affect the vitality of the people:—

	Births.	Deaths.	Rate per 1,000. Births.	Deaths.
For 1901 ...	660 ...	648 ...	43·46 ...	42·67
For 1900 ...	686 ...	576 ...	45·21 ...	37·96

The death-rate went up considerably, and the mortality was heaviest in the first six months.

The prevalent diseases were fever and parangi. In the village Madukanda eight deaths occurred from fever in the months of October and November. The number of cases treated at the hospitals and dispensaries is—

	Fever.	Parangi.	All Cases.
Mullaittivu hospital	1,843 ...	161 ...	3,302
Vavuniya hospital	3,373 ...	312 ...	7,790
Mankulam dispensary. (North-Central road)	764 ...	74 ...	1,458
Mankulam dispensary (Mannar road) ...	1,568 ...	213 ...	2,992
Nedunkeni dispensary... ...	1,352 ...	317 ...	2,605
Putukkudiyiruppu dispensary ...	1,063 ...	195 ...	1,830
Kokkilai dispensary	— ...	— ...	713
Total ...	9,963	1,272	20,690

The last column indicates how universally the Government institutions have ministered to the needs of the population. They have treated more cases than there are people in the district.

No doubt the figures include a considerable number of cases from other districts. It is certain that at Vavuniya and Mankulam (on the Mannar road) very many persons treated were from the North-Central Province. In the case of Mankulam dispensary, the proportion of outsiders is one-half. Others from the Trincomalee and Mannar Districts are included in these figures.

The towns of Vavuniya and Mullaittivu were kept in a satisfactory state of sanitation. In the former jungle clearing along the roads and of the open spaces was carried out, the fronts of boutiques and the cart gala were cleared, and dwellings and compounds cleaned early in the year. At Mullaittivu dwellings were cleared, scavenging of the town was carried on, and a public cemetery was made.

No epidemics occurred during the year. The precautions against the introduction of plague and cholera were maintained.

X.—CRIME AND POLICE.

There were no cases of murder or attempted murder. One case occurred of death by shooting, in which the accused was charged for causing death by a rash and negligent act. It was committed to the Supreme Court, but has not been brought to trial to date. The accused and his victim were relations travelling in one cart on the pilgrimage to Madu. The deceased who had gone to the jungle in the early morning was taken for a deer and shot by his relation. The parties were from Negombo, and did not belong to this district.

Two knife cases were reported. Both were heard summarily. In the first, two cultivators of Olumadu had a quarrel and fought, and each charged the other with having stabbed him with a knife and a style respectively. There was no corroborative evidence, except two small wounds, though

witnesses were near the scene at the time. The court held that there was no evidence, and that the wounds were probably self-inflicted. Both parties acquitted. In the second, a cultivator of Rasentirakulam was charged by a dhoby man for cutting him with a katty. Wound very slight, and did not appear to be a cut at all. There was evidence of the use of the katty as the weapon of offence. But the assault was under great provocation, and accused was convicted merely of causing hurt, and sentenced to a fine of Rs. 10 under section 325.

There was practically no crime. Many cases of theft were brought, nearly all of which were disbelieved; and a good many cases of assault, most of which were compounded, and in others the accused punished.

The headmen are very willing and ready to do their duty in the matter of police work, and do it well when required, but they are seldom called upon. The District Mudaliyars and the Ratemahatmaya have been zealous in the interest of law and order. There are no regular police.

XI.—CATTLE DISEASE.

The district has been immune. There were reported to be 8,071 buffaloes and 11,360 other cattle in the district. Only four buffaloes and eight black cattle were attacked with hoof-and-mouth disease, all of which recovered.

XII.—NEW AREAS OF CULTIVATION.

Three hundred acres of new land have been brought under cultivation, 200 of which are situate in the maritime pattus. More land will be opened up in the immediate future, as several sales of Crown land were held in the year. The number of Crown grants made was 145, and the acreage granted 440A. 1R. 21·75P. Extent of land sold during the year :—

	Extent. A.	R.	P.
(1) Under ordinary conditions	295	1	34½
(2) Under Sir Henry Ward's Minute	82	3	36
Total ...	378	1	30·50

The applications for survey and the fees for deposit are pouring in incessantly. The demand is certainly on the increase, and augurs well for the future. A regular land clerk is much needed.

XIII.—WASTE LANDS ORDINANCES.

These have not been brought into operation.

XIV.—CHENA CULTIVATION.

This has decreased, and is doing so year by year. The people of Putukkudiyiruppu were allowed chenas as usual, but the extent granted was only 45 acres. A few chenas were also allowed for kurakkan cultivation in some villages, where on careful inquiry it was found to be a necessity. In the other villages of the district only the beds of tanks were chenaed on permit.

Permits for this were first required this year. Unrestricted freedom in the cultivation of tank beds would eventually lead the people to assert their claim to the beds of tanks as private property. It is the policy of the Government to insist on permits and punish for unauthorized cultivation, but not to refuse one if applied for. A charge of Re. 1 per acre besides is made for cultivation in the beds of Government tanks.

This chena cultivation is of course harmless if controlled, and is easy and remunerative. It, however, led to difficulties. The people burned and cleared outside the contour and destroyed good forest. The people of Mahamayilankulam were prosecuted and fined Rs. 300, the people of Putuvilankulam were fined Rs. 20, the people of Etambagaskada were fined Rs. 100.

XV.—SALES OF LANDS BY VILLAGERS.

There have been a few sales of paddy lands and houses. When a shareholder does not care to cultivate or do the earthwork for a piece of land under a tank, he will sell it. As a rule, the villagers are tenacious of their lands, though they "otti" or mortgage them freely. They are obliged to do so to obtain seed paddy. No cases of insufficient title have come to notice.

XVI.—FOREST DEMARCATION.

The following forests were gazetted and are ready for proclamation :—

	Acres.
Mamadu	640
Tonigalla	2,035
Maha Irambaikkulam	2,105
Total ...	4,780

The number of chains of exterior boundary lines, not including compartment lines, cut is—

	Chains.
Width 10 ft....	3,735
Width 6 ft.	2,001
Total ...	5,736

The area released during the year is 43,820 acres.

XVII.—EDUCATION.

A summary of the schools and the number of pupils is here given :—

	No.	Boys.	Girls.
English Schools	2	39 ...	2
Vernacular Schools	16	387 ...	140
Pansalas	3	13 ...	—
Total ...	21	439	142

There is an advance on 1900 in the number of both schools and of scholars. The Roman Catholic Mission supports seven of these schools, the Church Missionary Society nine, and the public two. The pansalas are maintained by priests. There are no Government schools.

XVIII.—TRADE AND INDUSTRY.

The value of exports from the port of Mullaittivu in 1901 was Rs. 72,115, the chief exports being dried fish, salted fish, fish fins, cuttle fish bones, paddy, horns, unmanufactured tobacco, cotton goods, jak fruit, and timber.

The value of imports was Rs. 57,277·70, the chief imports being food stuffs, such as rice, arrack, spirits, arecanuts, chillies, jaggery. They included besides brass and copperware, cocoanut oil, salt, road metal, unmanufactured tobacco.

The trade is principally with the Northern and Western Provinces.

Fishing is the principal industry of the place. The season was not as successful as the year before.

Exports of Salt Fish.

	Cwt.
1900	5,482
1901	4,874

There are no mines in the district. One was started for plumbago at Maniyarkulam, but it ceased work in 1900 when the depreciation of the ore set in.

XIX.—MISCELLANEOUS.

Elephants.—Nineteen licenses were issued to capture, and fourteen elephants were caught, one of them a tusker.

Leopards and Bears.—Rewards were paid as under :—

	1899.	1900.	1901.
Leopards	42	21	27
Bears	5	11	10

Gun Licenses.—A great increase appears in the number taken, the villagers anticipating that if they fail to get them licensed by a certain date they will have to pay for an annual license :—

1899	11
1900	30
1901	331

Game Licenses.

1899	6
1900	3
1901	5

Cart Licenses.

1899	136
1900	99
1901	126

Experimental Gardens.—The two nursery gardens of Vavuniya and Kanagarayankulam have been of good service to the villagers. Plants issued during the year at Vavuniya were—

Cocoanut	187	Mango	27
Orange	124	Arecanuts	25
Lime	112	Croton	100
Jak	55		

The following remain for distribution in 1902 :—

Cocoanut	1,800	Jak	82
Orange	200	Mango	22
Lime	300	Arecanuts	100
Talipot	23	Pineapples	96

At Kanagarayankulam garden some difficulty was experienced in getting the villagers to take the cocoanut plants. All were, however, taken before the end of the year. Owing to the high price of cocoanuts no more seed cocoanuts were put in.

Village Tribunal, Vavuniya.

Statement of work done is appended :—

Pending on January 1, 1901 :—

XX.—EVENTS OTHER THAN ROUTINE.

January 25–28.—Public offices closed as a mark of respect to Her Majesty Queen Victoria's memory.

February 2.—Memorial services and address to His Majesty the King.

February 4–9.—Preliminary Census.

March 1.—Census Day.

March 10.—Telegraph to Mullaittivu opened.

March 11–14.—His Excellency the Governor and Major-General Hobson, accompanied by the Government Agent, arrive at Oddusuddan, visit Mullaittivu, and pass through the district on the way to the Eastern Province *via* Tennamaravadi.

June 26.—Rogue elephant killed by Mr. Murty, Assistant Government Agent, at Vengalacheddikulam.

November 25.—I succeed Mr. Murty in charge of the district.

During the year the Assistant Government Agent has travelled much throughout the district, inspecting tanks, dispensaries, post offices, roads, bridges, village clearings, wells, &c. He has held court fairly regularly at Mullaittivu and Vavuniya.

Mullaittivu Kachcheri,
February 12, 1902.

L. W. C. SCHRADER,
Assistant Government Agent.

SOUTHERN PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, SOUTHERN PROVINCE, FOR 1901.

REVENUE.

THE detailed comparative statement of revenue collected during the years 1900 and 1901 is annexed:—

Detailed Statement of Revenue collected in the Southern Province during the Years 1900 and 1901.

Heads of Revenue.	1900.	1901.	Increase.	Decrease.	Remarks.

The year was one of great depression in trade in the Southern Province, and the revenue suffered accordingly.

The plumbago business, which was flourishing during 1899 and the greater part of 1900, came to a standstill. Mines were closed, and the miners went back to their paddy fields, or else left the Province to seek work on the Railway Extensions. Tea estates were worked as economically as possible, and the labour force was kept low. There was little demand for land, and the salt collection at Hambantota failed owing to unseasonable rain.

The abundance of labour and favourable weather brought great prosperity to paddy cultivators, but the revenue no longer derives any direct benefit from this source.

Were it not for the failure of the salt collection, the Hambantota District would have shown material improvement; there is an increase under most of the heads of revenue in that district, but neither in Matara nor in Galle is there an appreciable increase under any head, except Arrack, Opium, and Fines.

The apparent nett decrease of Rs. 435,438·99 is misleading.

The real decrease is Rs. 192,594, as in the previous year Rs. 242,844·37 was credited under the head Railway Receipts.

Railway collections are not now paid into the Kachcheri, and the commission paid to the bank on remittances to the Treasurer is saved.

The Customs receipts fell from Rs. 410,769 in 1900 to Rs. 332,551, a decrease of Rs. 78,218.

Sale of Crown Lands shows a decrease of Rs. 52,661, Premia on Plumbago Leases Rs. 19,965, Salt Rs. 46,659, and Timber Rs. 8,679.

The revenue collected in each district was as follows :—

	Rs.	c.
Galle	741,219	73
Matara	205,127	4
Hambantota	217,695	35

The above figures for Matara and Hambantota include arrack revenue credited at Galle Kachcheri, viz.:—

	Rs.	c.
Matara	74,564	42
Hambantota	23,132	70

A comparative statement of revenue from railway receipts in the Southern Province is annexed (*vide* Appendix Q), which shows how seriously the depression in trade affected every part of the Province.

FOOD SUPPLY.

This is not an urgent question in Galle District. The Hambantota District is the only part of the Province where distress may be caused by the insufficiency of locally-grown food supplies, and I trust that the irrigation works in progress and those proposed will in the near future relieve the officer in charge of that district of all anxiety on this account.

The District Mudaliyars report as follows :—

Four Gravets.—In reviewing the year 1901 as regards the food supply of the inhabitants of my district, it is indeed a satisfaction to find that out of a total extent of about 5,000 acres of mud lands, not less than 4,500 acres have been brought under cultivation. The increased attention paid to this industry this year is mainly due to want of more lucrative employments in other directions, which in previous years had allured the cultivators from their fields and afterwards left them in utter disappointment. The crop raised this year far exceeds that of any one of the four years immediately preceding it, and has amply repaid the poor labourer for his trouble at both the harvests of the year, yala and maha.

From 1897 to 1899 the paddy cultivation in my district had a rapid annual decline and presented a most deplorable state, but the years 1900 and 1901 show a commendable increase, with very satisfactory results; and the increase in interest now displayed by the cultivators is certainly worthy of notice.

The following is a statement of the probable extent of paddy lands brought under cultivation during each of the past five years, with their respective produce :—

Year.	Extent cultivated. Acres.	Produce in Bushels.
1897	4,300	70,000
1898	3,350	40,200
1899	2,500	30,000
1900	3,400	61,000
1901	4,500	85,500

Although the above shows a comparatively abundant supply this year, it is but a very insignificant fraction of the year's consumption, and the rest, as is always the case, has been made up by imported rice, the supply of which was never below the demand; but the price of this staple was somewhat high, and in no part of the year could a bushel of Coast rice be obtained for less than Rs. 4·50, and although there has been no noticeable scarcity, the poorer classes have suffered to some extent from the want of food, as they have had no sufficient employment.

Wellaboda Pattu.—The food supply of the people consists mainly of imported and locally-grown rice, the produce of the cocoanut and jak and the breadfruit tree, garden produce, such as plantains, yams, &c., and fish, both fresh and preserved.

About 80 per cent. of the requisite supply of rice is imported, and a considerable quantity of vegetables, such as plantains, &c., is also brought in from other places. The rest of the principal articles of food mentioned are locally produced.

During the twelve months there was greater activity in the production of both rice and vegetables than during several previous years. This was owing to the scant demand for labour at the plumbago pits, and the facilities which the clearing of some neglected water-courses afforded in the cultivation of particularly the latter article. The result was very satisfactory. The jak and the breadfruit tree yielded in fair abundance.

Fish was not plentiful, but was quite sufficient for the local demand, after supplying the Colombo and up-country markets in fairly large quantities.

There was sufficient food all the year round in the division, prices being ordinary, but the ability for purchase of the poorer consumers was not satisfactory, as the demand for labour continued to be indifferent.

Talpe Pattu.—The food supply of the people continued to be plentiful during the year. It consisted, as usual, chiefly of imported rice. The quantity locally grown supplemented slightly that generally consumed.

The cultivators were enabled to sow their fields this year for both the harvests, yala and maha, with the help of the unusual rainfall experienced, instead of one, as was done previously with the usual rains, on which their cultivation depended as a rule. Rice locally obtained may therefore be held to have been doubled in quantity to that previously obtained. Cultivation of fine grain is confined to small areas alone, clearing of Crown chenas for the purpose being prohibited. The quantity available of this grain is consequently small, but the desire for its cultivation continues eager in the villager.

Yams, particularly sweet potato, are cultivated throughout the district in every available bit of ground suitable for the purpose. The output of the cultivations very often suffices to meet the wants of the poorer classes during the time that intervenes between the sowing and harvesting seasons. Garden fruits, such as jak and breadfruit in chief, are obtained in abundance in season, and go a good way in many parts of the district to supplement the food supply. In fact they form at the time the sole food, day and night, of the poorer classes living in inland villages. A good quantity of these is dried and stored away by the thrifty villagers against a wet day.

Oranges and other kindred fruits are treated by the ordinary villager more as luxuries than common articles of food. Their consumption locally is consequently rare. The growers, as a rule, take them to market for sale, and the money thereby realized enables them to provide themselves with other necessaries of life. Surplus vegetable and cocoanuts are similarly disposed of. The price of cocoanuts rose suddenly during the latter half of the year owing to the great demand that prevailed in the market for copperah, and a thousand nuts invariably fetched Rs. 40 at the spot.

The quantity of fish taken at the different fishing ports has been considerable, and more than equal to the demand. The choicer species of it found its way as usual to markets outside the district, where a ready sale at high prices awaited them.

Gangaboda Pattu.—The food supply of the district was abundant, the yala cultivation, amidst repeated floods, having proved successful.

The plumbago industry having retrograded, the villager was compelled to look to the improvement of his lands for a livelihood, and as a consequence extensive cultivation and planting of food stuffs was the beneficial result, and the year which has just ended has left the population contented and in better form to face the advancing year than the closing year found them when succeeding the preceding year of grace 1900.

The dependence on imported rice was limited, and what was brought to the district was mostly for the use of estate coolies and residents who had come from other districts.

Bentota-Walallawiti Korale.—The food supply of my district shows no appreciable change from that of last year, and this, notwithstanding the conversion of Urugasmanhandiya into a Boer Camp, which is catered for by contractors from Colombo. The price of imported rice is from Rs. 3·75 to Rs. 4 per bushel, a decrease from the rate of the preceding year. There was nothing to complain of in regard to the crop of vegetable products and the result of fishing operations.

Hinidum Pattu.—The food supply of the people consists of rice, kurakkan, amu, meneri, jak, potatoes, yams, and breadfruit. About one-third of the rice is grown by themselves, and the other two-thirds imported. The other food supplies above enumerated are grown by themselves, and have been plentiful. A bushel of imported rice is Rs. 4·50, and a bushel of country rice is Rs. 5.

LAND SALES IN GALLE DISTRICT.

Thirty-six sales were held, twenty-one at the Kachcheri and fifteen in the districts where the lands are situated. Although the amount realized is below that of last year, this result is not due to any laxity in the Land Department, as the annexed statement shows :—

	Sales.	Lands advertised.	Extent. A. R. P.
1900 ...	31 ...	1,286 ...	2,291 2 33
1901 ...	36 ...	2,090 ...	3,737 0 25

The sales were affected by the general depression in trade and want of money, and also by the new regulations restricting the right to mine for plumbago.

Detailed statement of lands sold during 1901 and a comparative statement of revenue derived from land sales during the years 1892 to 1901 are appended (*vide* Appendix M).

The sales consisted principally of small lots, and the average price was over Rs. 38 per acre. Only ten lots, 35A. 3R. 9P. in extent, were sold with mining rights. They realized Rs. 5,262·64, or over Rs. 146 per acre.

WASTE LANDS ORDINANCE.

Very satisfactory progress has been made with the settlement of lands in the Matara District. The Special Officer will, I believe, furnish a separate report. In Galle District an area of 814A. 2R. 8P. was declared Crown property, while an extent of 1,615A. 0R. 32P. awaits re-survey.

NEW AREAS OF CULTIVATION.

The extent of land brought under permanent cultivation increases annually, and satisfactory progress was made during 1901. Cocoanuts are the favourite product, and probably three-fourths of the land sold during the year has been planted with them. It is desirable to dispose of land in the Wellaboda and Bentota districts under Sir Henry Ward's Minute. There is a large extent of irrigable land, which can be asweddumized if the villagers are allowed to occupy it on easy terms.

SHIPPING.

The number of steamers calling at Galle for coal exceeds last year's total by 20. The number of steamers with cargo is practically the same, but only 12 sailing vessels called, as against 25 in 1900. A comparative statement of coal sold to ships is annexed :—

	1900.		1901.	
	Steamers.	Sailing Vessels.	Steamers.	Sailing Vessels.
With cargo	138	20	139	12
In ballast	28	5	29	—
For coal	48	—	68	—
Total ...	214	25	236	12

Coal sold to Ships.

	Tons.		Tons.
1896	16,200	1899	5,673
1897	3,653	1900	12,966
1898	9,328	1901	17,479

This statement shows the increasing importance of Galle as a coaling port, and emphasizes the necessity for its improvement.

SANITARY CONDITION OF PEOPLE.

The sanitary condition of the Province was generally satisfactory. There was a good deal of dysentery in the Bentota korale and a few cases of smallpox were imported from Colombo, but the disease did not spread owing to due precautions being taken.

In Morawak korale there was very serious mortality on certain estates from a peculiar disease practically unknown elsewhere. The attention of the Principal Civil Medical Officer was called to the matter.

A statement showing the number of persons attending each hospital and dispensary will be found in Appendix K.

LEGISLATION.

I have no suggestions to make under this head.

CHENA CULTIVATION.

Chena cultivation is practically confined to Hambantota District, where the people, who were accustomed to cultivate Crown lands on permit, continue the practice, although permits are no longer issued, and illicit cultivators are prosecuted. Some good has resulted from persistent prosecution. The demand for high land for permanent cultivation has increased, and the price has risen also. This is due to the labour made available by the partial stoppage of chena cultivation.

The main reason why chena cultivation is so attractive to the villager is that the paddy land proprietor will not give a fair share to the cultivator, who is therefore better off if he can secure a chena crop for himself, even on payment of a fine, than if he cultivated another man's paddy land for a share.

FOREST DEPARTMENT.

The report of Mr. Erskine is as follows :—

Area of Forests.

So far as released areas are concerned there has been no increase, but a portion of the South-Eastern Circle in the Hambantota District was handed over to be worked by the Assistant Government Agent, with a ranger and a clerk. This arrangement was found necessary, as the Assistant Conservator of Forests found he could not work it at a profit. Up to the end of the year any credits would still go to the South-Eastern Circle, but from the beginning of this year expenditure and credits will be disbursed under released areas. This matter has not been definitely settled; as the Government Agent has written to the Conservator of Forests. It is to be hoped that there will not be a loss on the working expenditure of 1902.

Boundaries and Demarcation.

The work of severing cultivated areas from forests was continued. This expenditure, I am sorry to say, is still taken out of the year's earnings, which is naturally not at all appreciated, as Government find the funds for the surveys, and both works are intimately connected. I regret to say the large surveys undertaken and carried out by the Licensed Surveyor Mr. De Vos have not met with the approval of the Surveyor-General, and the proclaiming of nearly 17,000 acres of land is blocked through the Surveyor-General not issuing certificates of surveys. Under the Waste Lands Ordinance I am sure these surveys will hold good, for if they are inaccurate, so far as including any private land, claims will be put forward, and no doubt if found correct will be admitted. As a parallel instance, it was found that Mr. Silva, a Licensed Surveyor sent by the Surveyor-General to survey the Polhunnawa Olebedda surveys at Batapola, included several private lands. These, after personal inspection by the Government Agent, were found to be *bonâ fide* claims, and now a re-survey has to be made at further expense by a member of the Surveyor-General's Department and notices altered. This surveyor was paid up in full on Superintendent of Survey's completion report; whereas Mr. De Vos has a large some of money in hand, and is ready, should it be found necessary, to make good any defects. Under the Government Agent 814 acres 2 roods 8 perches were dealt with and declared Crown land under the Waste Lands Ordinance. The claim against the Crown for the large tract of land called Polatukanda, after a prolonged trial, was given in favour of the Crown; and no appeal was lodged. The other claim of Badungoda was given in favour of the Crown, but is now in appeal.

Roads and Paths.

The Forest Ranger, Tangalla, was allowed funds to open a road to an ebony forest, promising to give a good return. He has already had one favourable sale.

Buildings.

There is only one building in the district in a forest. No expenses were incurred on it. The Bentota and Gintota river watchers' huts were reconstructed.

Financial.

Under this most important head, I think, there can only be satisfaction expressed. Our revenue has advanced, although the country is not flush of money as it was the previous years. A cash profit of Rs. 17,860·62 is very fair (excluding about Rs. 1,000 more still outstanding, but could not be credited, as it was received from War Department too late). Taking value of timber sold to Public Departments as well we have Rs. 29,546·87. Demarcation cost nearly Rs. 6,000 and was paid for, so that really our profit was over Rs. 25,000. The Railway Department, although a Public Department, curiously have to pay the Forest Department royalty. Why this distinction is made I cannot say. It appears to me, if the Railway took over fuel at cost price, and the Forest Department took paper credit for royalty and supervision, it would lead to a deal of less correspondence, accounts, and harmony in working. At present classifications are giving great trouble, being a matter of guess work on the part of the railway officials, and if the contractors classify the wood, this would be a further expense to either the Forest Department or Railway. I trust the Conservator of Forests will help to put this right.

Clerical Staff.

Mr. Sirimana, the Forest Clerk, was promoted to the Land Department on an increase of pay, as he had passed his Clerical. I am sorry to lose him. Mr. Bunltjens has since worked, with good results.

Annexed are statements showing in detail the expenditure, revenue, and cases :—

REVENUE.	Amount. Rs. c.	Total. Rs. c.
I.—Timber, &c., removed from forests by Government Agency :—		
(*a*) Timber	5,888 66

VI.—Transport ...	—	1,080 0
VII.—Miscellaneous :—		
(*c*) Stationery and sundries ...	—	127 76
Total Expenditure ...	—	18,667 44

Cash profit Rs. 17,860·62, or otherwise Rs. 29,546·87.

Mr. Erskine deserves much credit for the prompt manner in which he executed the works for the Boer Camp at Urugasmanhandiya. The house for the officer in charge was put up in less than ten days. Telegraph posts were provided at two days' notice, and the timber for the two additional houses for Boer prisoners was supplied in five days.

In Hambantota District the portion of the South-Eastern Circle lying within the Southern Province was handed over to the Assistant Agent, a very desirable alteration, as it is quite impossible for the officer at Batticaloa to properly supervise this portion of the Circle.

Prosecutions under the Forest Ordinance in the Police Courts, Southern Province, during 1900.

EDUCATION.

The Province is well provided with schools on the whole, but there is a not unnatural tendency to multiply schools in the populous districts, where good returns can be easily shown, while outlying villages are altogether uncared for.

Wherever good schools are or can be provided by private enterprise, the Government schools should be closed, and move on to places where education cannot be obtained unless a Government school is established.

The industrial school at Dodanduwa flourishes, and has been recently extended. Institutions of this kind are of very great value and deserve hearty support.

The difficulty of keeping school houses in order, which gives so much trouble to the Educational Department, is met by the Village Committees in the Southern Province, and substantial brick and tiled buildings are being erected.

WORKING OF ORDINANCE NO. 18 OF 1892.

The imposition of a sanitary rate for the town of Ambalangoda was first proposed soon after the Ordinance was passed, but it was given up. In 1898 a fresh proposal was made, and the limits of the town were defined. Numerous petitions were presented by the people, who objected to the rate, and the inhabitants of Polwatta, Porambe, and Kaluwadumulla protested against the inclusion of those hamlets within the limits of the town. It was not till 1899 that the rate was settled and an assessment made. More petitions were presented; and in June, 1900, after inspection, the Board of Health decided to alter the limits, thereby excluding the villages above mentioned and confining the rate to the town properly so called. The recovery of the tax was postponed to 1901. The opposition still continued, and an Association was formed to resist the collection of the tax.

Ultimately it became necessary to distrain property, as the people obstinately refused to pay; but as it was considered likely that resistance would be offered, a strong force of police was sent down from Colombo to protect the officers engaged in the work. A detective was sent out to ascertain the prospect of serious resistance, and his report, which subsequent events showed to be absolutely correct, was to the effect that a meeting had been held by the Association at which arrangements had been made to collect a mob of 2,000 men under four leaders, and to organize a sham perahera or procession as an excuse for the crowd. As soon as the distraining operations began, the crowd was to assault the Police and Government officers. This programme was carried out, and a very determined attack was made, compelling the police to fire on the mob, which, then, gradually dispersed, when the distraining operations were continued and the tax recovered. Two persons were killed and four injured, of whom two subsequently died. It is probable that, in spite of the distinct warnings given over and over again, the people did not believe that the police would use their firearms if attacked.

A force of punitive police has been stationed in the town. The rioters were prosecuted before the Supreme Court in Colombo, with the result that the chief offender, the Secretary of the Association, and six others were sentenced to two years' rigorous imprisonment. Twenty-eight others, ignorant and misguided villagers, who pleaded guilty, were merely fined Rs. 10 each.

Although the amount of the rate is exceedingly trifling, the difficulty of recovering it, where property is so minutely subdivided as in the maritime districts of the Southern Province, is very great.

A statement of the revenue and expenditure of the Board of Health is appended (*vide* Appendix N).

I am not in favour of imposing a sanitary rate on the villages in the Southern Province mentioned in the schedule attached to Ordinance No. 18 of 1892. The work of sanitation can in most of them be carried out by the Village Committee, and where a village has grown into a town, the establishment of a Local Board is preferable to a sanitary rate.

PUBLIC WORKS EXTRAORDINARY.

The most important works carried out during the year were—

Completion of the new cells, Galle jail.
Improvement of the jetty at Hambantota.
Completion of the new Kachcheri and court-house at Hambantota.
Improvement of the roads from Matara to Akuressa and from Hambantota to Bundala, and the renewal of the iron bridges on the Galle-Colombo road.

A detailed statement will be found in Appendix L.

WORKS REQUIRED.

In my last report the improvement of Galle Harbour by the construction of a breakwater and the removal of some rocks was brought forward as the principal want of the Province, and I have not altered my opinion; but the question is one which will in due time receive consideration, and as it is not a purely local question, I need do no more than allude to it here.

The extension of the railway to Tangalla would be of great benefit to Giruwa pattu west and to the Kandaboda and Wellaboda pattus of Matara District, and I have no doubt as to its proving remunerative. It should follow the coast as far as Dikwella, and be carried thence *viâ* Beliatta to Tangalla.

No progress has been made with the plans for supplying Tangalla with water. A costly scheme with miles of piping seems to me quite unnecessary; an open channel, with zinc troughs where needed, leading to a reservoir near the town is all that is required at present.

Other desirable works are—

(1) Restoration of Badagiriya tank, referred to elsewhere.
(2) Clearing of Waggalmodara canal.
(3) Dispensaries at Akmimana and Wakwella.
(4) Houses for District Judge and Police Magistrate, Matara.

(5) Infectious diseases hospitals at Galle. Considerable correspondence has passed on this subject owing to the absence of any definite agreement when the infectious diseases hospitals at Buona Vista and Bathfield House were handed over to the Plague Committee.

Temporary hospitals were erected by the Plague Committee on land belonging to the Municipality, but no provision was made for their upkeep, and on the occurrence of a few cases of smallpox the temporary buildings were condemned as unfit for occupation.

In the interests of the public the Chairman of the Municipality placed the Municipal plague hospital temporarily at the disposal of the Colonial Surgeon, but on representing to Government the urgent necessity for infectious diseases hospitals, it was suggested by the Principal Civil Medical Officer that it was the duty of the Municipality to provide them. This was disputed by the Municipality, and the matter is still unsettled. In the meantime there is no provision for the accommodation of patients in the event of an epidemic. It is obviously desirable that the law on the subject should be clearly laid down. Hitherto the Municipality has been required only to provide houses of observation, and the custody and care of actual patients has been undertaken by the Medical Department.

IRRIGATION.

The only works in Galle District are the Dedduwa and Waggalmodara schemes. Recovery of water-rates had fallen into arrear, and special efforts were successfully made to improve the state of the accounts. The proprietors who contribute to the Waggalmodara works complain that the work has not been completed, and that they derive little benefit from it. They say that the original scheme included the clearing of the stream, which has never been done. There is nothing on record to show that this was contemplated, and probably the villagers were expected to do it themselves.

The Walawe and Kottawa divisions of Talpe pattu applied to be proclaimed an irrigation district; this was done in November, 1901, and I trust that the result will be as successful as in the neighbouring District of Matara.

Mr. G. de Silva was appointed Irrigation Inspector, Southern Province, in August, and took over charge of the irrigation works from the Provincial Engineer.

Hambantota District is the centre of activity as regards irrigation in this Province, and the report of my Assistant at that station deals with the matter. It is desirable that the Irrigation Department should keep the Government Agent and the Assistant Agent fully informed of the work carried on.

In the course of a circuit in Hambantota District in July I visited Badagiriya tank, the restoration of which is, in my opinion, one of the most desirable works in the Province. I annex extract from my diary:—

6th July.—Spent the morning exploring bund. The tank is fed by two rivers, one of which apparently flows out through a breach in the bund, and then flows in again through another. I disagree with the theory that the second breach was made from the outside, the position of the stones show that it was from inside, but now the water appears to flow sometimes one way and sometimes another, according to which river is in flood. There is a high-level spill in solid rock, on which stands a pillar with an inscription; this is apparently in a more recent character than the inscription on the big rock where the two dagobas stand.

In the afternoon we resumed exploration at the southern end of the bund. We could find no trace of the mode of regulating the outflow. There is a large channel, which must have led to the fields, but there are no existing traces of headworks so far as we could see, and the natives knew nothing. There is one large breach in the bund, through which the Malala-ara flows, but, with this exception, the repairs required are of a simple character, the spill being over rock. The natural features have been very skilfully utilized, and the tank must have been a very fine one. I believe that it would well repay reconstruction. The land under it would be eagerly purchased at high rates, being so close to Hambantota; it would solve the question of a water supply for the town, and by diverting the river from Malala-ara Kalappuwa, a large and valuable salt lewaya would be rendered productive. It is most unfortunate that the execution of this great work should have been deferred so long through the chance remark of an Assistant Agent, who was not correctly informed as to the course of the river which supplies the tank. It is now certain that it has nothing to do with Pandikkulam. The idea that it was connected with Pandikkulam originated with Capt. Woodward, but Mr. Steele, who knew the country well, said at the time that he was wrong. The mistake was repeated a few years ago, when the scheme seemed in a fair way to be undertaken, and led to its indefinite postponement.

An interesting and accurate description of the tank may be found in a report by Mr. William Orr, dated 25th September, 1800, which is quoted by Cordiner.

A small scheme for the improvement of paddy lands at Akmimana and Walpita in Galle District, by the erection of flood gates, has been suggested; it was not brought to my notice in time to admit of my inspecting the locality before I left the Province, but it appears to be simple, and the proprietors are said to be ready to pay for its construction on the usual terms.

WORK OTHER THAN ROUTINE.

In the course of an interesting circuit in Hambantota District I visited the game sanctuary, which has proved a complete success. I quote the following diary entry:—

Potane, 13th July.—Started before daylight. The amount of game visible in the early morning was remarkable. We counted four separate large herds of wild buffalo, and deer, pigs, and pea-fowl were to be seen in all directions on the plain.

A beautiful herd of deer came down to drink at a water-hole at 8 A.M. There were thirty-two of all ages and sizes, with five very fine stags. Some of the other stags were in velvet, and the sight of this herd alone was quite enough to convince me, if I had needed conviction, that in this part of Ceylon, as in the Northern Province, there is no regular breeding season. The herd stayed for about twenty minutes without discovering us and moved off into the jungle.

The want of water is a possible danger, and steps have been taken to guard against this by roughly restoring some of the old tanks.

My only doubt about the sanctuary is whether it is not too successful. Instead of game spreading outwards from it, I believe that all the deer for miles around are concentrating there.

A good deal of time towards the end of the year was less pleasantly spent in work other than routine in connection with the Ambalangoda riot.

CRIME AND POLICE.

Thirty-two homicides were reported in 1901, of which 25 were brought to trial, seven cases pending at the close of the year. Details of each case will be found in Appendix F.

Convictions were obtained in 21 cases, and sentence of death was carried out in six. Four of the cases reported were deliberate murders of an unusual kind, two being committed for the sake of valueless trinkets worn by the victims. The murderer in one case was a mere boy, and the sentence of death was commuted to five years in Maggona Reformatory, but the murder was deliberate and brutal. Another mysterious murder in Matara District was never cleared up. It was committed by one of two persons, and the evidence pointed to the theory that the young man was murdered by his own father in order to implicate an enemy. At Bandaramulla a man drowned his illegitimate child because it proved an obstacle to his projected marriage. The other homicides were of the usual kind committed in the course of quarrels.

The returns (*vide* Appendix B), which have been carefully drawn up, do not indicate any very noticeable decrease of crime, but there has been improvement, probably greater than appears from statistics, owing to the fact that few offences now escape report.

The Assistant Superintendent Mr. Thornhill, who was in sole charge of the Police in the Southern Province for six months from September, 1900, to March, 1901, deserves great credit for the manner in which the work in the office was kept up to date, and also for the high state of efficiency and discipline attained by the police in his charge. There has been a marked improvement in this respect during the past year, especially since Mr. Collett has relieved Mr. Thornhill of part of the work in the office.

I annex Mr. Thornhill's report on the Police Office, also a report on crime in the Galle District furnished by the Police Magistrate.

I am strongly in favour of abolishing the Gangaboda pattu Village Tribunal and of appointing an Itinerating Magistrate for the Galle and Balapitiya Districts. The work of both these courts is very heavy, and there is no doubt that cases can be more satisfactorily and expeditiously disposed of in the village than at the court. The evidence is more trustworthy, and it is often possible to verify statements by personal inspection.

Mr. Thornhill reports :—

The Headmen and Detection of Crime.—On the whole, the headmen generally have rendered good service in the prevention and detection of crime, and they have shown special activity in arresting persons charged with violent offences. It was found necessary to suspend a few headmen for not promptly arresting criminals within their jurisdiction, but in almost all those cases the accused were subsequently arrested. I annex a list of headmen who have specially distinguished themselves and received rewards in the execution of police duties during the year (*vide* Appendix G). There have been cases of neglect of duty throughout the Province, which were followed in 33 cases by dismissal. The system of paying unpaid headmen batta and expenses incurred by them continues to work satisfactorily. At present their expenses are promptly paid from the different Kachcheries, which have votes for this purpose. So far the regular and rural police have worked harmoniously together, one helping the other in the various duties they are called upon to perform, and I am well satisfied with the work they have done. There has been no charge of any very serious nature brought against them by the public. This would indicate that there has been no serious neglect on their part.

I annex a list of the regular police who have specially distinguished themselves and received rewards, together with a statement of rewards and punishments of the rural police, during 1901 (*vide* Appendix O).

Use of the Knife.—The following is the return of persons prohibited from carrying knives under the Ordinance :—

	Persons.
Police Court, Galle	50
District Court, Galle	4
Police Court, Matara	66
District Court, Matara	—
Police Court, Tangalla	3
District Court, Tangalla	1
Police Court, Balapitiya	6
Total ...	130

There are now altogether 397 persons in the Southern Province prohibited from carrying knives, and up to date there have been three complaints that prohibited persons have carried a knife, and only one man so prohibited, as far as is known, has been brought up for any offence in which the knife was used. They were prosecuted and sentenced to different terms of imprisonment. No licenses to carry knives by prohibited persons have been applied for.

The headmen have instructions to see that the persons so prohibited do not carry knives, and it is one of the chief duties of the constable arachchies to watch these people.

The power of inflicting lashes has no doubt had a good effect, but it has doubtless also been an inducement for people to inflict knife injuries on themselves and charge innocent parties against whom they have a grudge. It is very hard, if not impossible, to prove positively that the wounds are self-inflicted. No one of course is ever present at the self-infliction, and if any witness came and stated that he was present, I for one would find it hard to

believe him. Conclusions only can be drawn of the improbability of the accused having inflicted them. If the practice became general of instituting proceedings against those who bring false cases, it would, I think, open the door to the manufacture of false evidence, and the evil would be accentuated; and I am of opinion that the summary jurisdiction given to the Magistrates by section 440 of the Criminal Procedure Code, if they were only allowed a free use of it by trusting in them to use their power discreetly, is the best check on perjury, and the only method of coping with the difficulty.

The Effect of Punitive Police where they have been imposed.—Owing to the headmen finding it impossible to recover the tax levied by the Sanitary Board from the people of Ambalangoda, the Government Agent went down to the village in September with a large force of police to enforce distraint of property. The state of tension was so great that it culminated in an attack on the Police and Government officials soon after distraining operations commenced, and before quiet could be restored the police were obliged to fire upon the mob, killing two and injuring four, two of which injuries subsequently proved fatal. Distraining operations were then continued, and in about two days, by a house-to-house visitation, the tax due was recovered. Under the extreme trying circumstances that prevailed the police behaved with the greatest coolness and steadiness. The following is the list of those who have been commended by His Excellency the Governor for the excellent services rendered by them :—

Inspector Dias	Police Sergeant Shaik Emaun
Inspector Pietersz	Police Sergeant Sourjah
Inspector Ludovici	Police Sergeant R. Miskin
European Police Sergeant Lockhart	Police Constable Don Adrian
Police Sergeant A. Lewis	

The last-named has, in addition, been promoted to a sergeantcy and given a reward of Rs. 100 for the great detective abilities displayed by him in ascertaining the prospect of resistance.

The cases against those concerned in the attack on the Police and Government officials resulted in the conviction of the chief offender and six others to two years' rigorous imprisonment and twenty-eight others to a fine of Rs. 10 each. Owing to the disturbed state of the town and the occurrence of this open breach of the peace a punitive police force of one Inspector, six sergeants, and thirty-three men was quartered in the village for four months from 1st November, 1901, at a cost of Rs. 6,320. It is impossible after two months' trial to state what permanent effect this will have, but for the short period in question it has been highly successful in controlling the turbulent spirits of this troublesome village, which is now quieter than it has ever been before.

Crime.—The usual criminal statistics are annexed (*vide* Appendix A, C, D, E). The village return shows the distribution according to villages of serious crime, under which term are included—

(1) Homicide.	(7) Rape.
(2) Grievous hurt.	(8) Abduction.
(3) Hurt with a dangerous weapon.	(9) Riot.
(4) Robbery.	(10) Unlawful assembly.
(5) House-breaking.	(11) Serious assault.
(6) Arson.	(12) Theft over Rs. 100.

The figures show a general decrease in the number of offences, as compared with those for the previous year. This is to some extent due to offences of cattle theft and theft of property exceeding Rs. 20 and under Rs. 100 in value having been entered in the return for 1900 and omitted in the present one.

Cattle Stealing.—Out of 180 cases in the Galle District (including Balapitiya), 147 were tried in the Police Courts of Galle and Balapitiya, resulting in 28 convictions; 11 were committed to the District Court, resulting in 3 convictions. The above figures cannot be said to denote that this form of crime has been very prevalent, when it is considered that in the Galle District there are 50,150 cattle, many of which belong to poor villagers, who through perhaps sheer want allow their cattle to stray about the roads, &c., for days and weeks together.

Most cattle stealing cases are true, but the evidence is utterly false owing to the fact that owners discover that their animals are missing long after the theft is actually committed. Then they do all in their power to implicate their enemies, not knowing who the actual thieves are. If villagers combined to "kraal" their cattle during certain seasons, cattle stealing would, I believe, soon decrease.

Reports on the Matara and Hambantota Districts will be embodied in the reports of the Assistant Government Agents.

Office Work.—Heavy as usual. The supervision of the police, regular and rural, throughout the Province, numbering 792 all told, and the supervision of cases in so many courts of the Southern Province, four of them among the heaviest in the Island, throws an immense amount of work upon the shoulders of the Superintendent, and the strain of the criminal work, and the necessity of keeping a constant pressure on so large a body of men throughout so large and populous a Province, is very heavy, and adds considerably to his work and anxiety. The office was strengthened in April by the appointment of an Acting Assistant Superintendent, and Mr. H. A. Collette was transferred from Negombo. He has been of much assistance in the office and whenever opportunity allowed in the district.

The work of the office was increased during the year by work in connection with Prisoners of War and the quartering of so large a body of punitive police at Ambalangoda. My thanks are due to the clerks in the office—specially the Pay Department—who so readily gave their overtime in some cases to get through the work.

The Police Magistrate Mr. Woodhouse reports :—

Police Court Institutions.—3,877 cases were investigated in the Police Court in 1901; 4,771 persons were charged, of whom 1,880 were convicted. Of these cases, 2,395 were under the Penal Code, and the rest under other Ordinances.

Supreme Court Sessions.—There were practically three sessions of the Supreme Court held in Galle in 1901. They began on the 1st May, 24th June, and 14th October, and lasted 11, 18, and 24 days respectively. Out of 28 cases committed, 14 resulted in convictions. The following is a statement showing the results of cases committed to the Supreme Court in 1901 :—

No. of Cases.	Offence.	No. of Persons charged.	No. of Persons convicted.	No. of Persons acquitted.	Cases pending.
10	Murder	12	7	5	2
2	Grievous hurt	2	2	—	—
3	Robbery	4	—	4	—
9	Robbery with hurt	16	12	4	—
3	Rape	3	—	3	—
1	Bigamy	1	1	—	—
28		38	22	16	2

District Court Sessions.—The following is a statement of cases committed to the District Court in 1901 :—

	No. of Cases.	No. of Persons charged.	No. of Persons convicted.	No. of Persons acquitted.	Pending.
January	5	7	1	6	—
February	7	12	6	6	—
March	3	3	2	1	—

May	9	19	4	15	—
June	7	8	4	4	—
July	6	8	4	4	—
August	5	11	1	10	—
September	5	14	9	5	—
October	12	25	4	21	—
November	21	34	8	26	—
December	17	32	9	17	6
	104	185	58	121	6

Homicides.—There were 10 cases of homicide. Two resulted in convictions for murder, 3 in convictions for manslaughter, 3 in acquittals, and the rest are pending.

Knife Cases.—There were 174 cases in which the knife was alleged to have been used. Of these, 155 were tried summarily in the Police Court, and 65 of them resulted in convictions; 14 were committed to the District Court, resulting in 8 convictions and 6 acquittals; and 2 to the Supreme Court, resulting in 1 conviction and 1 acquittal. Three cases remained undecided at the end of the year. The great majority of the so-called knife cases are false, the injuries being in most instances collusively or self-inflicted in order to have the accused lashed.

Robbery.—There were 67 charges of robbery, of which only 20 turned out to be true cases. Nearly every petty assault is converted into a case of robbery in order, no doubt, to avoid paying stamp duty, and, if possible, to procure the assailant enhanced punishment. It is a pity that when the Penal Code was amended last year some alteration was not made of section 380, empowering Magistrates to try summarily those cases where an assault is accompanied by a petty theft, like that of a comb or handkerchief. The theft in these cases very often merely amounts to mischief, the object being either to annoy or insult the other party.

Cattle Stealing.—Out of 97 cases, 86 were tried summarily in the Police Court, resulting in 17 convictions; 8 were committed to the District Court, resulting in 3 convictions. As I have pointed out in past years with reference to other parts of the Province, cattle stealing is so prevalent and the thieves are so difficult to detect simply because owners will not look after their cattle. If, as I believe is done in parts of the Northern Province, villagers combined to "kraal" their animals during certain seasons, cattle stealing would soon decrease.

House-breaking and Theft.—This form of offence is unfortunately very prevalent in the district. Out of 209 cases reported, in 39 cases only were any accused charged at all; of these, only 10 resulted in convictions. I can think of no remedy except that the police should watch those villages where house-breaking occurs and the neighbouring villages, and bring up all suspicious individuals who have no ostensible means of livelihood, and have them bound over under the Vagrants Ordinance.

The Police.—Judging from the records I find that the police have done excellent work, and on the whole they and their rural brothers have acted harmoniously and well.

Inquirers.—I find that, though Inquirers have been appointed to every pattu in the district, very little use has been made of them. I am not one of those who condemn the Inquirers' system in its entirety. I believe they could be of great assistance if they could be got to act promptly in cases of a serious nature where there is a likelihood of the evidence being smothered.

VILLAGE TRIBUNALS.

The work done in the Village Tribunal of Bentota-Walallawiti korale was satisfactory, but the amalgamation of the tribunals of Hinidum pattu and Gangaboda pattu has not proved a success. The arrangement was only made *faute de mieux*, as the income of Gangaboda pattu Village Tribunal was

insufficient to pay for the establishment. The best course appears to be the abolition of the Gangaboda pattu Village Tribunal and the appointment of the Mudaliyar of Hinidum pattu as President in addition to his own duties.

Statements of work done by the Village Tribunals are appended (*vide* Appendix J).

VILLAGE COMMITTEES.

Great progress has been made during the year with the work of the Village Committees. The labour called out under the Ordinance is very generally commuted, and funds thereby provided in each subdivision for expenditure on works which cannot be executed by unskilled labour. The people have begun to take a keen interest in the work of the Committees, and in some districts great progress has been made with roads, paths, bridges, and other village works. A great deal depends on the personal interest shown by the District Mudaliyars, who have, with few exceptions, done excellent work. I have personally held the election of Village Committees, and have endeavoured to make the people realize the importance of selecting worthy representatives.

As the returns (*vide* Appendix J 1) show, the amounts at the disposal of the Committees are very considerable, the annual receipts for Galle District amounting to nearly Rs. 17,000. The expenditure is carefully checked, and the money has been well spent.

The value of the Ordinance can hardly be overrated. The rules for calling out labour and recovery of commutation have been revised and some important alterations made.

Mr. Beven while Office Assistant devoted much attention to this work, and made some valuable suggestions.

The opposition that existed during 1900 has now disappeared, and both labour and money are cheerfully contributed. A detailed list of the works carried out during 1901 in Wellaboda pattu, Galle, is annexed as an example (*vide* Appendix P).

MISCELLANEOUS.

The sad intelligence of the death of Her Majesty Queen Victoria caused the deepest grief throughout the Province, and the mourning of all classes and nationalities was unmistakably sincere.

The Census was taken on the 1st March.

A camp for Prisoners of War was established at Urugasmanhandiya, Capt. Platt, 1st Battalion Gloucester Regiment, being in charge.

Another camp was established at Hambantota in charge of Mr. Horsburgh, Assistant Agent, who is Lieutenant in the Volunteer Artillery.

Mr. W. E. Davidson, Special Officer, left Ceylon for South Africa, being appointed Assistant Colonial Secretary of the Transvaal.

Mrs. Beven, wife of the Office Assistant, Galle Kachcheri, was killed by a fall from her horse in June.

A serious riot took place at Ambalangoda in September.

The changes in the Kachcheri have been numerous. Mr. Schrader left Galle in March, and was succeeded by Mr. Beven, who was relieved by Mr. Thaine in September, and Mr. Peiris was appointed in December on Mr. Thaine's appointment as Office Assistant, Ratnapura. In spite of these changes the work of the office generally was kept free from arrears, for which credit is due to the Head Clerk, Mr. Hunter, whose unremitting devotion to duty deserves special acknowledgment.

The reports of my Assistants at Matara and Hambantota are annexed.

April 6, 1902.

GEORGE M. FOWLER,
Government Agent.

APPENDIX.

A.—Statement of Murders, Attempted Murders, and Knife Cases for 1901.

	Galle.			Matara.			Hambantota.		
	Murders.	Attempted Murders.	Knife Cases.	Murders.	Attempted Murders.	Knife Cases.	Murders.	Attempted Murders.	Knife Cases.
Reported	11	—	260	12	3	177	9	1	99
Brought to trial ...	9	—	240	9	2	164	7	1	89
Convictions obtained ...	8	—	114	9	—	76	4	—	41
Pending	2	—	20	3	1	13	2*	—	10

* In one case the accused died in jail before trial.

B.—Return showing the Proportion of Serious Crime to Population in the several Mudaliyars' Divisions.

		Serious Offences per 1,000 Taxpayers.			Serious Offences per 1,000 Taxpayers.
1.	Four Gravets, Galle ...	5·4	9.	West Giruwa Pattu ...	3·9
2.	Bentota-Walallawiti Korale...	5·2	10.	Morawak Korale ...	3·3
3.	East Giruwa Pattu ...	5·08	11.	Kandaboda Pattu ...	3·05
4.	Talpe Pattu ...	4·8	12.	Hinidum Pattu ...	3·05
5.	Gangaboda Pattu, Galle ...	4·8	13.	Gangaboda Pattu, Matara ...	2·4
6.	Wellaboda Pattu, Matara ...	4·3	14.	Weligam Korale ...	2·2
7.	Wellaboda Pattu, Galle ...	4·2	15.	Magam Pattu ...	2·2
8.	Four Gravets, Matara ...	3·9			

The omission of cattle theft and theft of property under Rs. 100 in value from this return has not greatly altered the relative criminality of the different Mudaliyars' divisions.

Last year Four Gravets, Matara, and Four Gravets, Galle, headed the list, while this year Matara is eighth and Four Gravets, Galle, retains its position. Magam pattu shares with Weligam korale the place of honour at the bottom of the list, but there is little change otherwise.

C.—Statement showing the Number of Serious Offences reported to the Magistrate and decided within the Year, the Number found to have been committed in the different Villages, the Number which have and have not been punished, and the Taxpaying Population of the Villages.

8	Kottawa, 166 ...	Sept. 29	Sept. 29	Sept. 29	Sept. 29	Sept. 29	Committed	Pending	—	—	Knife	Revenge	No	The accused wantonly killed the pet daughter of his mother-in-law, with whom he was annoyed, in order to spite her, and then attempted to kill her too.
9	Hegalla, 7 ...	Sept. 20, 1 P.M.	Sept. 20	Sept. 21	Sept. 20	Sept. 20	Committed	Nov. 7	Convicted	Death	Knife	Anger	No	When two sisters were quarrelling over some bangles, the accused, their brother, interfered and stabbed one of them. The other remonstrated with him for so doing, whereupon the accused stabbed her to death.
10	Hatuwapiadigama, 150	Aug. 27	Sept. 3 (*a*)	Aug. 27	Sept. 3	Aug. 28	1 accused committed, 1 accused discharged	Nov. 4	Discharged	—	Club	Anger, money dispute	No	The deceased, who was accused's uncle, had a quarrel with the accused regarding some money transactions. On the night in question they met and an altercation ensued, and in the course of the quarrel which followed the accused assaulted the deceased with a club on his head, and the deceased died of the injuries in the hospital.
11	Meepe, 140 ...	Dec. 10	Dec. 11 (*a*)	Dec. 10	Dec. 11	Dec. 11	5 accused committed, 2 accused discharged	Pending	—	—	Club	Anger, land dispute	No	In the course of an altercation about the plucking of some cocoanuts from a land which was the subject of a dispute, the accused struck the deceased with a rice-pounder on his head, to which he subsequently succumbed in the hospital.
	Matara District:													
12	Pallewela, 168 ...	Feb. 3	Feb. 3	Feb. 3	Feb. 5	Feb. 5	Committed	May 30	Convicted	10 years' rigorous imprisonment	Knife	Anger, land dispute	No	In the course of an altercation about the removal of some paddy from a paddy field, which was the subject of a dispute, the deceased cut the accused with a sickle, and the accused stabbed him to death.
13	Wattegama, 96 ...	April 11, 10 A.M.	April 11	April 11	April 11	April 12	1 accused committed, 2 accused discharged	June 3	Convicted	10 years' rigorous imprisonment	Knife	Anger and ill-feeling	No	The deceased and the accused were not on the best of terms. The deceased came to the accused's well for a bath after his recent recovery from chickenpox. The accused objected, and in the quarrel that ensued the deceased was stabbed by the accused.
14	Bandaramulla, 57	May 3, night	May 4	May 4	May 4	May 4	Committed	June 11	Convicted	Death	Thrown into the sea	Cupidity	No	The accused took and drowned his illegitimate child in the sea because it was an obstacle to his contracting a marriage suited to his circumstances.

15	Kapugama, 82 ...	May 25	May 27 (a)	May 26	May 27	May 27	Committed	July 8	Convicted	1st accused 2 years' rigorous imprisonment; 2nd accused 10 years' rigorous imprisonment; 3rd and 4th accused 1 year's rigorous imprisonment each	Knife	Anger	Liquor	The deceased interfered to stop a fight between the accused and his brother, when he was set upon and severely handled by the accused, and died of the injuries in the hospital.
16	Walgama, 71 ...	June 19, 7 P.M.	June 19	June 19	June 20	June 20	Committed	Nov. 16	Convicted	10 years' rigorous imprisonment	Knife	Anger	No	The deceased, who was accused's brother-in-law, had a quarrel with the accused's mother and sister regarding a right of way. Accused interfered, and in the fight the deceased was stabbed to death.
17	Deniyaya, 188 ...	June 18 9 A.M.	June 18	June 18	June 18	June 25	Committed	Nov. 17	Convicted	Death commuted to 5 years' confinement in the Maggona Reformatory	Jungle creeper	Anger	No	The deceased and accused, both boys and on their way to school, entered a jungle to pluck wild berries. There a quarrel ensued, and the latter strangled the former with a creeper and decamped with his silver waist chain.
18	Batuwita, 136 ...	Aug. 11, 4 A.M.	Aug. 12	Aug. 12	Aug. 12	Aug. 23	Discharged	—	—	—	Knife	Revenge	No	The deceased, who was sleeping in the verandah of his father's house, was found lying dead with his throat cut at about 4 A.M. The suspected accused (one of whom was the deceased's own father) were arrested, tried, and were discharged upon instructions of the Attorney-General.
19	Porambakananke, 53	Oct. 23	Oct. 23	Oct. 23	Oct. 24	Oct. 24	Committed	Dec. 6	Convicted	7 years' rigorous imprisonment	Knife	Anger	No	The deceased engaged the accused to renew the frond tied round the trunk of a cocoanut tree, and failed to pay him for the work. The accused thereupon ripped open the frond he had tied and returned home. A short time after, while the deceased was passing the accused's house on his way home, he complained of the accused's conduct in ripping open the frond. The accused then came out, and from words they came to blows, and in the scuffle that followed the accused stabbed the deceased to death.

Homicide Return—*contd.*

No.	Village and Number.	Offence committed.	Body discovered.	Accused apprehended.	Date of Inquest.	Magisterial Inquiry commenced.	Committed or Discharged.	Date of Final Trial.	Result.	Punishment.	Instrument used.	Probable Motive.	Attributable to Liquor or not.	Circumstances.

20	Penetiyana, 18	Oct. 14	Oct. 14	Oct. 14	Oct. 14	Oct. 15	Committed	Nov. 29	Convicted	Death	Crease	Anger and ill-feeling	Liquor	The deceased and the accused were not on the best of terms owing to a family dispute. On the morning in question the accused, who was drunk, rushed at the deceased with a sword and crease and knocked him down and then stabbed him with the crease. The deceased died of the injuries while being conveyed to the hospital.
21	Beralapanatara, 198	Sept. 29	Oct. 24 (*a*)	Oct. 1	Oct. 24	Oct. 1	Committed	Pending	—	—	Knife	Anger	No	The accused was assaulted by the deceased for separating two boys, who were fighting at a devil-dancing ceremony, whereupon he snatched the knife that was in deceased's hands and stabbed him. The deceased died of the injuries in the hospital.
22	Haliella, 114	Nov. 2	Nov. 2	Nov. 2	Nov. 4	Nov. 4	Committed	Dec. 16	Convicted	5 years' rigorous imprisonment	Clubs	Anger	No	The deceased was caught in the act of stealing cocoanuts from the accused's garden. In the scuffle that ensued the accused assaulted him with clubs and caused his death.
23	Gandara, 84	Dec. 6	Dec. 6	Dec. 6	Dec. 7	Dec. 7	Committed	Pending	—	—	Knife	Anger	No	The deceased and the accused, both boys, were going in opposite directions, when the latter obstructed the way. When the deceased remonstrated with the accused for so doing, the accused stabbed him to death.
24	Weliweriya, 68	Dec. 27	Jan. 22 (*a*)	Dec. 27	Jan. 22	Jan. 22	Committed	Pending	—	—	Knife	Anger	Liquor	The accused, who was drunk, challenged the deceased for a fight. On refusing to do so, the accused dragged him to the road from his house and stabbed him. The deceased died of the injuries in the hospital.
	Hambantota District.													
25	Kudagalara, 110	April 14	April 14	April 14	No inquest	April 16	Discharged	—	—	—	Gun	Revenge	No	The deceased shot a bull belonging to the accused, and while in the act of skinning it was shot by the accused, who was behind some bushes. Accused was arrested, tried, and was discharged upon instructions of the Attorney-General.

26	Handunkotuwa, 107	May 2, 8 P.M.	May 2	May 6	No inquest	May 5	Committed	July 2	Convicted	10 months' rigorous imprisonment	Stick	Anger	No	The deceased's brother was on terms of intimacy with the accused's niece. The accused was enraged at this and quarrelled with the deceased's brother. The deceased interfered and struck the accused with a stick, with which the accused returned the blow. Death was due to rupture of the spleen consequent on this blow.
27	Mahahilla, 22 ...	March 21	March 22 (a)	March 21	No inquest	March 21	Committed	June 21	2 accused convicted, 3 accused discharged	Death sentence of one commuted to 20 years' rigorous imprisonment	Katty	Anger, cattle dispute	No	In a dispute about a cow the accused cut the deceased with a katty, and the deceased died of the injuries in the hospital.
28	Beminiyanwila, 97	May 23	May 23	May 28	No inquest	May 26	Committed	Accused died before trial	—	—	Stick	Revenge	No	The deceased left the accused with whom she was living owing to family disputes and went to live in another house. The accused enraged at this proceeded to the house where she was and clubbed her to death.
29	Tangalla, 1 A ...	Aug. 11, 9 A.M.	Aug. 12	Aug. 12	Aug. 12	Aug. 12	Committed	Nov. 29	Convicted	Death	Knife	Gain	No	The deceased was a Sinhalese boy, and his body was found in a jungle close to the court-house with stab wounds on the neck. The offence was cleverly traced to a habitual criminal, who murdered the boy in order to obtain possession of the jewellery which he wore.
30	Godawela, 23 ...	Sept. 24, 4 P.M.	Sept. 24 (a)	Sept. 24	Sept. 24	Sept. 25	Committed	Dec. 6	Convicted	10 years' rigorous imprisonment	Gun	Anger	No	The accused, who was deceased's brother-in-law, remonstrated with the deceased for stealing a bull, and asked him to return it to the owner. The deceased refused to do so, and in the quarrel that followed, the accused shot the bull and then shot the deceased, who died of the injuries in the hospital.
31	Dammulla, 25 ...	Nov. 11	Nov. 11	Nov. 11	Nov. 11, 12, and 13	Nov. 11	Pending	—	—	—	Gun	Revenge	No	The deceased was shot by the accused being irritated because his land was sold under a writ of the deceased.
32	Rekawa, 5 ...	Aug. 27	Aug. 27	Aug. 27	Aug. 28	Aug. 28	1 accused committed, 2 accused discharged	Nov. 29	Discharged	—	Gun	Revenge	No	The deceased was shot dead by the accused by way of revenge for a previous grudge.

1896	60,472 44	1901	42,879 87*

* Rs. 10,238·05 have been credited during January, 1902. These are nine-tenth purchase amounts, &c., of lots sold during the latter end of 1901. With these amounts the receipts of land sold in 1901 will be Rs. 53,118·38.

The difference between the figures of actual revenue and those shown in the statement is due to the fact that the nine-tenths due on sales in December are not credited.

P.—List of Village Committee Works referred to.

1. A start was made to sink a public well at Udugalpitiya.
2. Ranapanadeniya-Hegoda road, a distance of about 3 miles was opened to light traffic. Eight permanent culverts and three temporary and a bridge about 18 ft. were built on it.
3. Hegoda-Pitiwella road, a continuation of the last, was improved by gravelling to some extent. The bridge across Hegoda-ela was repaired and three temporary culverts made, and the road made fit for light traffic.
4. Bussa-Hegoda road : 2 miles was improved by repairing a *wella* and putting up a small bridge.
5. Bussa-Ranapanadeniya road : 2 miles was further improved. There is about half a mile of it yet to be widened and made fit for carts.
6. Owe Kanda-Gampitiya road : 1 mile is in fair condition. No work this year.
7. Bopagoda-Pinkanda road, 5 miles : about 2½ miles is now being used for carts. The remaining portion has been improved in parts. There are some *wella* to be made, and some portions of it through Ratgama estate and elsewhere have also to be made.

8. Bopagoda-Kanattatotupala road: half mile was repaired. There is a small portion yet to be made.
9. Imbula-Katudampe road: 1½ mile was improved last year, was further improved this year, and a *wella* made.
10. A latrine was built at Ambalangoda.
11. The Village Committee court-house was repaired.
12. Most part of the Maha Ambalangoda-Duwa road was repaired.
13. Most part, including a difficult *wella*, of Santupitiya-Ketantota-Manana road was improved.
14. Maha Ambalangoda-Tuduwemulla road was repaired.
15. Wilegoda-Watugedara road was improved and kept in repair.
16. Keraminiya-Randomba road completely opened.
17. Watugedara-Balapitiya road opened to carts.
18. Watugedara-Wandaduwa road repaired.
19. Paragahatota-Balapitiya road repaired.
20. Dampota-ela improved.
21. Karandeniya-Magala road nearly completely opened to carts.
22. Telwatta-Kiralagahawela road: 2 miles was repaired and improved.
23. Kajugaha Ambalama-Kahatapitiya road: 3½ miles was opened about half the distance.
24. Alutwala-Kalupe road: 3 miles was further extended and improved.
25. Weragoda-Ronnaduwa road: 2 miles kept in repair; a *wella* built.
26. Kahawa-Uduwaragoda road: half mile improved.
27. Mitiyagoda-Metiwala road: 1 mile improved partly.
28. Built a new school for girls at Godagama: not quite complete.
29. Some repair was effected to the Weragoda boys' school.
30. Repaired and tarred the fence of the cattle pound at Weragoda.
31. Kahaduwa-Horangalla road: 2½ miles improved.
32. Waturuwila-Rekadahena road: half mile improved.
33. Waturuwila-Wattehena road: 1 mile improved.
34. Kakaduwa-Ambana road: 1½ mile improved.
35. Pinikahana-Polgahawila road: 1 mile improved.
36. Kuttiyawatta-Polgahawila road: 1 mile improved.
37. Ambana school was repaired, whitewashed, and thatched.
38. Ambana-ela was cleared of side jungle to a distance of 1 mile.
39. Improved the Akurala school.
40. Cleared and improved Welle-ela.
41. Cleared and improved Kuli-ela.
42. Wellaboda-Kuligoda road improved.
43. Wenamulla-Kuligoda road: kept up and partly improved.
44. Etkandura-Batapola road: eight culverts were built and road repaired up to the limit of the division.
45. Batapola-Galpottawala road repaired.
46. Batapola-Godahena road improved.
47. Kuligoda-Kulitota road improved.
48. Ronnaduwa-Galpottawala road improved.
49. Tiranagama-Pinkandu road, including a permanent culvert, was improved.
50. Tiranagama-Paturwata road improved.
51. Narigama-Patana road improved, two permanent culverts were made.
52. Modarapaṭuwata-Walamulla road completed.
53. Dodanduwa-Godabedda road completed.
54. Godabedda-Udugalpitiya road partly completed.
55. A wall to screen off the rock at Dodanduwa by the sea, used as a latrine.
56. Wewala-Nalagasdeniya road completed.
57. Wawlagoda-Wewala road repaired.
58. Hikkaduwa-Hettigoda road repaired.
59. Gonapinuwala-Dodankahawila road completed.
60. Totagamuwa-Kalupe road improved.
61. Werellana-Munugoda road partly repaired.
62. Sinigama-Kalupe road partly repaired.
63. Sinigama-Malawenna road: very little work done.
64. Hackery stand at Hikkaduwa station: new work. Completed.
65. Wawlagoda girls' school: new work. Not completed.
66. Public well at Wawlagoda: new work. Not completed.
67. Tiranagama-Wewalaela road cleared.

REPORT ON THE MATARA DISTRICT.

I.—REVENUE.

THE figures for the last five years, exclusive of the Arrack Farm, credited in the Galle Kachcheri are :—

	Rs.		Rs.
1897	115,505	1900	149,618
1898	127,468	1901	130,562
1899	130,915		

2. The chief items of increase are Road Tolls, Rs. 1,489 ; Fines (other Departments), Rs. 2,667; Compensation, Forest Offences, Rs. 998 ; Rent of Government Lands, Rs. 340 ; and Unclaimed Deposits, Rs. 721.

3. On the other hand, there are decreases under the heads of Stamps (Revenue), Rs. 280 ; Stamps (Judicial), Rs. 3,870 ; Fines (District Court), Rs. 747 ; Fines (Police Court), Rs. 282 ; Survey Fees, Rs. 1,795 ; Police Rate, Rs. 668 ; Sale of Timber, Rs. 1,299 ; and Land Sales, Rs. 16,797.

4. The Arrack Rent for the Matara District realized Rs. 81,343, an increase of Rs. 9,732 as compared with that for 1900.

5. Detailed Statement of Revenue collected in the Matara District, Southern Province, during 1901 :—

6. The local expenditure was as below, being 16 per cent. of the gross revenue :—

	Rs. c.
Personal Emoluments	20,000 0
Other Charges	8,369 99
Pensions	5,854 74
Total ...	34,214 73

7. Mr. Hill writes :—

The year was not so prosperous as its predecessor. The fall in the price of plumbago and of citronella left the people with little surplus money to invest in land or to devote to litigation. The result is apparent in decreased takings under the heads Land Sales and Judicial Stamps. The closing of many plumbago pits also affected the demand for timber.

II.—FOOD SUPPLY.

8. The food supply of the people was exceptionally good. It was greatly in advance of that of the previous year. The local paddy crops were very satisfactory, and supplied nearly half of the rice consumed in the district. No scarcity of food was reported. Rain was plentiful and well distributed throughout the district.

9. The diet of the ordinary villager along the sea coast is rice, jak, and breadfruit; while in Morawak korale, Kandaboda pattu, and Gangaboda pattu, where fine grain is cultivated, amu and kurakkan and yams are of equal importance. In the months of April and May there was a good crop of jak, which, next to rice, is the principal food of the people.

10. Fish was abundant during the year. The sale of big fish locally, however, was very small, owing to its transportation by train to Colombo and up-country. Small fish had a ready and cheap sale at the market.

11. Price of food stuffs was normal: coast rice sold at Rs. 4 per bushel; cocoanuts, Rs. 35 per 1,000; paddy, Re. 1·50 per bushel; kurakkan and amu, Re. 1 per bushel.

III.—IRRIGATION.

12. A meeting of the District Irrigation Committee was held on 27th April, 1901. At other times business was conducted by circulation of papers among members as there was no subject for discussion.

13. The following works were carried out at a cost of Rs. 1,640 from the funds of the above Committee :—

	Rs. c.
Kumbalgama tank, for repairing the bund	99 20
Culvert on Akuressa road, for constructing	40 0
Sea gates, Galagamulla, for constructing	75 0
Dediagala anicut, for repairs	367 7
Pita-ela culvert, for constructing	90 0
Sea gates, Makawita, for constructing	73 36
Sea gates, Naimana, for constructing	25 0
Dangahakumbura anicut, for repairs	249 12
Kilitua-ara, for constructing gates	100 0
Titamugarawewa, for repairing the sluice	43 40
Double culvert at Dandeniya, for constructing...	89 0
Disawage-ela, for clearing	178 0
Naimana-Talpawela bridge, for repairs	21 60
Two culverts on Urugamuwa road, for constructing	81 65
Piladuwa-ela, for clearing	99 99
Malagoda bridge, for repairs	8 25
Total ...	1,640 0

14. Both the maha and yala crops were prosperous. The yield was over 526,000 bushels, giving an average of about three bushels per head of the population.

15. *Disawage-ela.*—This is an old Dutch channel restored in 1890, when it proved a complete success against the floods three months after its restoration. It was cleared and put into proper working order this year.

16. The other important works in the district are in the charge of the Central Irrigation Board. They form three different schemes:—

(1) *Gangaboda Pattu Scheme.*—This is the first in importance and consists of two large storage tanks, Ellewela and Hali-ela, and five anicuts, Urapola, Sapugoda, Pettara, Alawatugoda, and Hamaragoda. The irrigation interest collected during the year under these works amounted to Rs. 4,403.

(2) *Wellaboda Pattu Scheme.*—This is next in importance, and consists of the Kekanadura and Dandeniya tanks. The former serves the fields in the Four Gravets of Matara as well. The irrigation interest collected was Rs. 1,441.

(3) *Kandaboda Pattu Scheme.*—This consists of the two tanks Denagama and Uyanwewa. The collection of the irrigation interest was Rs. 778.

17. The irrigation interest for the year was recovered in full. The system of paying commission to collectors, authorized in Government Circulars Nos. 72 and 90 of 1st July and 5th August, 1901, respectively, was found unnecessary in this district, as under existing arrangements the recoveries were made without difficulty.

18. *Proposed Works*: (*a*) *Kekanadura Channel.*—It was proposed to cut a channel under the Kekanadura tank system for irrigating 75 acres of paddy fields dependent on rain water, in the Goigoda and Pategama divisions of the Wellaboda pattu. The owners of fields to be benefited, who now realize the advantages of these works, were prepared to pay Re. 1 per acre in perpetuity as water-rate. The matter is now in the hands of the Director of Irrigation. It is hoped that the work will be taken in hand early.

(*b*) *Talanwila Flood Outlet.*—This is a scheme that was proposed for relieving the low-lying lands bordering the Nilwala-ganga from damage frequently caused by floods. In 1891 it was estimated to cost Rs. 87,000. It stopped short at the survey in 1893. This important work was again brought to the notice of the Central Irrigation Board in the latter end of the year.

19. *Appointment.*—Mr. German de Silva was appointed Inspector of Irrigation in December, 1901.

IV.—WORKS REQUIRED.

20. Mr. Hill gives the following list:—

(1) Replanking of Matara iron bridges.
(2) Conversion of Bandattara wooden bridges into an iron one.
(3) Improved accommodation for carriages and hackeries at the railway station.
(4) A bungalow for the District Judge.
(5) A bungalow for the Police Magistrate.
(6) A villagers' ward at the Deniyaya hospital, Morawak korale.
(7) Improvements in the shape of additional metal to the Hakmana road,
(8) A Government building for a post and telegraph office at Matara.
(9) Upstairs office room for Assistant Government Agent, where a certain amount of quiet and privacy can be obtained. There are six doors to the present office, and people wander in at all hours of the day.

21. He adds:—

There are 687 planks on the Matara bridge. They shake and rattle as vehicles pass over them. In the course of the year 123 new planks have been laid at the northern end and fixed with clips instead of bolts. This is a device of the District Engineer (Mr. Caldicott). The clips are slightly cheaper than bolts, and keep the planks firm in their place, so that vehicles can pass without any movement of the planks, which should under these circumstances last longer than if bolted. It would cost Rs. 8,400 to replank the whole bridge on the clip system.

The idea of building a railway station for Mirissa has been abandoned, at any rate for the present. The line does not run near the populous centres of Mirissa, and the construction of a station at the place indicated by the people of Mirissa would involve the cutting of an expensive approach road.

22. The question of a pure water supply and a proper system of drainage for Matara town are mentioned in Mr. Davidson's report for 1900, and are of great importance. A preliminary estimate for a drainage scheme amounts to Rs. 93,000. When the scheme is perfected, it will be necessary to face the problem of "ways and means." Probably the work will be taken up in sections, if the Local Board finds itself unable to meet the whole cost at once.

23. I am afraid that an adequate supply of good water is practically impossible to secure at a moderate cost. There is no source near Matara which could be tapped, and the conformation of the ground does not admit of a reservoir being made at comparatively slight expense as was done at Ratnapura.

24. At present drinking water is hawked about for sale in carts, an obviously objectionable practice, unless the carts are kept under constant inspection to ensure their cleanliness.

V.—PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

25. As I assumed duties only on 17th December last, I have not had time to travel much in the district, much less to work out any plans for desired improvements, which require personal observation and investigation. It is clear enough already that the land question is about the most important one in this district. Besides barefaced encroachments, without any title, on Crown lands, there are many cases of possibly *bonâ fide* claims based on documents, which require careful investigation and settlement. Something has been done, but much more still remains to do. The Special

Officer and the Assistant Agent have now arranged a methodical procedure. The Special Officer completes the settlement as far as he can under the Waste Lands Ordinances of a particular village. He then sums up the result in a final report. This report and the plan of the village are then sent to the Assistant Agent, who completes the settlement of that village. We thus have for that village an absolutely final decision as to what land is Crown land and what land belongs to private persons.

26. One village—Pitabeddara in Morawak korale—is now ready for this final settlement by the Assistant Agent, and the Special Officer has many more nearly ready to hand over to me. I propose to give this work priority over all other plans for the improvement of the district. Once we have finally decided what is really Crown land in any village, it is possible to go on and establish a burial ground (very desirable from a sanitary point of view); a village reserved forest, when such is necessary, to supply the villagers' needs for fence sticks and minor forest produce; and a cattle kraal (Mr. Hill's suggestion as a means of checking cattle stealing).

27. I hope also to mature plans for the proper drainage of Matara town, for placing the rural villages in a satisfactory condition as regards a pure water supply, sanitation, and facilities for education, and for encouraging experiments in the cultivation of new products.

28. An agricultural show was held in Matara for some years in succession in Mr. Baumgartner's time, and it may be feasible to revive it.

29. There is an "experimental garden" in Matara, which may perhaps prove of service, if I can form a feasible plan for utilizing it under intelligent supervision. At present it scarcely deserves its name, as it is not a garden, and is not used for experimental purposes at all.

VI.—DISTRICT ROAD COMMITTEE WORK.

30. Mr. Hill writes:—

The minor roads were kept in good order by Mr. A. Erskine, the Superintendent. There is only one exception to this statement, and that is the Denagama-Miella section of the Hakmana-Miella road. The soil in this neighbourhood is nothing but mud, and there is no gravel to be obtained in the locality. A vote of Rs. 1,350 has been taken for laying foundation and metal in a half mile of this road.

160¾ miles of road were kept up at an average cost of Rs. 114 per mile, and 10 miles of footpath at a cost of Rs. 24 per mile.

In 1901 the Matara-Akuressa District Road Committee road was taken over as a principal road, and is being metalled, while the wooden bridges are being converted into iron ones.

The road tax collections were poor this year as compared with last. Only 33,902 paid at single rate, as compared with 34,739 in 1900. Warrants were issued against 3,410 defaulters.

The unsatisfactory nature of the collections is attributed to the decline of the plumbago industry, which formerly provided many with employment, and to the fact that many left the district early in the year to work in the Kelani Valley Railway. Many, too, were under the impression that they would be exempted from payment of their road tax owing to the death of Her late Majesty Queen Victoria.

817 defaulters were brought up on warrants. The majority gave as an excuse that they were absent from the village, working in Giruwa Pattu of the Hambantota District, and added as a rider that they had also been suffering from fever.

Seven division officers failed to pay in their road tax collections at the proper time, and although the sums due were eventually recovered, it was found necessary to punish five of the seven defaulting headmen. Police officers were rewarded for collecting tax from all and leaving no defaulters, and eighteen were rewarded for promptly closing their District Road Committee accounts. It is hoped that these measures will result in greatly improved collections in 1902, and that all will either pay their Re. 1·50 or work for six days.

31. Mr. Erskine, Superintendent of Minor Roads, reports:—

The upkeep of the roads during 1901 was not so trying as in previous years, there being only three floods to contend with, and the rain, though continuous, was not heavy. Considerable progress was made with the Mulatiyana-Urubokka line of road. In fact I may now say that one of the most difficult sections of the road is open. I refer to the 3 miles between Mulatiyana and Udapana. The road here runs through virgin forest, and masses of rock had to be blasted and removed. Steep rocky gullies were mostly filled with rock and the road taken across. There is now only one bit of rocky ground to be got over between Kudapana and Mawarala. At Angurumelehena a part of the 6 miles can be opened very easily, and I am looking forward to doing so. A great improvement was made on the road from Denagama to Mulatiyana. Both the large bridges Deiyandara and Dunda were completed, and two 12-feet bridges with abutments at Ovilana. 2½ miles of the road between Denagama and Pallawela were cut and opened. I think this road is more important than the Urubokka road, as it will join such an excellent connection between Hakmana and Mulatiyana. I anticipate completing this road in a few years, but the Mulatiyana-Urubokka road will take a lifetime to complete. This is a pity, as the whole of the north-east part of the district from Urubokka to Kudapana has no outlet, though thickly populated and a rich country. A most useful improvement was carried out on the Kadduwa road between the 13th milepost and Kamburupitiya. Here the road runs through low-lying fields, and was as much under water as above during the monsoon. I have now raised it and put in new culverts. I still maintain that this important road should have a toll at Kadduwa, more so now, as the Telijjawila road has been taken over by the Public Works Department, and the toll on this road could now be taken off.

The old Morawaka road received attention, and a considerable amount of traffic now goes up to Dehigaspe. Metal was laid in 3 miles of wheel tracks on the Kotapola-Urubokka road. This road, which is very difficult to maintain in good order, showed a marked improvement. With the handing over of the Matara-Telijjawila and 5 miles of the Weligama-Telijjawila toll grant roads to the Public Works Department, the Committee were great losers, as both roads were kept up entirely on the grants. Now, for the remaining 10½ miles of the Weligama-Telijjawila road, which is left in our charge, and which has four large bridges, we receive only Rs. 1,354, or Rs. 134 per mile, against Rs. 250, which was the amount

received before. The Committee had this year to vote an additional sum of Rs. 1,500 towards the upkeep. So this sum counts as a dead loss on this transaction. While on this subject, I may mention that I have been trying to get the Kekanadura toll sold separately. It is entirely a new road, and has no connection with a main road toll, and I am confident that Rs. 1,000 will be realized. At present we receive a meagre Rs. 557 for 9 miles of road with five bridges. Hitherto the Henagama road has not had much attention, but this year I greatly improved it, especially the long hill at Henagama. All the rocks were blasted and removed, and the road thoroughly formed and gravelled. This road forms an important link between the Galle-Akuressa and Matara-Akuressa main roads.

Four good improvement estimates were sanctioned in December and are now being carried out :—

(1) To make a deviation of the Naimana road at Motagedara. This will take out three sharp curves on a steep hill and reduce the gradient.
(2) At Parawahera the road will be widened and bad curves at the bottom of a hill taken out.
(3) The laying of a foundation and metalling half mile of the Hakmana-Mella road at Mella. There is no gravel to be had for this road anywhere, with the result that the road is the worst in the district.
(4) A 6-ft. road was constructed to Piladuwa, within the Local Board. It really joins an island village with the main land.

VII.—VILLAGE COMMITTEES.

32. The receipts and expenditure for each Village Committee during 1901 were as under :—

	Balance on December 31, 1900. Rs. c.	Receipts. Rs. c.	Expenditure. Rs. c.	Balance Rs. c
Four Gravets ...	25 49	660 7	662 42	23 1
Weligam Korale ...	120 18	7,849 7	7,715 57	253 6
Wellaboda Pattu ...	305 58	6,094 55	6,233 23	166 9
Gangaboda Pattu ...	1,203 77	4,079 96	4,661 46	622 27
Morawak Korale ...	407 85	2,144 40	2,283 44	268 81
Kandaboda Pattu ...	127 15	2,914 3	2,926 27	114 91
Total ...	2,190 2	23,742 8	24,482 39	1,449 71

33. Systematic estimates of revenue and expenditure were prepared for the first time in 1901. These Committees have done good work during the year, especially those of Weligam korale, Wellaboda pattu, and Gangaboda pattu.

34. The Weligam korale Village Committee has spent Rs. 1,370 on new works of public utility, including Rs. 548 on Maramba school.

35. The Gangaboda pattu Village Committee's chief work was the Karagoda-Uyangoda market, which cost Rs. 1,197.

36. The Wellaboda pattu Village Committee has erected a fine school building at Kottegoda at a cost of Rs. 1,667.

37. The chief works proposed for 1902 are the following :—

Name of Pattu.	Nature of Work.	Estimated Cost. Rs. c.
Weligam Korale ...	Horbury latrine for Weligama ...	400 0
Do. ...	Welihinda road	296 70
Do. ...	Kananka road	300 0
Do. ...	Maliduwa road... ...	1,201 40
Do. ...	Kotadupe road ...	207 85
Do. ...	Walliwela road ...	100 0
Do. ...	Kotawila-Akurugoda road ...	306 60
Do. ...	Akurugoda-Malimboda road ...	228 60
Do. ...	Akurugoda-Kirimetimulla ...	108 40
Do. ...	Repairs to Mirissa school ...	350 0
Do. ...	Weligama cemetery ...	300 0
Morawak Korale ...	Construction of a school at Morawaka ...	900 0
Wellaboda Pattu ...	Outhouses for Dondra Gansabhawa ...	150 0
Do. ...	For sinking a well at Kottegoda ...	75 0
Do. ...	Outhouses for Dikwella Village Committee ...	200 0
Do. ...	Outhouses of a school at Naotuna ...	370 0
Do. ...	Uda Aparekka bridge	100 0
Kandaboda Pattu ...	Construction of a school at Pallewela ...	750 0
Do. ...	Repairs to Mulatiyana bungalow ...	200 0
Do. ...	Deiyandara-Kirama road	80 0
Do. ...	Gangodagama-Getamanna road ...	50 0
Do. ...	Radawela-Iriyatota road	60 0
Do. ...	Repairs to Gombaddala school... ...	75 0
Four Gravets ...	Wehelgoda road	50 0
Do. ...	Naimana road	75 0

38. The Village Committee paths and roads have now been inserted on a one-inch-to-the-mile map of the district.

39. These Committees can be of the greatest public service in insisting on proper sanitary rules being observed, supplying proper burial grounds to supersede the present objectionable practice of burying near inhabited houses or wells, in ensuring an adequate supply of good water, and in giving educational facilities and insisting on their being availed of, besides opening up minor paths and roads. I am unable to say as yet from personal observation how far the Committees are efficient in these respects, but I shall watch their working with the closest attention. There can be

no question that where the Mudaliyar, who is *ex*-officio chairman, has his heart in the improvement of his pattu, he can do a great deal with the assistance of his Committee. The Committee itself is an instalment of local self-government, which must teach the electors the importance of selecting good candidates. Mr. Ellis introduced the principle of election into the appointment of police officers, so the villagers are gradually being educated into taking an interest in the public management of their common interests.

40. The system is based on the co-operation of the Mudaliyar with the villagers, so is applicable only to rural districts. Where the authority of the Mudaliyar is not frankly accepted, the system becomes unworkable, and a Sanitary Board or Local Board is the proper institution to establish. Mr. Hill has noted as an example of this the village of Weligama, which has 6,000 inhabitants.

41. The following is a list of the Village Committee schools :—

Four Gravets	1
Weligam Korale	5
Wellaboda Pattu	7
Gangaboda Pattu	6
Kandaboda Pattu	4
Morawak Korale	4
Total ...	27

Statistics of scholars have not reached me in time for inclusion in this report.

42. The Village Committee markets are :—

Weligam Korale.
Kamburugamuwa
Denepitiya
Akuressa

Wellaboda Pattu.
Kottagoda
Aparekka

Dikwella
Ratmale

Gangaboda Pattu.
Tihagoda
Kamburupitiya

Kandaboda Pattu.
Hakmana

43. Revenue of the four Village Tribunals during 1901 :—

	Rs. c.
Gangaboda Pattu	1,233 83
Wellaboda Pattu	1,467 66
Weligam Korale	2,332 53
Morawak Korale	1,012 66
Total ...	6,046 68

44. Institutions during 1901 :—

	Civil.	Criminal.
Gangaboda Pattu	458 ...	1,770
Wellaboda Pattu	960 ...	940
Weligam Korale	431 ...	816
Morawak Korale	744 ...	905
Total ...	2,593	4,431

45. Appeals to Assistant Government Agent :—

Morawak Korale	4 ...	3 ...	— ...	—
Total ...	30	10	17	1

VIII.—SANITATION.

47. Mr. Hill writes :—

8,720 births and 5,151 deaths were registered during the year. The birth-rate was 42·81 per mille, the death-rate 25·29 per mille.

The district was healthy on the whole ; a few cases of dysentery and chickenpox occurred.

Some of the estates in Morawak korale show a high rate of mortality among the coolies, owing to the prevalence of disease produced by an internal parasite (duodenalis).

The establishment of dispensaries at Mulatiyana (Kandaboda pattu), at Tihagoda (Gangaboda pattu), and at Rotumba (Morawak korale) has been recommended, and also the erection of a villagers' ward at Deniyaya. It is worthy of consideration whether a Local Board should not be established at Weligama, a large village of 6,000 inhabitants 11 miles west of Matara.

A cemetery has been provided for the village of Weligama, viz., the land Bamunugehena at Mudugamuwa. This land is 5 acres odd in extent, and funds for its acquisition (Rs. 500) were provided by Government. It has been left to the Village Committee to clear, fence, and road the land, but the Village Committee has no funds for the purpose, and application has been made for a grant from Government of Rs. 300. The matter is pending.

The villagers of course prefer to bury their dead in their gardens, and many complaints have been received on the score of the distance of the cemetery from the central parts of Weligama. The greatest distance from the cemetery to the outskirts of the town is 2 miles. This is not a very great distance for the people to carry a corpse occasionally, though from the complaints received one would imagine that deaths were of daily occurrence in every house in Weligama. In the town of Matara, on the contrary, people feel themselves aggrieved because they are not allowed to carry their dead for burial in private gardens outside Local Board limits.

A burial ground for the town of Kottegoda, Wellaboda pattu, has also been acquired. Funds for its acquisition were provided by the Village Committee, Wellaboda pattu. Both these cemeteries, viz., the one at Weligama and the one at Kottegoda, are for the present regulated by the Village Committee Rule No. 13 of 15th May, 1901, which forbids burial except in burial grounds registered by the Village Committee.

There are two latrines at Weligama, but others are required of a better type. The bazaars and side drains are cleaned up periodically, and on my last circuit the Mudaliyars had given this matter their personal attention, with satisfactory results.

IX.—CRIME.

48. Mr. Beven, Police Magistrate, reports :—

I regret that as I only assumed duties here in December last I am unable to offer any remarks of value on the subject of Crime. I, however, attach a few brief notes, which I trust will be of some use.

Homicides.—There have been 16 cases in 1901, as compared with 13 in the previous year. Of these 16 cases, 11 were committed to the Supreme Court, where the sentence of death was passed in 3 cases.

Knife Cases.—There has been an increase of 21 over the number instituted in 1900. A large number of these cases are, however, of a trivial nature, and as many as 48 were held to be designedly false. In these instances the complainant was invariably fined. Of the 161 cases instituted, 58 resulted in convictions, and in 58 cases the accused were prohibited from the use of the knife.

Robbery.—Under this head, too, there has been an increase, but my experience is that the majority of these cases are exaggerated into robberies from mere assaults.

Complainants are aware that if the charge is under section 314 for simple hurt, the chances are that they will be referred to the Gansabhawa. They accordingly tack on the charge of theft of some money from the person committed during the course of the assault. As far as I am aware, robbery as an organized crime scarcely exists in this district.

House-breaking.—This shows a satisfactory decrease. The percentage of convictions under this head is very small. The primitive methods of the people in safeguarding their goods not only offers temptation to this species of crime, but affords such facilities to the burglar that it is very seldom that sufficient evidence is forthcoming to trace out the offender. The majority of the cases are however true.

Cattle Stealing.—Under this head, too, there is a decrease from 230 in 1900 to 210 in 1901, but there still remains room for much improvement. Convictions in these cases are rare because the owner generally allows his animal to stray, and when it is stolen in the night there is little chance of any *true* evidence being forthcoming. There is plenty of *false* evidence led in actual cases of theft, led against suspected persons, but the falsity is so patent that acquittals invariably result. Except in Kandaboda pattu, where the animals stolen are removed over the border into the Tangalla district with impunity, a large number of cattle stealing cases result in the slaughter of the animals for the purposes of food.

Headmen.—In the majority of cases the headmen have done their duty well in arresting and producing offenders to court. I know of no *serious* case in which there has been a failure to arrest accused on the part of the headmen. The result is that cases are generally disposed of within ten days of institution, *i.e.*, on the second date the case is called.

Institutions in this court average slightly over 200 a month, making allowance for civil days and holidays. The Police Magistrate has eighteen days a month for hearing these cases, *i.e.*, 11 cases a day must be disposed of. That this number has been, on the average, successfully dealt with is evident from the fact that, whereas 140 cases were pending on 1st January, 1901, the number pending at the end of the year amounted to 97.

X.—POLICE.

49. *Rural and Regular Police.*—Both the regular and rural police have worked well and harmoniously together during the year. There was hardly a single serious case committed in which the offenders were not promptly dealt with. It is very remarkable how very few offenders escape unpunished. We have some paid headmen in the district who are called constable arachchies, who appear to be doing no work at all. It is a rare thing to see a constable arachchi in court. All the work appears to be done by the unpaid headmen in the district.

50. I annex a table of serious crime for the district :—

Table of Serious Crime committed in the Matara District during the Year 1901.

Pattu, &c.	Offences.							
	Murder.	Voluntarily causing Grievous Hurt: Knife &c.	Voluntarily causing Grievous Hurt: Club, &c.	Voluntarily causing Hurt: Knife	House-breaking and Theft.	Robbery.	House-breaking and Theft, Accused unknown.	Grand Total.
Weligam Korale ...	2	3	2	27	15	10	13	72
Morawak Korale ...	2	—	—	10	2	9	2	25
Gangaboda Pattu ...	4	1	3	25	12	18	19	82

Total ...	16	15	8	164	77	159	94	533

XI.—Forest Department.

51. Mr. A. Erskine, District Forester, reports :—

The demarcation of Masmulla forest was completed, and the trenches round Oliagankele were cleared, the number of chains cut during 1901 being 622. It is to be regretted that this important work has been stopped and no money allowed even for upkeep of the chains already cut. The first case since the demarcation line was opened round Masmulla forest came before the Police Court in December, and the accused was fined Rs. 50 for making a clearing inside the trench. The two other important cases I had during the year were one in which the Vel-vidane of Ulalla was fined Rs. 100, and in the other the Vidane Arachchi of Kirinda was fined Rs. 250 for felling na trees on a free permit for bedde del. In July I opened a firewood depôt to supply the town. Though great opposition has been shown, it has paid its way and credited to revenue a profit of Rs. 241·83 for six months. I anticipated being able to double this, but have been unable to stop the private supply of firewood, which mostly comes from the Crown forest Mirissewattekele at Naimana. The Four Gravets not being proclaimed the Magistrate would not inflict a fine when I brought a case before him. The people admit that they get the firewood from Crown land, and have done so from time immemorial. I am now supplying the Railway with firewood from Baddulukele; firewood was also cut from Horakettegodamukalana.

When inspecting Ranamukanda forest near Urubokka I found a fair number of dead ebony trees. I had them cut up and brought to Matara, in all two trees, which realized Rs. 205; the cost of transport was heavy (Rs. 100). A considerable amount of nedun was supplied to Colombo and Moratuwa people. Unfortunately the demand is greater than I can supply, nedun not being very plentiful in the district.

Financially 1901 can show better results than 1900, the total amount credited to revenue on sale of timber, &c., being Rs. 5,052·72, fines (chena and timber fellings) Rs. 1,925·75, total Rs. 6,978·47. My total expenditure, including Rs. 700 for demarcation and my own pay and allowance, amounted to Rs. 2,818·59, leaving a profit of Rs. 4,169·38, against Rs. 2,856·74 in 1900. Considering the depression in the plumbago market, this should be considered good.

XII.—New Areas of Cultivation.

52. Mr. Hill writes :—

Owing to the change of Assistant Agents early in the year, and the heavy work thrown on all Government Departments by Census operations from January to end of March, no lands were advertised for sale in the Matara District until May. The result was that the revenue from land sales fell from Rs. 41,605·10 in 1900 to Rs. 24,807·70 in 1901. Apart from the fact of there being fewer sales, there was less demand for land, the low prices of plumbago and citronella curtailed the purchasing powers of the villagers. Even large blocks of land suitable for cocoanut plantation failed to find purchasers at Rs. 20 to Rs. 50 an acre. There is no doubt that these lots could have been sold if offered at Rs. 10 an acre, but it would be unwise to let them go at that price.

One lot of 70 acres at Henagama, Weligam korale, was put up for sale at Rs. 50 an acre. Competition brought the price up to Rs. 7,000; the purchaser, however, forfeited the nine-tenths purchase amount and fees which he paid, as he failed to deposit the balance.

Statement of land sale and settlement for the year is annexed :—

	A.	R.	P.
Extent sold	1,115	1	37·6
Amount realized (includes nine-tenths purchase amount of lands sold in December, not paid before the end of the year)	Rs. 32,889		
Extent of certificate of quiet possession	393	3	16·75
Survey fees on certificate of quiet possession	Rs. 1,062		

53. The following figures give the area opened up in different products in the course of the year :—

Products.	Acres.
Cocoanut	200
Citronella	475
Tea	50
Paddy	90
Plantains	35

54. Mr. Hill writes :—

XIII.—CHENA CULTIVATION.

Illicit chena cultivation is largely practised in Kandaboda pattu and Morawak korale. 700 cases in all were reported in the district. A sum of Rs. 1,935 was recovered by the Assistant Government Agent as compensation for forest offences, while 40 cases were prosecuted in the Police Court, and resulted in 22 convictions and 4 acquittals. Five cases were withdrawn on the accused paying departmental fines, and 9 are pending. It has been the usual practice to fine at the rate of Rs. 4 per acre cleared and to seize the Crown share of the crop. The rate of fine should be raised. In some distant parts of Morawak korale chenas might be allowed to the villagers. A table is being prepared showing the population of each village and the amounts of paddy and high lands possessed by each family. No chena should be granted to villagers living within easy distance of the roads, principal or minor, where plenty of work can be obtained. Both the District Engineer and the Superintendent of Minor Roads complain of scarcity of labour.

XIV.—SALE OF LANDS BY VILLAGERS.

55. Mr. Hill writes :—

The usual fraudulent sales take place and are a subject of daily complaints by petitioners.

XV.—WORKING OF THE WASTE LANDS ORDINANCES, 1897, 1899, AND 1900.

56. Mr. J. G. Fraser, the Special Officer, has written a special Administration Report on this subject. I therefore do not touch on it here.

XVI.—WORK OTHER THAN ROUTINE.

57. My predecessors have from year to year explained that the routine work is so heavy in this Kachcheri that they had little time for anything else.

58. Government has now allowed me a Cadet, so I will not be able to advance this excuse in future. Mr. Galbraith, who assumed duties here on 9th January, takes most of the routine work off my hands, and I have time to go into important questions.

59. I extract from the diaries of my predecessors the items which fall under this head :—

(1) Preparations for the Census of 1901.

(2) Attempts (without success) to discover a suitable site for a Boer Camp in Matara District.

(3) Working up cases : (*a*) Civil : land litigation between the Crown and private persons ; (*b*) Criminal : prosecution of a Government officer for defalcation. This legal work has been exceptionally heavy during the year, due principally to the claims of Mr. Le Mesurier. Every case (13 in all) has now been won by the Crown in the District Court. Two are still in appeal, and 11 have been finally decided in favour of the Crown. The difficulty now is to recover damages decreed, which amount in all to Rs. 16,076·66, Mr. Le Mesurier having transferred his property to others before the Crown could seize it. A criminal case was taken against Mr. P. Jayawardena, Irrigation Clerk. The prosecution resulted in an acquittal.

(4) Reporting on British trade and articles sold in the native bazaars. Great Britain seems to have the monopoly in some classes of oilmanstores, in the better kinds of ironmongery, in nibs and ink and pins, and to enjoy a large share of the drapery trade. In all other classes of goods British-made articles are either supplanted or flagrantly imitated by foreign competitors.

XVII.—MISCELLANEOUS.

60. This has been a year of changes in the *personnel* of the Government officials. The following are the principal changes :—

Mr. Saxton was relieved by Mr. Davidson as Assistant Agent on 1st February.
Mr. Hill relieved Mr. Davidson on 23rd May.
Mr. Bowes relieved Mr. Hill on 1st December.
I relieved Mr. Bowes on 17th December.
Mr. Davidson relieved Mr. Lewis as Special Officer on 15th May.
Mr. Fraser relieved Mr. Davidson on 18th August.
Mr. H. Beven relieved Mr. Woodhouse as Police Magistrate on 1st December.
Mr. C. W. Buultjens assumed duties as Chief Clerk, Matara Kachcheri, *vice* Mr. Solomons, retired, on 1st May.
Mr. E. B. Gunatilaka relieved Mr. V. de Saram (resigned) as Mudaliyar, Morawak korale, on 10th July.
Mr. H. C. Guneratna became President, Village Tribunal, Wellaboda pattu, on 25th November, *vice* Mr. N. A. Bandaranaika, retired.

61. The principal events of interest were :—

(1) Memorial service for Her late Majesty Queen Victoria and proclamation of the King in February.

(2) School treat in September for boys and girls of Village Committee schools. 700 children attended, and the function was a great success. Mr. Burrows, Director of Public Instruction, came down specially to distribute prizes for recitation, regular attendance, sports, &c. Mr. Altendorff, Inspector of the Local Board, managed the feeding of the children at breakfast and tea, and did the work excellently.

(3) A curious outbreak of illness in December at Midigama, Weligam korale. Seven children died and forty others were seriously ill from eating the flesh of an inedible turtle. It is a species well known to be poisonous, but people occasionally do venture to eat it, usually with disastrous results, known to the vedaralas as "turtle sickness."

62. I regret the imperfections of the above report, due to my recent assumption of duty and to the necessity for forwarding it earlier than usual. Mr. Hill's notes and the diaries of my predecessors form the basis of the report. Mr. Amerasekara, Irrigation Clerk, practically wrote the section on Irrigation.

K. MACLEOD,
Assistant Government Agent.

February 1, 1902.

REPORT ON THE HAMBANTOTA DISTRICT FOR 1901.

Area, 1,013 square miles; Population, 105,000.

I.—REVENUE AND EXPENDITURE.

THE revenue credited at the Hambantota Kachcheri in 1901 was Rs. 194,562, as compared with Rs. 209,061 in 1900 and Rs. 238,976 in 1899.

2. The following comparative statement shows the principal items:—

	1900. Rs. c.	1901. Rs. c.	Increase. Rs. c.	Decrease. Rs. c.
Salt ...	165,605 92	118,915 68	—	46,690 24
Road Tolls ...	4,010 13	5,407 87	1,397 74	—
Bridge Tolls ...	3,498 50	4,506 50	1,008 0	—
Stamps, Revenue ...	8,686 28	8,996 24	309 96	—
Stamps, Judicial ...	6,148 45	8,787 53	2,639 8	—
Fines for Forest Offences	2,338 0	4,284 53	1,946 53	—
Fines in Police Court Offences ...	4,461 14	5,246 68	785 54	—
Survey Fees ...	2,216 7	2,938 73	722 66	—
Irrigation Recoveries ...	7,022 10	5,292 62	—	1,729 48

3. The large decrease in salt revenue is due to the poor collections of 1899 and 1900, which were insufficient to meet the full demand, so that the issue had to be restricted to local requirements and the carting trade. So low did the stock run that it had to be supplemented by the importation of 20,000 cwt. from Jaffna.

4. The increases under Road Tolls, Bridge Tolls, Revenue and Judicial Stamps are all indicative of improved prosperity.

5. Owing to the restriction of paddy cultivation caused by the dryness of the year, as compared with 1900, there was a very considerable increase in chena cultivation, necessitating the institution of many more cases, and a corresponding increase of revenue from fines.

6. The slight increase under Sale of Crops on Crown Lands is also due to this cause, but most of the increase was credited at the beginning of 1902.

7. Police Court Fines vary with the disposition of the Magistrate.

8. The increase under Survey Fees shows a satisfactory increase in the demand for land.

9. There is a decrease under Irrigation Recoveries, due to the crediting of a considerable amount of arrears in 1900, the amount of 1901 being more nearly the normal sum due.

10. The increase in Rent of Lands indicates greater protection of Crown lands and prompt checking of encroachment.

11. The receipts from Timber were normal, the decrease being due to the record sale of ranawara bark in 1900 for Rs. 1,100, the sale in 1901 realizing only Rs. 470, as much of it had been worked out.

12. No Police Rates were imposed in 1901, so that none were recovered, the amount under this head for 1900 being on account of special punitive police.

13. The amounts realized by the opium license sales of 1900 were credited in 1901 along with the revenue of that year.

14. There was really an increase both in extent of land sold and in the total realized by sale, the small decrease in revenue being due to the cessation of the payment of instalments on sales held five or six years ago under Sir Henry Ward's Minute.

15. I annex a statement of extent sold and amounts realized:—

Year.	Extent sold. A. R. P.	Settled on Certificate of Quiet Possession. A. R. P.	Settled on Half-improved Value. A. R. P.	Amount realized. Rs. c.
1898 ...	421 3 24	573 1 37	1 3 38	5,435 0
1899 ...	304 0 21	81 1 5	29 1 15	23,760 31
1900 ...	555 3 29	134 3 12	34 1 23	12,136 50
1901 ...	863 1 17	457 3 23	—	15,098 25

16. The sales were entirely to natives, and almost entirely to natives of the district, and the steady increase indicates advancing prosperity.

17. A sum of Rs. 23,132·70 was credited in the Galle Kachcheri on account of arrack revenue of the Hambantota District, as compared with Rs. 22,368 for 1900 and Rs. 20,515 for 1899.

18. The expenditure for the year was Rs. 71,680·06, as compared with Rs. 51,690 in 1900, as follows:—

	Rs. c.
Personal Emoluments	19,832 96
Pensions	2,583 61
Other Charges	49,263 49
Total ...	71,680 6

19. As noted in previous reports, the present system of accounting does not allow of any true comparison between the revenue and expenditure of a district.

II.—SALT.

20. The following is the report of Doole Mudaliyar, the Superintendent of the Salt Department:—

I beg leave to submit my report on the Salt Department for the year 1901.

The Department has under its control thirty-seven lewayas and kalapuwas, of these only ten yield salt worth gathering.

During the year under review there were collections from the following four lagoons, of these Bundala producing comparatively the largest quantity. Collections in 1901, viz.:—

	Cwt.	lb.
Bundala Lewaya	24,015	87
Maha Lewaya	10,682	28
Palatupana Parappuwa	906	11
Koholankala Lewaya	337	96

The total yield for the year is 35,941 cwt. 110 lb., which brings a revenue of about Rs. 84,823 odd to Government.

The outturn of the year has not been at all good. An enormous quantity could have been stacked but for the scarcity of gatherers at the collection.

The formation at the Bundala lewaya was decidedly a rich one. The collection commenced at a time much behind the usual collection season, which is attributable to the copious rains which fell during the preceding year. When the past year is marked by an unusual quantity of rainfall, it results, as has resulted this year, in the late formation and collection of salt in the succeeding year. The Assistant Government Agent and the Government Agent on their visit to Bundala must have observed what a large quantity of water the lewaya contained at the time. I reported that a formation could be seen by the end of July, yet I was not without doubt. Never despairing, I put up a bund across the Bundala modara (outlet), which latterly served a double object. First, of employing the gatherers in the work of enlarging and strengthening the bund; second, of reserving labours in anticipation of a collection. If not for this attempt, the collection of even 24,015 cwt. and 87 lb. would not have been made from this valuable lagoon.

The absence of a good number of gatherers at the collection is to be greatly deplored. The collection commenced on the 14th September with 208 men, on the second day the number was 223, third day 229, fourth day 147, and on the fifth the number reduced to 95. The shower of rain which fell on the same evening partially dissolved the formation and made it quite unfit to collect the following day, a quantity of about 6,744 cwt. only being secured. Without allowing the gatherers to go to their distant villages, I reserved labour by continuing the work of raising the bund at the outlet, 69 men being employed in the task. When they were thus being engaged salt re-formed, and due notice having been given, a second collection was commenced by the 28th of the same month with 84 gatherers, inclusive of the 69 afore-mentioned. This number gradually increased on the 2nd October to 106, on the 3rd there were 89, on the 4th 112, and the rest of the days in the month as follows:—5th October 111, 7th 83, 8th 86, 9th 69, 10th 73, 11th 38, 12th 57, 14th 67, 15th 76, 16th 77, 17th 90, 18th 81, 19th 73, 21st 54, 22nd 111, 23rd 112, 24th 88, 25th 73, 26th 35, 28th 38, 29th 24, and on the 30th October 29 men.

The rapid fluctuation was mainly due to some of them being engaged from the beginning of the collection at Palatupana Parappuwa and Koholankala and Maha lewayas. When employed continuously in collecting salt the gatherers are liable to get their hands and feet cut and bruised by the salt, thus making a few days' rest absolutely necessary; some go to the Kachcheri to cash their pay tickets and bring provisions, and some betake themselves to their villages and may or may not come back.

The fact remains that although we were favoured with thirty-four days from the 14th September to 30th October, an opportunity so rare at that time of the year, yet owing to the unfortunate scarcity of gatherers we could not reap the full advantage of the blessing. The average number of gatherers present at the collection was only 92. To go more into details. The number 200 was only thrice exceeded, and seven days over 100 but below 200, during the remaining number of days fewer than 100 a day. The irrigation and cultivation works of Tissa and Mamadola account for the indifference of late of most of the sea coast side men of the East Giruwa pattu and some parts of the West Giruwa pattu towards salt collection as a better paying work. In cultivation they find they are almost assured of their living for a period of over six months; while, on the contrary, the salt collection is viewed by them as a chance work, for they may come from distant villages in response to notices and find the formation dissolved by a shower of rain. If they can be working uninterruptedly for some time in salt collection, then only they will find it worth their trouble.

It is to be regretted that the present constitution does not permit the enforcement of some system of compulsory attendance of villagers at salt collections. The falling off year after year in the number of gatherers is apparently gradually decreasing the revenue derivable from salt. Salt has proved to be a great source of revenue to Government, and when favoured by chance and good weather should be harvested within a short notice and time, if not it will be lost.

If some means of communication could be introduced by which the gatherers of the nearest sea coast of the Matara District and that of the Giruwa pattu west could be quickly brought to the scene of the labour, unsettled weather would not affect the collection and cause such heavy loss to Government as it does now.

The headmen should be ordered to exercise their influence and bring all the available men of their villages at least even for a week. The headmen of the Magam pattu, its villages being in close proximity to and within easy reach of the lagoons, or a matter of one day's journey, can be of substantial help to the Department by bringing men at an emergency from places such as Kirinda, Magama, Katagamuwa, Tihawa, Unatuwewa, Padawekema, Udamattala, Mulpitawewa, Wirawila, Weligatta, Pallemalala, Koholankala, Keligama, Gonnoruwa, Bundala, Hambantota, Walawe, Medagama, Wanduruppa, Beragama, and Koggala.

The men of the interior villages of Giruwa pattus, in contrast to their brethren of the sea coast, do not exactly know the art of getting salt, and even when they come they cannot be expected to collect more than 3 or 4 bushels a day and to remain more than two or three days at the lewaya.

The Maha and Koholankala lewayas—the two nearest lagoons to the stores—will, I am afraid, not produce good returns hereafter. Saline matter though presumed to be embedded in the lewayas, yet year by year silt being accumulated the beds get choked. Unless they are dug about 3 or 4 inches deep, or sea water admitted freely into the lewayas, salt will not form in sufficient quantity to warrant collection. I referred to this matter in my report for 1900, and the last collection of these lagoons supports my view to some extent.

By admitting a little sea water Maha lewaya produced a quantity of 10,682 cwt. in 1901, and Koholankala, which produced no collection in 1899 and 1900, a quantity of 337 cwt. The sea water was introduced by a lucky chance. I must forcibly submit the fact that collections in these lewayas seem to be more the exception than the rule.

Transport of Salt.—Since the last few years transport of salt from the lagoons to stores has been a source of great difficulties. The long drought of the year 1901 has killed many cart bullocks, and it will, I am sure, in turn further reduce the existing number of carts. This is a serious outlook, as there has been already a fall off in the number of carts in recent years. Consequently rates for transport have risen 50 per cent., especially from the Bundala lewaya.

21. The following table shows the quantities collected and sold in each of the last ten years :—

Year.	Amount collected. Cwt.	lb.	Amount sold. Cwt.	lb.
1892	19,378	71	75,797	0
1893	189,562	48	64,365	0
1894	110,545	26	88,172	0
1895	118,344	108	89,642	0
1896	6,894	111	85,327	0
1897	1,642	54	82,442	0
1898	145,637	58	63,682	0
1899	39,812	65	73,507	0
1900	28,308	7	70,172	0
1901	35,941	110	50,296	0

22. I annex a statement of monthly sales in 1901 :—

	Cwt.
January	4,013
February	13,104
March	6,678
April	6,057
May	3,451
June	3,171
July	3,211
August	2,390
September	3,880
October	3,495
November	4,108
December	4,963

23. I have to repeat my remarks of last year with regard to the transport difficulty. Cart transport is certainly becoming not only more expensive, but distinctly scarcer. Doole Mudaliyar attributes this to the drought of the year having killed off some of the cart cattle, but I think some of the difficulty is also due to the increased demand for carts for general purposes of trade.

24. The collection of the year was also unsatisfactory, for, though a large formation took place at Bundala, it was unseasonable, and a sufficient labour force could not be got together to gather it all in, as all available labour was required at the time for cultivation, and the labour naturally preferred a certainty to the precarious work of salt collection.

25. This is a difficulty that will always be felt as long as the formation is so entirely dependent upon weather as it is at present.

26. I have received permission this year, 1902, to try an experiment, by which it is hoped to be able to introduce sea water at will into the Maha and Koholankala lewayas. If this is successful, much of the uncertainty of collection will disappear, and labour will be proportionately attracted. The improvements of the roads to the lewayas was pushed on during the year, though not so rapidly as might have been, but I am still of opinion that some more modern form of transport than that by carts ought to be introduced without delay.

27. As the quantities collected in 1899 and 1900 were together less than one year's demand, the stock in store became exhausted, and a supply of 20,000 cwt. had to be obtained from Jaffna to meet local requirements.

III.—FOOD SUPPLY.

28. Unlike the previous year, 1901 was a dry one, and paddy cultivation dependent on rainfall or on small tanks was considerably restricted. There was a great increase of chena cultivation, due, I think, to this inability to cultivate paddy. The return from chenas was fair.

29. Under the larger irrigation works good crops were secured, though the pinch of the drought was felt at the close of the yala season both under Walawe and Tissa, causing a partial failure under the latter. The food supply, however, was abundant and varied, consisting of rice, fine grain, vegetables, fruit, and fish.

30. The supply of fish was plentiful, and fresh fish could be obtained in all the principal bazaars, while large quantities were cured, much of it being carried to the Galle and Matara Districts by fishermen who came from these parts during the north-east monsoon.

31. The following extracts are from the reports of the Mudaliyars on the subject :—

West Giruwa Pattu.

Food supply, which consisted of rice, kurakkan, meneri, tana, marodh, and fish, was enough for the wants of the district. Fresh fish caught from the sea and lagoons is removed

to and sold in all the principal villages in the interior, except at Katuwana, a division lying in the confines of the pattu on the north, where fish obtained from the tanks and streams, and cured fish from the sea-borde villages, are consumed. The jak and root crops, such as sweet potatoes and manioca, also formed important articles of food among the poorer classes, who not only eat these, but also barter them for rice. Imported rice is used, if at all, only by a very small fraction of the strangers.

East Giruwa Pattu.

In Para nagam and Wewugam palatas kurakkan, sweet potatoes, and jak are the staple food of the inhabitants, and they are grown by the cultivators. Kurakkan is very scarce in comparison to former years. There were about 800 acres of land under paddy cultivation, which yielded about 24,000 bushels of paddy; and about 500 acres under fine grain yielded about 9,000 bushels.

Magam Pattu.

The residents of Hambantota town generally receive their food supply from Colombo and Galle by steamer and dhonies, such as imported rice, curry stuff, &c., excepting cocoanuts and plantains, which include the production of the pattu.

The population of Magam pattu, other than Hambantota residents, are using for their consumption locally-grown rice. Fine grain, Indian corn, breadfruit, jak, and vegetables, besides fish from lake and sea, which are sometimes caught in abundance. A number of fishing boats arrived in the following places during the fishing season, viz., Godawaya, Hambantota, Bundala, Kirinda, Amaduwa, Pattanangala, and Pottana. The fishers are people of Galle, Matara, and Tangalla Districts, and their fish are partly sold then and there to the traders, and partly cured by themselves and taken away to their villages, also most of their cured fish is sold at Hambantota. The country-grown rice and fine grain is plentiful for the population in Magam pattu, and abundantly transported to Tangalla, Matara, and Galle Districts. The prices of paddy per bushel Re. 1·75, and kurakkan per bushel Re. 1·50. The acreage cultivated with paddy during the year for maha and yala is 5,287 acres, yielding 95,988 bushels; and fine grain cultivated 1,234 acres, yielding 18,510 bushels. Paddy and kurakkan, if not transported to other districts, the price will not probably rise more than 50 cents a bushel. This year in maha season there was plenty of rain, and by the help of it most of the lands were brought under cultivation and richly successful. The yala harvest rain was extremely slight, and by the scarcity of water in the small tanks most of the lands partly withered during the time the crops were under blossom.

IV.—IRRIGATION.

32. I repeat the programme laid down in my previous reports, which is being steadily followed with satisfactory results, viz.:—

(1) Steady and systematic improvement of the village tanks and working of the irrigation rules.
(2) The development to the full of the Walawe and Tissa schemes now in progress.
(3) The examination and undertaking of new works, such as the Urubokka valley anicuts, Badagiriya tank, Pandikulam, &c.

33. *Village Tanks.*—The new irrigation rules, having been passed only towards the end of 1900, came into active operation in 1901, and I am glad to be able to report that very good work has been done under them under the superintendence of Mr. Ferguson, Chief Irrigation Inspector, who has favoured me with the following report. I invite special attention to his remarks regarding sluices:—

Owing to my having left the district at the beginning of 1900, just as I had got a knowledge of the country and learned its wants, and no one having been appointed to take up the work for some months, it was difficult for my successor to pick up the thread of its requirements, and he had only just begun to get things into working order, after organizing a staff and the work, when I relieved him.

During my absence I found that the much-needed rules under the Irrigation Ordinance had been passed and vel-vidanes appointed in most cases where a tank or group of tanks required them, but they have not yet received their acts. On the whole, they have done their work well, but a few will have to be weeded out, as it is evident they have not sufficient influence for their position.

An overseer had been appointed for each pattu. These, with a messenger, complete the executive staff under me.

I returned in April, and although, I understand, the first part of the year was very wet, from that time on to the end of the year was exceptionally dry, and earthwork, which by the rules ought to have been finished in August or September at the latest, had to be left till rain fell in October and November.

On the whole, the progress in clearing bunds had been satisfactory, and in earthwork a good start has been made, especially in the Magam and northern portion of the East Giruwa pattu, but the amount done is still very much short of what is due. Owing to illness and the delay in earthwork mentioned above I could not get round to pay a final visit of inspection to the tanks till the end of the year, consequently prosecutions for the non-completion of tank work, where no allowance can be made, are pending.

I give figures showing the amount of earthwork done and area of bunds cleared during the year. Some of the tanks have had work done on them sufficient to justify their being supplied with sluices by Government in the coming year. In some cases the bent pipe sluice suggested by Mr. Horsburgh will be sufficient, but in others, such as in the larger tanks of the Magam and East Giruwa pattus, masonry sluices ought to be supplied. Where the bent pipe sluices have been put in at Keligama, they are a distinct success so far as they go, but Keligama is one of the tanks that later on ought to be supplied with a masonry sluice, and the bent pipe sluices kept for the smaller tanks.

In the Magam and East Giruwa pattus the clearing of the bunds was no light task, as they had not been cleared for years, and were covered with a dense growth of jungle. The people, especially in the drier pattus, East Giruwa and Magam, seem to appreciate the fact that it is for their own benefit that the tanks are being restored, and, with few exceptions, have worked cheerfully and well. In some cases they have called in hired skilled labour to do their earthwork, a system which gives most satisfactory results, and I hope later to be able to carry out the suggestion of the Assistant Government Agent and keep a gang of skilled coolies during the season of earthwork.

There is a tendency among owners of land paying water-rate for Government channels to expect that Government should restore and keep clear for them the bunds of tanks into which these channels flow, but I hope with a few prosecutions this idea will soon die out. Lists have been made of all the tanks in the West Giruwa and Magam pattus with the names of the landowners under them and the area of their share in detail. From these the accounts of labour can at once be calculated. Those from the East Giruwa pattu are still incomplete. Copies of the rules in Sinhalese passed in 1900 have been distributed by the headmen, my overseer, and by myself personally throughout the district. The latter portion of the year was exceptionally dry. Luckily some heavy showers at the end of October filled the tanks in the interior of the Magam and East Giruwa pattus. In September a sudden scourge of caterpillars appeared in different parts of the West Giruwa pattu and threatened to do considerable damage to the young crops, but fortunately the arrival of rain or some other cause brought about their immediate disappearance, so much so that when I tried to procure specimens for the Government Entomologist, with whom I had some correspondence on the subject, I could not get any, although the traces of their depredations were in evidence for some weeks after.

One or two applications to restore abandoned tanks on the terms offered by Government came in, and I was able to report favourably on them.

The spill of Pattiyappla tank, which had been broken, was restored during the year, and the sluice of Hitinamaluwa repaired by contract.

The overseers of East Giruwa pattu and Magam pattu have suffered considerably during the year from fever, which seems to have been particularly bad in the district, especially in the Magam pattu. I myself, although keeping clear of fever, have had a good deal of illness as the after effects of typhoid.

The following are the figures of the work done during the year :—

Earthwork done.		Cubes ft.		Value. Rs. c.	Total. Rs. c.
East Giruwa Pattu	...	2,667 77	...	2,667 77	
West Giruwa Pattu	...	1,577 61	...	1,577 61	
Magam Pattu ...	...	895 86	...	895 86	
	Total ...	5,141 24		—	5,141 24
Area cleared.		Square Yards.			
East Giruwa Pattu	...	143,140	...	715 70	
West Giruwa Pattu	...	33,278	...	166 39	
Magam Pattu ...	...	96,630	...	483 15	
	Total ...	273,048		—	1,365 24
Turfing.		Square Feet.			
East Giruwa Pattu	...	135	...	13 50	
West Giruwa Pattu	...	750	...	75 0	
Magam Pattu ...	...	—	...	—	
	Total ...	885		—	88 50
			Total Value of Work done ...		6,594 98

34. The following statement shows the receipts and expenditure of the Irrigation Fine Fund, a most useful fund in connection with village tank work :—

RECEIPTS.	Amount. Rs. c.	Total. Rs. c.
East Giruwa Pattu.		
Balance brought forward ...	—	500 0
Irrigation fines	—	1 0
West Giruwa Pattu.		
Balance brought forward ...	—	1,705 76
Refund of advance to Mr. Meurling	100 0	
Irrigation fines	150 0	
Received from Government Agent, Galle, on account Udukiriwila bungalow	2 76	
		252 76
Magam Pattu.		
Balance brought forward	—	500 0
Irrigation fines	—	479 10
Total ...	—	3,438 62

PAYMENT.	Total. Rs. c.
Cost of printing, &c.	29 55
Pay of tank overseers	519 20
Transport, hire, &c.	4 99
Value of tools	286 18
Repairing bund of Pittanyaya tank ...	28 50
Advance to Mr. Meurling	100 0
Cost of putting up a fence and refund of an overpayment	8 50
Rebuilding the spill at Pattiyapola tank ...	446 80
Paid District Engineer on account Udukiriwila bungalow	2 76
Repairing the sluice wall at Hitinamaluwa tank	20 0
Value of planks	43 50
Compensation to complainant ...	20 0
Amount paid on account cement pipes for Mahawewa	137 50
	1,647 48
By Balance. ...	1,791 14
Total ...	3,438 62

35. *Walawe and Tissa Schemes.*—I regret to state that progress with these important works was not so satisfactory as it might have been.

36. On the Walawe scheme the work on the improvement estimate was left uncompleted, though I am aware of no reason why it should not have been proceeded with. The completion of this work is most important, and it should not be left longer in its present unfinished state.

37. The Lunama channel, left incomplete in 1900, was finished in 1901, and is proving most serviceable.

38. The Oluwila channel was also completed with the regulator at its junction with the Beminiyanwila drainage channel, but owing to the restoration of the Oluwila tank having been struck out of the estimate, no provision has been made for the water going down the channel being properly distributed to the fields. Its present state is not satisfactory.

39. On the east bank of the Walawe Mr. Bowden completed the surveys and levels partially carried out by Mr. Brunton, but plans and estimates for the works were not finished within the year. There has been unnecessary delay over the work on this side.

40. I have also not yet received the plans from the Surveyor-General of the cadastral survey which was made in 1900, with a view to a settlement of that part of the country under the Waste Lands Ordinance.

41. On the Tissa scheme no apparent progress was made, the plans and estimates which were in hand in 1900 not being sanctioned till this year, 1902.

42. As in previous reports, I annex a statement of what is still required to extend the benefit of the Walawe and Tissa schemes:—

Walawe.

A. (1) Raising and strengthening the abutments of the anicut. A heavy flood in October, 1899, showed the necessity for this, but though included in the improvement estimate and the work started, it remains at present at a standstill.

(2) Providing spills along the main channel, also included in improvement estimate, but work at a standstill.

(3) Completion of drainage of Beminiyanwila (in progress).

(4) The restoration of Oluwila tank, into which the Oluwila channel should be led. The work at present is, in my opinion, incomplete and unsatisfactory.

B. (1) Construction of a channel from the Liyangaha-ela anicut through the Magam pattu, with the necessary branch channels and restoration of tanks on the way (survey completed).

Tissa.

A. (1) Raising the bund and spill of Tissa.

(2) Cutting more distributing channels.

(3) Complete restoration of Yodawewa, with proper spills, sluices, and distributing channels.

(4) Improvement of Debarawewa bund and spill, supplying proper sluices and distributing channels.

(The Tissa improvement estimate has since been sanctioned.)

B. (1) Examination of the country and tanks to the west of the river with a view to irrigation from the Ellgala anicut.

43. I repeat my recommendation of the provision of proper outlet sluices or doors from the chief channels of both the Walawe and Tissa schemes. They should be supplied at every offtake.

44. *New Works.*—In April, after a careful examination of the scheme, I submitted a report on the Badagiriya tank, the restoration of which I strongly recommended. It was subsequently visited by the Government Agent, Mr. Fowler, and again by the Director of Irrigation, Mr. Ward, and both these officers were convinced of the advantage and necessity of its restoration. I trust that the preliminary survey will be put in hand without delay.

45. A supplementary tank to Badagiriya, called Maha Ranawarnawewa, further up the river, has also been discovered by Mr. Ferguson, and visited by me, and I am now inclined to look to these tanks rather than to Walawe river as the chief source of a water supply to Hambantota, the urgency of which need is a powerful argument for their early undertaking.

V.—LEGISLATION.

46. I have no suggestion to make under this head.

VI.—PUBLIC WORKS.

47. The new Kachcheri at Hambantota, begun in April, 1900, was not ready for occupation till November, 1901.

48. The construction of a new court-house at Hambantota was sanctioned, and satisfactory progress made with the work, which, however, remained unfinished at the end of the year.

49. A beginning was made with the new T head to the Hambantota jetty, but the work had to be carried over to 1902.

50. The provision of cement drains along both sides of the principal road through the town was completed, and has proved a most useful work.

51. The sea wall at Tangalla was thoroughly repaired at a cost of Rs. 926.

52. Work was also begun on the large bridges Nos. 4 and 5 on the Tangalla road, but they remained unfinished at the close of the year.

53. I regret that only a small portion of the vote for wells was expended in the year. I made it a condition that the villagers benefited should contribute labour on earthwork, and it was late in the year before work was begun on four different wells. The vote for 1902 will be fully expended.

54. Work on the improvement estimate for the Hambantota-Bundala road was pushed on during the year, but remained unfinished at its close.

55. I regret to report that the state of repair of the principal roads leaves something to be desired, though sufficient funds were provided. This may have been due to the dryness of the year.

56. The minor roads, being all gravel or natural surface, remained in fairly good order throughout the year.

57. A new crane was erected in the Hambantota jetty.

58. Works still required are—

(1) Continuation of the work of improving the principal roads, especially that part over, which the salt traffic passes. This is being done in 1902.

(2) Water supply to Tangalla. I regret to have to again report no progress with this important work, though an estimate for fencing the wells has been sanctioned for 1902.

(3) Water supply for Hambantota. The construction of the Magam pattu channel now under contemplation should, if continued to Hambantota, help to solve this increasingly serious question, but, as already stated, I think that a supply from Badagiriya tank will also be necessary. The question should nowbe deliberately faced.

(4) Addition to Tangalla hospital, though provided for in 1901, has not yet, 1902, been put in hand.

(5) A light at Hambantota (provided for in 1902).

(6) A mooring buoy in the harbour.

(7) A dispensary at Ambalantota (provided in 1902).

(8) Sinking wells. An annual vote of Rs. 1,000 should be allowed for some years to come.

(9) A grant in aid of Village Committee works. The Committees of the district, as will be seen from this report, are doing excellent work in opening up the country by village cart roads, on the earthwork of which the labour of the people can easily be applied; but for the very necessary works of bridges and culverts and similar undertakings cash is required, and the funds in hand are insufficient to do all that is necessary in this respect. Government has recognized the necessity of rendering aid in this matter, and has been good enough to allow me Rs. 2,000 for 1902, of which Rs. 1,000 has already been spent on important bridges.

(10) Improved means of transport between the salt lewayas and the stores. I have referred to this under "Salt" and in my previous reports. The increasing scarcity and expense of the unsatisfactory cart transport render this a pressing question.

(11) Extension of the railway to Beliatta at least. This is the trade centre of West and East Giruwa pattus, with a population of over 94,000, steadily advancing in development and prosperity.

(12) Improvement of the Coast road east of Bundala. I beg to repeat my remarks of last year on the need for taking up the section between Bundala and Kirinda.

VII.—PLANS FOR IMPROVEMENT.

59. I re-state these from my previous reports :—

(1) The carrying out of the necessary public works, including the large irrigation schemes.
(2) Vigorous administration of the Irrigation and Village Communities' Ordinances.
(3) A land settlement.
(4) Prompt dealing with crime.

60. The other sections of this report will show what has been effected along these lines in 1901, and what yet remains to be done.

61. The result of the Census has proved the district to be one of the most progressive in Ceylon, and the work of administration has correspondingly increased. A larger staff is required to properly deal with the work.

VIII.—SANITARY CONDITION AND MEDICAL AID.

62. There was a good deal of fever at the beginning and end of the year, which was, however, a healthy one on the whole.

63. There are two Government hospitals in the district, one at Hambantota and one at Tangalla. The former serves the Magam pattu with a population of 10,500, and is actually larger and better equipped than that at Tangalla, which has to serve a population of over 94,000. An additional ward has been provided for in the Supplementary Bill for 1902, but what is really required is a new hospital built on modern lines.

64. The district is fairly well provided with dispensaries at suitable points, and the present old building at Ambalantota is to be replaced this year by a new one, but a dispensary is still urgently required at Migahajandura, and one should also be opened at Augunukolapelessa or Alutwewa (adjacent villages). The precautions against plague were continued. The towns of Hambantota and Tangalla have a standing force of scavengers paid from public funds, while sweepers are employed in all the markets by the Village Committee, which also maintains a public latrine at Tangalla.

65. There was no outbreak of disease during the year.

66. The annexed statement shows to what extent the people availed themselves of the medical aid provided :—

Hospital or Dispensary	Patients treated. Indoor.	Outdoor.
Hambantota Hospital	224	3,684
Tangalla Hospital	276	4,848
Ambalantota Dispensary	—	3,046
Tissamaharama Dispensary	—	5,285
Ranna Dispensary	—	900
Beliatta Dispensary	—	5,114
Walasmulla Dispensary	—	1,269
Wiraketiya Dispensary	—	2,374
Talawa Dispensary	—	1,064
Kirama Dispensary	—	1,049
Katuwana Dispensary	—	1,274

IX.—CRIME AND POLICE.

67. For judicial purposes the district is divided into two, under the jurisdiction of the Police Courts of Tangalla and Hambantota. The Tangalla court has jurisdiction over the West and East Giruwa pattus, and the Hambantota court over Magam pattu. The following statement shows the number of cases of serious crime committed in 1901 in each of these pattus, with its distribution among the villages.

68. "Serious crime" has been taken to include the following offences, viz.:—

(1) Homicide.
(2) Grievous hurt.
(3) Hurt with a dangerous weapon.
(4) Robbery.
(5) House-breaking.
(6) Arson.
(7) Rape.
(8) Abduction.
(9) Riot.
(10) Unlawful assembly.
(11) Serious assault.
(12) Theft of property over Rs. 100 in value.

69. The statement given in my report of last year also included cases of theft of cattle and of property over Rs. 20 in value, which has been omitted in compiling the statement of this year:—

Criminal Statistics of Hambantota District for 1901.

Division.	Serious Offences reported to Court.	Found		Number of Villages and Offences committed in each.		Total Offences.	Of these		Total Taxpaying Population	Villages with Eight or more Offences.
		Not to have been committed.	To have been committed.	Villages.	Offences.		Punished.	Unpunished.		
West Giruwa Pattu...	115	45	70	54	—	—	—	—	8,326	Nil.
				22	1	22	17	5	3,974	
				9	2	18	15	3	2,410	
				3	3	9	6	3	861	
				1	4	4	3	1	526	
				1	5	5	4	1	367	
				2	6	12	12	—	1,136	
	115	45	70	92	—	70	57	13	17,600	
East Giruwa Pattu...	22	9	13	19	—	—	—	—	1,590	Nil.
				11	1	11	9	2	898	
				1	2	2	2	—	68	
	22	9	13	31	—	13	11	2	2,556	
Magam Pattu ...	11	5	6	18	—	—	—	—	1,761	Nil.
				2	1	2	1	1	251	
				1	4	4	4	—	675	
	11	5	6	21	—	6	5	1	2,687	

70. The above figures deserve careful examination. It will be seen that the Tangalla court had to deal with 137 cases of serious crime and the Hambantota court with only 11. Of these, the serious crimes found to have been actually committed are 83 in Tangalla and 6 in Hambantota, so that the total volume of crime is really very small.

71. Nor when we come to its distribution do we find that it is widespread throughout the country.

72. In the West Giruwa pattu 70 crimes were committed in 38 villages, so that in the remaining 146 villages of the pattu there was no serious crime at all, while four villages out of the 38 account for 15 crimes out of the total 70.

73. In the East Giruwa pattu 13 crimes were committed in 12 villages out of a total number of 88, or 76 villages had no serious crime at all.

74. In the Magam pattu six crimes were committed in three villages, leaving 55 without serious crime, one village, viz., Hambantota town itself, accounting for four crimes out of the six.

75. It may be noted *en passant* that the total of crimes found to have really been committed in the Magam pattu bears a much smaller proportion to the total number reported than in the other two pattus. It is possible that with a less credulous Magistrate in Tangalla the volume of real crime there might have been found to be less than it now appears.

76. The proportion of punished crimes to unpunished and to the total population is also, I think, satisfactory, as will be shown more clearly by the following statement:—

	West Giruwa Pattu.	East Giruwa Pattu.	Magam Pattu.
Total taxpaying population ...	17,600	2,556	2,687
Total offences committed ...	70	13	6
Punished	57	11	5
Unpunished	13	2	1
Number of offences per 1,000 taxpayers	3·9	5·08	2·2
Percentage of punished to total offences committed	81·4	84·6	83·3
Number of taxpayers to each offence	251·4	196·6	447·8
Taverns	14	6	5
Distilleries	—	—	—
Number of taxpayers to each tavern ...	1,257·1	426·0	537·4

77. I have in my last report stated that the word "criminal" can no longer be applied to the Tangalla District, *i.e.*, to the East and West Giruwa pattus, and I think the above statements amply bear that out.

78. The crime in Magam pattu is too insignificant to require any detailed examination.

79. I described in my last report the system followed in working the regular and rural police, to which I attributed much of the improved state of things in regard to crime. I should be more chary now in attributing the reduction or suppression of crime to any "system," but a good system can certainly effect that crime on its occurrence or report shall be dealt with promptly and effectively, so as to secure the ascertainment of the truth and the proper punishment of the real offenders.

80. I think I am justified in saying that the regular and rural police have worked together to that end with a fair measure of success, as is shown by the results of the prosecutions in serious cases, in the conduct of all of which the police are directly engaged.

81. I have pleasure in again recording my appreciation of the good service rendered by Inspector Peries, and also of noting the name of Sergeant Johardin Sudar.

82. The following headmen received rewards for intelligent and zealous action :—

Police Officer, Tenagama, No. 31.	Police Officer, Mawella.
Police Officer, Handugala, No. 53.	Gravets Arachchi, Hambantota.
Police Officer, Pategama, No. 52.	Vidane Arachchi, Tissa.
Vidane Arachchi, Kahawatta Upper.	Police Officer, Tissa, No. 134.
Police Officer, Mahahilla.	Police Officer, Kanakeliya, No. 135.

83. Rewards for good work were also given to the following members of the regular police:—

Tangalla.

Inspector Anthony Peries.	P. C. 129 S. Perera.
P. S. 658 C. H. Ramblan.	P. C. 898 Juwanis Appu.
P. C. 152 Arunachalam.	P. C. 60 H. Perera.
P. C. 107 William.	

Hambantota.

P. S. 1,419 C. A. Sourjah.	P. C. 156 Tajudeen.

84. There were eight cases of homicide in 1901, as compared with five in 1900.

85. The following statement gives the circumstances and result of each :—

[For Table see next page.]

X.—CATTLE STEALING.

86. This class of crime does not call for any special remarks as regards this district. It exists, but is not prevalent.

XI.—CATTLE DISEASE.

87. There was no outbreak of any serious disease among cattle during the year, though there was general suffering towards the end of the dry season, owing to scarcity of water and pasture, from which many died. Some hoof-and-mouth disease appeared at Bedigama and vicinity.

XII.—NEW AREAS OF CULTIVATION.

88. There is a steady extension of permanent cultivation going on throughout the district, but it is not easy to estimate it year by year.

89. The Mudaliyar, West Giruwa pattu, reports as follows :—

> In cocoanut there has been considerable extension of cultivation, the new area added to the extent already under cultivation being 500 acres. The rise in price of cocoanut oil has led to the increase of chekkus, the number being fifteen, as against ten during the previous year. Owing to unfavourable weather no new land was added to the paddy area. A large extent of the old area, too, was left uncultivated. There has been a decline in the cultivation of citronella, owing to the fall in price of the oil. The plantations on small extents have been abandoned. But in large estates the distillation went on steadily, though no profits were realized as in previous years. The number of citronella stills is 202.

90. The Mudaliyar, East Giruwa pattu, reports 50 acres of paddy opened under Walawe, and the Mudaliyar, Magam pattu, estimates 100 acres added to the fields under Yodawewa.

XIII.—CHENA CULTIVATION.

91. Last year I reported a considerable reduction in chena cultivation in 1900.

92. This was due, in the first place, to the very favourable weather, which allowed the cultivation of almost every piece of paddy land in the district, and also helped to encourage and extend the ordinary garden cultivation. It was also due to the steady restrictive pressure maintained by a policy of refusal to issue licenses, except in cases of absolute necessity, and of prosecution under the Forest Ordinance in every case of unlicensed clearing of Crown jungle. In 1901, owing to the severe drought that prevailed throughout most of the year, the area under paddy was considerably restricted, and planting operations also had for the time to be suspended.

93. The result was that, as employment in the more legitimate directions was curtailed, many of the villagers turned their attention to chenas, and the area of Crown land thus cultivated much exceeded that of the previous year, notwithstanding the maintenance of the restrictive pressure in all cases where the necessity for chenas was not considered sufficiently pressing.

94. The experience of the last two years, however, shows that the pressure is being felt, and tends in the right direction, and that the old dependence on chena only, good year or bad, with its consequent abandonment of all more permanent and dependable cultivation, is being given up.

95. It will be cruel kindness, in my opinion, to relax this pressure and to revert to a system of general license, by which any appearance even of countenancing chena cultivation would be given.

96. The results of recent land sales, and the applications to purchase which are being received in increasing numbers for ordinary waste high land, show that the demand is increasing, and its value rising, and every acre thus disposed of is an addition to the permanent wealth of the country.

F.—Homicide Return.

[In the cases marked (a) the injured person was conveyed to the hospital and died there on the date given in column 3.]

No.	Village and Number	Offence committed.	Body discovered.	Accused apprehended.	Date of Inquest.	Magisterial Inquiry commenced.	Committed or Discharged.	Date of Final Trial.	Result.	Punishment.	Instrument used.	Probable Motive.	Attributable to Liquor or not.	Circumstances.
	HAMBANTOTA DISTRICT.	1901.	1901.	1901.	1901.	1901.		1901.						
25	Kudagalara, 110 ...	April 14	April 14	April 14	No inquest	April 16	Discharged	—	—	—	Gun	Revenge	No	The deceased shot a bull belonging to the accused, and while in the act of skinning it was shot by the accused, who was behind some bushes. Accused was arrested, tried, and was discharged upon instructions of the Attorney-General.
26	Handunkotuwa, 107	May 2, 8 P.M.	May 2	May 6	No inquest	May 5	Committed	July 2	Convicted	10 months' rigorous imprisonment	Stick	Anger	No	The deceased's brother was on terms of intimacy with the accused's niece. The accused was enraged at this and quarrelled with the deceased's brother. The deceased interfered and struck the accused with a stick, with which the accused returned the blow. Death was due to rupture of the spleen consequent on this blow.
27	Mahahilla, 22 ...	March 21	March 22 (a)	March 21	No inquest	March 21	Committed	June 21	2 accused convicted, 3 accused discharged	Death sentence of one commuted to 20 years' rigorous imprisonment	Katty	Anger, cattle dispute	No	In a dispute about a cow the accused cut the deceased with a katty, and deceased died of the injuries in the hospital.
28	Beminiyanwila, 97	May 23	May 23	May 28	No inquest	May 26	Committed	Accused died before trial	—	—	Stick	Revenge	No	The deceased left the accused with whom she was living owing to family disputes and went to live in another house. The accused enraged at this proceeded to the house where she was and clubbed her to death.
29	Tangalla, 1 A ...	Aug. 11, 9 A.M.	Aug. 12	Aug. 12	Aug. 12	Aug. 12	Committed	Nov. 29	Convicted	Death	Knife	Gain	No	The deceased was a Sinhalese boy, and his body was found in a jungle close to the court-house with stab wounds on the neck. The offence was cleverly traced to a habitual criminal who murdered the boy, in order to obtain possession of the jewellery which he wore.
30	Godawela, 23 ...	Sept. 24, 4 P.M.	Sept. 24 (a)	Sept. 24	Sept. 24	Sept. 25	Committed	Dec. 6	Convicted	10 years' rigorous imprisonment	Gun	Anger	No	The accused, who was deceased's brother-in-law, remonstrated with the deceased for stealing a bull, and asked him to return it to the owner. The deceased refused to do so, and in the quarrel that followed, the accused shot the bull and then shot the deceased, who died of the injuries in hospital.
31	Dammulla, 25 ...	Nov. 11	Nov. 11	Nov. 11	Nov. 11, 12, and 13	Nov. 11	Pending		—	—	Gun	Revenge	No	The deceased was shot by the accused being irritated because his land was sold under a writ of the deceased.
32	Rekawa, 5 ...	Aug. 27	Aug. 27	Aug. 27	Aug. 28	Aug. 28	1 accused committed, 2 accused discharged	Nov. 29	Discharged	—	Gun	Revenge	No	The deceased was shot dead by the accused by way of revenge for a previous grudge.

97. I annex statements of chena cases in the Tangalla and Hambantota courts from 1897:—

Chena Cases, Tangalla.

XIV.—Waste Lands Ordinances and Sales by Villagers.

98. Better progress was made under the Waste Lands Ordinances in 1901 than in previous years, but the most important steps in advance were the taking over of the work from the Assistant Agent by the Special Officer Mr. Fraser, and the arrangement whereby the cadastral survey party is to start work in the West Giruwa pattu.

99. Thirty notices were issued by the Assistant Agent, aggregating 10,330 acres 2 roods 20 perches in Magam pattu and 1,242 acres 3 roods 7 perches in West Giruwa pattu. The Walakoggala land in Magam pattu of 255 acres was noticed by the Special Officer.

100. Early in the year Mr. Lewis settled the Punchiheneyagama and Godakoggala claims, and Mr. Fraser practically completed the inquiry into the Gonadeniya claim.

101. Mr. Fraser will take up the settlement of all the lands noticed by me.

102. In the reference to court of the Liniyanpotawa or Samayanara claim made by me last year, judgment was entered this year in favour of the Crown, after trial by the District Court of Tangalla, for the whole land of 763 acres. The appeal lodged has not yet been decided.

103. Mr. Van Cuylenburg completed the survey of the Daha-umuna claim of 759 acres, and Mr. Jansz that of the Debokkawa claim of 1,290 acres 2 roods 5 perches, and the plans have been sent to the Special Officer to be dealt with, as well as all surveyed claims that remained undisposed of.

104. Matters are now in train for a proper land settlement of the whole district, which cannot but have a most important effect on its development and prosperity, by deciding long-standing disputes between Crown and subject, relieving the present tension between them, and by giving certainty of title allowing the work of permanent improvement to proceed unhampered.

105. Though proceedings were not taken under the Waste Lands Ordinances but by ordinary civil action for declaration of title and ejectment, the result of the Handunoruwa case may be noted under this section of my report. In this case certain people of the Matara District, on a forged copper sannas, claimed several villages in the Magam pattu, now abandoned and buried in uninhabited forest, the total extent being some 25,000 or 30,000 acres. One of these villages, about 4,000 acres in area, in a corner of which they had recently built a hut or two, and cultivated a small patch of old field, was surveyed, and an action brought by the Crown for declaration of title thereto, in which the Crown got judgment, the sannas being clearly proved a forgery.

106. The two forgers were subsequently placed on their trial before the Supreme Court and sentenced to five years' rigorous imprisonment each.

107. No authenticated cases came under my notice in which villagers had sold land to which they had no title.

XV.—Gansabhawa and Village Committees.

108. I have always given special prominence in my annual reports to the work done under the Irrigation and Village Communities' Ordinances, and Government has now ordered that full accounts of such work should be shown in all Administration Reports.

109. It is almost impossible to exaggerate the importance and advantage to the people of the vigorous administration of these two Ordinances.

110. The work done under the Irrigation Ordinance has already being dealt with under that heading.

111. Under the Village Communities' Ordinance very good work indeed was done in 1901.

112. This work is very specially the concern of the chief headman of each pattu, and affords an excellent test of his administrative ability and initiative.

113. I have nothing but the highest praise for the results achieved in the West Giruwa pattu by Mr. Alfred Jayawardana, Mudaliyar. His energy and initiative and the interest he takes in the development of his pattu deserve special recognition.

114. Cassim Mudaliyar in the Magam pattu has also done good work, and shown considerable interest and energy in carrying it out. With more experience even better results may be expected from him.

115. I regret that I cannot speak in terms of approval of the East Giruwa pattu. Here one must drive, while in the other divisions it is sufficient to guide. While the other pattus have village markets, schools, ambalams, and Gansabhawa buildings; in the East Giruwa pattu there are none of these, except one small market at Talawa, which I got erected last year after considerable difficulty. A Gansabhawa has since been built in the same village, but not by the Mudaliyar.

116. The system of accounts introduced to control the working of the various Committees has proved effective.

117. Since 1899 the detailed accounts of the Committees have been printed in pamphlet form in the vernacular and widely distributed among the people, who have shown considerable interest in them. Those for 1901 are now in the printer's hands.

118. All village works were maintained in good order during the year. Improvements have been carried out and new works undertaken.

119. The following details are from the reports of the Magam pattu Mudaliyar:—

(1) Road from Tissa main sluice along the channel to the high road. Embankment raised and road formed as a cart road.

(2) Tissa-Helambagaswala road. Construction begun.
(3) Medagama tank bund widened into a road, allowing carts to reach the hamlet during the cultivating season.
(4) Ambalantota-Beragama road opened out as a cart road for one mile. It has already been cleared throughout.
(5) Road from Migahajandura to Viharagala *viâ* Angunukolawewa and Anukkangala. This is a new cart road leading to villages hitherto quite inaccessible.
(6) Road from Pallemalala to Badagiriya *viâ* Yahangala repaired for cart traffic.
(7) Road from Veharagoda to Telulla deviated.
(8) Cart road opened between Gonnoruwa and Kurundana.
(9) Road from Landejulana to Aluttwewa repaired for cart traffic. This will be carried on to join the road from Pallemalala to Badagiriya, thus joining the old and new Badulla main roads.
(10) Road from 22nd milepost, Badulla road to Unatuwewa, *viâ* Padawkema, 3½ miles, repaired for cart traffic.
(11) Four miles of the abandoned road between Mattala and Tanamalwila re-opened for cart traffic.
(12) Road from Udamalala to Keligama repaired for cart traffic.

120. The markets and schools were maintained, and new Gansabhawas built at Tissa and Ambalantota. When the above is compared with my report for 1900, it will be seen that the Magam pattu Mudaliyar has greatly extended the range of his operations.

121. As the East Giruwa pattu Mudaliyar has omitted all reference in his report to the work done by him under the Village Communities' Ordinance, though asked to make a special point of this, I can only say that I found the village roads which I travelled over kept in fair order, and a new one opened from Middeniya to Hellala on the Ratnapura border, where it joins a village road of that district.

122. The report of Jayawardana Mudaliyar for West Giruwa pattu is so interesting, as showing the extent and variety of the works, that I beg leave to give it in full, though somewhat lengthy.

123. It is as follows :—

Village Committees.—As Chairman of these Committees, and with the invaluable assistance and advice extended to me by the Assistant Government Agent, the village works have had, as they deserve, tending as they always do the improvement and development of the district, my special attention. The year with these works has been a very busy one, and as fortune succeeds labour the end of it saw the incalculable advantages to be reaped by the execution of such works.

Of the roads improved during the year, the most important one is the Wiraketiya-Gonadeniya road, opening as it does what was at one time found to be most inaccessible part of the country far and wide, connecting even the Talawa District Road Committee road and communal road to Sabaragamuwa.

On this line of road as many as ten temporary bridges were converted into permanent ones with solid masonry abutments and piers and durable timber, thus facilitating cart traffic on the whole line to and from the interior villages, where home-grown articles of food and local industries will, as a matter of course, find a ready sale at the very door of the villagers at enhanced prices.

Wiraketiya-Welipitiya road, 12 miles, was so improved as to render it fit for cart traffic through the villages of Marakada, Kinchiguna, Galpotteyaya, Hillegealyina, Pahala, and Ihala Julampitiya, and other minor villages which had no road communication before. Traversing as it does isolated villages, this road has been the means for springing up a cluster of boutiques on the line and for transport of Crown timber.

Mandaduwa-Talunna road of 12 miles was made thoroughly fit for carts, and it runs through Aggarahera, Wakamulla, Kumbukmulla, Himbunna, Udayala, Medayala, Hakuruwela, Netalaporuwa, Indegetawela, Talamporuwa, and Gonewala.

From the above road I have now opened a cart road to Palugahawala to connect with Talawa road through Kotawagampalata, the greatest rice-growing division in the pattu, Marakada excepted, with no lack of water. A traveller over this line of road cannot fail to be struck with the charm of not only green paddy plants waving over an area of land as far as the eye can reach, but also of a large range of forest lands, mostly claimed as "lebimas," where elk and deer and other game are to be found in abundance. When the claims to these "lebimas" are settled, a part of the division might be reserved for a game sanctuary. The other roads already improved are equally useful and interesting. But the number of such roads being large, I fear I would be transgressing the limits prescribed for our reports were I to expatiate on the benefits accruing from them in *seriatim*. But I may annex a list of all roads which have been improved and kept throughout the year in efficient repair :—

		Miles.
1.	Wiraketiya-Gondeniya road ...	9
2.	Mandaduwa-Talunna road ...	8
3.	Panawela-Palugahawela road ...	5
4.	Mulkirigala-Okewela road ...	3
5.	Mandaduwa-Palle Julampitiya road ...	5
6.	Kinchiguna-Handapangalagegoda road	6
7.	Uda Julampitiya-Pahalaobada road ...	4½
8.	Godigamuwa-Talunna road ...	4
9.	Ranna-Lunumagara road ...	3
10.	Ranna-Kahandamodara road ...	3
11.	Netolpitiya-Ranna road through Rekewa	6
12.	Netolpitiya-Wigamuwa road ...	3
13.	Vitaranadeniya-Wigamuwa road ...	3
14.	Modarawana through Wawwa-Panawela road	3
15.	Kaduruliyadda-Yatigala road ...	4
16.	Natuwala-Kanumetdana road ...	2
17.	Koholana-Pahalaobada road ...	4
18.	Kirama-Ihalaobada road ...	4
19.	Walasmulla-Mahamaditta road ...	6
20.	Radaniara-Ihalaobada road ...	4
21.	Kirama-Murutehena road ...	4½
22.	Karametiya-Watukanda road ...	2½
23.	Migasara-Uda Julampitiya road ...	5
24.	Warapitiya-Hulankanda road ...	4½
25.	Katuwana-Ihalaobada road ...	5
26.	Atuela-Kariwilakanda road ...	5
27.	Katuwana-Hulankanda road ...	3½
28.	Mimanakoladeniya-Ambagasara road ...	5
29.	Siyarapitiya-Hingurekanda road ...	2½
30.	Killewatta-Koholana road ...	5½
31.	Tangalla through Medaketiya-Henakaduwa road	1½
32.	Medilla-Rekewa road	2

		Miles.
33.	Medilla through Patayarawela to join the main road at Marakolliya ...	1
34.	From the main road to Hambantota through Kuttandurekakkama, and Palatuduwa to meet the minor road to Wiraketiya	2½
35.	From the general cemetery to Danketiya minor road	½
36.	Godawanegoda-Pipiriyegodella road ...	1
37.	From the teak garden at Tangalla through Tahanachiwewa to join the village path to Kadurupokuna and Pallapota	¾
38.	Parepokuna-Palapota road ...	4
39.	Ketaketiya-Morakehara road ...	3½
40.	Morakehara-Galagama road ...	2
41.	Sinimodara-Palapota road ...	2½
42.	Godellewela-Kadurupokuna road ...	1½
43.	Mahawela-Handapangodella road ...	2
44.	Nihiluwa-Kendala road	2½
45.	Walawela-Karatota road ...	2½
46.	Pallattara-Walawela road ...	2¾
47.	Pallattara-Beligalla road ...	1¾
48.	Getamanna-Kambarankagaspitiya road	1¼
49.	Getamanna to Urugamuwa limit ...	1
50.	Godakumbura-Mahavilla road ...	2
51.	Puwakdandawa-Dedduruwala road ...	4
52.	Palapota-Sinimodara road ...	¾
53.	Kudahilla-Palapota road ...	2
54.	From Palapota to meet the village path from Tangalla to Kadurupokuna ...	2
55.	Dedduruwala-Galagama road ...	2½
56.	Polommaruwa through Nalagama to meet the minor road at Kahawatta	5
57.	Beligalla through Etgalmulla to join the minor road to Wiraketiya at Tenagama	3
58.	Nalagama-Aranwella road to meet the minor road to Wiraketiya at Dammulla	2

The new roads opened during the year are :—

(1) Road from Palankada to Modarawana, in length 4 miles, through Tamaduwa and Yodakandiya. This road is of short distance to the high road near Modarawana, and it will prove decidedly useful to the officials in charge of irrigation works, there being a number of village tanks requiring their attention over that line.

(2) Road from Rajapaksawewa to Kadigamuwa to meet Talahagamwaduwa.

(3) The cross road to connect Walasmulla and Ranna roads was begun and nearly two-thirds of the work was finished. When the whole line is completed it will be a most useful road, as people travelling from Walasmulla to Ranna might avoid the route through Wiraketiya 15 miles, or *vid* Tangalla 22 miles, and drive or walk straight off, journeying only about 10 miles.

(4) Commenced a road from Kotambe to Yatigala, 6 miles. This road was undertaken to utilize the Kotambe bridge and thus avoid putting up a bridge on the old trace, which may as hitherto be used by pedestrians.

(5) Kanumaldeniya to Dewalagama, 6 miles.

(6) Walasmulla to Mahamaditta through Oluara, 8 miles.

Temporary culverts were made for all the Gansabhawa roads where they were found imperatively necessary. Wells were restored at Walasmulla and Wiraketiya bazaars. The sinking of new wells has been started at Galpotteyaya, Kandemaditta, Rekawa, and Wellabada. The ambalam at Wiraketiya was thoroughly repaired; a bathroom was made for the Gansabhawa of Wiraketiya. All the Gansabhawa buildings at Kahawatta were thoroughly repaired and whitewashed, and a new cattle pound was provided at the police station.

Works which the Village Committee contemplates taking in hand when funds allow are (1) extension of the fish market at Tangalla; (2) acquisition of boutiques surrounding markets; (3) markets at Katuwana, Julampitiya, and Nakulugamuwa; (4) conversion of temporary culverts and bridges into masonry ones; (5) two schools for Gonadeniya and Hakuruwela; (6) purchase of a large open land for pasturage, also of a stud bull to be attached to it; (7) rebuilding the Pallattara school on a different site; (8) increase the number of wells; (9) a halting bungalow at Gonadeniya; (10) introduction of garden seeds.

Public Markets.—At Tangalla, Beliatta, Wiraketiya, Walasmulla, Kirama, and Ranna there are six public markets, all substantially built and in efficient repair. Three more markets are required, and I have included them in the list under the heading "Works required." The Kirama market was removed to the bazaar, where it is now in a flourishing state. A new fish market was built at Walasmulla. Portable sheds were introduced into the Wiraketiya market. The condition of the Ranna market was greatly improved, and the market buildings at Beliatta were thoroughly repaired and improved. The salaries of constables and sweepers and the cost of repairs to each of the existing markets are all met out of the proceeds sale of the annual rents of the markets. The prices obtained for these rents for the year under review have been very satisfactory, they having exceeded those of the previous year :—

	Rs.	c.
Tangalla market	282	0
Beliatta market	1,295	0
Walasmulla market	626	0
Wiraketiya market	450	0
Kirama market	44	0
Ranna market	50	0
Total ...	2,747	0

Education.—The number of Government vernacular schools is 11, private schools aided by Government 13, and private schools not aided by Government 110. The bungalows provided for the Government schools out of the Village Committee funds have all been thoroughly repaired, whitewashed, and otherwise improved, and they are now, without a single exception, in excellent condition. The Nakulugamuwa school bungalow is built after St. George's cross—a design quite unique of its kind. The building has been completed, and serves as an ornament to the place. A latrine was provided for the Wiraketiya school. The teacher's room in this building was paved and improved. The education is progressing steadily, and the average attendance of each of the Government and voluntary schools testifies to the fact that the villagers fully appreciate the benefits of education.

124. I have already stated that Government has given a grant in aid of village works this year. I think it will be admitted that the assistance is well deserved.

125. I annex the labour and money accounts of each pattu :—

Labour Accounts of the Village Committees for 1901.

Pattu.	No. of Men liable.	No. of Men commuted.	No. of Men worked.	No. of Men unaccounted.
West Giruwa Pattu ...	17,225	1,814	11,465	3,946
East Giruwa Pattu ...	2,412	821	—	1,591
Magam Pattu	2,403	1,577	440	386
Total ...	22,040	4,212	11,905	5,923

A number of men performed labour in East Giruwa pattu, but as the Mudaliyar has not sent in his progress reports I have to show them as "unaccounted for." Defaulters are being prosecuted.

Statement showing Receipts and Payments of Village Committee and Village Tribunal Funds for the Year 1901.

(6) Advance on account of cattle pounds at Tangalla and Wiraketiya ...	131 30
(7) Pay of overseers employed on village paths	657 0
(8) Construction of the Gansabhawa market at Walasmulla	250 0
(9) Repairing and rethatching the fish markets at Hambantota and Ambalantota...	36 30
(10) Construction of Village Committee court-houses at Tissamaharama and Ambalantota	955 0
(11) Pay of staff of the President, Village Tribunal, Giruwa pattu west ...	585 0
(12) Clerks and messengers to the Chairman, Village Committees	860 0
(13) Pay of constables and sweepers of markets ...	1,140 0
(14) Pay of Assistant Gansabhawa clerks ...	360 0
(15) Keeper of Village Committee printed forms	30 0
(16) Pay of latrine cooly ...	33 0
(17) Cost of lighting street lamps ...	172 50
(18) Pay of caretakers of Gansabhawas ...	272 25
(19) Miscellaneous	920 35
	7,983 47
Balance ...	3,685 57
Total ...	11,669 4

126. There is only one Village Tribunal in the district, viz., that in the West Giruwa pattu, under the Presidency of Mr. de Silva, who has favoured me with the following report on his work. His remarks and suggestions deserve careful consideration :—

1. I have the honour to submit my report on the working of the Village Tribunals of West Giruwa pattu for 1901.

The figures relating to my work have already been given in the annual and monthly returns, which are regularly submitted to the Assistant Government Agent, I need not therefore repeat them here. Suffice it to remark that the trial roll at the present moment is very low, consisting as it does of not more than 135 cases, exclusive of "schools" and "labour" cases (86).

2. The question of amicable settlements of cases coming before the tribunals has been placed in the forefront of my work, and whenever opportunity offered amicable settlements have been brought about. Efforts in this direction have been chiefly directed to cases of abuse, petty assaults, &c., between neighbours and relations. These settlements have, I am convinced, borne good fruit in the prevention of ulterior litigation. This is the chief aim of the Ordinance, and has been constantly kept in view. The tribunal has, on the other hand, set his face against the compounding of cases of gambling and petty theft; these have been brought to trial, and the offenders punished.

3. Gambling is carried on to a considerable extent in these parts, the most pernicious and popular form of it being that known as "bebi kepima," which is the curse of the whole country. It is carried on mostly in the jungles, and is far from easy to detect. Unless the headmen exercise the greatest caution, a successful raid is well-nigh impossible. A wedding festival, a devil dance, or any other gathering of villagers, either on the call of pleasure or business, is made the occasion of a gambling party. Indeed, cases have come under my

notice where, while in one part of the house a devil ceremony was being performed, some of the spectators had adjourned to the maduwa and taken part in "bebi kepima." I beg to suggest that, in the event of a second conviction for gambling, the offender be given rigorous imprisonment without the option of a fine. Stern measures are required to check this evil, which brings in its train thefts of garden produce, village brawls, &c.

4. The reluctance of the villagers in this district to give evidence in their neighbours' cases is a very noticeable fact. They prefer to keep aloof rather than incur the ill-will of their fellow-villagers, so that the complainant has to go further afield for his evidence, and he invariably presses into the service a couple of false witnesses from a distant village. Needless to say they break down in cross-examination, and many real culprits go free.

5. The question of the punishment of juvenile offenders is one which is hedged round with a great deal of difficulty. The tribunals dislike to send them to jail to herd with the more hardened criminals. To pay a fine they can ill afford. Parental or corporal chastisement has not proved very satisfactory. The caning is generally done in such a tender manner that it ceases to be any good for the purposes of correction. Some parents evince a marked disinclination to cane their boys, even upon conviction on the most clear evidence, protesting their innocence up to the last. I have reason to believe that these are the individuals who wink at their boys' misdeeds, if not directly incite them to evil ways. I consider it desirable, under these circumstances, to revive the question of the grant to Presidents of powers of corporal punishment. These juvenile offenders generally belong to the poorer classes, who find the decent upbringing and schooling of their children beyond their limited means.

6. There is a great deal of minor village crime that does not come within the purview of the Ordinance. Let me suggest that illicit toddy-drawing, disorderly conduct in the high roads and markets, cruelty to animals, and cart-driving without lights be added to the list of offences triable by the Gansabhawas.

7. Malicious injury to property (in the case of cattle) should be made punishable by imprisonment, with the alternative of a fine, as is prescribed for assaults and thefts. Cattle cutting is, I am afraid, rather common in this district, and the man who resorts to the use of the "katty" on cattle would be just as prone to use it on a human being.

8. There is no provision in the Ordinance or in the rules for the issue of a warrant in the first instance where such a course becomes necessary in the interests of justice, also for a search warrant. I think the Gansabhawa ought to have such powers.

9. Rule No. 19 regarding writs should be amended by the addition of the words "except on notice to the judgment-debtor to show cause, if any, why it (execution) should not issue, notwithstanding lapse of time." This would bring the rule into line with the procedure adopted in the higher courts under similar circumstances and prevent the institution of a fresh case on the same claim.

10. The Gansabhawa is the relic of an ancient Kandyan system for the adjustment of petty village disputes, and is undoubtedly a very popular institution with the people. They would, indeed, welcome an extension of its powers.

11. In conclusion, it gives me much pleasure to say that I am greatly indebted to the headmen for the cordial co-operation they have extended to me in my work. There have been two or three instances in which they have failed in their duty and had to be reported to the Assistant Government Agent for misconduct, but, on the whole, I must say that they have rendered the tribunals most valuable aid.

127. The following is a tabular statement of work done in the year :—

Work done in the Village Tribunals of Giruwa Pattu West.

	Civil.	Criminal.
Pending on January 1, 1901 ...	58	109
Institutions during the year 1901 ...	786	1,646

XVI.—EDUCATION.

128. There has been no relaxation of the efforts of the chief headmen and myself in ncouraging and providing facilities for the spread of education in the villages.

129. As stated in previous reports, good results have been obtained in the West Giruwa pattu.

130. Those in the Magam pattu are not so good, while the East Giruwa pattu is very backward.

131. In Magam pattu I had with great reluctance to close the Bundala Gansabhawa school, as he villagers, notwithstanding the pressure brought to bear on them, took no interest whatever n sending their children regularly. The Migahajandura and Tissa Gansabhawa schools have, owever, improved somewhat.

132. In East Giruwa pattu there are no Gansabhawa schools, and no interest in the matter eems yet to have awakened in the people.

133. In the West Giruwa pattu the three new schools started in 1900 have prospered, and the thers also are in satisfactory condition.

134. A very large new school, costing the Committee Rs. 1,200, was built at Nakulugamuwa, here the great increase in daily attendance has been most marked and steadily maintained. It s the model Gansabhawa school of the district.

135. The following statement gives the schools and average daily attendance :—

Government Schools maintained by Gansabhawas.

XVII.—FOREST WORK.

136. The South-Eastern Circle in charge of the Assistant Conservator includes the northern and eastern half of the Magam pattu. The rest of the district forms a "released area" under the Government Agent and Assistant Government Agent. The released area is worked through a Forest Ranger, Mr. Fernando, and two watchers, assisted by the headmen. The Forest Department charge is under the Assistant Conservator of Forests, with a Ranger, Mr. Barthelot, and three Forest Guards.

137. From the 1st August the whole area was under the Assistant Government Agent on the transfer of the Assistant Conservator of Forests to Batticaloa.

138. The chief work done in the released area was the demarcation of the reserved forest Burutugodana by a 10-ft. line.

139. Talapotayakanda was also partially demarcated. Some ebony was felled at Kirama and sold at Tangalla, fetching good prices. 113 trees felled are ready for transport.

140. In the Forest Department area the chief work was the cutting up into compartments and enumerating the forest between the Wirawila-Tanamalwila road and the Kirindi-oya.

141. The revenue from the released area was as follows :—

	Rs. c.
Value of timber supplied to Public Departments (paper credit) ...	1,860 32
Sale of timber to private purchasers	991 30
Sale of firewood	13 0
Sale of minor produce: ranawara	470 0
Sale of other minor produce	10 86
Compensation for forest offences	50 0
Fines in chena cases in Police Court, Tangalla	4,300 75
Fines in timber cases in Police Court, Hambantota ...	26 0
Sale of chena produce	34 25
Total ...	7,756 48

142. The total expenditure, including staff, was Rs. 2,422·43.

143. The revenue for the Forest Department area was as follows :—

	Rs. c.
Value of timber supplied to Public Departments (paper credit) ...	462 74
Local sale of timber	132 74
Sale of timber in Central Depôt	2,873 73
Sale of firewood	5 24
Compensation for forest offences	15 30
Total. ...	3,489 75

144. The Expenditure was as follows :—

	Rs. c.
Personal Emoluments (salaries of staff)	4,773 37
Other Charges	3,770 1
Total ...	8,543 38

145. The value of free grants for agricultural and village purposes was Rs. 674·61.

146. It gives me pleasure to again record the good work done by Mr. Fernando, for which he was specially commended by Government.

XVIII.—MISCELLANEOUS.

147. *Game Sanctuary.*—The success of this reserve is now undoubted. Game of all kinds has greatly increased, one of the most satisfactory features being the comparative fearlessness of the usually most timid species.

148. The increase in the number of watchers recommended by me was approved, and the total number is now eight, including the head watcher.

149. Permanent quarters have also been provided for them at Talgasmankada Yala and Kumana, the three chief points of entrance to the sanctuary, and from these the reserve is regularly patrolled. There were no cases of poaching during the year.

150. A beginning was made with the work of providing a water supply for the game during the dry weather, when they suffer from the drought, by restoring the Pallepottana tank.

151. This work will be continued, and I selected two tanks for restoration this year.

152. The country to the west of the sanctuary, between Palatupana and Yala, was closed to non-resident sportsmen, thus giving it a much-needed rest.

153. *Licenses* :—

	1898.	1899.	1900.	1901.	Value of Stamps in 1901. Rs. c.
To kill game ...	25	54	31	45	157 50

Opium licenses, Tangalla ...	510 0	535 0

XIX.—WORK OTHER THAN ROUTINE.

154. I made a tour through the game sanctuary at beginning of April, of which a descriptive report was sent in, subsequently copied into the local newspapers.

155. A second visit was paid in July along with the Government Agent Mr. Fowler.

156. The arrangement of the ceremonies in commemoration of the death of Her Majesty the Queen-Empress fell to my lot to perform for the district.

157. The preparations for the Census and instruction of those entrusted with the work naturally occupied much of my time in the early part of the year.

158. On the 1st August I took over charge of all the forest work in the district on the transfer of Mr. Moss, Assistant Conservator of Forests, to Batticaloa.

159. On the 19th September fifty-eight Boer Prisoners of War, mostly officers, were sent on parole to Hambantota, where they were accommodated in the buildings previously used as a prison, but which made an excellent camp. I was appointed officer in charge, and the preparation of the buildings for the reception of the Prisoners of War and the arrangement of contracts for supplies, hire of servants, &c., threw a considerable amount of work on my shoulders, but everything was ready in good time, and the camp has been a success from its first inception.

XX.—EVENTS OF INTEREST OR IMPORTANCE.

160. The most memorable event of the year was the Queen's death on the 22nd January. The people of the district were behind no other in the Island in the spontaneous and universal expression of their grief.

161. The Census was taken on the night of the 1st March, and the results of this district are, I think, very accurate. The total for the district was 104,790, as compared with 89,330 at the previous Census, or an increase in the decade of 17·3 per cent.

162. The Hambantota District shows the largest purely native increase of any, *i.e.*, an increase which cannot be attributed to the introduction of European capital and enterprise.

163. Its percentage of increase is 17·3, while only two Provinces, the Western and Sabaragamuwa, show a higher percentage, 18·7 and 18·6 respectively.

164. Only five districts show a higher percentage, viz., Colombo 20·7, Kalutara 18·6, Kandy 18·2, Batticaloa 17·9, and Ratnapura 23·8; but the enormous increases in the estate population of each of these show at once how much they owe to foreign or non-native capital.

165. His Excellency the Governor, accompanied by Major-General Hobson, Dr. Perry, and staff, paid a visit to the station on the 22nd March on their way to Colombo by steamer, and spent the whole day ashore.

166. The Boer Prisoners of War on parole arrived by steamer on the 19th September.

167. A topographical survey party under Mr. Dyson Blair began work in the Magam pattu in June. It is being continued in 1902, and will prove a most useful undertaking, especially as regards irrigation work.

168. The Tangalla Sub-Treasury was closed in January, all transactions being now made direct with the Hambantota Kachcheri.

169. In October I sold for the first time the Crown grazing rights in the country between Kirinda and Yala. With the extension of population and cultivation, and also in view of the numerous land claims, it is as well that the Crown should have some proof of its right by overt acts of possession.

170. The other events of interest are chiefly official changes.

171. Mr. Murty succeeded Mr. Russell as District Judge and Police Magistrate, Tangalla.

172. Mr. Ferguson, Inspector of Village Tanks, replaced Mr. Meurling, who had been acting for him.

173. Mr. de Silva, District Engineer, was succeeded by Mr. Jeffery, who in turn was followed near the end of the year by Mr. Bucknall.

174. Mr. don Nikulas Dahanayaka, Pattu Muhandiram of the West Giruwa pattu, was promoted to the rank of Mudaliyar, and the Pattu Arachchi, Johanes de Silva Munasin Disanayaka, was made a Vidane Muhandiram on the occasion of His Majesty's birthday.

Hambantota Kachcheri,
April 3, 1902.

B. HORSBURGH,
Assistant Government Agent.

EASTERN PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, EASTERN PROVINCE, FOR 1901.

I.—REVENUE.

RETURNS of the revenue of the Province in the prescribed forms have been forwarded to the Auditor-General. The revenue of the Province for the year amounted to Rs. 448,120·69, as against Rs. 431,713·53 for 1900, the increase being due chiefly to larger sales of wholesale salt, timber, and postage stamps; a larger increase in the revenue could have been reported, but for the comparatively small area of Crown land sold during the year, and a falling off in the sale of judicial stamps. In the Batticaloa District the average revenue during the last eight years, or since the returns have been unaffected by the paddy tax, has been Rs. 292,027, exceeded in consequence of large sales of Crown land in 1896, 1897, 1898, and 1899.

The decrease of sale in Crown land is due to the policy of Government in deferring the sale of large areas under the new irrigation works at Vakaneri, Unnichchai, and elsewhere until approach of completion of the works, which it is expected will result not only in better prices for land known to be irrigable under the works, but obviate the cancellation of sale of lands eventually found incapable of irrigation experienced hitherto under the practice of selling land in anticipation of irrigation.

II.—FOOD SUPPLY.

Rice and fish were the staple articles of food, and both were plentiful and cheap throughout the year. The supply of locally-grown rice is more than sufficient for the population, but as large quantities are exported to other districts, the poorer classes suffer at times, though never for long or with real distress.

The population of the Province by the Census returns for 1901, exclusive of estates, military, and shipping, was 172,978 persons, as against 148,365 at the Census of 1891; and the supply of home-grown paddy, in 1901, 1,153,185 bushels, as against 800,000 bushels in 1891.

Chena cultivation has been much restricted, but the produce of chenas still constitutes a considerable portion of the food of the people, and must continue to do so in some pattus in default of some less objectionable livelihood which the chena villager can be induced to adopt.

Cocoanuts enter largely into the food of the sea-borde population, and game into that of the people of the interior villages.

Fish is procurable at all seasons and in great abundance from the Batticaloa lake, lagoons, and rivers, besides the large quantity of sea fish caught by Sinhalese fishermen of the Southern and Western Provinces during the south-west monsoon.

Subjoined is a statement of the rice sent up-country during the last two years. The large increase in 1901 is due to the fact that less home-grown rice was exported to Jaffna during that year:—

Statement of the Quantity of Coast and Country Rice sent Up-country in 1900 and 1901.

	Coast Rice.		Country Rice.

	28,560	30,750	11,269	25,040

III.—IRRIGATION.

Maintenance of Irrigation Works.—The maintenance of the following restored tanks, which had hitherto been in charge of the District Engineers under the direction of the Provincial Irrigation Board, was handed over during the year to Irrigation Engineers under the direct control of the Director of Irrigation :—

Batticaloa District.

Pullumalai	Chadayantalawa
Rugam	Viragoda
Kadukkamunnai	Naulla
Manalpuddiar Anicut	Panama
Pulukunavi	Rotawewa
Divulanai	Lahugalla
Tumpankeni	

Trincomalee District.

Ilakantai	Andankulam
Allai	Periyakulam
Peruveli	

The maintenance of the remaining two tanks in the Batticaloa District, viz., Hakgalawewa and Maha-oya, has been transferred to the Government Agent under instructions from Government. These two tanks will be treated as ordinary village tanks in future, but Government has been asked to allow the retention of the watchers to look after the iron sluices.

Tanks under Construction and proposed Irrigation Schemes.—Work was continued during the year on the new irrigation schemes in the Province. Work began on Vakaneri in July, 1900, and by the end of that year a permanent inspection bungalow with out-offices, temporary cooly lines to accommodate 1,000 coolies, quarters for fifteen native subordinates, with office, store, and dispensary buildings had been completed, besides the completion of 8 miles of the gravel service road from the North Coast road to the works. During 1901 work on the anicut and supply channel was limited to the mining and collection of stone at the anicut site and a start made on the earthwork for the supply channel, but had to be stopped in consequence of the necessity for concentration of all available labour on the storage works, *i.e.*, the main and northern sluices, irrigation channels, and tank embankment, on all of which work was pushed on steadily; and it is expected that the sluices will be finished this year, the excavation for the embankment trench having been retarded by cutting into a quicksand 16 feet below the bed of the tank, and the work on the northern channel rendered more difficult by cutting into rock. Permanent quarters for the guardian were erected, and 3 miles of gravel service road to the anicut completed. On an average 350 coolies per diem were employed on the works, but at least double that number are required. Barely half the present number are procured locally, the rest having been imported from India.

On the Tembittiya works 11 acres of forest and jungle were cleared from the bund, lines for 100 coolies, quarters for Sub-Inspector and overseer, besides tool store and smith's shed erected, and cart track cleared for 2½ miles from the main road to the site of the works; all the small breaches in the tank have been built up and completed, the three large breaches remaining to be finished.

In the case of the Unnichchai works, the estimate has not yet been sanctioned, but the preliminary works commenced in June, and cooly lines to accommodate 400, quarters for overseers, tool and rice stores, smith's shed, and office and quarters for clerk erected. A road from Tumpalancholai, 4½ miles long, to the site of the works was cleared, side drains cut, and fifteen culverts put in.

In the case of the Rugam lower anicuts, work was commenced in April, and all the preliminary works have been finished, namely, opening of service road and erection of cooly lines, and materials collected at the anicut sites, and it is hoped that three out of the four anicuts will be completed during 1902. Insufficient labour supply is the chief drawback both at Vakaneri and on this work.

At the Sakamam-Vammiyadi work a well was dug at Vammiyadi, and a service road cut and cleared for 3½ miles thereto, the bund partly cleared of jungle, and cooly lines and a temporary inspection bungalow built. At Sakamam itself only about one-fifth of the earthwork on the bund remains to be done, and about half that on the inlet channel. Stone has been cut for the anicut and head sluices on the Talipot-aar, and stone wedged and dressed for one of the spill walls.

Preliminary surveys and levels were also taken during the year in connection with the extension of the Paddipalai-aar scheme, which provides for a reservoir at Kondavaddavan to supply Amparai reservoir, restoration of Vladdivaddi tank, and construction of connected anicuts and channels, it being estimated that the extension will render 10,000 additional acres irrigable under this already fine work.

Better progress on all these works could have been reported but for deficiency in the labour supply, and their completion affords an ample programme for the immediate future.

Two estimates for improvements and repairs to certain anicuts and sluices under the Paddipalai-aar works have been submitted for the sanction of the Central Irrigation Board by the Director of Irrigation; they are :—

(1) Rs. 1,796, providing for repairs to three sluices.
(2) Rs. 6,049, providing for protecting abutments of seven anicuts and three sluices.

A meeting of the proprietors benefited by these anicuts and sluices was held by me on 10th November last and following days, when their consent was obtained to repayment of the cost in ten annual instalments.

The construction of several other anicuts under the restored tanks in different parts of the Batticaloa District has been applied for on promise of repayment of the cost, but has been deferred for want of experienced officers to supervise the work, those already engaged being fully occupied with the construction of sanctioned works.

Village Tanks.—The village tanks in the Province are worked by a Chief Irrigation Inspector assisted by an Inspector and four Sub-Inspectors, under the direction of the Government Agent. There are three Sub-Inspectors in the Batticaloa District, viz.;—

(1) Mr. A. J. Schaffter in charge of tanks in the Bintenna, Rugam, Eravur, and Koralai pattus;
(2) Mr. P. B. Weerasinghe in Panama pattu; and
(3) Mr. H. N. de Hoedt in charge of tanks in the rest of the pattus, viz., Manmunai north, Manmunai south, Eruvil, Porativu, Karavaku-Nintavur, Sammanturai-Nadukadu, and Akkaraipattu.

The charge of the last-named Sub-Inspector is considered too large, and it is proposed to relieve him of the village tanks in the Akkaraipattu, and transfer them to the charge of the Sub-Inspector of the adjoining Panama pattu, who at present looks after only a single pattu.

Annexed is a statement showing the number of village tanks undergoing restoration in each pattu, the total earthwork required, the quantity done during the year, and the number of cement sluices supplied:—

Return of Village Tanks, 1901.

Registers of both the village and Crown tanks in the Province are being opened with a view to systematizing work on the former under Village Committee rules, and on the latter under the Government Circulars issued during the year.

The cement pipe factory, which was temporarily closed during the year, has again been started for the manufacture of sluices for village tanks in the Batticaloa and Trincomalee Districts on estimates sanctioned by the Central Irrigation Board.

A statement is annexed showing the expenditure during the year on estimates sanctioned by the Central Irrigation Board on account of minor irrigation works in the Province:—

Statement of Expenditure on Repairs, Improvements, &c., to Irrigation Works during 1901.

No. of Estimate.	Date of Sanction.	Work.	Amount of Estimate or Amount Available.	Expenditure.	Balance Unexpended.
			Rs. c.	Rs. c.	Rs. c.
187	July 6, 1898	For transporting and inserting cement pipe sluices to village tanks, Bintenna	104 13	67 63	36 50

		Total ...	5,562 65	2,256 73	3,305 92

IV.—LEGISLATION.

Game and Firearms Ordinances.—The following amendments of the law are urgently needed in the interests of game protection :—

(1) Amendment of Ordinance No. 10 of 1891 by the grant to the police headmen of power of search of premises for the meat, hides, and horns of game, where the delay in obtaining a search warrant from a magistrate would defeat the object of a search. A clause giving headmen power of search similar to that given to them under the Salt Ordinance would be of great advantage, while providing against abuse of the power.

Police headmen already possess the power of arresting offenders charged with the commission of non-cognizable offences under certain circumstances, but even unqualified power of arrest would not be of much advantage in the case of armed offenders in a remote forest, who can resist arrest, and cannot readily be made answerable for any violence which they might commit in such resistance; whereas the power of search indicated would strike at the receiver of the venison, who can be more readily dealt with. The amendment also of sub-section (3) of section 13 of the Ordinance by the addition of the words "hides and horns" after the word "meat" would make the sub-section complete and facilitate conviction in the Police Court.

(2) Amendment of section 17 of Ordinance No. 6 of 1901 by the grant to all "public servants," as defined in the Ceylon Penal Code, of power to call for the production of gun licenses, and to arrest without warrant any person possessing, carrying, or using an unlicensed gun; the definition suggested would include Government surveyors, irrigation and forest officers, who are the classes of Government officers who have most opportunities of bringing unlicensed gun-holders to account.

V.—PUBLIC WORKS MOST REQUIRED.

Batticaloa District.

The public works most required are :—

(1) Permanent bridge over the Paddippalai-aar at 33rd mile on the South Coast road. The monsoon rainfall during November and December was below the average, but extraordinary floods during the first few days of January carried away the Kaliyodai wooden bridge on the 4th January. It has been already carried away by floods four or five times, and it is necessary for the development and prosperity of the district that a permanent bridge should now be constructed.
(2) New police barracks in the town of Batticaloa
(3) Transfer of the Customs office and warehouses to the Bar, and utilization of the present Customs warehouses as salt stores, for increased efficiency in recovery of the Customs revenue and accommodation for salt, the sale of which has nearly doubled during the last ten years.
(4) Government quarters for Office Assistant to Government Agent.
(5) Final examination of, and decision regarding, the Dutch canal project.
(6) Substitution of buckled plate concrete bridges for wooden platform bridges on the Batticaloa-Badulla road.
(7) Completion of the cart road from Pottuvil to Muppana to connect the east and south of Uva with Arugam Bay and open up the intervening country.
(8) Road on the western shore of the Batticaloa lake in the interests of the paddy proprietors under the Kadukkamunai, Pulukunavi, Divulanai, and Unnichchai irrigation schemes.
(9) Road from the Coast road *via* Vakaneri and Minneri to feed the Northern Railway, and open up intervening country.
(10) Continuation of the coast road south from Pottuvil to Panama.
(11) Connecting road between villages of Batticaloa south and south-east of Uva along present tavalam route.
(12) Transfer of the following roads to the Public Works Department :—
    (*a*) Road from Padiruppu ferry to Coast road (½ mile).
    (*b*) Road from Valaichenai to Kalkuda (3 miles).
    (*c*) Road from Eravur to Punnaikuda (3 miles).
(13) New resthouses at Karunkoddittivu and Pottuvil.
(14) Outdoor dispensary buildings at Kokkaddicholai, Nintavur, Katiraveli.

Trincomalee District.

(1) Gravelling of road from Verugal-aar to Kiliveddi.
(2) Provision of steam ferry boat between Muttur and Trincomalee.
(3) Completion of jetty, inner harbour, Trincomalee.
(4) Bridge over Verugal-aar to connect the Batticaloa and Trincomalee Districts.
(5) North Coast road, Nilaveli to Kokkilai, improvement of.
(6) Pankulam and Tiriyai road, improvement of.

VI.—SANITARY CONDITION OF THE PEOPLE.

There was no epidemic during the year, and the health of the people may be said to have been good. The rainfall during January and February was below the average, and unusually heavy rain fell in March and April, causing fever, pneumonia, and dysentery in the town of Batticaloa and in the crowded villages along the South Coast road between March and August, the health of the people having been fair during the remaining portion of the year.

During the year 8,331 rats were destroyed in Trincomalee and 1,699 in Batticaloa; and the plague hospitals, segregation camps, and medical officers' quarters connected therewith were maintained in readiness for emergencies. Private gardens were kept cleared of vegetation and rubbish, and cesspits filled in, and latrines, public and private, disinfected regularly. There are five permanent civil hospitals in the Province, one at Batticaloa, one at Trincomalee, two at Kalmunai (of which one is a leper hospital), and one at Maha-oya; there are, besides, ten permanent and eleven itinerating outdoor dispensaries in the Province, at suitable centres for the convenience of the people, the advantages of which are fully appreciated by them. Twenty-seven lepers were treated during the year in the Kalmunai Leper Hospital.

At the Wesleyan Medical Mission for women and children in Batticaloa 8,211 patients were treated during the year, as against 6,787 in 1900. The Superintendent reports as follows :—

"The part of the work of the Mission that has shown the greatest advance during the year is that connected with the town dispensary. We have spent nearly a thousand rupees in enlarging, improving, and furnishing the premises. The number of in-patients has largely increased, being 46, as against 9 in 1900. Of these 46, 20 were girls of the Mission Boarding School, whilst others were women from distant villages. There were several striking cures, attributable as much perhaps to good nourishment as to the Lady Doctor's skill, and as a consequence the popularity of the institution has steadily grown. It touches a class of women who would not at present be helped by the Government hospital, and we do our best to limit the operations of the Mission to its legitimate sphere. At Kattankudiruppu the attendance of women has been about the same as in previous years. Many of the Moormen who do not allow their women to come to the dispensary take the Lady Doctor to their homes, where she attends to their wants. At Eravur a change of position has led to a falling off of patients, so we intend to revert to the old arrangement in 1902."

4,200 patients were, besides, treated during the year at the Roman Catholic dispensary in the town of Batticaloa, as against 5,300 in the previous year, during which the increase was due to an outbreak of cholera.

The increase in the population of some 25,000 inhabitants during the decade shown by the Census was at the normal rate of increase shown by the registrars' annual returns. There has been a substantial increase in Jaffna and Moorish traders in Batticaloa town, and the irrigation works in progress during the last few years and the opening of cocoanut estates in the northern part of the Batticaloa District account for the increase of Indian cooly labour in the district.

VII.—MURDER AND SERIOUS CRIME.

The Province was comparatively free from serious crime during the year. Five cases of murder or attempted murder were reported, in four of which the accused were discharged in the Police Court, and in the fifth, in which both the injured man and accused are low-country Sinhalese, the accused has been committed for trial before the Supreme Court.

Forty-eight cases of hurt in which a knife was used were reported during the year, eleven of which only resulted in convictions.

A serious riot occurred in April between the villagers of Navatkuda and Nochchimunai, in which eight men were seriously wounded; the chief offenders were convicted in the Supreme Court, and sentenced to terms of imprisonment from eight years downwards.

Punitive police have since been quartered on both villages, and four headmen dismissed from office for neglect of duty in connection with the case.

Convictions were secured in either the Supreme Court or District Court in five cases of robbery, four of house-breaking, two of mischief by fire, five of theft, and eight of grievous hurt.

The Province compares somewhat unfavourably in serious crime (*i.e.*, crime tried by the Supreme Court or District Court) with the only other Tamil Province, and this I attribute to the Moorish population in the Eastern Province, but both Provinces compare most favourably with the low-country Sinhalese Provinces in this respect, the latter having headed the list for 1900 (latest judicial statistics available) with 19·8 persons tried per 10,000 inhabitants, as against 6·9 in the Eastern Province.

VIII.—HEADMEN AND POLICE.

The regular police for the Province consists of one Inspector, four sergeants, and thirty-four constables, of whom two sergeants and nineteen constables are stationed at Batticaloa, which might with advantage be raised to the strength recommended by the Inspector-General of Police, more especially in view of the tendency of the people to indulge periodically in riots.

During the last five years four more or less serious riots have occurred in the Batticaloa District, the last having been between the villagers of Navatkuda and Nochchimunai in April last, as mentioned under the head of Serious Crime.

During the year subsequently armed police were called out on three occasions to deal with apprehended riots at Mandur, Kattankudiruppu, and Navatkuda, but *ex parte* notices under section 114 of the Criminal Procedure Code, supported by armed force on the spot, had the effect of preventing disturbance or bloodshed. On all these occasions, as also in the discharge of their duties as Treasury Guards and patrols, as well as in prevention and prosecution, the regular police discharged their duties well.

One or two of the nine rural police constables discharged their duties very well, the rest indifferently. As regards the ordinary police headmen, it cannot, I fear, be reported that they co-operate vigorously in the prevention and detection of crime in the Batticaloa District, the view of many of them being apparently that the corrupt suppression of information regarding crime is not inconsistent with their duties; in one case under investigation at present, where a theft of Rs. 500 worth of cash and cloth from a cart on the high road at night had been committed, the proceedings are under reference to the Attorney-General with regard to the prosecution of a Vanniah, a rural constable, and two police vidanes for the entire suppression of information regarding the offence and release of the accused, which only came to my notice accidentally on circuit a month after the commission of the offence.

Only three headmen were rewarded during the year for good service in connection with their police duties. The issue of printed instructions and regular examination of their crime reports, coupled with severe notice of delinquencies, and the judicious grant of rewards in cases of good service may, it is hoped, gradually result in an improvement in the discharge of their duties relating to crime.

IX.—CATTLE STEALING AND CATTLE DISEASE.

Only forty-one cases of cattle stealing were tried in the Batticaloa District (including Kalmunai) during the year, and in only one of these was a conviction obtained, thirty-one being of a civil nature and six false. The Magistrate informs me that the vast majority of cases are of the following nature :—An animal strays from the pasture ground and joins the herd of another man; the latter

does not know whose animal it is, but is content to tend and make use of the animal until the owner finds it, which can hardly be described as theft, unless the brandmarks are altered, which is rare. In the Trincomalee District there was only one conviction for theft of cattle during the year.

The health of the cattle was good during the year; there was no outbreak of murrain, though foot-and-mouth disease prevailed in February, March, and April, during which the cattle in the Bintenna and Manmunai pattus suffered most. This disease appears to be more or less endemic in the Province, and the people do not regard it as serious; it is specially fatal to Indian and mixed breeds, the native black cattle suffering least.

X.—NEW AREAS OF CULTIVATION.

Subjoined is a statement of Crown lands sold and granted during the year, from which it will be seen that the total extent alienated during the year was less than in 1900, the decrease having been due to delay in receipt of plans from the Surveyor-General (of which my Assistant at Trincomalee also complains), the reservation of surveyed lands under new irrigation works, and the want of demand for large blocks for cocoanut cultivation. The 763 acres of forest land sold in 1900 included two large blocks purchased by native gentlemen for cocoanut cultivation, but some 1,668 acres were sold for paddy cultivation during 1901:—

Return of Lands sold and granted in the Batticaloa District during 1900 and 1901.

	1901. A.	R.	P.	1900. A.	R.	P.
Sold { Waste or high land ...	210	2	19	762	2	26
Sold { Paddy land ...	1,667	3	15	1,215	2	22
Half-improved value ...	20	1	3	8	3	26
Certificates of quiet possession ...	91	2	29·48	204	2	17·87
Total ...	1,990	1	26·48	2,191	3	11·87

XI.—CLAIMS UNDER THE WASTE LANDS ORDINANCES OF 1897, 1899, AND 1900.

It has only been necessary to put these Ordinances in force so far in the Batticaloa District in respect of one claim known as the Pottanaiveli claim, situated in the village of Varippattanchenai in the Nadukadu pattu. The Ordinance was put in motion in September last by publication of notice in the *Government Gazette* after approval by the Waste Lands Committee. The extent of the land claimed is 188 acres 1 rood and 4 perches. The land is forest, with the exception of about 24 acres, which is paddy land, and an old chena clearing under 2 acres in extent. There are three sets of claimants who base their title on transfer deeds executed between 1850 and 1860, which bear reference to certain Dutch deeds not yet forthcoming. In 1896 a certificate of quiet possession was granted to the present claimants for 16 acres 2 roods and 17 perches out of the 24 acres of paddy land referred to. Inquiry into the claim has been proceeding since the 17th January.

Another claim, which is about to be dealt with under these Ordinances, is that known as the Padaiyandaveli claim in the Manmunai south pattu.

XII.—CHENA CULTIVATION.

Chena cultivation decreased during the year owing to the operation of rules in the Bintenna district by which the chena villagers were allowed chenas during the two first years of work on abandoned tanks, the privilege ceasing in the third year, and also in consequence of much greater facilities for this kind of cultivation during the year in the Uva District on Vihara and Nindagama lands, where the people can get ten or more acres for each family, instead of the one or two allowed to them on Crown land in this Province. Influenced by this attraction some fifty families migrated into Wellassa during the first half of the year, and no persuasion to induce them to work on the abandoned tanks in this pattu, under the liberal terms of Circular No. 59 of 5th June, 1901, was of any avail. This kind of cultivation cannot altogether be suppressed, and must be countenanced, unless and until the people can be induced possibly to work under such irrigation schemes as cultivators as the restoration of Wattawalakandaya and Mahakandiyakaddu, which might be undertaken in their interest as soon as funds are available, after the completion of the irrigation schemes at present in progress, or until the gradual opening up of the district affords them some other suitable livelihood which they can be induced to follow.

XIII.—SALES OF LAND BY VILLAGERS.

There is no reason to believe that there have been frequent sales of land by villagers, including houses and fields. Ordinary sales take place between villagers, and the notaries before whom they are transacted are particularly careful, since the judgment of the Chief Justice, in respect to the necessity on their part to quote prior registration of transactions affecting lands, to see that titles are good, and that there is no fraudulent collusion between parties to conveyances.

XIV.—FOREST ADMINISTRATION.

Little progress has been made in respect of the legal declaration of reserved forests, and it has been considered advisable to await further decided action, pending receipt of the topographical survey sheets for the Province, without which satisfactory progress is difficult. It is hoped that those for the Eastern Province will be completed within a few months, and on receipt of them the sooner the reserved forests for the Province are legally defined and demarcated the better.

Mr. J. M. Chitty was appointed Forest Settlement Officer for the Batticaloa District in 1898, but no work was done beyond publication of the preliminary notice in the *Government Gazette*; Mr. A. M. Walker, the Assistant Conservator of Forests, was similarly appointed for the Trincomalee District in 1900, but the want of the topographical survey sheets has been found to render settlement impracticable.

During the year the receipts for the Province on account of timber sold in the Colombo depôt were as follows, which are exclusive of the value of timber sold locally by the two Assistant Conservators of Forests :—

Comparative Statement showing Timber sold at the Central Timber Depôt, Colombo, on account Eastern Province, in 1900 and 1901.

	Value. 1900. Rs. c.		1901. Rs. c.
Batticaloa District	27,329 78	...	27,571 31
Trincomalee District	67 45	...	16,573 12
Total for the Province ...	27,397 23		44,144 43

Subjoined is a statement of forest revenue and expenditure for the year relating to the released areas in charge of the Government Agent in the Batticaloa District. The total receipts amounted to Rs. 2,364·82 and the payments to Rs. 569·92, the latter including only the salary and allowance of the Forest Ranger. The royalty on timber felled by private parties realized Rs. 594·64. All first class timber has been removed from the released area, but there is still a demand for the inferior timber left, and every possible care is taken to protect the interests of the Crown in respect thereof.

The means adopted to check illicit felling and removal of timber from Crown land resulted during the year in 91 seizures, which resulted in one conviction in the Police Court, and Rs. 578·50 recovered departmentally as compensation for forest offences, besides Rs. 929·27 proceeds of sale of confiscated timber, carts, and ballams.

Statement of Revenue and Expenditure, Forest Administration, Government Agent's Released Areas, Batticaloa District, for 1901.

REVENUE.	Amount. Rs. c.	EXPENDITURE.	Amount. Rs. c.
Royalty on timber felled by private parties ...	594 64	Salary of Forest Ranger	360 0
Royalty on firewood	44 20	Allowance of Ranger	199 92
Royalty on other produce	19 20		
Proceeds sale of timber illicitly felled on Crown land	929 27		
Fines and forfeitures	578 50		
	2,165 81		
Value of timber issued to Public Departments (Conservator's Circular No. 27 of November 16, 1899)	199 1		
	2,364 82		559 92

XV.—WORK OTHER THAN ROUTINE.

I assumed duties at the end of April in succession to Mr. Murray, and, after taking charge at Headquarters, was engaged in making myself acquainted during the dry season with the large irrigation works and means of road communication in the Province, including a visit to the Trincomalee District in September.

Between the 1st May and 31st December 23 cases, committed by the Attorney-General for trial before the District Court, were tried by me as Additional District Judge, resulting in 16 convictions and 7 acquittals; there were three appeals to the Supreme Court in respect of the convictions, which resulted in one reversal on technical grounds.

Far too much of the time of the Government Agent is taken up in Kachcheri routine work, and personal attention to the many details of work connected with the Native Department, the work of ten Revenue Vanniahs, four Inspectors of Village Tanks, appeals from three Village Tribunal Presidents, and twelve Irrigation Vanniahs, in addition to the correspondence of the English Department in the Kachcheri and the miscellaneous work of nine other different departments, and work with the headmen, which in other Kachcheries devolves on the Office Assistant, with the result that the Government Agent has not sufficient time for the proper supervision and consideration of the more important work for which his time should be available in the interests of a large Province, which shows such favourable signs of development.

The Government Agency of the Province was transferred from Trincomalee to Batticaloa in 1870 for the better management of the increasing interests of Government and the people in connection with the large irrigation works in the Batticaloa District then coming into full operation. The population of the Province was in 1871 118,058 inhabitants and the revenue Rs. 333,351·87, as against 173,470 inhabitants and a revenue of Rs. 448,120·60 in 1901 (in spite of the abolition of the paddy tax in 1892), and administration work in every branch has increased correspondingly, with the addition of new work and duties connected with the establishment of Local Boards, a separate Irrigation Department, and Superintendence of the local police. In addition to this increased revenue work, the Government Agent is now also required to discharge onerous duties as Additional District Judge, and his Office Assistant has to act as Magistrate during the absence of the regular Magistrate at Kalmunai. The clerical staff of the Provincial Kachcheri has, it is true, been increased from fourteen clerks in 1870 to nineteen during the last thirty years, but they are barely equal to the increased and new work which has to be discharged.

SAMUEL HAUGHTON,
Government Agent.

Batticaloa, February 7, 1902.

REPORT ON THE TRINCOMALEE DISTRICT FOR 1901.

Area of District	...	... 1,165 square miles.
Population at Census of 1901	...	... 28,891
Population of Town (within Local Board limits)	...	... 10,216

THIS will be my sixth report on the Trincomalee District. No Assistant Agent has ever administered the District of Trincomalee for so long a period.

I am glad to be able again to furnish a favourable report on all points.

The health of the population, both in the town and in the villages, has been unusually good, and the Naval authorities inform me that such a healthy time among the sailors has never been known before on the East Indian Station.

The flagship has been in Trincomalee for an unusually long period this year, and no flagship has ever before had so little sickness on board.

The number of deaths registered in the town was as follows :—

1898	... ...	407	1900	... ...	398
1899	... ...	671	1901	... ...	386

There were a few cases of measles and chickenpox towards the close of the year, but no epidemics of a more serious character, and for the first time Trincomalee has escaped cholera for a whole decade.

Harvests were good and plentiful, and there has been no disease among cattle.

The revenue of the district was higher than it has ever been.

The same wants which I referred to last year still make themselves felt.

Trincomalee is heavily handicapped by being linked on to Batticaloa. I can send a letter to Colombo in less than two days, but if that letter is an official one, it must go *viâ* Batticaloa, and takes at least six days, and when the rivers are in flood much longer. Whenever departments are re-organized, the false position is recognized. In the Forest Department the "Circle" is partly in the North-Central Province and partly in Trincomalee, in the Irrigation Department the Trincomalee tanks are placed in charge of the Irrigation Engineer stationed at Minneri, but for revenue purposes Trincomalee is tacked on to Batticaloa. Tamankaduwa should be restored to Trincomalee, to which it naturally belongs, and to which it was attached until 1873.

The other great want is railway communication with Colombo.

Quite recently the Railway authorities have been discussing the importance of an alternative line to convey the traffic up-country in the event of landslips and rockslips on the incline (*vide* Sessional Paper No. 47 of 1901).

Four different traces have been suggested, but none were approved, and no reference was made to my proposal for a line from Kurunegala *viâ* Dambulla to Trincomalee, with a branch line to connect Matale and Dambulla. This line, while giving the much-required communication between Colombo and Trincomalee, would also afford the relief which is required in the alternative route for up-country traffic in the event of any block on the Main line.

The whole of the dangerous Allagalla Incline, with the treacherous country above Rambukkana, would be avoided, and the risk of a rice famine among the estate coolies would disappear. Rice would come in large quantities from Southern India *viâ* Trincomalee to Matale, and some of the pressure on the Main line traffic would thus be relieved.

The last paragraph of the letter of the Consulting Engineers deserves to be quoted :—

> We fully recognize the very great inconvenience and loss, not only to the Government, but to the very important tea-producing interests, which must result from any interruption of traffic on the Kadugannawa Incline, but it is a question for the Government to determine whether the risk involved is sufficient *primâ facie* to justify so large an expenditure as that now approximately estimated as being necessary in order to avoid it, *especially when it is considered the remedy might not be wholly effectual owing to the possibility of the proposed loop line being liable to interruption at the same time as the incline.*

I have italicized the last sentence because herein lies the crux of the whole matter. The proposed loop line is intended only as a remedy in seasons of heavy rain, and it is liable to the same interruptions as the existing line. On the other hand, the line which I propose from Kurunegala to Dambulla and Trincomalee runs through a much drier district with no steep inclines. It would carry traffic all the year round, and would not be liable to landslips during the rainy season. It would afford the required alternative route, it would relieve the Main line of some of its traffic, and it would open up the lands north-east of Kurunegala, the tank lands of Minneri, Topawewa, Kantalai, and Kanduluwewa, and the cocoanut lands of Trincomalee District. It would convey rice, salt, and coolies to Matale and the surroundings ; timber, tobacco, paddy, and dried fish to Colombo ; and bring Colombo and Trincomalee together for Military purposes.

On the chance of this line being opened I understand that the British India Steam Navigation Company has already bought land for its offices in Trincomalee, surveyed the necessary anchorage, and fixed upon the site for a jetty at which a line of steamers connecting Trincomalee with Madras and the ports of Southern India would load and unload.

This is but a harbinger of what we may expect as soon as the line is constructed. Later on houses, banks, and all the concomitants of a shipping port must rapidly spring into existence, and a brisk trade would be created in lieu of the present stagnation.

REVENUE AND EXPENDITURE.

The revenue of the district for the year 1901 is by far the largest that has ever been collected and has increased from Rs. 152,446·31 in 1900 to Rs. 177,458·13 in 1901—a rise equivalent to 16½ per cent. The figures since 1891 have been—

	Rs. c.		Rs. c.
1891	126,043 49	1896 ...	149,770 17
1892	139,064 69	1897	161,871 49
1893	139,527 68	1898	159,849 27
1894	141,882 6	1899	153,599 22
1895	147,839 76	1900	152,446 31
Total	694,357 68	Total ...	777,536 46
Average of Five Years...	138,871 53	Average of Five Years...	155,507 29

1901 ... Rs. 177,458·13

Part of the increase is undoubtedly accidental, and is not likely to be maintained.

There is a remarkable increase under the head of Customs Imports, Grain, of Rs. 3,841, which is difficult to account for. Undoubtedly the Indian famine and plague restrictions reduced the imports in former years, but the present figures are considerably in advance of those before the famine years.

Arrack shows a decrease of Rs. 3,506, due to the rent having been sold for a lower amount; and in this connection I may mention that the consumption of arrack in this district seems moderate when compared with that of other districts. Taking the Road Ordinance figures as showing the adult male population, we have 3,374 in the town and 4,046 in the rural districts, total 7,420. The consumption of arrack according to the renters' weekly returns was 8,506 gallons, or about 1¼ gallon per head. By a similar computation in the Negombo District in 1890 I worked out the figures at 3 gallons per head.

Salt shows an increase of Rs. 15,451. I have received no direct information from other Provinces, but I presume that this must arise from a failure in the supply of salt at Hambantota, as I have sent away large shipments to the Southern Province

What I described as an "accidental" increase is shown under Postage Stamps, as I have sold locally stamps to the value of Rs. 6,605, against Rs. 1,630 in 1900.

Formerly postage stamps were sent from Colombo for sale by the postmaster, but towards the end of 1900 a separate vendor was appointed, who obtains his stamps from the local Kachcheri, hence the increase.

A wholly satisfactory increase is that for the sale of Timber, which has gone up from Rs. 6,834 in 1900 to Rs. 13,127 in 1901. Nor does this represent the whole value of timber felled and removed on Government account, as the best timber is usually transported to Colombo for sale at the Central Depôt, where very high prices have sometimes been realized, and a sum of Rs. 21,573·12 has been credited in the General Treasury on account of this district.

Land Sales show a decrease of Rs. 1,240, which is referred to below.

Expenditure.

The expenditure has been normal, but the accounts are now kept by the Hon. the Treasurer, so I cannot give the precise figures. They will, however, be found in the Appendix.

SALT.

In my report for 1900 and former years I have referred to the uncertainty which has prevailed as to the continuance of the salt manufacture at Nilaveli.

Fortunately the Government decided to have a collection in 1900, which produced over 38,000 cwt., for during the past year I have had an unusual demand for salt from the Southern Province, a demand which still exists.

The average sales in Trincomalee amount to about 11,000 cwt. per annum, but in 1901 the sales amounted to 18,851 cwt., of which 6,600 cwt. were shipped to the Southern Province, and if this demand is likely to continue, it will be advisable to have another collection this year.

The actual outturn of last year's crop was 38,075 cwt., of which 32,049½ cwt. were stored in 1900 and 6,025½ cwt. in 1901.

Last year I referred to the variations in the "profits" shown if one year's accounts only are taken into consideration: the expenditure and revenue of a series of years must be taken and an average struck. In 1900 we had to meet the greater part of the cost of the year's collection, and the profit worked out at 143 per cent.; in 1901 there was no collection, but the cost of manufacture and of storing part of the 1900 crop fell in this year's expenditure, and the result works out at a profit of 600 per cent., as will be shown from the following table:—

Return of Salt Revenue of the District of Trincomalee for the Year 1901.

Cwt. qr. lb.	EXPENDITURE.	Rs. c.	Rs. c.
—	Establishment, Fixed and Provisional	1,195 0	
—	Contingencies other than collection	3,167 80	
6,025 2 0	Cost of manufacture at 17¾ cents per cwt.	1,069 53	
18 1 2	Wastage in transit from Nilaveli to Trincomalee store at 17¾ cents	3 24	
17 2 9	Wastage in Trincomalee store at 17¾ cents	14 11	
—	Commission to salt retailers ...	900 0	
	Total ...	6,349 68	

Cwt. qr. lb.	REVENUE.	Rs. c.	Rs. c.
4,262 0 0	Sold by retail at Trincomalee at Rs. 2·36 per cwt. ...	10,058 32	
14,589 0 0	Sold by wholesale at Trincomalee at Rs. 2·36 per cwt. ...	34,430 4	
			44,488 36
	Deduct charges ...	—	6,349 68
	Nett Revenue ...		38,138 68

Nett revenue Rs. 38,138·68 on an expenditure of Rs. 6,349·68. Nett profit 600 per cent.

I have still in store 32,113 cwt. of salt, which would suffice for local sales for 2½ years, but the sales for January continue high, and more may be required to meet the demands of other Provinces.

LAND SALES.

There has again been a falling off in the revenue from Land Sales, which, though higher than in the early nineties, has gone steadily down since 1897, when the highest figure was touched. The figures are—

	Rs.		Rs.
1891	2,879	1897	20,185
1892	5,723	1898	16,354
1893	9,521	1899	15,471
1894	7,632	1900	10,079
1895	15,818	1901	8,840
1896	12,573		

The decrease in 1901 is solely due to the want of survey plans. I have ascertained that of the overdue applications no less than 99 have been surveyed, and the field sheets are in the Surveyor-General's Office, while 78 more have been surveyed, but the field sheets not yet sent in. If preliminary plans for the former had been sent to me during the course of the year, the revenue would have shown no falling off.

Altogether I advertised for sale 641 lots (mostly surveyed years ago) for general sale and 178 lots for default of payment of purchase instalments. Of the former, 66 lots of paddy land, aggregating 380½ acres, were sold for Rs. 5,547; and 57 lots of high land, aggregating 101 acres, were sold for Rs. 1,437; while 35 lots, aggregating 79 acres, were granted on certificate of quiet possession.

THE FOREST DEPARTMENT.

Work has been carried out under the "Circle" system, the Assistant Conservator having control over the North-Eastern Circle, which lies partly in the North-Central Province and partly in this district. The remaining area of the district, a strip of about 7 miles in width from the sea coast, is under the control of the Assistant Agent, with the assistance of a Forest Ranger.

I enclose a report by the Ranger with regard to the "released area." It will be seen that only common round timber is dealt with in this portion of the district, except for strictly local use in house-building.

The revenue amounted to Rs. 1,267·17, including fines recovered for offences under the Ordinance. The only expenditure is the salary and allowance of the Forest Ranger, amounting to Rs. 560.

The Assistant Conservator, however, was permitted to carry on operations in the *released area*, and he reports that 797 logs of ebony, weighing 157 tons, and 237 logs of other timber (chiefly halmilla and ranai) were felled and removed departmentally, besides 100 satin, 326 palai, and 91 ranai trees sold standing in the forests, so that the *released area* contributed a large amount towards the Forest Revenue, as, besides the sum of Rs. 6,318·52 credited in the Trincomalee Kachcheri, a sum of Rs. 21,573·12 was credited at the General Treasury, Colombo.

Report on the Released Area of the Forests under the control of the Assistant Government Agent, Trincomalee, for the Year 1901.

Area.—The area of the released forest, which lies under the control of the Assistant Government Agent of Trincomalee, is about 525 square miles. This includes the villages and private jungles.

Boundary.—It is bounded on the north by Kokkilai lake and Parayan-aru; east by sea; south by Verugal-ganga, the road from Verugal-ganga to Kiliveddi, and the demarcation line which runs from Kiliveddi to Kandy road; and on the west by reserve forests belonging to the North-Eastern Circle.

Surveys.—Nil.

Prosecutions and Compositions.—There were 23 cases of forest offences dealt with by the Assistant Government Agent, and a sum of Rs. 112·63, which includes the fine imposed on the delinquents as well as the proceeds sale of confiscated forest produce, was credited in the Trincomalee Kachcheri during the year.

Plantations.—Nil.

Roads and Paths.—Nil.

Buildings.—Nil.

Timber, &c., sold from Depôt.—Nil.

Timber, &c., sold on Payment of Royalty.—The following statement shows the value of sales of different kinds of forest produce under the above heading during the year :—

	Rs. c.
Timber	775 63
Alampal	68 91
Bark	109 0
Cane	4 80
Clay	108 60
Stone	75 60
Firewood	12 0
Total ...	1,154 54

A sum of Rs. 775·63 was recovered during the year on account of royalty on timber of common kinds, such as seevintai, uluvintai, nedunarai, and kanukkompu, and required for local use. The issue of licenses for felling valuable timber was left with the officers of the Forest Department.

Royalty on barks collected amounted to Rs. 109 during the year. All bark is weighed in presence of the Forest Officer before a shipment permit for Colombo or Negapatam is issued. All the other forest produce, such as cane, clay, stone, firewood, and alampal, the royalty on which is Rs. 20, was consumed locally.

Free Grants.—Permits to fell timber in the released area were issued to Public Works and Irrigation Departments under Circular No. 27 of 16th November, 1899, and to the Assistant Government Agent for building a Village Tribunal bungalow at Tiriyai to the value of Rs. 109·58, and fence sticks of the nominal value of Rs. 3,082·55 were cut by villagers for fencing gardens, fields, &c.

Abstract showing Total Value of Produce sold or granted Free.—The total value of produce sold on payment and granted free of royalty amounts to Rs. 4,346·67 for the year.

Statement of Trees felled.—Nine satin, 4 halmilla, 11 ranai and suriya trees were felled during the year by the Government Agent's and Irrigation Departments and by private parties.

Value of Timber in Depôt.—Nil.

Revenue credited in the Treasury.—The total amount of revenue credited in the Kachcheri during the year amounted to Rs. 1,267·17, which includes the fines for forest offences and the proceeds sale of the confiscated forest produce.

Expenditure disbursed.—The amount of expenditure during the year is Rs. 560. Of this, Rs. 360 is the personal emoluments and Rs. 200 the travelling allowance of the Forest Ranger.

Outstandings due to the Department.—Nil.

Outstandings due by the Department.—Nil.

Sample Plots.—Nil.

Statement showing abundance of Seed and Seedlings.—Nil.

GAME.

Game seems as plentiful as ever, elephants, buffaloes, sambur, spotted and red deer, and pea-fowl are met in almost every jungle throughout the district, while teal, snipe, flamingoes add to the sport to be had in the district. It is remarkable that though year after year the number of snipe shot in the Tamblegam tract of paddy fields is counted by the *thousand couples*, the number of these migratory birds never seems to diminish, and I think there have been more snipe during the present season than in former years.

Bears and leopards are also numerous, one young sportsman bagging four bears and one leopard at a water hole in a single night's watch.

Nine game licenses were issued between January and May for the end of the season, and twenty-five during November and December for the commencement of the current season. Of these, fourteen were issued to Europeans. One license to shoot buffaloes was issued, and twenty-three licenses to capture buffaloes.

Forty-five guns were licensed and two renewal licenses were issued.

According to existing regulations, 1901 was the year in which licenses are issued for the capture of elephants in the Trincomalee District. Altogether seventeen licenses were issued, most of them to Afghan traders, and nine young elephants were reported as captured on license.

LEGISLATION.

I venture to repeat what I have suggested in former years, viz., the necessity for a short Ordinance providing for the election of "managers" of Hindu temples. I have had a case pending for some time in the District Court, which illustrates the want of legislation. There existed from some early period a shrine in the town of Trincomalee with its "lingam" and a shed and little, if anything, more. A wealthy and pious Hindu a few years ago built on the site a temple with its concomitant buildings, removed the "lingam" to the temple, and endowed the same with landed properties, jewellery, &c. He himself acted as manager for some years, and then by a trust deed appointed a relation as co-manager with himself, and to succeed him as manager after his death. On his death this relation succeeded him in the management, but a few months later a number of persons convened a meeting alleging that they were the descendants of the founder of the original "temple," of which little or nothing remained, and they elected a small committee from among themselves to act as managers, entirely ignoring the benefactor who had built and endowed the new temple.

After "lying low" for some time these elected managers entered a case in the District Court against the *de facto* manager, the heir of the man who built the new temple, for a declaration that they were the lawful managers, and for recovery of the temple property, both movable and immovable.

There was no *proof* as to who was the original founder, no *proof* of the succession of any managers, but merely an *allegation* that there had been a regular line of managers selected from among the descendants of the founder, and that one of these managers had *verbally granted permission* to the builder of the new temple to make certain improvements and had *allowed* him temporarily to manage the temple property. After the death of the so-called hereditary manager, no one had been appointed to succeed him.

What I desire is that a legal status should be given to the "managers" of Hindu temples, that provision should be made for their election either for limited periods or for life, and that a record should be kept and filed in the District Court of all elections, showing what person is authorized to deal with the temple property, which is often extensive and valuable. Further interference in temple affairs I do not recommend.

PUBLIC WORKS.

Roads.

The two principal roads leading to Dambulla and Anuradhapura show continued improvement. An iron bridge was constructed over the Paravipanchan-aru in place of the wooden platform which existed previously, and a small iron bridge was put up in place of a wooden platform at 1¼ mile from Trincomalee.

I am glad to note that greater attention has been paid to the clearing of jungle on the roadsides and to the opening up of drains, so as to allow of flood water escaping into the jungle streams instead of stagnating in side drains.

The new section of road to Mutur ferry was completed at the end of the year, but as the survey of the adjoining lands for which I had asked was not made in time, I fear the road will be but little used for some time, as the boats are not likely to stop at a jetty where there are no stores or boutiques where goods can be deposited. I was in hopes that I should have been able to sell boutique lots and garden lots along this road, and gradually to induce the villagers of Mutur to leave their congested and low-lying dwellings and to settle on the high lands near the seashore.

It was a matter of considerable importance, as tending to improve the health of the villagers and the sanitation of the village, and should have been carried out simultaneously with the opening of the new road and new jetty. It will be more difficult hereafter to induce the traders, boatmen, and villagers to adopt the new route.

The section of road from Kiliveddi to the Verukal river remains *in statu quo*, *i.e.*, almost impracticable for wheeled traffic, but I am glad to see that a vote "on account" has been taken in the Supply Bill for 1902.

The North Coast road as far as Nilaveli is in fair order, but is heavy in wet weather and after gravelling.

A small vote should be taken for raising the centre of the road between the 4th and 5th milestones, where the causeway was widened in 1900. Not having been properly "barrelled" the road is like a raised canal in wet weather, as the rain water lodges in the centre of the road.

Buildings.

The public buildings have been kept in a fair state of repair. The ironwork of the new jetty has been completed at the Government Factory, and a start is to be made early in 1902 in erecting the same.

The old gaol was entirely pulled down, and a small building consisting of a line of cells and a small association ward has been built in its place. The female ward has been altered so as to afford less facilities for escape, the old office pulled down and rebuilt at a distance from the outer wall, and a new cook-house and work shed constructed. The whole has been done in a workmanlike and substantial manner, and does credit to Mr. Vanderstraaten, the District Engineer. I now feel that I have a gaol where prisoners can safely be kept in custody, in lieu of a tumble-down old salt store, which afforded every facility and temptation to escape.

The Government is in treaty also for the purchase of a house on an admirable site facing the esplanade for the use of the Assistant Collector of Customs, who now has to rent a private house.

The new resthouse at Kantalai was after much delay completed and opened to the travelling public on the 20th December. It is a handsome and substantial stone building built on solid rock and overlooking the beautiful Kantalai lake. The building does credit to both Architect (Mr. Tomalin) and Engineer (Mr. Vanderstraaten).

The Kuchchaveli resthouse collapsed, as I expected, during the year, and I am getting a small one-roomed building put up in its place, utilizing the materials of the old building, which a hundred years ago was probably a military tappal station.

A new Village Tribunal Court was also built at Tiriyai, partly from subscriptions raised among the villagers and partly from a grant in aid given by the Government. I am anxious gradually to replace all the mud huts used as village courts by permanent buildings, and a small vote to assist in this work has been sanctioned in the Supply Bill for 1902.

PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

The work of the greatest importance for the improvement of the district is a line of railway from Kurunegala to Trincomalee, which I have already referred to in my opening remarks, and at greater length in previous reports. This railway is one of "the crumbs which are to become great loaves," which His Excellency has allowed to fall from his table to be gathered by his successor, but there is no reason why the preliminary surveys and estimates should not be prepared at an early date. Already one of the great shipping companies has bought land for offices and warehouses in anticipation of the necessary sanction, and this only foreshadows the vast improvements which must follow the construction of the railway.

Next to a railway improved communication by land is necessary for the development of the district.

His Excellency the Governor, when travelling through one of the wildest parts of the district along the *track* which appears on the map as the "Coast road," a track which is under water for miles during the north-east monsoon, was much struck by the fertility of the soil and its adaptability to the cultivation of paddy, tobacco, cocoanuts, &c. Yet these villages are often for weeks together entirely cut off from Trincomalee by flood water. Suitors and witnesses cannot attend court, the villagers have to depend on home-grown provisions, cultivators are unable to sell their crops, and unfortunately the rainy season coincides with the north-east monsoon, when the sea is too rough for coasting vessels to ply, or for fishing boats to go out to sea. And yet the remedy is perfectly easy, and could be obtained at small cost. Along the whole line of coast there is high land suitable for cocoanut cultivation, over which the road could be made at no great cost. The Dutch were content with any open track, whether over loose sea sand, as in the case of the old "road" from Negombo to Kalpitiya, or through saline swamps, as in the case of the road round the coast from Hambantota to Mullaittivu, and these old tracks were for long adopted by the British. There was not much traffic, and time was no object. But as the country is developed and traffic increases good roads become an absolute necessity. If it had not been for difficulties raised elsewhere, I might have had 7 or 8 miles opened on high ground ready to be gravelled this year.

Another portion of the district, that lying to the west of the Mahaweli-ganga and south of Tamblegam Bay, is in an equally deplorable condition for want of roads, though the circumstances differ. Formerly a road ran from Kiniyai to Tamankaduwa, and all along the boundary of that Province were many village tanks and paddy fields, all of which are shown in a Dutch map in my possession. Now the road is overgrown with jungle, the villages have been abandoned, and all the

population has settled on the shores of the bay and in a few hamlets about Tamblegam. The village of Kiniyai is overcrowded, and there is no land suitable for paddy, except in the south, and the lands around the village are periodically inundated alternately by salt and fresh water.

I recently explored that part of the district, and I am convinced that much of the salt water flooding can be prevented by dams across the backwaters, and that a large tract of 2,000 acres of the finest paddy land in the Island could be cultivated by means of one or two tanks now buried in jungle, while probably an equal extent would be benefited by the exclusion of sea water. A road to these paddy lands is also required, and I have made a commencement on this lately. No Government money whatever has *ever* been spent in that part of the district on roads, irrigation works, or other improvements, and help is much required.

I have previously referred to the wants of the Sinhalese portion of the district. On a recent circuit the Government Agent had an opportunity of seeing the beautiful village tanks of that division, and was surprised to see the very large amount that the villagers had contributed in the way of earthwork, which benefits Crown and private lands alike, and yet the only help these villagers (the poorest in the district) have had has been a cement pipe sluice, the cost of which averages only Rs. 60.

In many cases there are only two shareholders, and they are required to contribute the labour necessary for restoring a bund of ¼ mile in length, 10 or 12 feet high, and from 6 to 18 feet wide It is hopeless, heart-breaking work. These people are willing to repay to Government the cost of the work, if only the whole work could be completed for them in a year. They have been ten or twelve years at work already, and in many cases the work (at the present rate of progress) will not be completed for ten or twelve years more. I think a portion of the large Irrigation Vote should be apportioned to this district to enable me to help these villagers either by way of loan or of free grant, as circumstances may dictate.

HEALTH OF CATTLE.

There has been neither rinderpest nor hoof-and-mouth disease among the cattle of the district during the year.

The cattle registers show 7,870 buffaloes and 9,904 neat cattle, an increase of 3,213 buffaloes and 2,518 neat cattle when compared with the figures furnished for 1900.

FOOD SUPPLY.

The Trincomalee District is able not only to support itself in the way of locally-grown food stuffs, but to export paddy as well as dried fish to other districts.

Rice is imported for the consumption of the town population to the amount of 26,366 cwt., equivalent to 44,742 bushels. On the other hand, the district exports coastwise 13,256 cwt., equivalent to 29,693 bushels of paddy.

In my report for the year 1900 I dealt at some length with the produce of paddy lands, and referred to actual measurements which I had secured. I have this year secured similar measurements of the actual yield of six different fields, four of which were irrigated by tanks and two were munmari lands. The results show even higher returns than those given last year, as follows :—

Village.	Field.	Grade.	Actual Outturn of One Acre. Bushels.
Tamblegam ...	Kalliyadivayal ...	Very good ...	63½
Kantalai ...	Peratuvelichenai ...	Very good ...	82
Tamblegam ...	Manalpakuti ...	Good ...	39
Kantalai ...	Paddankaddinilai ...	Medium ...	30

The above fields are irrigated by Kantalai tank, and give an average of 53½ bushels per acre. The following are munmari lands cultivated by rain water :—

Village.	Field.	Grade.	Actual Outturn of One Acre. Bushels.
Kiniyai ...	Nelluchchenai ...	Good ...	32½
Do. ...	Kuddiyakulam ...	Bad ...	24

giving an average of 28 bushels, though the second crop was considered to be bad. With these figures to support those given last year, I adhere to the average which I then adopted of 35 bushels to the acre, with a slight increase for the magnificent fields of Tamblegam irrigated by Kantalai tank, which even the headmen assess at 45 bushels per acre. I thus arrive at the following estimate of the actual crops for the year 1901 :—

Division.	Area Cultivated. Acres.	Produce. Bushels.
Trincomalee	513½ ...	17,973
Tamblegam pattu	4,519 ...	170,540
Koddiyar pattu	4,048 ...	141,640
Kaddukkulam pattu east	1,707 ...	59,745
Kaddukkulam pattu west	370 ...	12,950
Total ...	11,157½	402,848

The actual area cultivated is 237½ acres in excess of that cultivated in 1900, and the produce greater by 27,648 bushels.

Unfortunately the poor Sinhalese division of Kaddukkulam pattu west shows a considerable decrease, owing to the failure of many of the village tanks for want of rain during the north-east monsoon.

The average price of both rice and paddy has been slightly higher than in 1900. The prices of other food stuffs appear to be normal, as per annexed return :—

Average Prices of Provisions, Arrack, and Manufactured Tobacco.

		Rs. c.			Rs. c.
Wheaten flour, per lb.	...	0 12	Salt, per lb.	...	0 2
Wheaten bread, per lb.	...	0 15	Tobacco, manufactured, per lb.	...	3 60
Butter, fresh, per lb.	...	1 25	Tobacco, raw, per lb.	...	0 37½
Butter, salt, per lb.	...	1 25	Rice, per bushel	...	4 25
Cheese, per lb.	...	1 0	Paddy, per bushel	...	1 40
Coffee, per lb.	...	1 0	Peas, per bushel	...	3 75
Tea, per lb.	...	1 0	Arrack, per gallon	...	6 50
Sugar, per lb.	...	0 16			

With regard to the increased imports of rice and simultaneous rise in price, it should be noted that the demand for imported rice is due partly to the detachment of Madras troops stationed at Trincomalee and partly to the supply required for coolies employed on the restoration of Minneri tank.

The produce of the cocoanut palm is still insufficient to meet local requirements, but another five years will probably see the balance turned owing to recent extension of cocoanut cultivation, as every division, except the town division and Kaddukkulam west, shows that there are now more plants under eight years of age than there are bearing trees, so that the produce is likely to be doubled or trebled within eight years.

Of fine grain, there is practically none. Chena permits are issued only to Veddahs.

The supply of fish taken both from the sea and from inland waters seems unlimited. It is impossible to extenuate the quantity of dried fish exported by land, but the Customs returns show that no less than 12,253 cwt. of dried fish are exported (coastwise) by sea.

Game is plentiful, and adds considerably to the food supply as well as the sport of the district.

SANITATION AND HEALTH OF THE PEOPLE.

There has been no relaxation in the vigilance displayed in recent years in keeping out the plague and other epidemics. Strict sanitation and cleanliness in the town and villages are rigidly enforced.

There is a permanent infectious diseases hospital at the end of Orr's Hill at a safe distance from the town, but easily accessible by road or by water; and near this is a temporary hospital intended for plague patients in view of an outbreak, which can be burnt down after use. Sites for plague hospitals have also been selected and cleared near the most populous villages, and materials for erecting sheds can be obtained at short notice.

Fortunately there has been no epidemic of a more severe type than measles and chickenpox, of which there were a few cases in the town.

The annexed list shows the number and locality of hospitals and dispensaries and the number of patients treated :—

				No. of Inmates.
Trincomalee Town	...	1	Government Civil Hospital ...	281
Do.	...	1	Infectious Diseases Hospital	—
Do.	...	1	Outdoor Dispensary ...	5,010
Mutur ...	...	1	Government Outdoor Dispensary	2,878
Toppur ...	...	1	Do.	906
Nilaveli ...	...	1	Do.	461
Tampalakamam	...	1	Do.	1,781
Kiniyai	...	1	Do.	900

As there have been during the past ten years so few patients treated at the Nilaveli dispensary (which is within 9 miles from Trincomalee), it is proposed to close this dispensary and to open one instead at the village Tiriyai, which is about 30 miles from Trincomalee, and accessible to the villagers of Tiriyai, Pulmoddai, Amarivayal, and Tennamarawadi in the north, as well as to the Sinhalese villages of Kaddukkulam pattu west. These villages have hitherto not had any medical advantages, and during part of the year they are quite cut off from Trincomalee.

VITAL STATISTICS.

In my last report I stated that too much stress could not be laid on the figures usually adopted for calculating the actual population of the district, but I was not prepared to find so large a discrepancy as the Census figures have shown. These figures are, however, of great importance, as it is on these that the Registrar-General bases his percentages of births and deaths, and by the latter percentages the health of a district or division is gauged. According to the registration returns, the figure adopted to the end of 1900 for the total population was only 25,949, which was lower than the figure shown by the Census of 1891, denoting a decrease of population. The actual figure shown by the Census of 1901 was 28,891, showing a very considerable increase. This will, however, be dealt with more fully under the heading of "Census," and I now refer to it only as showing that the percentages are apt to be fallacious, and especially so in the rural districts.

The figures for the year are in every way most favourable, both as regards births and deaths. The births in the town have risen from 245 to 389, Koddiyar pattu 347 to 376, Tamblegam pattu 290 to 339, Kaddukkulam pattu 142 to 172, and for the whole district from 1,024 to 1,271.

On the other hand, the deaths have decreased as follows :—In the town from 389 to 386, Koddiyar pattu 203 to 199, Tamblegam pattu 171 to 166, Kaddukkulam pattu 161 to 134, and the total for the district from 924 to 885.

There has therefore been (exclusive of immigration and emigration) an increase of 286 in the population of the district during the year.

Unfortunately marriage registration is sadly neglected in this district; but even in this Department there has been an improvement, as the general marriages registered number 121, against 95 in 1900.

IRRIGATION.

Work under this head has been now entirely transferred, as regards the larger irrigation works, to the Irrigation Department. Minor works are now in charge of the Government Agent, who works through Irrigation Inspectors. Unfortunately no provision seems to have been made for

allotting any portion of the irrigation funds to the District Assistant Agencies, and not one cent of Government funds has been spent in this district.

As regards the larger irrigation works, *Kantalai Tank* is in good working order, and, as usual very fine crops were raised on lands both at Kantalai and Tamblegam irrigated by this tank. 2,102 acres at Tamblegam were cultivated during the year and 360 acres at Kantalai, and when the new channel which is now being constructed at Kantalai is complete, there ought to be a very considerable extension of paddy cultivation in that village.

There is a large extent of paddy land which has been sold, and which has been hitherto dependent on the "Barber's channel"; but the line of that channel was faulty, and the supply of water inadequate. I pointed this out some years ago, and at last a new channel has been commenced, starting eastward from the "Barber's channel," which will serve all the lands already sold, including the fertile tract known as Perartuveli, as well as a considerable extent beyond, which has been surveyed, but not sold.

The extreme fertility of some of these lands is shown by the figures which I have given under the heading "Food Supply." It will be observed that one acre of the Perartuveli yielded no less than 82 buslels, while one acre of the field Kalliyadivayal at Tamblegam yielded 63½ bushels.

The Kantalai tank did not fill up to spill level during the monsoon of 1900–1901, but the water was sufficient for the requirements of the large extent (nearly 3,000 acres) irrigated therefrom. During the recent monsoon the tank has been filled up, and the water would be sufficient to irrigate a further extent of 2,000 acres, if not more.

Allai tank filled up as usual during the north-east monsoon, but as the tank is so very shallow there was considerable difficulty as usual in retaining sufficient water for the large extent irrigated by the tank. However, the cultivators were persuaded to commence operations earlier than usual, utilizing rain water for ploughing, and saving the tank water for the later operations, and thus an excellent crop was secured. But this is a precarious system, and there will always be anxiety until the scheme for conducting water into the tank by means of a channel from the Verugal river is carried through. Unfortunately this scheme still hangs fire owing to the difficulty of securing the services of an irrigation officer to superintend the work.

The bund of the connected tank *Peruveli* was raised and strengthened during the year, the work being entrusted to the Irrigation Inspector Mr. A. C. Buttery. This work was of considerable importance, as the larger *Allai* tank depends on the stability of Peruveli, with which it is connected by a channel. If the bund of Peruveli tank had seriously breached, the water in Allai would have been lowered by 4 feet. I use the expression "*seriously* breached" intentionally, as in former years the bund of Peruveli was repeatedly breached, and the whole work was only saved by the strenuous exertions of the cultivators, who turned out in force to stop the breaches before any very serious mischief was done.

Andankulam and *Periyakulam* tanks fulfilled their requirements. The former tank is not wholly satisfactory, as the existing channels have been badly traced, and cannot distribute water to some of the higher lands. High level channels were traced many years ago, but were never constructed, and I have already taken steps to have this work, which will not be costly, put in hand.

Nearly all the lands under *Illakantai* tank have now been sold, and a considerable extension of paddy cultivation has resulted.

Minor Works.

Earthwork was carried on as usual on the village tanks during the year, but I am unable to give the usual statement of work done, as the Irrigation Inspector was removed to Batticaloa towards the end of the year to act for the Chief Inspector of the Province, to whom leave was granted by the defunct Provincial Irrigation Board.

Vilankulam tank having been declared a village tank, a commencement was made with its restoration, but owing to delay in the receipt of funds from Colombo and the removal of Mr. Buttery, Irrigation Inspector, to Batticaloa, work was stopped just before the commencement of the north-east monsoon, and the bund was again breached.

No Government moneys were granted for expenditure on any of the minor works.

VILLAGE TRIBUNAL.

I annex a statement of work done in the Village Tribunal during the year. The President continues to give satisfaction, and his decisions are generally good. Appeals were taken in only 21 cases, and in 19 of these the decisions were affirmed. One appeal only was taken to the Governor and Executive Council, the decision of the Assistant Government Agent being affirmed :—

Return showing the Number of Criminal and Civil Cases instituted, decided, and appealed under the Village Communities' Ordinance for the Year 1901.

CRIME.

The Trincomalee District is, as a rule, very free from serious crime. There are four cases pending before the Supreme Court, two of which are of a serious kind. One is a case of attempted murder, both the accused and the injured man being low-country Sinhalese of the Galle District. A dispute arose between the proprietor and manager of a boutique on a matter of accounts, in the course of which the latter shot his master with a revolver. Fortunately the wound inflicted was only skin deep. The second case was one of robbery of cash from the person of a villager in the Koddiyar pattu. There is another case of robbery of jewellery, and the fourth case is a trifling case of forgery, in which a man obtained a bottle of gin cheap on a forged order.

Five cases were committed for trial before the District Court. One was a case of unlawful assembly and riot, in which eight accused were convicted and sentenced to two years' rigorous imprisonment, the ringleader being also fined Rs. 100. In one case of grievous hurt with knives three accused were convicted and sentenced as follows : First accused nine months' rigorous imprisonment, second accused twelve months' and ten lashes, third accused six months' imprisonment. The other three cases resulted in acquittals.

In the Police Court there was one bad case of cattle stealing, cleverly traced out by the rural constable of Tamblegam. This case resulted in two accused (Malays of Kiniyai) being sentenced to six months' rigorous imprisonment. One boy was convicted of goat stealing. In four other cases reported there was no offence (of cattle stealing) disclosed, and one case was proved to be false.

Only one case of knifing resulted in a conviction, though the Magistrate considered that a second case was true, but he was unable to convict owing to contradictory evidence. All other cases ended in an acquittal.

Altogether there were 178 cases, with 230 accused persons charged with cognizable offences in the Police Court. Of these, 68 persons were convicted, 8 committed for trial before the Supreme Court, 17 before the District Court, and 137 were acquitted or discharged.

HEADMEN AND CRIME.

The headmen have done excellent work in the prevention and detection of crime. In every case where a crime was committed the headmen or rural police have at once proceeded to the spot, arrested accused persons, and brought up the necessary witnesses, so that the case could be heard at once. This was especially marked in a case of robbery from Koddiyar pattu and a case of cattle stealing from Kiniyai. In the latter case the Police Magistrate specially commended the rural constable (Majid Khan) of Tamblegam, who has been rewarded for good work on several occasions.

REGULAR POLICE.

There have been several changes in the force during the year. As a rule, the police have done well and given satisfaction, and Sergeants Deen Sarap and Cole have been specially commended by the Police Magistrate for smart work in connection with a case of shooting in the town of Trincomalee.

CATTLE STEALING.

Only one case of cattle stealing and one of goat stealing were proved to conviction. Other cases reported were cases of animals either straying or possibly killed by leopards.

NEW AREAS OF CULTIVATION.

There has been a very considerable extension of paddy cultivation, especially near Mutur in Koddiyar pattu and the lands irrigable by Illakantai tank in the same pattu ; and the area at Tamblegam irrigated by the Kantalai tank is being extended year by year. 380 acres of paddy land were sold during the year, and will shortly be brought under cultivation.

Cocoanut cultivation is also extending, and 101 acres of high land were sold during the year. I shall look for a more rapid extension after the estates planted within the last four or five years have come into bearing.

TOBACCO.

Tobacco is still in a precarious position. The Customs figures show a drop from 1,401 cwt. sea-borne to Jaffna in 1900 to 842½ cwt. taken in 1901. What is required is the services of an expert in the curing of tobacco, for the locally-grown leaf is excellent, but the tobacco is spoilt in the curing. A large extent of land is suitable for the growth of tobacco, but much of it has fallen out of cultivation owing to the low prices of recent years.

CHENA CULTIVATION.

Practically *nil*. Permits are granted only to the Veddahs of Koddiyar pattu.

SALE OF LAND BY VILLAGERS.

There has been nothing worthy of note, and no Crown lands have been absorbed under cover of private transfers or Fiscal's sales.

WORK OTHER THAN ROUTINE.

I have been deeply interested in the two questions of opening up the northern parts of the district by means of a proper road and the drainage and irrigation of the lands lying to the south of Kiniyai. Such questions imply a departure from the beaten track and working on the lines of scientific officers. Jungles must be explored to see the "lie of the land," whether the lands are high or swampy, the nature of the soils, whether the water is sweet or brackish, and so on. The further these researches are extended the more one feels convinced that a great future lies before the Trincomalee District as soon as a railway brings fresh capital, fresh energy, and fresh life into the district. Many square miles might be drained of its salt water and irrigated by fresh water, and a yet larger area might be denuded of jungle and covered with cocoanuts, tobacco, and perhaps rubber.

I should like to see pioneer terms offered to persons who are willing to experiment in the growth of rubber as well as the edible-date palm. This last can be *grown* in the district, and I have seen it *in flower*; but hitherto it has never been known to bear fruit, but this I attribute solely to the fact that the trees are few and far apart and uni-sexual. If there were a plantation of 100 trees in one block so that the flowers would be fertilized, I see no reason why the trees should not be fruitful and profitable.

THE CENSUS.

The Census was one of the great events of the year. The work was done thoroughly and, I believe, accurately, but special reports on the subject have been forwarded and will be published in their proper place. I will therefore confine my remarks to the figures for this district.

The town population shows a remarkable drop from 11,596 in 1891 to 10,216 in 1901. This is partly due to the figures for "Shipping." There happened to be vessels in harbour in 1891 which accounted for 940 persons, whereas in 1901 there were only 26 persons afloat on native vessels. On the other hand, the military population has been increased from 352 to 592. The fall in the town population is probably due to two causes, one of which also affected the village of Nilaveli. These are (1) decline in the tobacco industry; (2) a gradual removal of the town population to the rural districts.

With regard to (1), there was a great demand for Trincomalee tobacco in 1891, causing quite a rush into tobacco land both in the town and at Nilaveli. Cultivators were brought from Jaffna, who came only for the cultivating season from November to March, and these probably swelled the number in 1891. Lately there has been a decline in the industry, and consequently there are fewer immigrants from Jaffna. Work on the Jaffna Railway also tended to decrease this annual immigration from Jaffna.

The second cause is one which I consider is to the advantage of the district. The population had learnt to rely almost entirely on the naval dockyard and the garrison and flocked into the town. If the naval station had been abandoned, the population would have been thrown upon its own resources. I rejoice, therefore, to see a tendency to take up agricultural pursuits and to see the population working outwards into the rural districts. I cannot otherwise account for the very large increases (1) in Koddiyar pattu from 5,441 to 7,038; (2) in Tamblegam pattu from 4,029 to 6,374.

The Kaddukkulam pattu east shows only a small increase, from 2,589 to 2,717, while the depopulation of the Sinhalese villages, which I have so frequently deplored, still continues, the number having fallen from 926 to 764.

THE POST OFFICE.

Though the work of the post office belongs to another Department, it will not be out of place to refer to the very large amount of business transacted at the Trincomalee Post Office.

Until nearly the end of 1900 all postage stamps for local use were sent from Colombo to the postmaster for sale by him, and only a small supply was kept in the Kachcheri to meet emergencies in case of the postmaster's supply failing, as it often did when the coaching service was disorganized. It was therefore impossible to estimate the local business.

In 1900, however, a separate vendor for postage stamps was appointed, who obtained his stamps direct from the Kachcheri, and I find that in 1901 postage stamps to the value of Rs. 6,943 were sold to the vendors.

But the transmission of letters is only one branch of the work transacted in a post office. The money order business is a very large one, and the native troops as well as traders avail themselves of the facilities offered by the post office for the transmission of money. I find that in this branch alone remittances to the Head Office were made amounting to no less than Rs. 114,643.

The sale of telegraph stamps came within four cents of Rs. 15,000, while the Savings Bank remittances amounted to Rs. 3,725. The business in this post office is therefore shown to be very large.

GENERAL.

Rear-Admiral Bosanquet still holds the high office of Naval Commander-in-Chief of the East Indian Station.

The Flagship "Highflyer" spent a longer time than usual at Trincomalee, and the general health of the sailors has never been so good as it has been this year.

Major Middlemass, R.E., commanded the troops for the greater part of the year, and on his promotion handed over the command to Major James, R.G.A., who was in turn succeeded by Major Van Straubenzee, R.E.

There was no collection of salt during the year, as the stores were full and no more salt was required.

The topographical map is still incomplete, though the survey was finished in 1900.

His Excellency the Governor visited the district in March, riding along the track known as the "North Coast road" from the boundary of the Mullaittivu District.

Some of the headmen of the district were present in Colombo on the occasion of the visit of His Royal Highness the Duke of Cornwall and York.

The rainfall was again deficient, amounting only to 56·55 inches. The average rainfall for the three years 1896 to 1898 amounted to 79·19 inches, but during the last three years 1899 to 1901 the average has been only 57·93. If the readings have been properly taken, this deficiency is hard to explain.

C. M. LUSHINGTON,
Assistant Government Agent.

March 27, 1902.

NORTH-WESTERN PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, NORTH-WESTERN PROVINCE, FOR 1901.

Area of Province ... ... 3,000 square miles.
1901 Population 357,496

REVENUE.

THE revenue of the Province for the year 1901 amounted to Rs. 1,592,505, showing an increase of Rs. 82,598 over the previous year. The receipts under the various heads of revenue were as follows :—

Detailed Statement of Revenue collected in the North-Western Province during the Years 1900 and 1901.

Heads of Revenue.	1900.	1901.	Increase.	Decrease.	Remarks.

Grand Total ...	1,509,907 12	1,592,505 70	86,345 64	3,747 6	Net increase Rs. 82,598 58

For more than half this amount, viz., Rs. 46,000, Licenses are responsible, but there is a marked increase in Toll Rents, Revenue, Judicial, and Postage Stamps, Survey Fees, Fees for Title Deeds, Recoveries on Account of Irrigation Works, Rents of Government Property, Sale of Timber, and Prœmia on Leases.

Nearly all these items of increase are unfailing indications of prosperous times, whilst, on the other hand, the items in which there is a decrease are not of similar importance. For instance, the principal heads under which there is a decrease are (1) Dispensary and Hospital Collections, Medical Aid Recoveries, and Sale of Drugs, which are attributed to a less unhealthy season and fever patients; and (2) Fines in District Court—not necessarily a matter for regret.

The following statement gives the revenue for the last twenty years :—

Statement showing the Revenue of the Province for the last Twenty Years.

Year.	Rs.	Year.	Rs.
1882	951,497	1892	1,344,062
1883	988,632	1893	1,190,803
1884	1,165,580	1894	1,245,986
1885	1,082,870	1895	1,180,313
1886	1,065,378	1896	1,159,767
1887	1,068,771	1897	1,372,489
1888	1,083,820	1898	1,461,058
1889	1,561,322	1899	1,561,611
1890	1,440,405	1900	1,509,907
1891	2,150,952	1901	1,592,505

It will be seen that the past year's revenue was the highest on record, with the exception of 1891. The figures for that year do not furnish any real comparison, as they include an item of over Rs. 900,000 for the Pearl Fishery. The ordinary revenue for that year was only Rs. 1,200,000.

A comparative statement showing the extent of land alienated by the Crown during the last three years in this Province is annexed :—

Return of Lands granted and sold in the several Kachcheries in the North-Western Province during the Years 1899, 1900, and 1901, including those disposed of under the 7th and 8th Clauses of the Ordinance No. 12 of 1840.

The figures do not tally with those given in the revenue statement. The explanation is that the subjoined statement gives the sums actually bid for land during the year. The revenue figures give the amounts credited. It is only necessary to pay down one-tenth and fees on the day of sale, and one month's grace is allowed for payment of the balance. Consequently, in the month of December only a portion of the amounts realized by sales appears credited. The number of sales in the month of December, 1901, was exceptionally large. It will be seen that the number of lots sold and disposed of was very largely in excess of the two previous years, the figures being—

1899	275
1900	523
1901	1,643

whilst in 1898 only 181 lots were disposed of. This is no doubt mainly due to the increase, under the head Certificates against the Crown, which are usually known as certificates of quiet possession, but even excluding that head, it will be seen that there is a marked increase, the figures being for sales and grants at half-improved value—

1899	246
1900	361
1901	548

whilst in 1898 but 153 lots were similarly dealt with. The total extent alienated was considerably more than in 1898 and 1900, but somewhat less than in 1899.

The average price for lots sold was Rs. 37 per acre, as against Rs. 38 in 1899 and Rs. 42 in 1900; but the average per acre for half-improved lots was Rs. 31 per acre, as against Rs. 21 in 1899 and Rs. 25 in 1900.

The annexed returns give the prices realized by the sale of arrack and toll rents :—

Statement showing the Amounts realized by the Sale of Arrack Rents of the North-Western Province, from 1896 to 1901.

Description of Rent.	July 1, 1896, to June 30, 1897.	July 1, 1897, to June 30, 1898.	July 1, 1898, to Dec. 31, 1900.	January 1, to Dec. 31, 1901.	Increase in 1901 over 1900.

* Sold with bridge, Maguru-oya, Puttalam road. † July 1 to December 31. ‡ May to December.

EXPENDITURE.

The expenditure for the last two years has been as follows:—

	1900. Rs.	1901. Rs.
Personal Emoluments	26,398	26,895*
Pensions	6,683	7,403†
Other Charges	14,236	11,572‡
Total ...	47,317	45,870

* Increase due to payment of increments.
† Increase due to additional pensioners.
‡ A special increase in the travelling vote was allowed for the year 1900 to the late Government Agent Mr. Fisher, which accounts for more than half the decrease under the head "Other Charges."

I.—FOOD SUPPLY OF THE PEOPLE.

There was no scarcity of food in any part of the Province. The price of paddy in the Wanni, formerly the most poverty stricken of all the divisions of the Kurunegala District, varied from Re. 1·25 to Re. 1·50, and of dry grain from Re. 1 to Re. 1·25. This division now produces more grain than it requires, and barters the excess for cocoanuts and other food products which it does not grow. For the most part the northern divisions produce enough grain for their needs. The southern supplement the local production with imported rice or grain from other divisions.

The figures furnished by the Ratemahatmayas of different divisions vary very widely, and do not appear to me to be of sufficient accuracy to be reproduced. Adjoining divisions, where the conditions are practically the same, give respectively returns of 30 bushels an acre (or approximately fifteen-fold) and 14 bushels an acre or less than half. The lower figure is, in my opinion, more nearly correct. The average yield does not, I believe, exceed ten-fold.

The conditions of life of the Demala *hatpattu* of the Puttalam District are similar to those of the Wanni, but so far less has been done by the people in regard to irrigation, and the supply of paddy is consequently less.

The area stated to be under cultivation is also very inaccurate, for instance, the Wendawili hatpattu is reported to have double the acreage under paddy of the Wanni with its 600 tanks. The topographical survey will no doubt correct these mistakes and omissions.

In the maritime districts of the Province the supply of fish is plentiful. Although cows are very numerous, especially in the Wanni, the people make no use of milk, which they regard in the light of a medicine. It is unfortunate that so useful and nourishing a food, which is readily obtainable, is not utilized. There would probably be far fewer cases of parangi in the Wanni and other parts of the Province, if the villager could be induced to bring up his children on a milk diet.

II.—IRRIGATION.

Last year the work of restoration of village tanks in this Province was vigorously prosecuted. In the Dewamedi hatpattu 233 tanks were completed, in Hiriyala hatpattu south 58, in the Demala hatpattu of the Puttalam District 84, and in the Chilaw District 5, in all 380. There now remain to be undertaken in these districts:—

In Dewamedi Hatpattu	17
Hiriyala Hatpattu South	15
Demala Hatpattu	23
Chilaw District	111
Total ...	166

These will, I hope, be completed in the course of the present year, and in addition the restoration of the village tanks in Hiriyala hatpattu north 85 in number, and in Katugampola hatpattu, where there are 140, will be undertaken. When this programme has been finished, practically all the village tanks in the Province will have been restored. In the remaining divisions of the Weudawili and Dambadeni hatpattus there are but few village tanks, and the cultivators depend on rainfall, which is rarely deficient, as these districts adjoin the hills of the Central and Sabaragamuwa Provinces. Here, too, considerable areas of land are under cocoanuts, which means that the people generally are prosperous, and there is consequently not the same necessity for irrigation as in the wastes of the Wanni and Dewamedi hatpattus.

The villagers of the district have worked well during the year, as is evidenced by the number of tanks completed. Where tanks are not finished, it is usually due to the fact that a proportion of the landowners under such tanks are non-resident, and it is difficult to ensure service of notice on absentee proprietors, who are either low-country men or Moormen travelling in various Provinces as traders. Some alteration of the irrigation rules may be necessary to obviate the delay which is thus caused by the dilatoriness of a few proprietors. It should be possible in such cases to have the work performed by hired labour, and to recover the value by sale, if necessary in the last resort, of the fields benefited. At the present time months are often wasted in the attempt to serve summons on an absentee proprietor, who can then only be fined for his neglect when he does eventually appear before the Gansabhawa. The tank in the meantime remains uncompleted.

Provision was made for supplying 225 cement pipe sluices during the year to village tanks that had been completed. For the larger tanks masonry sluices are provided.

With regard to larger irrigation works under the direct control of Government, some Rs. 190,000 was spent in additional works connected with the Deduru-oya channel and in maintenance. This latter work is under the direct charge of Mr. Parker, the Assistant Director of Irrigation, who pays periodical visits to it. For Meddeketiya tank a sum of Rs. 2,070 was provided for repairs.

Two Irrigation Officers, Messrs. Hilton and H. C. Berwick, were engaged on preliminary surveys in connection with a scheme for supplying water by a channel to a large tank at Galgamuwa and filling a number of tanks *en route* by means of subsidiary channels. The scheme appears to be a promising one. The ordinary village tank is too small to hold up a supply capable of lasting through a period of drought. Its usefulness consists in storing sufficient water for cultivation of the usual harvests, where otherwise the rainfall would in itself be insufficient for that purpose. The large storage tanks, such as Kalawewa, provide for seasons of actual drought.

One other large scheme, the restoration of Pandawewa, has also entered the preliminary stage of a contour survey. This tank is said to have been constructed in the reign of King Panduwas, the third in descent from Wijayo, in which case he would be one of the pioneers of irrigation amongst the Sinhalese kings. A considerable portion of the bund is in good preservation, and there is a fine natural spill in solid rock.

Altogether the progress of irrigation in this Province is very encouraging, and the consequent improvement in the condition of the people is marked. To the late Mr. Fisher is due the credit of the adoption of a spirited and definite policy in regard to the prosecution of irrigation works in this Province.

III.—LEGISLATION.

In Gansabhawa cases a small fee should, I think, be levied on the issue of civil process and on appeals. In the latter case the amount of the fee should be refunded, if the appeal is successful. There seems no reason why some portion of the cost of the administration of justice by Village Tribunals should not be recovered from the unsuccessful suitor, who has either put the law in motion without sufficient cause or has endeavoured to evade a just claim, and frivolous and dilatory appeals would probably be checked.

The Firearms Ordinance should be introduced into the Kurunegala District, where the reckless use of guns is very common. There is not the same necessity for its introduction into the Chilaw and Puttalam Districts.

IV.—WORKS MOST REQUIRED IN THE PROVINCE.

A good water supply for the town of Kurunegala is the most pressing want at the present time, and it is hoped that in the course of the year a beginning will be made in this direction. A comprehensive scheme has just been prepared by Mr. R. W. Smith of the Public Works Department and submitted to Government for consideration.

The improvement of the drainage of the town is also greatly required, and the work might be taken up in connection with the waterworks plans. There is but little doubt that the completion of these undertakings would result in a great improvement in the health of the town, which has hitherto borne an evil reputation by reason of its high death-rate.

In spite of the size of the place there are as yet no markets, and a public recreation ground is also required. Steps are being taken to supply these wants. The funds required for these large improvements to the town will have to be raised by loan, but the rapidly-increasing importance of the town with the extension of the railway to the North fully justifies the increased expenditure that will have to be incurred.

A new Post Office is much wanted in Kurunegala. There is an excellent site available opposite the jail, where a building, which would be an ornament to the town, could be erected.

A light railway to Chilaw and Puttalam from Colombo has long been advocated, but has only recently come within the sphere of practical politics. There can be but little doubt that on the completion of the lines now under construction, the coast line north from Colombo, tapping the rich districts of Negombo and Chilaw and the salt-producing plains of Puttalam, must be the first to claim attention, if the policy of railway extension in Ceylon is to continue. The population and the goods traffic alike justify the construction of this line, passing as it does through the finest cocoanut plantations in the Island and with a teeming population along the sea-horde to Chilaw, whence cocoanut cultivation is steadily extending northwards.

In their reports on their respective districts the Assistant Agents of Puttalam and Chilaw have furnished a list of the works in their opinion most required. In Chilaw the principal need is a new hospital. It is universally admitted that this is a necessity, and it is hoped that provision will be made for this work in the Supply Bill for next year. Hitherto there has been some difficulty in respect of a suitable site, but this difficulty is not insuperable.

An iron bridge over the Chilaw river to replace the present wooden structure, which is most inconvenient, if not positively dangerous, is greatly wanted.

In the Puttalam District the Assistant Agent urges the construction of a light tramway to bring the salt into the central stores from the salterns. There has been constant difficulty in arranging for transport by cart. Rates are raised to an unreasonable extent, and at best such transport is slow. It is of great importance that a collection of salt should be rapidly dealt with, as a shower of rain may destroy the formation. The cost of laying down a light tram would be inconsiderable, as the road is absolutely flat for the entire distance from the salterns to the stores.

V.—PLANS FOR THE IMPROVEMENT OF THE PROVINCE.

(1) The completion of the village tank system, which has already been dealt with under the head of Irrigation, is of primary importance to the Province, and especially to the home district of Kurunegala.

(2) Next in importance comes the construction of feeder roads to the railway, which will open up the country and provide means of communication, in addition to the main object of bringing traffic to the railway.

(3) The construction of dispensaries in outlying parts of the district, so as to enable the people to have within a reasonable distance the means of obtaining medicines and drugs, such as quinine. In this district the villagers have now great faith in the efficacy of European medicines, and the existing dispensaries are thronged in the unhealthy months of the year—December and January. The inhabitants tax themselves through the agency of the Village Committees at the rate of a rupee a head for the construction of dispensaries, and a programme under which thirteen buildings are to be erected has been undertaken. So far one has been completed in December, and three others are nearing completion. The money for these buildings has been collected without any great difficulty. The initiation of this scheme was due to the late Mr. Fisher, and this Province was the first to voluntarily undertake the cost of the construction of such buildings. It has been a matter of reproach that for every local requirement the Central Government is not merely appealed to for assistance, but is expected to bear the entire cost of such improvements, and in this instance at any rate the district is free from the charge.

(4) The village schools are, whenever it is practicable, being furnished with a plot of land, and the masters receive supplies of vegetable seeds with which to plant up the soil. These gardens are for the most part experimental, but in time good results may be expected. The boys work in these plots, and if but one or two in each school are induced to take an interest in this cultivation, the gradual extension of the production of vegetables, of which at present there is great scarcity in the Province, may be hoped for. Much of course depends on the master and the interest he takes in the subject. Unsuitable soil and want of water are frequent difficulties. In this latter case wells are being dug to supply the want, and it rarely happens that the soil does not suit any kind of vegetable.

(5) The improvement of the breed of cattle is one of the great wants of the Province. The numbers of cattle are very large, but no attempt has been made by selection or otherwise to improve the class, which is deteriorating in size and in milk production. A native cow in full milk will frequently not give more than a quarter of a bottle a day. The dairy farm that has been started in Kurunegala will, it is hoped, prove a useful object lesson to the people of the district, and also assist in improving the breed of native cattle by the sale of good bull-calves.

VI.—SANITARY CONDITION OF THE PEOPLE.

The Kurunegala District was not visited by any epidemic. Towards the end of the year there was a considerable outbreak of fever, but this unfortunately occurs nearly every year in December and January.

In the town of Kurunegala there were a few cases of chickenpox amongst pilgrims returning from St. Anna's festival in the Puttalam District. The cases were promptly dealt with, and the disease did not spread. The sanitary condition of the towns and of the villages generally was good. In the Kurunegala District a sixty yards belt of jungle is cleared round each village so as to allow of the free circulation of air.

With regard to the prevention of the spread of plague, sites for plague camps have been fixed on and cleared in the principal town or village of each division in the Kurunegala District. In the Puttalam and Chilaw Districts, where there is some risk of its introduction from the sea, the number of such centres is larger, and cadjan buildings have in some places been erected in which to isolate patients should the disease break out.

VII.—Cases of Murder and of the use of the Knife.

Annexed is a statement for the last three years of murders and cases of grievous hurt in the six divisions of the Kurunegala District, with the area and population of each. The figures disclose an improvement under both classes of cases as compared with 1900, but they are slightly higher than those for 1899 :—

Comparative Statement of Crimes of Violence committed in the several Hatpattus during 1899, 1900, and 1901.

Hatpattu.	Area. Square Miles.	Population.	1899.		1900.		1901.	
			Murder.	Grievous Hurt.	Murder.	Grievous Hurt.	Murder.	Grievous Hurt.
Weudawili Hatpattu	177	50,417	6	30	3	43	6	32
Dambadeni Hatpattu	164½	41,606	3	19	9	23	2	22
Dewamedi Hatpattu	186¾	32,079	—	7	1	4	1	4
Katugampola Hatpattu	358¼	53,322	3	12	7	20	3	19
Hiriyala Hatpattu	387½	29,967	1	12	3	22	2	10
Wanni Hatpattu	569½	37,127	1	—	3	5	1	3
			14	80	26	117	15	90

The following is a list of cases of murder with the details of each offence :—

Weudawili Hatpattu.

1. *Ulpatagama, 29th January, 1901.*—The deceased Ranhamy, a Kandyan cultivator, was shot whilst he was on a cocoanut tree after dusk. Three Sinhalese men were arrested, but two were discharged by the Magistrate. The first accused was committed before the Supreme Court on a charge of voluntarily causing grievous hurt and sentenced to 4½ years' rigorous imprisonment.

2. *Muttettugala, 12th February, 1901.*—The deceased Muna Chena Mohamadu Abubakkar was a habitual criminal, and the accused Abdul was on bad terms with him. The accused met deceased on the road in the dark and struck him with a stone on the head. The deceased being a habitual was afraid to complain to the Police, and was treated for some time by a vedarala until he became seriously ill. He was removed to the hospital, and there died after three days. The accused was sentenced to seven years' rigorous imprisonment.

3. *Wewagedara, 18th April, 1901.*—The Korala of this village, the Duraya, and several others armed with guns, clubs, &c., went out to seize a party of gamblers. On the way some of the men molested the inmates of a Duraya's house, a general disturbance took place, and while the Korala's men were running away, one of them—Pina—was shot dead. It was not ascertained who fired the shot, and the homicide remains undetected.

4. *Wataraka, 5th June, 1901.*—The deceased Ukku Banda was sleeping in a shed in the evening, when he was shot dead. Two men were put on their trial for this murder before the Supreme Court, but were acquitted.

5. *Wenduruweva, 2nd September, 1901.*—Appuhamy, the deceased, a notorious cattle lifter, was shot dead near the house of a Moorman. A man named Palladian was suspected, and he and another man were arrested, but the evidence against them was insufficient, and they were acquitted. The motive in this case was supposed to be jealousy.

6. *Galgamuwa, 3rd November, 1901.*—The deceased Appuhamy and the accused Punchirala were cultivators. The accused alleged that deceased and several others came into his premises, forced open the doors of a room, broke into the granary, and removed paddy, that he shot at the thieves, but did not know what happened. The deceased's body was found the following day in a distant thorny jungle. This story of the accused was not believed by the Magistrate, and proceedings were taken against Punchirala and another man, but they were subsequently discharged on instructions from the Prosecuting Department.

Dambadeni Hatpattu.

7. *Aturuwela, 19th April, 1901.*—The deceased Selestinahamy, a low-country Sinhalese girl, was asked in marriage by the accused Julis, but her parents did not give their consent. When deceased was drawing water from a well the accused pushed her into it, jumped after her, and forced her down until she was drowned. The accused was sentenced to death, but the sentence was commuted to ten years' rigorous imprisonment.

8. *Kalalpitiya, 14th October, 1901.*—The deceased Dekanchiya was a dhoby and cultivator. He was shot at night in a cocoanut plantation. Two men were taken into custody, but as evidence against them was insufficient, they were discharged by the Police Magistrate. No motive for the murder could be found.

Dewamedi Hatpattu.

9. *Kolamuna, 23rd January, 1901.*—A villager named Herathamy was killed by a blow from a club or stick. Some thirteen men, including two headmen, are said to have conspired to introduce cooked and raw beef into the house of the deceased in order to charge him with cattle lifting. A quarrel ensued and Herathamy was killed. The doctor deposed that the deceased was an ill-nourished man, and that his spleen was ruptured. The case is pending against ten accused before the District Court on a charge of voluntarily causing grievous hurt.

10. *Walaliya, 15th April, 1901.*—The accused Rankira and his wife adopted a girl, and when she grew up the accused kept her as his mistress. The deceased Ausada was paying her attentions, and one day eloped with her. The accused is said to have watched his opportunity and shot deceased when he was in a field. He was, however, acquitted when put on his trial before the Supreme Court.

Katugampola Hatpattu.

11. *Meddepola, 26th April, 1901.*—The deceased Punchirala was a kapurala. Whilst conducting a devil ceremony, at which many people assembled, the accused Welun Appu, who was under the influence of liquor, came to witness it. A fight took place, in which the deceased was stabbed to death. The accused was convicted under section 297, Ceylon Penal Code, and sentenced to ten years' rigorous imprisonment.

12. *Bakmiruppa, 2nd August, 1901.*—The deceased Sindi, a young woman, stole some cocoanuts and rice from the house of another woman named Pini during her absence. On Pini's return she abused Sindi. One Hapuwa thereupon struck Sindi with a broomstick. She went home and died shortly afterwards. Hapuwa, when he found her dead, secretly buried her with the help of two others, Petta and Tambaliya. The body was exhumed, and the medical evidence disclosed that the deceased was sickly and that the injuries were slight. Upon instructions from the Prosecuting Department the accused were dealt with by the Magistrate, the first accused was sentenced to one month's rigorous imprisonment. The second and third were discharged.

13. *Konduruwapola, 8th October, 1901.*—The deceased was an *ex*-Korala, who when in office was very harsh in his dealings with the villagers. One night at about 8 P.M., when he was engaged in his copperah drying shed, he was shot dead. Two men were arrested, but the evidence for the prosecution was untrustworthy, and the accused were discharged.

Hiriyala Hatpattu.

14. *Maduragoda, 26th January, 1901.*—The deceased Peris Samaranaika, a nephew of the late Mr. Attygalla, Mudaliyar, was employed at the plumbago pits as manager. The accused W. Jayasinha, manager of a rival pit, after an altercation about a right of way, shot the deceased and also cut him with a sword. Three of the deceased's subordinates, Appuhamy, John Perera, and Kalu Banda, who came up to his assistance, were also injured by the accused and four of his subordinates. The first accused was put on his trial for murder and was sentenced to death; this sentence was commuted to twenty years' rigorous imprisonment. The other accused were acquitted.

15. *Uturuwela, 16th August, 1901.*—The accused Punchi Banda and deceased Ukku Banda had an altercation about the distribution of some fish, and the accused stabbed deceased with a clasp knife. The accused was sentenced to death.

In regard to crime generally, the statistics betoken a slight improvement:—

	1901	62,300	705	201	504	11·3	28·5	88	55	—	1,132

Return A gives the number of serious offences against person and property committed during the year. There is a trifling diminution in the total number of offences committed, but the percentage of convictions was lower than in 1900. The Weudawili hatpattu resumes its position as the most criminal of the hatpattus. In Return A the figures for the town of Kurunegala, which is in this hatpattu, are included, but even without those figures, which considerably swell the total, Return C, in which Kurunegala is separately dealt with, shows Weudawili hatpattu to have the worst reputation for crime.

Return C gives the number of taverns in each division, and also the number of offences committed in each division. It cannot be said that the return throws much light on the vexed question of the connection between the number of taverns and crime. In the Wanni, with five taverns only, the offences are most infrequent, and in Dambadeni, where taverns are comparatively numerous (12), offences are numerous. These figures support the generally received view. Unfortunately, in the Weudawili hatpattu, with only 6 taverns, we find the largest number of offences of any district: whilst in the Katugampola division, with the largest number of taverns (15), offences are few, less than a third of the number in Weudawili hatpattu. Again, in Hiriyala hatpattu, with fewer taverns (4) than in any other division, the offences are more than double the number in the Wanni with 5, and just exceed the number in Katugampola with 15 taverns. It would not, however, be safe to deduce from these figures that there is no connection between drink and crime. It would, indeed, be idle to deny it. One of the homicides referred to in the previous list was directly due to drink, but it must be remembered that illicit drinking may be carried on where taverns are few, if the people are already accustomed to take intoxicating liquor. All that can be safely laid down is that the number of offences is not directly proportionate to the number of taverns.

Generally speaking, however, I think that gambling and land disputes are a more fertile source of violent crime in this country than drink; and in the case of murders, revenge and jealousy are the most frequent motives.

VIII.—Whether the Headmen have vigorously co-operated in the Prosecution and Detection of Crime, and the Names of those who have distinguished themselves in this respect.

On the whole, the headmen have done well, and in some cases excellently. In a serious case of cacao stealing from Yatawatta estate, where three of the thieves escaped across the border into this Province, the headman of Malmiwala on receiving information went from the Weudawili hatpattu to Tamankaduwa and there arrested the man who was wanted. The other two men were also arrested.

The following are the names of headmen who have earned rewards for conspicuous energy in detecting and arresting offenders:—

Statement showing the Names of Headmen, &c., who were rewarded during 1901 on the recommendations of the Police Magistrate, Kurunegala, &c.

No.	Name of Headman.	Office.	Amount of Reward. Rs.
1	E. D. Banda	Gan-arachchi of Boyagoda	20
2	J. Fernando	Peace Officer of Pilessa	15
3	Kalu Banda	Gan-arachchi of Puswella	20
4	G. Mudalihami	Korale Arachchi of Gantihe	20
5	Appuhamy	Korale Arachchi of Kadurugashena	10
6	Punchirala	Korala of Walgam pattu	30
7	Madarsa	Udaiyar of Puttalam	20
8	S. Dingiri Banda	—	25
9	Kaurala	—	25
10	Mudiyanse	Korala of Maraluwawa	15
11	J. Fernando	Peace Officer of Pilessa	10
12	Punchirala	Peace Officer of Narammala	40

No.	Name of Headman.	Office.	Amount of Reward. Rs.
13	J. Fernando	Peace Officer of Pilessa	10
14	Assena Lebbe	Peace Officer of Hadirawalana	10
15	Punchi Banda	Gan-arachchi of Malmiwala	25
16	M. D. S. Siriwardena	Korala of Alawwa	25
17	W. A. K. Mudiyanse	Gan-arachchi of Wangomuawasama in Kegalla District	25
18	Ukku Banda	Gan-arachchi of Panaliyapalata	25

IX.—CONDUCT OF REGULAR AND RURAL POLICE.

The regular police have done their work fairly. They have kept order in the town, but, as was noticed in the report of the late Mr. Fisher for 1899, they generally fail in detective ability.

In view of the considerable amount of crime and the growing importance of the Province, with the extension of the Northern Railway and its general development, an Assistant Superintendent of Police is greatly needed to regularly supervise and direct the work of the police.

The rural police consist of peace officers, one or more for each korale, who are, with a few exceptions, unpaid. They have satisfactorily discharged the duties entrusted to them, which consist chiefly in preserving order on main thoroughfares and in important villages like Dodangaslanda, which is the centre of a large mining population engaged in the plumbago industry.

X.—CATTLE STEALING.

The District of Kurunegala, which was formerly the most notorious in the Island for cattle stealing, has now lost its evil reputation, and the returns disclose only a normal number of offences. The figures for 1901 show an improvement over the last two years:—

1899	127
1900	147
1901	117

There were 24 convictions, as against 18 in 1900.

The communal system of branding has undoubtedly done much to prevent the systematic theft of cattle. Any village headman can at once see whether an animal bears the brands of his division. If it does not, he can immediately require explanation from the man in whose possession it is, who must prove his ownership by means of the production of cattle vouchers.

XI.—DISEASE AMONG CATTLE.

Only one case of murrain or cattle plague was reported during the year. In the Wanni hatpattu and also in the Weudawili hatpattu there were slight outbreaks of hoof-and-mouth disease in the middle of the year, but few deaths resulted.

There is little doubt that the disease can be effectually checked by the measures of quarantine in Colombo, which are now being adopted, as outbreaks of murrain are found to be due to imported cattle carrying the infection.

On the whole, the health of cattle was unusually good. The services of the Stock Inspector, who was stationed in Kurunegala early in the year, proved of value.

XII.—NEW AREAS OF CULTIVATION.

Cocoanut cultivation continues to progress, and nearly 2,000 acres were planted in the Kurunegala District during the past year. The increased area under this product is mainly in the Katugampola and Dambadeni hatpattus, but the cultivation is making rapid strides in the Hiriyala hatpattu also.

In the Wanni, owing to the restoration of the tanks and to favourable rainfall, there was a large increase in the extent of paddy cultivated, estimated at some 3,000 acres, as compared with the previous year, but this was of fields already asweddumized and not cultivated for some years owing to want of water. It was not entirely new land previously uncultivated. In the Dewamedi hatpattu, too, there was a large increase in the area cultivated, also in consequence of the restoration of tanks in that division. In respect of other products no marked increase is perceptible.

XIII.—WASTE LANDS ORDINANCE.

One block of land in extent 24 acres, situated at Kebellawita in the Dambadeni hatpattu, was dealt with under the Waste Lands Ordinance. An agreement was entered into with the claimants, by which they agreed to pay Rs. 10 per acre to Government for the whole block, together with all expenses incurred in dealing with the land under the provisions of the Ordinance. The money has been paid, and the land has been settled in favour of the claimants. The action taken by the Assistant Government Agents, Chilaw and Puttalam, will appear in their respective Administration Reports.

XIV.—CHENA CULTIVATION.

In the Wanni, where chena cultivation had been most difficult to check on account of the necessity that previously existed of allowing the people to grow dry grain for food, it was possible last year to restrict the cultivation owing to the increase in the area under paddy consequent on the restoration of the tanks. Where Crown land has been encroached upon for chena cultivation, the offenders have been summarily dealt with, the crops confiscated, and the value of any timber destroyed has been recovered.

XV.—Sales of Lands by Villagers.

There have been instances of sales of lands by villagers, but they rarely included houses or fields. In some instances the villagers have sold chenas, to which their title was doubtful, to low-country speculators, who desired to plant them up with cocoanuts. In such cases the title of the Crown has been maintained. The case referred to in a previous paragraph relating to the Waste Lands Ordinance was one of these. The villagers had sold chenas to which they had no title. The purchasers from the villagers agreed to pay Rs. 10 an acre to the Crown for these chenas. Another such case is pending in the courts. In the Katugampola and Dambadeni hatpattus, where cocoanut cultivation is fast extending, it is highly desirable that the block survey should be taken up speedily, with a view to securing the rights of the Crown in these cases of doubtful title. The transformation of chena into cocoanut plantations could then be encouraged.

XVI.—Village Tribunals.

There are twelve Gansabhawa courts in the Kurunegala District, two in each of the six hatpattus. The salaries of the Presidents are paid by Government, but all other charges, including repairs to buildings, are met from Gansabhawa funds.

The large number of cases pending in the Dewamedi and Hiriyala hatpattus is almost entirely due to the institutions for failure to complete earthwork on village tanks. The villagers are frequently allowed time in which to complete their allotted tasks, and in the meanwhile the cases remain pending against them. The Presidents are not in fault in respect of these cases.

There is a want of uniformity in some of these returns, which I propose to have remedied. For instance, the President of the Wanni hatpattu returns the number of amicable settlements as nil, whilst the Weuda President records 337 cases thus settled. The difference is due to the fact that one President enters under that head cases settled out of court as "amicable settlements," whilst the other returns only those which he has personally settled in court.

XVII.—Working of the Thoroughfares Ordinance.

The collections show a marked increase over the previous year. The figures for the past two years are as follows :—

	Discharged their Liability.	
	1900.	1901.
Kurunegala	56,030	58,143
Chilaw	16,686	17,411
Puttalam	6,053	6,635

At the end of the year only 509 were unaccounted for. The detailed returns are given in a separate report on the working of the Thoroughfares Ordinance.

XVIII.—Work other than mere Routine.

The acquisition of land for the Northern Extension was carried on up to the Kala-oya, which forms the northern boundary between this Province and the North-Central Province.

The decennial Census was taken on the 1st March, 1901, and showed an increase of 31,579 in the population of the Province as compared with 1891.

XIX.—Miscellaneous.

Considerable progress was made with the Northern Railway Extension, and the bridge over the Deduru-oya—the most formidable undertaking of the kind in this Province—was satisfactorily completed by the end of the year. The line was practically finished as far as the first station Wellawa, and the stations at Ganewatta at the 13th and Maho at the 26th mile were also completed and occupied by the Railway Engineers. Earthwork was in progress along the whole line as far as Ambanpola, 35 miles from Kurunegala.

The figures given by the Railway show some falling off in the output from the plumbago pits as compared with 1900, and many of the pits in the neighbourhood of Dodangaslanda have been closed since the boom in this mineral collapsed :—

Statement showing Quantity of Plumbago despatched by Rail from Kurunegala during 1900 and 1901.

From	To	1900. Tons cwt.	1901. Tons cwt.	Decrease. Tons cwt.
Kurunegala ...	Colombo ...	3,642 11	3,076 21	565 10

Events of Interest.

His Royal Highness the Prince of Wales received an address from the people of the North-Western Province at Polgahawela on the 12th April, 1901, when travelling to Kandy.

Changes amongst Officials.

The lamented death of Mr. Fisher, who had administered the Province with so much energy and success, caused widespread sorrow amongst all classes of the community, to whom he had greatly endeared himself. He was succeeded in May by Mr. Murray, who was appointed to act as Treasurer in November, and was succeeded by the writer.

Mr. Mason, the District Judge of Kurunegala, was succeeded in the same month—November—by Mr. Baumgartner.

Kurunegala, March 27, 1902.

L. CRAWFORD,
Government Agent.

REPORT ON THE PUTTALAM DISTRICT FOR 1901.

Area, 889¼ square miles; Population, 30,071.

I.—REVENUE.

THE revenue amounted to Rs. 891,999·71, being Rs. 38,230·94 more than that of 1900. The increase was chiefly due to larger sales of salt and land. The following statement shows the revenue for 1900 and 1901 and the causes of increase or decrease under the various heads:—

Comparative Statement of the Revenue of the Puttalam District for the Years 1900 and 1901.

Heads of Service.	1900. Rs. c.	1901. Rs. c.	Remarks.
Customs	— ...	79 74 ...	Increase is due to sale of salved goods of the schooner "Suppramania Puravi" wrecked off Musselpitty.
Port, Harbour, Wharf, & Lighthouse Dues	251 18 ...	205 80 ...	—
Licenses, Excise, and Internal Revenue not otherwise classified ...	792,531 50 ...	814,506 45 ...	Increase is due to higher figures obtained for sale of arrack rents, larger sale of salt, and to fines under forest offence.
Fees of Court or Office, Payment for Specific Services, and Reimbursements in Aid	12,703 51 ...	14,412 43 ...	Increase is due to sale of more lands.
Post and Telegraph	62 0 ...	— ...	Decrease is due to postage stamps not being sold now in the Kachcheri.
Rents of Government Property ...	391 58 ...	643 50 ...	—
Interest	42 3 ...	47 93 ...	—
Miscellaneous Receipts ...	270 89 ...	338 20 ...	—
Sale of Government Property ...	4,256 •3 ...	5,662 29 ...	—
Total exclusive of Land Sales	810,508 72	835,896 34	
Land Sales	43,260 5 ...	56,103 37 ...	Increase is due to sale of more lands.
Total	853,768 77	891,768 71	

The following statement shows the revenue of the district during the last ten years:—

	Rs. c.		Rs. c.
1892	739,428 30	1897	781,257 62
1893	702,664 98	1898	833,800 40
1894	696,867 1	1899	955,445 86
1895	719,309 51	1900	853,768 77
1896	693,370 29	1901	891,999 71

The abnormal revenue of 1899 was due to exceptionally large sales of land as explained in previous reports.

A sum of Rs. 677,300 was remitted to the General Treasury, being the surplus of receipts over payments. The following statement shows the amounts remitted from this Kachcheri during the last ten years:—

	Rs. c.		Rs. c.
1892	504,602 50	1898	555,800 0
1893	535,994 25	1899	655,400 0
1894	499,055 0	1900	711,200 0
1895	450,000 0	1901	677,300 0
1896	460,000 0		
1897	681,900 0	Total ...	5,731,251 75

II.—EXPENDITURE.

The following statement shows the expenditure for 1900 and 1901. The increase of Rs. 19,992·07 under the head of Salt is due to a favourable manufacturing season, the result being that more salt was collected than in 1900, and larger payments had to be made to the manufacturers:—

	1900. Rs. c.	1901. Rs. c.
Personal Emoluments	24,366 64 ...	24,598 3
Pensions	1,523 60 ...	1,663 60
Other Charges.

Special Advances.			
Cost of manufacturing, collecting, and storing salt ...	74,999 68	...	94,991 75
Value of steam launch	3,565 0	...	255 18
Boat-house for steam launch	604 25	...	395 75
For scavenging Kalpitiya town	315 0	...	—
	123,223 78		140,956 73

III.—GRANTS OF LAND.

The following statement shows the extent of land granted at half-improved value and sold during 1901. The total extent alienated was 1,481A. 3R. 15P., being 363A. 3R. 34P. more than the extent sold in 1900:—

District.	Number of Grants under 100 Acres.		Number of Grants above 100 Acres not exceeding 500.		Number of Grants exceeding 500 Acres.		Total No. of Grants in 1901.	Total Number of Acres granted in 1901.	Whether by Grant or Purchase.	Average Price per Acre.	State the Total Number of Acres granted.	State the Total Number of Acres sold.	State the Total Number of Acres, remaining unsold
	No. of Grants.	Number of Acres.	No. of Grants.	Number of Acres.	No. of Grants.	Number of Acres.

The revenue derived from land sales in 1901 exceeded that of 1900 by Rs. 9,411·65. The revenue from land sales during the last ten years has been as follows:—

	Rs. c.		Rs. c.
1892 ...	4,690 0	1899 ...	144,855 53
1893 ...	6,181 43	1900 ...	38,439 95
1894 ...	32,658 25	1901 ...	47,851 60
1895 ...	2,088 57		
1896 ...	1,154 50	Total ...	287,648 83
1897 ...	932 75		
1898 ...	8,796 25		

In addition to the ordinary land sales, fifteen leases were settled in 1901, the amount recovered being Rs. 8,251·77. The following statement shows the revenue recovered by settlement of leases during the last ten years:—

	Rs. c.		Rs. c.
1892	9,475 61	1899	1,515 92
1893	5,304 92	1900	4,820 10
1894	11,474 51	1901	8,251 77
1895	3,199 27		
1896	1,148 70	Total ...	55,354 36
1897	4,984 29		
1898	5,179 27		

Out of 176 leases appearing in the register, 161 have now been settled. The remaining fifteen leases will probably be settled in 1902.

IV.—ARRACK AND TOLL RENTS.

The following return shows the amounts recovered for arrack and toll rents in 1900 and 1901 and the amounts bid for the rents of 1902. An offer of Rs. 1,700 has been made for the new road toll on the Akkarai pattu road for 1902:—

	Amounts realized.		
	1900. Rs. c.	1901. Rs. c.	1902. Rs. c.
Arrack Rent, Puttalam District ...	47,000 0	50,025 0	50,025 0
Bridge Rent, Kottukachchiya ...	2,200 0	2,500 0	2,675 0
Canal Rent, Palavi ...	3,520 0	3,430 0	3,900 0
Ferry Rent, Eṭalai ...	650 0	550 0	823 0
Do. Kalpitiya, Mutwal ...	32 50	27 50	30 0
Do. Kalpitiya, Karaitivu ...	80 0	60 0	65 0
Total ...	53,482 50	56,592 50	57,520 0

V.—LEGISLATION REQUIRED.

It should be made an offence to possess fresh hides of game during the close season. The possession of fresh meat is prohibited by the Ordinance, but hides are not mentioned.

It should be made a criminal offence to persistently and habitually allow cattle to stray and commit trespass.

VI.—WORKS MOST REQUIRED.

The following works, mentioned in previous reports, have received attention:—

(1) The bridge at Battulu-oya has been completed.

(2) The new court-house at Puttalam is progressing, and will probably be completed about May, 1902.

(3) A steam launch was provided for the Salt Department, but was found to be unsuitable for the Puttalam lake, and it was sent back to Colombo.

(4) A Receiving Office has been opened at Segesta estate, between Puttalam and Chilaw.

The following works have still to be considered:—

(5) Completion of metalling the Puttalam-Chilaw road.

(6) Quarters for clerks. These are badly required, as the Government officers have difficulty in procuring suitable quarters. The old court-house is to be converted into quarters for two officers. The resthouse would make convenient quarters for another officer. It is suggested that Government should build a new resthouse on the esplanade facing the Kachcheri and new court-house and take the old resthouse for officers' quarters, or that the Government should buy the present resthouse at a valuation and that the Provincial Road Committee should build a new resthouse.

(7) The Coast road north of Puttalam requires improvement. Some of the culverts are at present constructed of jungle sticks. They should be converted into permanent culverts. The gravelled road, which now only goes as far as Vannativillu, 12 miles from Puttalam, should gradually be extended to Pomparippu at the 24th mile. The causeway across the Mi-oya has been improved since the last report was written.

VII.—PLANS FOR IMPROVEMENT OF THE DISTRICT.

The chief work required for the development of the district is the proposed railway through Negombo and Chilaw to Puttalam.

The estimate of goods traffic submitted by Mr. Lushington in 1886 was considered oversanguine at that time, but it would probably be below the mark at the present time. The sale of salt has increased from 236,846 cwt. to 310,640 cwt., the extent of land under cocoanut cultivation in this district has increased from 35,397 acres to 47,761 acres, and a large quantity of timber is transported to Colombo.

It is only just to the three prosperous districts interested in this railway to consider their revenue, and the amount which they are able to contribute towards the cost of the railway. From this point of view they probably occupy a stronger position than any other outstation to which the railway has already been extended.

The estimated cost of the railway is, roughly, Rs. 6,048,000, at the rate of about Rs. 84,000 per mile, for 72 miles.

As shown in the first chapter of this report, Puttalam alone has remitted Rs. 5,731,251·75 to the General Treasury during the last ten years.

The last volume of reports received shows that the excess of revenue over expenditure in Puttalam in 1899 was Rs. 810,114·56 and in Chilaw Rs. 262,476·81. In 1895, the last year in which Negombo figured as a separate district, the excess there was Rs. 291,107·42. The total is Rs. 1,363,698·79. This account does not include expenditure on public works and some other items.

but it is probable that the total surplus of receipts over expenditure of the three districts is not much less than Rs. 1,000,000 per annum. If the three districts concerned were allowed to have the use of their own surplus revenue for some seven years, they could probably construct their own railway without borrowing and without asking for help from the rest of the Colony.

It must be remembered that Puttalam, though a large district, is sparsely populated, and that there is a large quantity of Crown land available for sale. As soon as it is known that a railway is sanctioned the value of this land will be greatly enhanced, and there should be a large increase in the revenue from land sales.

One thing is, I think, certain, and that is that if the railway is constructed the canal must be abandoned. The annual expenditure on the canal was in 1894 about Rs. 38,000, and it would hardly be desirable to spend that money on the canal and thereby divert traffic from the railway.

Next in importance to the railways is the construction of feeder roads to bring traffic to the railways. The traces from Andigama to Nikaweratiya and from Karuwalagaswewa to Galgomuwa have been surveyed, and it is hoped that the construction of these roads will shortly be commenced. The Nikaweratiya-Andigama road should, however, be continued to Kiriyankalli on the Chilaw road, thus opening up the southern portion of the Puttalam District. At present that section is objected to on the ground that it might throw extra traffic on to the canal on the west instead of on to the railway on the east. This objection will be removed when the canal is closed and the coast railway substituted for it.

The minor road from Andigama through Anamaduwa to Nawagattegama, connecting the two new feeder roads, should be steadily improved and formed into a driving road. The District Road Committee is devoting its attention and a large portion of its funds to this important work.

The introduction of the Sanitary Rates Ordinance into the port of Kalpitiya has been sanctioned, and the town will be brought under the provisions of the Ordinance from the 1st April next.

The work of completing the village tanks should be steadily pushed on. Much was done in this direction in 1901, the details of the work appearing under the head of Irrigation.

Fever is prevalent generally in the Puttalam District, especially in the Demala hatpattu, and it must be attributed chiefly, I think, to bad water. A vote should be granted by Government for sinking wells in this division.

The dispensary at Andigama, partly maintained by a private donor, should be taken over by the Government. Another dispensary is required at Nawagattegama, 12 miles north of Anamaduwa. The dispensary at Anamaduwa requires extension and improvement, and the establishment of a small hospital at that centre, especially for parangi cases, is desirable.

Resthouses are required at Karuwalagaswewa and Kala-oya on the Anuradhapura road, and when the feeder roads are opened, resthouses will be required at Andigama and Nawagattegama.

The new road within Local Board limits has been opened, but requires gravelling. The work of filling up stagnant swamps near the town for sanitary reasons should be steadily proceeded with.

VIII.—CRIME.

I am glad to be able to report that no case of murder was reported during the year. In 1900 four murders were committed.

I attribute the improvement in 1901 partly to the careful and thorough manner in which the cases in 1900 were investigated, with the result that in every case committed before the Supreme Court a conviction was obtained. The cases committed were four murder cases, one of attempted murder, and two of burglary and theft.

I also think that the executions in the Puttalam prison have had a salutary effect. Six of the persons convicted in the murder cases were sentenced to death. One was hanged in Colombo, and the other five were hanged in Puttalam. I understand that no execution had previously taken place in Puttalam, and I have no doubt that the fate of the prisoners was far more widely known in the district than it would have been if the executions had taken place as usual in Colombo.

One case of attempted murder was reported from Kattakadu. The assailant was not identified and no direct evidence is forthcoming.

The following is the return of murder, attempted murder, and knife cases in 1901:—

	Murder.	Attempted Murder.	Hurt with Knife.
Reported ...	—	1	13
Convicted ...	—	—	4
Committed ...	—	—	—
Pending ...	—	—	5
Discharged ...	—	1	4

The following return shows the cases of serious crime reported during the year:—

Crime.	No. of Cases.	Convicted.	Discharged.	Committed.	Pending.
Bigamy ...	1	1	—	—	—
Kidnapping ...	2	—	2	—	—
Indecent assault	2	—	2	—	—
Rape ...	2	—	2	—	—
House-breaking ...	3	—	2	—	1
Theft from dwelling-house ...	12	2	7	—	3
Mischief by maiming cattle ...	1	—	1	—	—
Theft ...	5	—	5	—	—
Cattle stealing ...	11	1	5	1	4
Grievous hurt ...	3	1	2	—	—
Mischief by fire ...	1	—	1	—	—
Grievous hurt by an act which endangers human life ...	1	—	1	—	—
Theft of cocoanut (over Rs. 20)	8	2	5	—	1
Robbery	10	—	10	—	—
Drugging	1	—	1	—	—
Uttering counterfeit currency notes. ...	7	1	6	—	—
Forgery	1	—	1	—	—
Arson	4	—	3	—	1

The following comparative statement shows the serious crimes reported in 1900 and 1901 :—

Division.	Total Serious Crime reported, 1900.	Total Serious Crime reported, 1901.	Found to have been committed, 1900.	Found to have been committed, 1901.
Puttalam Gravets ...	31	27	9	7
Puttalam Pattu ...	22	39	3	5
Kalpitiya Division ...	25	17	5	2
Demala Hatpattu ...	13	6	4	—
Total ...	91	89	21	14

A tabulated statement is annexed showing the distribution of serious crime among the villages :—

Division.	Serious Offences reported to Court.	Found by Magistrate		Pending.	Number of Villages and Serious Offences committed in each.		Total Serious Offences.	Villages with Three or more Serious Offences.
		To have been committed.	Not to have been committed.		Villages.	Serious Offences.		
Puttalam Gravets ...	27	7	18	2	1	6	6	Puttalam Town
	—	—	—	—	1	1	1	
	—	—	—	—	4	—	—	
Total ...	27	7	18	2	6	—	7	
Puttalam pattu ...	39	5	28	6	1	2	2	
	—	—	—	—	3	1	3	
	—	—	—	—	82	—	—	
Total ...	39	5	28	6	86	—	5	
Kalpitiya ...	17	2	12	3	2	1	2	
	—	—	—	—	68	—	—	
Total ...	17	2	12	3	70	—	2	
Demala hatpattu ...	6	—	3	3	137	—	—	

It will be seen from this statement that the Demala hatpattu had a remarkably good record. In two of the cattle stealing cases reported from that division the accused are residents of the Puttalam pattu. It may be only a coincidence, but it is certainly curious that in the Demala hatpattu there is not a single tavern or liquorshop.

The following return shows the condition of the four divisions of the district in respect of serious and violent crime, and of facilities for obtaining drink :—

Division.	Area in Square Miles.	Population.	Total Serious Crimes reported.	Offences under Sections 315, 316, 317.	Taverns.	Godowns.	Liquor Shops.
Puttalam Gravets ...	10	5,103	27	315:3	3	1	4
Puttalam Pattu ...	123	8,944	39	315:7, 316:2, 317:1	15	—	1
Kalpitiya Division ...	315	8,698	17	315:3, 316:1	8	—	1
Demala Hatpattu ...	441¼	7,255	6	—	—	—	—

While the condition of the district in respect of crime was generally satisfactory, there were several serious mosque disputes among the Mohammedans; one of which resulted in bloodshed. These disputes are of more frequent occurrence in Kalpitiya than elsewhere, and it is becoming every year more necessary that a separate Magistrate should be appointed at Puttalam, who could hold court at Kalpitiya at regular intervals. The introduction of the Sanitary Rates Ordinance at Kalpitiya will also render it desirable for the Magistrate to take up cases more frequently at that station. The Assistant Government Agent and the Salt Inspector, who at present attend to the Police Court work, cannot, without neglecting their more important duties, pay frequent visits to Kalpitiya.

IX.—Co-operation of Headmen.

The headmen generally did their work efficiently, but there were no cases of serious crime in which the headmen were considered entitled to special rewards. Some rewards were given to headmen in a few cases of timber stealing, and one headman was dismissed for apathy and negligence on the occasion of an outbreak of smallpox.

X.—Regular and Rural Police.

The police force at Puttalam was kept in better order than in the previous year. An efficient sergeant was placed in charge, a second sergeant was added to the force, and the Inspector from headquarters paid more frequent visits to the station. The police generally did their duty satisfactorily.

The constables quartered at Kalpitiya on plague duty were removed. One of them, who attempted to murder the Mudaliyar at the end of 1900, was convicted in the Supreme Court and sentenced to seven years' rigorous imprisonment.

The police force sent from Colombo to St. Anna's, Talavillu, for duty during the festival in July, kept good order in the camp.

The health of the police in Puttalam was unsatisfactory owing to the insanitary state of the barracks. Estimates have been sanctioned for improvements in 1902.

There is only one paid police headman in the district, the rural constable of Kalpitiya. He is an efficient officer, and does his duty satisfactorily.

XI.—CATTLE STEALING.

Eleven cases of cattle stealing were reported, in five of which the accused were acquitted, in one the accused was convicted, and the other five are pending. There is not much cattle stealing in the district at present, most of the cases, I think, being disputes about the ownership of the cattle or false cases resulting from the disappearance of stray cattle.

XII.—DISEASE AMONG CATTLE.

No cases of murrain were reported. A few cases of hoof-and-mouth disease were reported in the gravets, in Pomparippu pattu, and in portions of the Demala hatpattu. The diseased animals were carefully segregated, and no deaths were reported.

XIII.—WASTE LANDS ORDINANCE.

The following return shows the cases in which the Waste Lands Ordinances were put in motion during the year :—

1. Number of notices issued under section 1 of the Ordinances Nos. 1 of 1897, 1 of 1899, and 5 of 1900	4
2. Number of notices abandoned	3
3. Number of notices in which lands have been declared the property of the Crown in which no claimant appeared	Nil
4. Number of notices in which lands have been declared the property of the Crown in which claimants appeared and withdrew their claim	Nil
5. Number of notices in respect of which owing to failure to arrive at a settlement reference was made to court	2
6. Number of notices in respect of which a settlement was arrived at with claimant	1
7. Number of orders gazetted, showing—	
(*a*) Cases in which an agreement was entered into	1
(*b*) Cases in which land was declared the property of the Crown	1
8. Number of orders waiting to be gazetted, showing—	
(*a*) Cases in which an agreement was entered into	1
(*b*) Cases in which land was declared to be Crown property	Nil
9. Number of agreements effected after reference to court	2

A settlement of the Unaveli claim, which has been pending for many years, was arrived at in December, and the lands will shortly be brought forward for sale.

XIV.—CHENA CULTIVATION.

It is impossible at present to entirely prohibit this form of cultivation in the Puttalam District, and nineteen permits were issued to cultivate Crown chenas in the Rajakumarawanni pattu of the Puttalam division. In the same division, there were six cases of illicit chenaing, and fines amounting to Rs. 42 were inflicted.

In the Demala hatpattu owing to the work on the village tanks the cultivation of paddy was restricted and a quantity of communal land was chenaed. There were twenty-nine cases of illicit chenaing of Crown land in this division, and fines amounting to Rs. 538·50 were inflicted.

Now that the majority of the village tanks have been completed, there will probably be a considerable increase of paddy cultivation and a corresponding decrease of chena cultivation.

XV.—SALES OF LAND BY VILLAGERS.

No cases were brought to my notice in which villagers had sold their gardens or houses. There are several cases pending under the Waste Lands Ordinance in which villagers have sold forest and waste lands to which they appear to have insufficient or no title. It is a common thing in the district for a few villagers to claim a whole village on an ola "sittu" and to sell the claims to a speculator at a nominal price.

XVI.—IRRIGATION.

Satisfactory progress was made with the work on village tanks in spite of difficulties which occurred early in the year. The former Sub-Inspector, whose work was not satisfactory, was removed. His successor absented himself from the district without leave, and I presume that he was dismissed by the Irrigation Board. The result was that Mr. Weeraperuma, the Sub-Inspector of the Wanni hatpattu, had to attend to the work of this district, in addition to his own duties. There was naturally some little delay in picketing some of the bunds, but credit is due to the Acting Sub-Inspector for the excellent work done on most of the tanks during the latter part of the year.

Only one village tank, Galkulama, had been completed by the end of 1900, out of 107 on the list. The following statement shows the number of tanks completed during 1901 :—

Karambe Pattu.	Earthwork done in Cubes.		Earthwork done in Cubes.
1. Dunumadalawa	467	11. Lasmiyawa	989
2. Siyambalawatta	362	12. Kudawewa	1,009
3. Alankulama	575	13. Talakolewa	871
4. Karambewa	1,029	14. Merungoda	700

9.	Bogahawewa ...	72
10.	Walingura ...	72
11.	Mahadodanettena ...	—

The following tanks should have been completed by the end of the year, but little or no work was done on them. The defaulters are being prosecuted :—

Pahala Puliyankulama | Moragahawewa | Ramankulama | Galapitawewa

In addition to the above tanks, the following tanks were added to the list in 1901, and will be gradually improved :—

Demala Hatpattu.

Rajawanni Pattu.

Pahala Siyambalewa | Pahala Kuruketiyawa | Murukwatawana | Nikewewa

Kumarapallam Pattu.

Pallama

Puttalam Pattu Division.

Rajakumaravanni Pattu.

Vetiya	Kohombagaswewa
Kawiyankulama	Mohoriya
Magurankadawala	Baranankattuwa
Punawitiya	Angunuwila
Sembukuliya	Kudakumbukkadawala
Sohonkalma	

The village tank work in the Rajakumaravanni pattu has been in abeyance for some years. There is no Gansabhawa in this division, and defaulters will be dealt with by the Mudaliyar and the Village Committee.

One tank, Karuwalagaswewa in Perawili pattu, was struck off the list in 1901, the village having been abandoned. The total number of village tanks now on the list is 122, of which 110 have been inspected by me and marked on the district map.

No sluices were provided in 1901. Masonry sluices should be provided for Medawakkulama, Demala Thalagama, and Unaliya tanks, and a masonry spill is required for Maha Madawachchiya.

The cement pipe sluices provided for eleven tanks in 1900 were inspected and reported on. In some cases the sluices were badly inserted, sufficient pipes not having been provided, the result being that the bunds were cut away at the sluice and are liable to breach. More pipes should be supplied, and the bunds should be filled up.

A considerable number of defaulters were prosecuted in the village tribunal for default of earthwork, 220 cases being instituted, while a sum of Rs. 2,328, was levied as fines.

Maha Uswewa is the only tank in the district which was in the charge of the Public Works Department. The Provincial Irrigation Board having been abolished this tank has been handed over to the Government Agent, and will in future be looked after by the Irrigation Inspector. A sum of Rs. 264·25 was recovered as irrigation rate on fields under this tank.

The old abandoned tanks which it is proposed to restore with Government money are Periyakulam, Pandiyamaduwa, and Uriyawa. The survey of Periyakulam was commenced, and money has been voted for the survey of Pandiyamaduwa. The Uriyawa scheme is a promising one, and I hope it will shortly be taken up.

XVII.—WEATHER.

The rainfall in 1901 amounted to 49·24 in., being 7·03 in. in excess of the rainfall in 1900. The following statement shows the rainfall in each month :—

	1900. Inches.	1901. Inches.		1900. Inches.	1901. Inches.
January ...	2·97	6·24	August ...	0·45	—
February ...	0·22	2·96	September ...	0·35	0·95
March ...	0·13	2·20	October ...	10·61	4·75
April ...	10·07	9·65	November ...	6·06	14·30
May ...	2·65	3·35	December ...	5·25	2·64
June ...	3·40	1·35			
July ...	0·05	0·85	Total ...	42·21	49·24

The salt manufacturing season was fairly favourable, the crop collected being rather above the average

XVIII.—FOOD SUPPLY.

The food supply of the district generally is reported to be sufficient for the requirements of the people. There was some little deficiency in the supply of rice in the Demala hatpattu owing to the work on the tanks, and kurakkan was more largely consumed than usual.

In the Demala hatpattu and Rajakumaravanni pattu of the Puttalam pattu division nearly all the rice consumed is home grown. In the other divisions rice is chiefly imported from Colombo.

There is an abundant supply of fish in the maritime divisions, and a considerable quantity is cured and exported to the interior divisions and to other districts.

Butcher's meat is procurable in Puttalam and Kalpitiya, and vegetables can be obtained in most of the villages.

Fowls are becoming rather difficult to buy in some parts of the district, large numbers being taken to Colombo. It is a pity that poultry rearing is not more systematically carried on in the district.

Fruit is generally scarce, though there should be a fair market for pineapples, oranges, and mangoes, if good varieties are cultivated.

The price of rice varied from Rs. 4 to Rs. 6 per bushel for good qualities. The prices of other commodities were normal.

XIX.—VITAL STATISTICS.

The following returns show the number of births and deaths and the marriages among the different communities :—

	1900.	1901.
Stillborn ...	2	15
Births ...	1,031	1,075
Deaths ...	983	1,015
Marriages :—		
Kandyan ...	155	65
Mohammedan	149	95
General ...	191	116
Divorces :—	8	10
Kandyan		

The Census taken on the 1st March showed the population of the district at that date to be 30,000. The following is the number of the different nationalities:—

Europeans ...	5
Burghers ...	114
Sinhalese, Low-country ...	4,657
Sinhalese, Kandyan ...	7,131
Tamils ...	8,598
Moors ...	9,096
Malays ...	238
Others ...	161
Total ...	30,000

XX.—SANITARY CONDITION OF THE PEOPLE.

There is a civil hospital at Puttalam, and there are dispensaries at Puttalam, Kalpitiya (with a branch at Karaitivu), Anamaduwa (with a branch at Andigama), and Mundel. The Andigama dispensary is partly maintained by a private donor, and it should be taken over by Government. A dispensary at Nawagattegama and a small hospital at Anamaduwa are required. The number of patients treated in 1901 was as follows:—

Puttalam Hospital ...	638
Puttalam Dispensary ...	3,600
Kalpitiya ...	1,235
Karaitivu ...	294
Anamaduwa ...	10,764
Andigama ...	1,776
Mundel ...	2,861
Total ...	21,168

The above represent new patients. The total number of visits paid by new and old patients at all the dispensaries was 39,518. These visits were distributed among the four divisions as follows:—

Puttalam Gravets ...	3,932
Puttalam Pattu ...	5,008
Kalpitiya Division ...	3,509
Demala Hatpattu ...	27,069
Total ...	39,518

The figures for Demala hatpattu deserve special attention. This is the division in which the food supply is least abundant and the water is of the worst quality, the result being that fever constantly prevails, and in some parts there are bad cases of parangi.

The whole population of Demala hatpattu is only 7,255. The patients treated at the two dispensaries in that pattu, Anamaduwa and Andigama, numbered 12,540, and they paid 27,069 visits. Assuming that half the patients, or even two-thirds, came from adjoining districts, the figures show that the people of the division are in need of further assistance. The assistance should take the form of—

(1) Restoration of more tanks to supply more and more nutritious food.
(2) Wells to supply drinkable water.
(3) Another dispensary and, if possible, a hospital.

A temporary hospital and dispensary were opened at St. Anna's during the festivals in March and July. Eighteen persons were admitted to the hospital, of whom one died, and 255 persons, who paid 555 visits, were treated at the dispensary.

Plague hospitals of a temporary nature have been erected at Puttalam and Kalpitiya, and there is a permanent infectious diseases hospital at Puttalam.

The town of Puttalam is scavenged by the Local Board, and hitherto the District Road Committee and the Plague Committee have supplied two scavengers for Kalpitiya. The proposal to introduce the Sanitary Rates Ordinance into Kalpitiya has now been sanctioned, and the Ordinance will come into force from the 1st April, 1902.

In July an epidemic of smallpox occurred, the disease being introduced to the district from Colombo by a pilgrim journeying to St. Anna's. In all thirteen cases occurred, and two of the patients died. Six cases were treated in the infectious diseases hospital, the others being treated at the four infected villages in Akkarai pattu.

One fatal case of choleraic diarrhœa occurred, the origin of the disease being traced by the Medical Officer to the water in the Mi-oya at Sellankandel. Application was at once made for a vote for a well at this spot, and the money has been granted. The work will shortly be carried out.

In the town of Puttalam fever is always prevalent during the rains, owing to the stagnant water which stands in the swamps and on the plains near the town. The ground is so flat that it is hardly possible to drain these pools and the Local Board is endeavouring at considerable expense to fill them up with sand from the lake.

In the villages generally there was no regular system of sanitation. A few wells were dug in the Demala hatpattu, but in the matter of drainage nothing has been done.

XXI.—NEW AREAS OF CULTIVATION.

The returns furnished by the chief headmen show an increase of 451 acres under cocoanut cultivation. The district is well adapted for cocoanut cultivation, and application has been made for the survey of a large block of land near Sellankandel, which will probably realize good prices. It is not probable, however, that any large area will be planted up until the railway is sanctioned.

There was little or no change in the area cultivated with other fruits, vegetables, and tobacco, and the extent under paddy cultivation was less than usual owing to the work on the tanks.

XXII.—FOREST WORK.

The Assistant Government Agent has charge of the released area bordering the coast, the rest of the district being in the charge of the Forest Department.

There is little timber of any size in the released area, and the operations are restricted mostly to sale of firewood, fence sticks, &c., and supplying timber to the salt manufacturers. The revenue from the released area amounted to Rs. 1,848·69 and the expenditure to Rs. 560, showing a small profit of Rs. 1,288·69.

XXIII.—GAME SANCTUARIES.

The proposal to form a game sanctuary in that portion of the Pomparippu pattu which lies north of the Kala-oya, has been approved by the Government. The area of the sanctuary will be about the same as that of the Yala Walakada in the Hambantota District, viz., about 150 square miles. It is bounded by the Mannar District on the north, the North-Central Province on the east, the Puttalam District on the south, and the sea on the west.

There are several inhabited villages within this area, and the land cannot therefore be dealt with in one block under the Waste Lands Ordinance as was done in the case of the Yala reserve. The sanctuary will presumably be proclaimed a reserved forest under the Forest Ordinance, and the question of conserving shooting rights to the villagers living within the reserve will require careful consideration.

In connection with the proposal to exempt villagers from some of the restrictions of the Game Ordinance within the limits of their own villages, it will, I think, be desirable to establish smaller sanctuaries in various parts of the districts, and for this purpose every reserved forest of a certain area should be made a sanctuary, and a watcher, paid jointly by the Forest Department and the Game Preservation Society, should be placed in charge.

XXIV.—SCHOOLS.

There are three Government vernacular schools in the district at Anamaduwa, Nawagattegama, and Galkulama. The attendance is fair considering the sparse population and the distances the children have to travel. The school bungalows are wretched buildings, but the Village Committee have undertaken, with the assistance of the people, to provide more permanent buildings. There are 10 Roman Catholic Mission schools, 10 Mohammedan schools, 1 Protestant private school, and 1 Hindu school in the district.

XXV.—SALT DEPARTMENT.

The revenue from sale of salt amounted to Rs. 746,130·42, an increase of Rs. 19,277·84 over that of 1900. The following statement for the last ten years shows a satisfactory increase in the salt revenue:—

	Rs. c.		Rs. c.
1892	666,749 51	1897	709,331 44
1893	650,897 30	1898	732,395 75
1894	596,673 95	1899	719,791 87
1895	628,121 95	1900	726,852 58
1896	633,411 41	1901	746,130 42

The total expenditure of the Salt Department amounted to Rs. 120,685·13, the cost price of the salt being 39 cents per cwt.

The manufacturing season was more favourable than in the previous year, and the estimated collection amounted to 394,000 cwt., equal to about fifteen months' supply. The stock in hand is, however, still very low, owing to the small collections from 1896 to 1900.

On 1st January, 1901, the quantity in store was 239,454 cwt. and in the kottus 241,087 cwt., giving a total of 480,561 cwt., equal to about nineteen months' supply. On the 31st December, 1901, the quantity in store was 148,947 cwt., and in the kottus 415,778 cwt., giving a total of 564,725 cwt., equal to about twenty-two months' supply.

The question of providing additional storage has been under consideration, and an extension of the southern depôt to accommodate six more stores has been sanctioned.

The necessity for extending the salterns, owing to the steadily increasing sale of salt, has also been considered. It has been decided to grant certificates of quiet possession for the lands already possessed by private manufacturers, and to allow extensions of the eastern and western pans on the lease system. Apart from the question of increasing the supply of salt to meet the local demand, there is a prospect of establishing an export trade with the Straits Settlements. A merchant recently applied for permission to export 100,000 cwt. annually, but owing to the low stock now in hand the request could not be complied with. It is now proposed to open a new saltern at Tattaveli near Kalpitiya, the salt from which could be stored at Kalpitiya for export.

Constant trouble is experienced in the matter of obtaining contracts for removal of salt to the stores and for issuing it to purchasers. The contractors who usually undertake this work have recently combined to raise the rates, and it will probably become necessary for the Government to carry out this work by means of tramways from the Puttalam salt pans to the depôts. There should be little difficulty about this, as the distance to the end of the northern pans is only 2½ miles and to the Palavi pans 3½ miles. A tramway to the latter pans, serving also the southern pans, could be laid along the lake shore at a comparatively small cost.

The steam launch supplied for the use of the Salt Department in March, 1901, was found to be unsuitable. She had not sufficient free board for the rough water at the northern end of the lake, while she drew too much water for the canal and shallow portions of the lake near Puttalam. The launch was sent back to Colombo, and a "kula," boat, like the one formerly belonging to the Department, should now be supplied.

XXVI.—FISH-CURING YARDS.

The following statement shows the working of the fish-curing yards at Udappu and Navatkadu :—

	Season 1899–1900. Cwt. lb.	Season 1900–1901. Cwt. lb.

Salt issued from Navatkadu, 1899–1900	...1,360 ,, at Rs. 2·76 ...	3,753 60
Salt issued from Udappu, 1900–1901	... 892 ,, at Rs. 2·66 ...	2,372 72
Salt issued from Navatkadu, 1900–1901	...1,866 ,, at Rs. 2·76 ...	4,598 16

The receipts from the sale of salt at these yards exceeded the expenditure by Rs. 1,303·84, but when the cost price of the salt at 39 cents per cwt. is added there is a loss of Rs. 1,095 83.

The proposal made in the last report to raise the price of the salt issued to fish curers in order to cover this deficit has been approved, and salt is now being sold at Re. 1·25 per cwt. at both yards instead of at 65 cents at Udappu and 75 cents at Navatkadu. The result of the working of the yards under the new conditions cannot be ascertained until the end of the curing season in April next.

XXVII.—ST. ANNA'S FESTIVAL.

The annual Roman Catholic pilgrimage to St. Anna's church at Talavillu took place in July, the festival lasting from the 18th to the 29th July. The number of pilgrims in the camp on the 24th July, the chief day of the festival, was estimated at about 40,000.

The health of the camp was satisfactory, only six deaths having occurred. The scavenging was on the whole satisfactory, but the Medical Officer in charge of the camp has suggested certain improvements in the cadjan buildings which are put up by the Mission authorities.

The two smaller pilgrimages which take place in March are becoming more popular yearly, and the numbers have increased so much that the Government has had to make arrangements similar to those made for the great festival in July.

The proposal made in the last report to establish a toll on the Akkaraipattu road owing to the heavy traffic during the pilgrimages has been approved, and a toll was established from the 1st January, 1902.

XXVIII.—WORK OTHER THAN ROUTINE.

The whole time of the Assistant Government Agent, when he is in the station, is taken up with the routine work of the Kachcheri, Courts, Police, Prison, and other Departments in his charge. On circuit my time was chiefly occupied with inspection of tanks, encroachments on Crown lands, minor and village roads, &c.

XXIX.—EVENTS OF IMPORTANCE.

In January the news of the lamented death of her late Majesty Queen Victoria was received with deep sorrow by the whole district.

On the 2nd February memorial services were held throughout the district, and an address of loyal sympathy and condolence was largely signed by all classes of the community.

On the 1st March the Census was taken, the population of the district being found to be 30,000, showing an increase of 12·6 per cent. during the decade.

On the 2nd April this district, in common with the Province, suffered a heavy loss by the untimely death of the Government Agent Mr. F. C. Fisher.

From the 7th to the 15th April I acted temporarily as Government Agent, in addition to my own duties.

On the 12th April the Chiefs, Mudaliyars, and Presidents of the Province met Their Royal Highnesses the Duke and Duchess of Cornwall and York at Polgahawela and presented a loyal address of welcome.

On the 16th April Mr. C. A. Murray assumed duties as Government Agent of the Province.

In May the District Engineer Mr. Adams left the Colony and was succeeded by Mr. C. H. de Silva, and the Medical Officer Dr. Rode was succeeded by Dr. Brito.

In August the Government Agent Mr. Murray paid a short visit to the district.

In December the Acting Government Agent Mr. Crawford paid a visit to Puttalam and Kalpitiya.

On the 26th December Mr. James Saverimuttu, the able Mudaliyar of the Kalpitiya division, contracted an illness which proved fatal, and I deeply regret to record his death on the 4th January, 1902.

H. W. BRODHURST,
Assistant Government Agent.

Puttalam, February 3, 1902.

REPORT ON THE CHILAW DISTRICT FOR 1901.

Area, 262 square miles; Population in 1901, 74,836.

REVENUE.

So far as general revenue can be taken as the gauge of prosperity, then this district must be pronounced year by year more prosperous. In it the revenue may be taken as a fair index to the prosperity, because it is not derived from any particular source, but is well distributed throughout the heads under which it is collected. And for the same reason there is very little doubt that the revenue will continue to increase.

2. The following statement shows the comparative revenue for the year 1900–1901 :—

Revenue.	1900.	1901.	Increase.	Decrease.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.
Licenses, Excise, and Internal Revenue not otherwise classified	242,055 11	249,084 48	7,029 37	—
Fees of Court or Office, Payment for Special Services, and Reimbursements in Aid	24,733 3	27,692 39	2,959 36	—
Post and Telegraph	902 50	1,275 67	373 17	—
Rents of Government Property	945 59	1,272 71	327 12	—
Interest	185 82	491 27	305 45	—
Miscellaneous Receipts	225 74	310 38	84 64	—
Sale of Government Property	990 14	645 35	—	344 79
Total, exclusive of Land Sales ...	270,037 93	280,772 25	11,079 11	344 79
Land Sales	48,350 15	49,573 33	1,223 18	—
Total	318,388 8	330,345 58	12,302 29	344 79

It will be noticed that every head, except "Sale of Government Property," shows a very considerable increase. Under the head "Licenses," the chief increases are on account of Arrack (Rs. 4,000), Road Tolls (Rs. 2,500), Canal Tolls (Rs. 450), and Revenue Stamps (Rs. 1,250). The increase in Road Tolls was partly attributable to the establishment of a toll on the Nattandiya-Dunkannawa road. The money collected at the toll will be spent on the road, which is much in need of improvement. Under "Fees of Court," the chief items of increase are Judicial Stamps (Rs. 1,300), Survey Fees (Rs. 1,350), and Water-rate (Rs. 950).

The increase in Judicial Stamps is owing to the greater number of cases which have been instituted during the year and to the bigger value of the subjects of litigation. The judicial work of the district is very rapidly on the increase, the sale of stamps showing an increase of Rs. 4,400 in the last two years. The increase in Survey Fees was owing to the granting of many certificates of quiet possession for small lots of land. The settlement of Udappu village helped to swell this item. The increase in Water-rate is owing to the collection of the rate for Tunipitiwewa. It was not collected in 1900. Postage Stamps show an increase of about Rs. 400. The rest of the increase is the aggregate of miscellaneous petty increases.

3. The single decrease is owing to the small sale of timber during the year and to the decreased value of crops on Crown lands.

4. The following statement shows the revenue for the last six years :—

Year.	Revenue, including Land Sales. Rs.	Revenue from Land Sales. Rs.
1896	169,221 ...	16,551
1897	173,954 ...	15,144
1898	236,797 ...	15,696
1899	275,730 ...	15,514
1900	318,388 ...	18,532
1901	330,345 ...	19,894

It will be seen that the revenue has almost doubled in the six years.

5. The expenditure in the Assistant Government Agent's Department shows a slight decrease for the year :—

Statement of Expenditure for 1900 and 1901.

	1900. Rs. c.	1901. Rs. c.
Personal Emoluments	11,334 61	11,241 11
Other Charges	4,607 35.	4,009 92
Pensions	1,388 56	1,516 16
	17,330 52	16,767 19
Deduct Pension Charges against Treasurer's account ...	1,388 56	1,516 16
Total Expenditure of Assistant Government Agent ...	15,941 96	15,251 3

6. The revenue from Road Tolls is gradually increasing. The following statement shows the amounts raised in 1900 and 1901 respectively :—

Revenue from Tolls.

	1900. Rs. c.	1901. Rs. c.	Increase. Rs. c.	Decrease. Rs. c.
Road Tolls ...	4,005 0	6,439 21	2,433 21	—
Bridge Tolls ...	13,070 0	13,100 0	30 0	—
Ferry Tolls ...	3,372 50	2,873 18	—	499 32
Canal Tolls ...	8,570 0	9,040 0	470 0	—
Total ...	29,017 50	31,451 39	2,933 21	499 32

7. As was pointed out last year, the bridge tolls at Toppu and Nainamadama are brought to account in the books of the Government Agent, Western Province. The rent of the Assistant Government Agent's quarters and the value of postage and telegraph stamps sold in the post offices is credited in the Treasurer's books.

I.—FOOD SUPPLY.

8. The chief articles of food are rice, fish, meat, vegetables, dry grain, yams, especially manioc, and bread.

9. The quantity of rice grown locally is insufficient for the wants of the population, and most of the rice consumed is imported from India. There has been no scarcity. The best rice has been selling at about Rs. 5 per bushel, and, though this price is fairly high, the people are well able to buy, as the chief product of the district—cocoanuts—has been selling at higher prices than usual.

In Pitigal korale south about one-eighth of the supply is home-grown and in Pitigal korale central about one-fourth. It is not likely that future years will see any increase in this proportion, for the korales are both planted and sown until there are very few acres of uncultivated land left.

In Pitigal korale north the supply is equal to the demand, except in Udappu and Chilaw. When the tanks are fully restored and the fields regularly cultivated, there should be eventually a surplus from this korale.

The cultivators still show an unfortunate mixture of laziness and ignorance when cultivating their fields, and invariably put down failures to lack of water, which is in many cases not the truth. In many cases the crops are choked to death with weeds of big proportions; in some the seed is scattered on an improperly prepared seed-bed, and is killed by the sun or eaten by birds; in some cases the crops appear to be weak from lack of change of seed; and in almost every case the land is left during the off-season in the state it was when the last harvest was reaped. Ten days or so is considered amply sufficient to cultivate the fields for the next crop. I have not met a cultivator yet who understood that if he wished his land to be fully benefited by lying fallow he should turn it up and should not leave it a baked or sodden mass. As a result of this indifference the yield is often very small, and the cultivator cries for more water!

10. Fish is very largely caught during the north-east monsoon, and with rice forms almost the sole food of the majority of the people. It becomes so cheap as to greatly affect the sale of meat. In this hot climate the fish to be wholesome must be very fresh, and it is to be feared that some of the sickness which usually prevails during the north-east monsoon is owing to the consumption of tainted fish. In the south-west monsoon sea fish is dear, but tank and river fish and meat supply its place.

11. The supply of vegetables is very limited, though the cultivation is very profitable. The native does not, it would appear, possess the assiduity necessary to make a good market gardener, although he values the quick returns. It is much easier to plant a cocoanut tree, which will give him no trouble in two or three years, and will give a return without any labour on his part.

12. Yams are much consumed, especially by the poorer classes. The chief one eaten is the cassava or manioc, which grows well. Various other yams are also grown, but in no great quantity.

13. *Fruits.*—As pointed out in the last report, fruits grow very well throughout the district, and sell well too. They would be grown, if only the native proprietor could be convinced that they are profitable. One gentleman with whom I have discussed the subject is going to plant up a couple of acres of oranges and carefully keep accounts. It will be seen, then, whether oranges can repay attention as well as cocoanuts. The lack of fruit is much to be deplored. Plantains grow well, but are only grown as a preliminary to cocoanuts, to which in fact every product seems to be sacrificed. It is even difficult to get a bottle of milk which does not taste of poonac.

14. Meat is much consumed in Chilaw, Madampe, and Marawila, and on special occasions throughout the district. The animals brought for slaughter are usually healthy, but small and not always well-favoured. Pigs are raised and killed in numbers in the Sinhalese villages.

15. The following table shows the prices during the year of the chief articles of food :—

Table of Prices of Chief Articles of Food.

Rice	... Rs. 4 to Rs. 6 per bushel.	Jak fruits	... 25 to 37 cents a fruit.
Paddy	... Re. 1·50 to Rs. 2 per bushel.	Beef	... 18 cents per pound.
Mun	... Rs. 3 to Rs. 4 per bushel.	Chickens	... Rs. 4·50 and upwards a dozen.
Kurakkan	... Re. 1 to Re. 1·50 per bushel.	Dry fish	... 20 cents per pound.
Cassava	... Re. 1 per cwt.	Bread	... 25 cents per pound.
Cocoanuts	... Rs. 35 to Rs. 40 per 1,000 wholesale; and Rs. 40 to Rs. 50 by retail.	Chillies	... 18 to 20 cents per pound.
		Mutton	... 37 to 43 cents per pound.
Plantains	... 37 cents per 100.		

II.—IRRIGATION.

16. The new system inaugurated by my predecessor Mr. Fraser, and vigorously pushed by him until he quitted the district in August, has met with the same success in 1901 as it did in 1900. The net result is now becoming very visible in the case of most tanks. In some the bunds have been completed, in some more than half, while even in those where the work is very laborious and the population few the progress made is very encouraging. The bunds have been well restored, and the slopes fixed fairly well observed. Nearly all the tanks filled in 1901, and the fields below them cultivated, in many cases after several years. The tanks should fill every year, if only no water was allowed to run to waste. As it is, if the rain comes in a plump, the tanks are in too imperfect a condition to retain it, and a large proportion runs to waste. When the bunds are fully and completely restored, this waste will be prevented.

17. Only one tank—Mugunuwatawana—breached during the year, the breach being caused by the water going over the bund. The complete restoration of this bund, though not a big work, will have to be very carefully carried out, for the soil is very loose and sandy, and the only available high ground for a spill is of the same nature. There is, too, but little room to obtain material to construct the bund.

18. The statement of work done in 1900 and 1901 is annexed. It shows a decrease, owing partly to the completion of some tanks and partly to the refusal of proprietors, who had done more earthwork last year than they were compelled to do, to work this year. The large works at Battulu-oya made much progress, and great credit is due to the Vel-vidane for seeing the work well done. At the present rate the completion of this large tank should not take long :—

Comparative Statement of Earthwork on Tank Bunds during Years 1899, 1900, and 1901.

19. Cement pipe sluices are much required to insert in completed bunds where the latter are suitable. For some reason the supply of pipes has fallen short in 1901, much to the disappointment of the villagers, who had worked hardest. I am making the subject of cement pipes a special one for 1902.

20. In the larger tanks masonry sluices will have to be built, and in some cases masonry spills too, in juxtaposition with the sluice or otherwise. The tanks which will *require* these sluices are Mahawewa, Attanganni, Battulu-oya, Karawita, Singakkuliya, and possibly one or two others. Feed sluices will also have to be provided soon for the system mentioned in paragraph 29.

21. During the year bricks have been transported to Tabbowa tank, and the work of building the sluice will be completed early in 1902. The spill has been properly cut at Walahapitiya, but the combined spill and sluice will require repairs in order to make it quite trustworthy.

22. In last year's report attention was drawn to the fact that in Pitigal korale south many of the beds of tanks have been gradually encroached and cultivated, and these squatters in the bed are now very hard to eject. With a view to restoring the fine Singakkuliya tank a survey of the amount of land that would be submerged if the tank had a 6 ft. head has been made, and the owners of the field below the tank have consented to compensate the owners of the fields in the bed. This arrangement I hope to see fully carried out in 1902, and then the tank work can be done. After that Bujjampola tank should be taken in hand.

23. This and the next paragraph are merely a repetition of last year's report, for nothing has been done on the works suggested :—

"In the Korale Mudaliyar's opinion the reclamation of 2,500 bushels' sowing extent of paddy land, which lies fallow owing to its periodical inundation by the salt water of the Gin-oya, is the most pressing irrigation work in Pitigal korale south.

24. "In Pitigal korale central the chief works calling for attention, besides Tabbowa, Walahapitiya, and Mahawewa, are—

"(*a*) The restoration of the bunds along the course of the Kadupiti oya—a work which will prevent in great measure the periodical devastation of the fields by floods and increase the water supply of Tinipitiwewa.

"(*b*) The prevention of the periodical submersion of the Peekkulama fields when all the boards are inserted in Kadupiti-oya (Tinipitiwewa) anicut.

"(*c*) The construction of another outlet for Tinipitiwewa to admit of the silt now said to be deposited in the tank reaching the fields. This work is especially asked for by the landowners, who are, I understand, prepared to pay its cost.

"(*d*) The restoration of Karawita tank and the string of tanks dependent like it on the Yodaya-ela, and the study by a competent Irrigation Officer of the whole Yodaya-ela scheme."

25. The Tinipitiwewa has been kept in proper repair during the year under the orders of the District Engineer. The water upheld proved insufficient to irrigate the full extent of fields below it, but those irrigated are producing a fine crop. In 1902 this tank will be in charge of the Chief Inspector of Village Tanks of the Province, and will be kept in order by the Irrigation Department.

26. The following bunds were completed during the year :—Katuneriya, Lunuwila, Etiyawela bemma, Sandanangama, and Jankurawila.

The following bunds were nearly completed :—Karawita, Karukkuliya, Munnasseram, and Punchiwilattawa. The first three are big tanks, and the work has been heavy. Sluices were inserted in Suruwila and Anavilandawa bunds.

27. A great advance has been made in the clearing of bunds of jungle. In the case of completed earthwork the turfing has been carefully done and the crest gravelled.

28. The scene of future operations will be chiefly Pitigal korale north. Amongst the works to be undertaken there I should place first and foremost the re-establishment of the system of bunds and canals by which the Ratambala-oya was made in olden time to feed a big chain of tanks, viz., Bogamuwa, Maha Maeliya, Battulu-oya, Puliohakulam, Wellawela, Pinkattiya, Maradankulama, Irakkawela, Anaivilundawa, Maiyawa, and Suruwila tanks. The bunds are in good preservation, and so are the channels from the Palani Eba, but until quite recently so buried in jungle that few people were aware of their existence, and no one can give very exact information as to the present distribution. I had the good fortune to visit the tanks in flood time, and the old system was gradually revealed. I hope to have plans and estimates for the full restoration prepared after the Chief Inspector next visits the district. The earthwork will be done and all channels cleared in 1902, and the Surveyor-General has promised to insert the whole system on the survey plans of the district which will be produced this year.

29. The other works requiring attention are :—

(*a*) The completion of the Munnessaram group of tanks, together with a scheme for improving the water supply by constructing regulating gates on the Manuwangama-eba.

(*b*) The restoration of the Diganwewa, Bombawela, Karukkuliya group, with the construction of low bunds to prevent the water in Karukkuliya from submerging the fields under Diganwewa. This latter scheme is to be surveyed in 1902.

(*c*) The completion of the Battulu-oya works, especially the construction of a good flood spill.

(*d*) The preparation of a scheme for the restoration of Katupota tank and other tanks in the neighbourhood.

30. The rainfall was in 1898, 54·34 in.; in 1899, 35·33 in.; in 1900, 46·93 in.; in 1901, 46·02 in.

III.—LEGISLATION.

31. Under this head I would propose two subjects which seem to me worthy of attention. I would suggest :—

(1) A law forbidding the registration of any deed affecting the title to property above a certain area or above a certain value, unless that deed is accompanied by a survey exhibiting such physical features in or about the land as will enable any one to identify it in future.

(2) An Ordinance to regulate the coast fisheries and the migration of the fisher population.

IV.—WORKS REQUIRED IN THE DISTRICT.

32. Keeping to the grouping adopted last year, I enumerate the works required under the three heads—

A.—Improved Means of Communication.

B.—Health and Sanitation.

C.—New Buildings and Improvements to Old Ones.

A.—*Improved Means of Communication.*

33. I endorse my predecessor's remarks with regard to the poor means of communication in the district, especially for passengers. The main Colombo-Puttalam road has now been metalled nearly to the district boundary and forms a good backbone. On each side of it fairly good by-roads start out, and as far as goods traffic is concerned the communication by road and canal on the western side is good. But on the eastern there is no proper means of communication at all, and will not be until the Compaspara is re-constructed. The coach service has somewhat improved since last year, but it still requires ten hours to travel the 50 miles from Colombo.

My predecessor pointed to the remedies in—

(*a*) *The Improvement of the Canal.*—The canal is undoubtedly capable of bearing more traffic than it has at present, and would carry more if the facilities were greater. In flood time (for the canal in this district is a river, or at any rate an outlet for rivers) the water is deep and boats travel rapidly, arriving from Colombo in from two to three days. But when the drought comes, the water in the canal becomes very shallow, and recently boats have taken eight or ten days to travel the 50 miles. Possibly the state of affairs could be remedied only by the introduction of locks; possibly by deeper dredging. In any case the matter is one requiring attention.

(*b*) *Railway.*—That a railway must come to this district before long no one can doubt. I am inclined to differ from my predecessor as to whether, if it did, much of the present canal traffic would not be transferred to it. The canal boats are not particularly cheap and terribly slow. I find that the Ceylon Steamship Company carry goods to Jaffna for less than the pada boats bring them to Chilaw. The delay is often of great importance when such goods as parts of machinery or building materials are despatched at different times.

Another drawback about the canal traffic is the lack of fixity in rates, the boatmen charging as much as they think they can get the victim to pay. There is no warehouse storage system in Colombo for the canal traffic, and hence the Colombo firms find it hard to load up boats without great trouble, unless the goods despatched just fill a boat. If the railway were once carried through to the Puttalam salt stores, I venture to think that the canal traffic would be reduced to a minimum.

The passenger traffic along the coast would be very considerable. There are now four coaches running between Chilaw and Negombo, and the private vehicles are very numerous.

(*c*) The coach service on the Colombo-Chilaw route showed very little improvement in 1901, but has since been improved.

(*d*) The Colombo-Puttalam road has been improved during the year, the metalling now extending almost to Battulu-oya. The portion between Chilaw and Madampe is yet, however, very unsatisfactory.

(*e*) The portion of the Chilaw-Wariyapola road up to the first milestone having been taken over by the Local Board will be widened, if possible, in 1902. Nothing could be done in 1901.

(*f*) Improvement of the Bangadeniya-Mandalana road. The first mile will be taken up in 1902.

(*g*) The Dankotuwa-Giriulla road is badly in need of thorough construction. It has been in a terribly bad state during 1901. As the toll yields a good sum, the road deserves more generous treatment.

(*h*) The Willattawa-Payirendawa road has been much improved during the year, and will in 1902 be still further improved by the Road Committees of Kurunegala and Chilaw.

(*i*) The opening up of the Compaspara, at any rate in those parts where the cost of construction is not prohibitive.

(*j*) Steel girder bridge over the river at Chilaw.

(*k*) Telegraph offices at Nainamadama and Madampe.

B.—*Health and Sanitation.*

34. (*a*) *Hospital for Chilaw.*—This is one of the most pressing needs of the town. The present hospital is unsuitable in every way for the wants of a district becoming quickly more populous. The matter will be urged in 1902.

(*b*) *General Cemetery.*—The site for this will probably be eventually at Welihena, south of the jail, on the sandbank between the river and the sea. There seems no reason to believe that its being so situated would in any way affect the water supply.

(*c*) Water supply for Chilaw town.

(*d*) A dispensary at Udappu—an urgent need, the village containing 2,000 inhabitants, and the nearest dispensary being at Mundel, 6 miles away over roads which are at their worst when sickness is raging most.

(*e*) Dispensaries at Rajakadaluwa, Willattawa, and Dunkannawa. The last two would serve the Kurunegala District too.

C.—*New Buildings and Improvements to existing ones.*

35. (*a*) Improvements to the Kachcheri.

(*b*) A separate Police Court.

(*c*) A Post Office for Chilaw with improved accommodation.

(*d*) Improvements to the Assistant Government Agent's bungalow.

(*e*) Increased accommodation for Government clerks.

(*f*) A lock-up attached to the Police Court. At present there is no place whatever in which to lock up prisoners for the night pending their production before a Magistrate.

V.—PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

36. Complete restoration of all irrigation works. The better roading of the eastern side of the district. The provision of village wells where most needed. The complete settlement of the land matters in the district—a plan quite feasible after the district survey is completed, as it is hoped it will be in 1902. The encouragement of "petite culture"—vegetables and fruit are succumbing to the cocoanut plant. The improvement of the system of paddy cultivation. The establishment of good schools in populous centres—there is not one good school in the district. The completion of a system of drainage for Chilaw town.

VI.—SANITARY CONDITION OF THE PEOPLE.

37. The sanitary condition and general health of the people has been very satisfactory throughout the year. No epidemic has, happily, visited the district, and the chief disease that has had to be combated is malarial fever. This has, as usual, been prevalent during the months of the north-east monsoon, especially January and December. This is the only disease which has varied with the meteorological conditions.

38. Parangi has been prevalent owing doubtless to carelessness in eating and drinking and in some cases to actual poverty. The original cause of it still remains a subject of doubt.

39. Three cases of smallpox occurred, two at Nainamadama and one at Lunuwila. About 50 cases of measles and about 20 of chickenpox were reported.

40. I cannot but repeat a complete paragraph from my predecessor's report for 1900, for it is still as true as when written :—

> The southern portion of the district is adequately supplied with medical facilities, there being a large hospital at Marawila and dispensaries at Dankotuwa, Madampe, and Marawila. The same cannot be said of the northern portion, the only hospital being the one at Chilaw, which has one female ward for four patients and two male wards for ten patients, and even this accommodation is of a very uncomfortable description. A ward for maternity cases, a ward for parangi patients, and a ward for paying patients are urgently required. But I deprecate any addition to the existing building, which should be pulled down and rebuilt on a better site. North of Chilaw there is no dispensary, nor is there any dispensary available for the inhabitants of the eastern portion of the district. During the construction of the Battulu-oya bridge the dispenser from Mundel visits Battulu-oya periodically, but this provision is insufficient, and I recommend the opening of four dispensaries : one at Willattawa and one at Dunkannawa to serve the villages to the east and a portion of the Kurunegala District, one at Rajakadaluwa, the centre of extensive cocoanut plantations, and one at Udappu, the most populous and most insanitary fishing village in the district.

41. The sanitary condition of Chilaw town has been very satisfactory, and will, it is hoped, be still more so when the drainage is completed and gala ponds filled up.

42. Side drains in Madampe have been built in 1901, but it still remains to deal with the deep water-course bordering the western side of the road. It is proposed to insert large-diameter pipes in this and to fill it up.

43. The births, marriages, and deaths for 1901 were as under :—

	1899.	1900.	1901.
Births	2,574	2,594	2,583
Marriages	773	593	1,176
Deaths	1,586	1,595	1,374

The apparent increase in the number of marriages in 1901 is due to the District Judge having issued a circular to all the chief headmen to use their influence in getting all the unregistered unions registered.

44. The sanitary condition of the villages has been satisfactory, much care having been exercised by the householders in many of the villages I have visited accidentally in keeping their compounds swept. The excellent general health of the people is a testimony to this.

45. The number of cases treated in the hospitals and dispensaries is as follows :—

	Hospital.	Dispensary. Visits.	Dispensary. Persons.
Marawila	782	21,818	8,044
Madampe	—	6,808	3,921
Chilaw	289	11,650	6,058
Dankotuwa	—	6,262	3,233
Mundel	—	155	137

46. During the year ten wells were built in various villages in Pitigal korale north. In all cases the sites were very carefully chosen after personal inspection by the Assistant Agent. These wells should prove a great boon to the villagers as well as to visitors to the respective villages. The well at Kiriyankallai especially yields a steady supply of excellent water.

47. The following return shows the number of accidental and sudden deaths and the causes to which they were due :—

Suicide	1
Homicide amounting to murder	2
Killed by snake-bite	1
Drowning	8
Fall from trees	5
Gunshot	3
Disease	12
Miscellaneous causes	11
Total ...	43

48. The sites for plague camps were kept clean. New materials, where necessary, will be provided in 1902.

VII.—THE NUMBER OF CASES OF MURDER AND ATTEMPTED MURDER.

49. The following statement shows the number of cases of murder and attempted murder during 1901 :—

Statement showing the Number of Murder Cases or Attempted Murder during the Year 1901.

No. of Case.	Name of Complainant.	Name of Accused.	Reported.	Brought to Trial.	Convicted.	Remarks.
17,257	Gregoris Fernando ...	Belichoru ...	1	1	1	The accused was intimate with the deceased's wife. One day she abused him, and he threw a stick at her. This she complained of to her husband, who had words with the accused. When the man (the husband) was on his way to the kiln, the accused gave him a blow with a stick. The accused was found guilty of culpable homicide and sentenced to five years' rigorous imprisonment.
17,576	Pulicanu, Police Headman	Costantinu Fernando	1	1	—	The deceased, a noted thief, was stealing cocoanuts at night, when the accused shot him. The defence was that the accused fired in self-defence. The accused was acquitted.
17,805	The King ...	Caro Sinno ...	1	1	1	The accused was married to deceased's sister. After his wife's death he proposed to the deceased, who first consented, but again declined. The accused went armed and shot her. The accused was convicted of murder.
17,948	The King ...	Joseph Fernando ...	1	1	1	The deceased was ill-treating the accused's mother and her daughter, when the accused ran up and dealt a blow on the head resulting in death. The accused was found guilty of voluntarily causing grievous hurt and sentenced to eighteen months' rigorous imprisonment.
18,088	The King ...	Charles Appuhami...	1	1	—	Pending before Supreme Court. The accused was intimate with the deceased's wife. One night when the deceased was returning from the boutique he was shot dead.
18,180	The King ...	Mudalihami (a case from Kurunegala District)	1	—	—	In this case the deceased, a pronounced libertine, went to accused's house, in his absence, intent upon either seducing or ravishing accused's wife. When deceased's party neared the house, the wife raised an alarm, and her brother, running with a gun from a neighbouring chena, shot deceased. The accused was discharged by the Attorney-General.

50. The following is a full statement of Cases where the knife has been used :—

Statement of Cases in which the Knife has been used in 1901.

No. of Case.	Village.	Persons reported.	Persons brought to Trial.	Persons convicted.	Persons acquitted.	Remarks.
16,969	Marawila ...	1	1	—	1	—
16,750	Lunuwila ...	1	1	1	—	The accused convicted in Supreme Court.
17,021	Haldanduwana ...	1	1	—	1	Police Court.
17,070	Horagolla ...	3	3	1	2	Also prohibited from wearing knife. Police Court.
17,145	Chilaw ...	1	1	—	1	Police Court.
17,139	Chilaw ...	1	1	1	—	Also prohibited from wearing knife; lashes inflicted. Police Court.
17,152	Marawila ...	1	1	—	1	Police Court.
17,187	Koswatta ...	2	2	2	—	1st, under section 314, Ceylon Penal Code; 2nd, under section 315, Ceylon Penal Code. Police Court.
17,189	Tambarawila ...	1	1	1	—	Convicted in District Court.
17,234	Walabena ...	1	1	—	1	Police Court.
17,247	Waikkal ...	1	1	—	1	Acquitted in District Court.
17,284	Talwila ...	1	1	—	1	Police Court.
17,311	Katuneriya ...	2	2	1	1	Also prohibited from wearing knife, &c. Police Court.
17,313	Walahapitiya ...	1	1	—	1	Police Court.
17,300	Kahatawila ...	1	1	1	—	In appeal lashes set aside. Police Court.
17,392	Ulhitiyawa ...	1	1	—	1	Police Court.
17,452	Toduwawa ...	3	3	3	—	1st, under section 315; 2nd and 3rd, under section 314; affirmed in appeal. Police Court.
17,548	Ulhitiyawa ...	3	3	3	—	1st, under section 315; 2nd and 3rd, under section 314; lashes confirmed. Police Court.
17,566	Boralessa ...	1	1	—	1	Police Court.
17,583	Walahapitiya ...	1	1	1	—	Also prohibited from wearing knife, and lashes. Police Court.
17,699	Kolanjadiya ...	5	5	5	—	1st, only under section 315, Police Court; the rest section 314.
17,583	Walahapitiya ...	1	1	1	—	Also prohibited from wearing knife, and lashes. Police Court.

No. of Case.	Village.	Persons reported.	Persons brought to Trial.	Persons convicted.	Persons acquitted.	Remarks.
17,734	Medagoda ...	2	2	2	—	1st, under section 314, Ceylon Penal Code; 2nd, under section 315, Ceylon Penal Code.
17,740	Haldanduwana ...	1	1	—	1	Police Court.
17,775	Ponnankanny ...	1	1	1	—	Police Court.
17,815	Boralessa ...	1	1	—	1	Police Court.
17,825	Lihiriyagama ...	1	1	—	1	Acquitted in District Court.
17,885	Uraliya ...	1	1	1	—	Affirmed in appeal. Police Court.
17,962	Walahapitiya ...	1	1	—	1	Police Court.
17,972	Galmuruwa ...	1	1	—	1	Police Court.
18,015	Nattandiya ...	2	2	—	2	Acquitted in District Court.
18,179	Karukkuliya ...	1	1	1	—	Police Court.
18,181	Toduwawa ...	1	1	—	1	On instructions discharged.
18,192	Kudawewa ...	1	1	1	—	Convicted in District Court.
18,194	Kolanjadiya ...	1	1	—	1	Police Court.
18,278	Uraliya ...	—	—	—	—	Accused unknown.
18,316	Chilaw ...	2	2	1	—	Affirmed in appeal. Police Court.
18,403	Sembukattiya ...	2	2	1	—	Police Court.
18,411	Madampe ...	1	1	—	1	Pending.

VIII.—CO-OPERATION OF HEADMEN IN THE PREVENTION AND DETECTION OF CRIME.

51. Throughout the year the headmen have done good work in this respect, and have, wherever their acts have been specially deserving, been well rewarded from the Headmen's Reward Fund. There have been very few cases of dismissal or suspension from office on account of laxity.

52. The following headmen are deserving of special mention, the amounts they have received from the Headmen's Reward Fund appearing against their names :—

Remuneration to Headmen during 1901.

		Rs.	c.
1.	William Gunawardena, Vidane Arachchi	40	0
2.	A. C. Telasinha, Vidane Arachchi	30	37
3.	W. E. Herat Sinno Appuhamy, Police Headman	20	0
4.	W. G. Fernando, Police Headman	15	0
5.	Tambi Lebbe Noordeen, Police Headman	15	0
6.	M. Punchappuhamy, Police Headman	15	0
7.	Juan Peris Appuhami. Police Headman	15	0
8.	M. Appuhamy, Police Headman	15	0
9.	Peris Appuhamy, Police Headman	15	0
10.	S. Ranasinha, Inquirer	15	0
11.	Simeon Appuhamy, Police Headman	15	0
12.	Peris Sinno Appuhamy, Police Headman	10	0
13.	P. W. Abayakone, Police Headman	10	0
14.	Alexander Jayasundera, Police Headman	10	0
15.	Naguda Marikar, Police Headman	10	0
16.	W. Jeremias Fernando, Police Headman	10	0
17.	W. M. Sinno Appuhamy, Police Headman	10	0
18.	W. Elaris Fernando, Peace Officer	10	0
19.	Don Joronis Peris, Police Headman	10	0
20.	H. M. Kirihamy, Police Headman	10	0
21.	A. Punchi Sinno, Peace Officer	10	0
22.	Appusinno Appuhamy, Police Headman	10	0
23.	R. M. Peter Appuhamy, Police Headman	10	0
24.	K. Nallaiya, Police Headman	10	0
25.	K. Appurala Appuhamy, Peace Officer	10	0
26.	Jusey Manuel Livera, Peace Officer	10	0
27.	Menikrala Appuhamy, Police Headman...	10	0
	Total ...	370	37

IX.—POLICE, REGULAR AND RURAL.

53. The only regular police which were stationed in the district at the beginning of the year, viz., the small force at Marawila, were removed in February, 1901, and it does not appear that they will again become necessary.

54. The paid rural police were as follows :—W. John Mendis, Vidane Arachchi of Madampe ; A. Vadiwel, Police Officer of Rajakadaluwa ; D. J. P. Ratnayaka; Constable Officer of Marawila ; Baronchi Appuhamy, Constable Arachchi of Nattandiya ; L. Kadirgamen, Police Officer of Udappu. They did their work well.

X.—PREVALENCE OF CATTLE STEALING.

55. In 1899 there were 27 cases of cattle stealing reported ; in 1900, 25 ; in 1901, 23. An analysis of the latter is given in the subjoined table :—

Statement of Cattle Theft Cases.

Division.	No. of Cases.	Found by Police Magistrates not to have been committed.	Found to have been committed.	Convicted.	Acquitted.
Pitigal Korale North ...	4	1	3	—	3
Pitigal Korale Central ...	10	2	8	3	5
Pitigal Korale South ...	9	2	7	2	5
Total ...	23	5	18	5	13

There were 18 true cases, but only five persons were convicted.

56. It surprises me that cattle stealing is not more prevalent in Ceylon than it is. The owners are quite indifferent as to their property. I knew one case in the Kurunegala District where buffaloes were stolen and seized by the Mudaliyar, and their owners were quite unaware of it until the Mudaliyar's messenger informed them seven days after the theft! Where an owner has, by his negligence, contributed to the theft, it is a pity the Magistrate cannot fine him at least Rs. 10. I venture to think that cattle stealing would quickly decrease.

XI.—DISEASE AMONGST CATTLE.

57. There was a prevalence of a mild form of hoof-and-mouth disease in various parts of the district, but no cattle died. Segregation and careful treatment proved efficacious.

58. There was no murrain during the year.

XII.—NEW AREAS OF CULTIVATION; LAND SALES.

59. Great activity has prevailed during 1901 in the purchase of lands from the Crown, the high price of cocoanuts having given rise to keen competition whenever a piece of land suitable for sale was put up to auction. It will be seen from the subjoined statement that although the acreage alienated in 1901 was slightly smaller than in 1900, yet the price per acre realized was so much higher that the net receipts were over Rs. 3,000 in excess of those for 1900. A large price per acre was obtained from lands given on half-improved value. A larger acreage than usual was given on certificates of quiet possession, and the amount of survey fees recovered from this source shows a large increase. Nearly all the certificates were granted for lands in Paluwelgala and in Udappu, the whole of which latter village was finally settled. There is still brisk competition, and, after the comprehensive survey proposed in 1902, there will be much interesting work to be done in deciding all claims, reserving lands for forests, and selling the rest.

60. The following returns show—

A.—Return of Lands granted and sold during the Three Years 1899 to 1901.

Year.	Sales.				Half-improved Value.				Certificates against the Crown.		
	No. of Lots.	Extent.	Amount.	Average Price per Acre.	No. of Lots.	Extent.	Amount.	Average Price per Acre	No. of Lots.	Extent.	Fees recovered.
		A. R. P.	Rs. c.	Rs. c.		A. R. P.	Rs. c.	Rs. c.		A. R. P.	Rs. c.

B.—New Lands cultivated.

	Cocoanuts. Acres.	Paddy. Acres.	Other Products.	Total. Acres.
Pitigal Korale North ...	500	—	—	500
Pitigal Korale Central ...	310	18	—	328
Pitigal Korale South ...	—	—	—	—
Total ...	810	18	—	828

XIII.—WASTE LANDS ORDINANCE.

61. The lands described in the following notices, which were referred to court during 1900, were declared Crown property:—

Situation.	Extent. A. R. P.	Result.
Puliyankadawera... ...	52 3 31	Declared Crown property
Puliyankara		
Meda Dambuwa		
Arachchikattuwa... ...	140 2 12	do.

62. Eight notices as per subjoined statement were issued during 1901, of which four were declared Crown property, three referred to court, and one will be dealt with in 1902:—

Situation.	Extent. A. R. P.	Result.
Mugunuwatawana ...	10 1 20	Referred to court
Do.	19 1 32	do.
Do.	20 3 13	do.
Arachchikattuwa... ...	166 1 24	Declared Crown property
Vairankattuwa	1,520 3 28	do.
Nalladarankattuwa ...	120 3 2	do.
Do.	604 3 0	do.
Arachchikattuwa... ...	360 2 15	Will be dealt with in 1902

XIV.—CHENA CULTIVATION.

63. There has been but very little chena cultivation in 1901, and that almost all private property. As the paddy fields throughout the district have been cultivated during the year, no hardship has been felt by the people, and licenses to clear Crown chenas were refused.

XV.—SALES OF LAND BY VILLAGERS.

64. There have been the usual sales of lands both with houses and without, but there is no reason to believe that the villagers selling had insufficient title.

XVI.—VILLAGE COMMITTEES.

65. The two following returns show—

(*a*) The number of cases dealt with by the Village Committees during 1901.

(*b*) The state of the funds of the Committees.

Return of Cases in the Village Committees, Chilaw District, for the Year 1901.

Korale and Division.	Cost of Staff per Annum.	Cases instituted and decided.							Appeals.					
		Pending on January 1, 1901.	Instituted during the Year.	Total.	Decided	Amicably settled.	Pending on December 31, 1901.	Total.	To Assistant Government Agent.		To Governor in Executive Council.		Pending.	
									Confirmed.	Set aside.	Confirmed.	Set Aside.	To Assistant Government Agent.	To Governor in Executive Council.
	Rs.													
Pitigal Korale North ...	420	16	293	309	167	121	21	309	1	1	—	—	—	—
Pitigal Korale Central ...	420	20	166	186	144	22	20	186	—	—	—	—	1	—

Return of Gansabhawa Deposits, Chilaw District, for the Year 1901.

Korale and Division.	Revenue and Expenditure.				
	Balance on January 1, 1901.	Receipts during the Year.	Total.	Payments during the Year.	Balance on December 31, 1901.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.
Pitigal Korale, Northern Division	269 9	774 8	1,043 17	877 83	165 34
Pitigal Korale, Central Division	7 79	1,285 23	1,293 2	638 59	654 43
Pitigal Korale, Southern Division	228 90	673 82	902 72	733 82	168 90
Total ...	505 78	2,733 13	3,238 91	2,250 24	988 67

66. Besides these cases, the Committees, especially in Pitigal korale north, have dealt with a large number of irrigation cases during the year, and have in that done much useful work.

67. Most of the Village Committee cases are for abuse, and if the Committees could succeed in stopping some of the evil language used by villagers, it would be a great gain. Unfortunately the majority of the cases are "amicably settled," which means, I take it, that the complainant gets a fee to drop the case. Under these circumstances the imposition of a small stamp fee will in some degree repay the Committee for extracting money from the accused's pocket in order that it may drop into complainant's.

68. The Village Committees of Pitigal korale south have done a good deal during the year in improving paths, bridges, and school buildings. It is hoped that the good work will be still more energetically carried on in 1902.

XVII.—COCOANUT, TOBACCO, AND OTHER PRODUCTS.

69. The development of the cocoanut industry continues apace, and proves an ever-increasing source of prosperity to the district. Month by month the price of cocoanuts is increasing, the supply being unequal to the demand. The local desiccating mills are capable of dealing with a large proportion of the nuts grown.

70. Tobacco is an important crop, but is not really very profit-yielding, for the cost of cultivation from beginning to end is such as to leave but a very small margin of profit. I have refrained from quoting figures, which, as supplied to me, are more or less guess-work.

XVIII.—FISH-CURING.

71. The following returns show that the fish-curing operations at Toduwawa are gradually increasing in importance. It is regrettable that the transport of the salt from Puttalam is so costly, as the profits are for that reason rather small :—

Comparative Statement of Fish-curing Operations at Toduwawa.

Particulars.	1900.		1901.	
	Quantity.	Amount.	Quantity.	Amount.
	Cwt. lb.	Rs. c.	Cwt. lb.	Rs. c.

Cost of carrying Salt	336 25	380 0
Other Charges	35 78	16 48
Total ...	762 51	886 86

XIX.—NATURE OF WORK OTHER THAN ROUTINE.

72. Mr. Fraser, my predecessor, had taken very keen interest in irrigation, the improvement and beautifying of Chilaw town, the improved roading of the district, and in land settlement. On all these matters he kindly left me memoranda, and I have carried out his plans where possible. The progress of the district is in no small degree due to his energy and foresight, and I am sure he left it with regret. The only points, apart from those mentioned, to which I have given attention are the binding of Kachcheri records and the beginning of the systematic draining of Chilaw town.

XX.—MISCELLANEOUS.

73. I took up duties on the 20th August, relieving Mr. Fraser, who had ruled the district since December, 1899.

74. There were no events of striking importance during the year.

75. The work in the Deputy Fiscal's Office has continued to increase, and the staff will shortly have to be increased.

76. A very large part of the time of the Assistant Government Agent is taken up in District Court work, which is year by year becoming more arduous. The following return shows the work done :—

Return of Work done in Civil Actions in the District Court of Chilaw during the Year ended 31st December, 1901.

Trial Roll.

		Land.	Money.	Total.
1.	Number of cases on the first day of the year	34	23	57
2.	Placed on the Trial Roll during the year	23	103	126
		57	126	183

Decided.

	Balance on Trial Roll	28	9	37
	Total Number of Cases pending ...	66	54	120

77. The revenue derived from judicial stamps has increased until it has reached Rs. 20,000. If the work continues thus hard, a second judicial officer will be required, at any rate until the land matters of the district have been settled.

78. The Battulu-oya bridge was completed during the year, and was opened for traffic on 1st January, 1902.

J. H. LEAK,
Assistant Government Agent.

February 26, 1902.

NORTH-CENTRAL PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, NORTH-CENTRAL PROVINCE, FOR 1901.

I.—REVENUE AND EXPENDITURE.

THE total revenue for the year was Rs. 100,914·92, or Rs. 24,868·19 more than that of 1900, an increase of 32·7 per cent. This revenue has been exceeded only twice during the last ten years: in 1892 when it was Rs. 121,531·48 and in 1896 when Rs. 101,235·60 were collected. In 1892, however, the total was swelled by the large sum of Rs. 59,144 on account of paddy tax, and in 1896 by Rs. 30,031, value of timber sold to the Indian Government. This year's revenue was independent of both these items.

The collections of this year have been exceeded in seven of the years between the creation of the Province in 1873 and 1892, but in every one of them there were large items on account of timber and land revenue, averaging respectively Rs. 68,000 and Rs. 34,000. Since the bulk of the timber sales were taken over by, and credited to, the Forest Department, and since the abolition of the paddy tax, both "Timber" and "Land Revenue" have dwindled to comparatively insignificant items in the Government Agent's books. The figures for this year are "Timber" Rs. 2,519·74 and "Land Revenue" Rs. 3,440·87. No fair comparison can therefore be made between the revenue of this and former years, unless these two heads are eliminated. If that be done, this year's revenue has been the largest on record. One of its best features is the uniform increase in almost every branch, certainly in every important branch. The most notable are :—

	Rs.	c.
Arrack	6,405	0
Paddy	1,672	88*
Revenue Stamps	1,092	30
Survey Fees	1,257	61
Fees for Title Deeds	971	30
Postage Stamps	789	22
Timber	1,664	86†
Land Sales	6,373	96‡

All these indicate the steadily growing prosperity of the people, though "Arrack" and "Timber" point rather to an influx of people from outside, who find ready employment on the railway and large irrigation works in progress, than to any demand by the indigenous population. The latter have, happily, not yet acquired a taste for strong drink. No doubt the new comers have also contributed largely to the increase in "Revenue" and "Postage Stamps," but the rise in "Survey Fees" and "Land Sale" receipts points unmistakably to increased purchasing power among the villagers, in spite of short paddy crops, very few lands having yet been sold to, or applied for by, strangers.

The total decrease of revenue under the various heads has been only Rs. 653·56. The only item worth mentioning is a pleasing falling off in Police Court fines of Rs. 182·27.

The total expenditure of the Government Agent's Department was Rs. 36,824, or Rs. 1,652 more than in 1900. This is due to (1) two special appointments, a Waste Lands Clerk and an Additional Land Clerk; (2) to larger payments of commission to headmen on increased revenue collection; (3) to larger Kandyan marriage registration fees; (4) to an item of Rs. 932·30, "Rewards to Headmen," paid in 1900 by the Government Agent (Police); and (5) to "Cholera Charges" incurred in December, 1900, but brought to account in 1901.

II.—FOOD SUPPLY.

Among the villagers rice grown by themselves is the staple food, though, especially in Nuwarakalawiya, it is largely supplemented by chena produce, such as kurahan, Indian corn, amu, *mederi*, undu, mun, tana, &c. Indeed, kurahan is often preferred to rice, as having more sustaining power. There can be no doubt, however, that it is indigestible in the form in which it is commonly eaten. Mr. Ievers's remarks in his Administration Report for 1888 are still true :—

> Some discussion has recently arisen regarding the use of kurahan, which forms so large a part of the food of the people. In the opinion of the medical men of the Island I believe it is held to be injurious. In my opinion this statement should be modified by saying that the constant use of kurahan as a food, especially when improperly cooked, is injurious. There can be little doubt that kurahan, *per se*, is a nourishing and healthy grain if properly cooked, although most natives consider it a source of "giniyama" (සීනියම), that is, of a heating nature. Eaten as porridge it is excellent. But the village method is this: the grain is ground and made into a paste with water and then beaten out flat in a chatty and put over the fire and baked. To the sight and touch the product is like thick leather; and I have

* More tavalu or tank bed cultivation having taken place owing to the village tanks not having filled for the third year in succession.

† Local sales only.

‡ Or over 38 per cent. more than in 1900.

occasionally used it for gun wads. If a square of this is eaten in the morning, the eater does not become hungry again till next morning, and this is considered by him the great merit of the food. The villager says: "If I eat rice I shall be hungry by evening, and must then cook and eat again." It is obvious that the long time the "roti" takes to digest, and its unvarying use as a food, must be injurious to the constitution. I am informed that there is an intimate connection between the state of the digestion and the occurrence of skin disease. If the villager were in the habit of using milk and ghee with kurahan porridge, I believe he would have an excellent food. But unfortunately the Sinhalese villager does not utilize the milk of the numerous cattle which are reared in every village of the Province. The milk of the buffalo cow, which is exceedingly rich, is made into curds ("dikiri") and eaten with rice by many of the higher classes, but the neglect of milk and its products by the ordinary Sinhalese villager is almost universal.

Much of the paddy grown, especially by the more well-to-do among the people, and just after each harvest, is exported, as also is a large quanity of the dry grain. Almost all the paddy grown under the Anuradhapura city tanks is exported, chiefly to Jaffna.

Gingelly is largely grown as a second crop on the chenas. The sale and barter of this commodity, and of rice, kurahan, &c., provide the people with their cloths, curry stuffs, dry fish, salt, and other imported articles which they use.

Imported rice is used by the Tamil coolies employed by the Public Works; the Irrigation, and the Railway Departments, and by the population of Anuradhapura town, composed chiefly of Moormen, Tamils, and low-country Sinhalese settlers. It is not used by the villagers.

Yams, pumpkins, chillies, and other vegetables are grown on the chenas along with the dry grain crops. The villagers are being gradually induced to cultivate improved varieties in their gardens and also fruits of various kinds. The cultivation of plantains and cocoanuts is also slowly but steadily increasing. It has been supposed that the latter will only grow well close under the tank bunds, where the soil is constantly kept moist by percolation. It is true that this is the usual spot where they are planted, because the hamlet almost invariably happens to be in the same place, but there are several villages in which there are flourishing cocoanut plantations half a mile or more from the tank. Mr. Godage's garden in Anuradhapura is a striking proof that the proximity of a tank is not essential to successful cocoanut cultivation.

Two Cottagers' Shows were held during the year, one at Habarana, the other at Rambewa, two days, instead of one as heretofore, being devoted to each. Both attendance and exhibits were numerous. Seeds were distributed to all who cared to take them.

Other sources of food supply ready to the hands of the people are game and fish. The latter abound in all the tanks and are caught at all times, but especially when the tanks are low at the end of the dry season. I quote some interesting remarks on this and other sources of food supply of the villagers, derived both from the tanks and forests, from the Administration Report of Mr. Ievers for 1887:—

> Fish is largely eaten by the people. When the water in the tanks fails, the villagers assemble with fishing baskets and catch immense quantities of fish, and this is divided among them according to the village pangu. The fish seem to have the power of burying themselves deep in the mud, or they would soon be exterminated in tanks. I have been astonished to see tanks, which a few months before were perfectly dry, stocked with good-sized fish when it filled. Immense quantities of sprats are caught and dried. There are several fish which are bony and disagreeable. The best kinds are "lula" and "walaya." The former is an eel-like fish, and grows to about 8 lb. or 10 lb. in the rivers, and averages 1½ lb. or 2 lb. in the tanks. The "walaya" is a fine fish, which grows to an immense size, and is generally caught with a line and live bait. It has a faint taste of salmon, though the flesh is not firm and flaky. It has a broad flat head and long beard-like threads about the mouth, which is furnished with several rows of formidable teeth. I have never heard that any fish here are unwholesome at any time of the year, as some kinds are in the up-country streams. A good deal of dried fish is sent from Tamankaduwa to other districts.
>
> Besides fish, the tanks supply a considerable variety of wholesome vegetable food, which I have personally tried and appreciate. The stalks of a small kind of lotus called "olupiti" are boiled and eaten in curry. The fruit yields seeds called "tank-rice" ("oluhal"). The seeds and buds of the lotus are edible; the former ("nelunbatu") are eaten both raw and cooked, the latter ("dalu") raw. The kernel of the caltharp ("vilagas"), a herb which grows in tanks, is excellent, and is largely eaten boiled or roast. The nut is bat-shaped with three or two sharp thorns, whence its name (*Calcitrapa bispinosa*).
>
> The forests yield yams of various kinds, and honey, which is diligently sought and divided, when found, according to ancient custom. They also supply a number of fruits for food, and almost innumerable kinds of pungent leaves, which are used to flavour curries.

Cocoanuts, curry stuffs, onions, dry fish, salt, &c., are imported from Kurunegala, Puttalam, Matale, Jaffna, Trincomalee, and Mannar, into Nuwarakalawiya and the Sinhala and part of the Meda pattu of Tamankaduwa. The wants of the rest of the Meda pattuwa and of the whole of Egoda pattuwa of Tamankaduwa in these respects are chiefly supplied from Batticaloa.

Palmirah jaggery is imported from Jaffna, and cocoanut and kitul jaggery, which are preferred, from Matale. With a view to encouraging the cultivation of the palmirah, which thrives fairly well here, 8,000 seeds were purchased from Jaffna out of Gansabhawa funds during the year and distributed among the different palatas, Tamankaduwa getting the largest share.

During the year under review the food supply in Nuwarakalawiya was sufficient, though the paddy crops were short, owing to the failure of the tanks to fill, for the third year in succession, in many parts of the district.

In Tamankaduwa, owing to the continued closure of Minneriya tank, where the work of restoration was not sufficiently advanced to admit of the issue of water, very little cultivation under it has been possible, and large tracts of fields in the Sinhala and Meda pattu were again left uncultivated this year. In this part of the Province, though there has not been acute distress, there has undoubtedly been scarcity. The condition of the people has received the anxious consideration of the Government, and I have, under its instructions, permitted the cultivation of a limited extent of chena on payment of rent at the approved rate of Re. 1 per acre.

I am glad to say that the prospects for the coming year, both in Nuwarakalawiya and in Tamankaduwa, are distinctly brighter than they were a year ago. In the former district there has been abundant rain at the right time, and the tanks are, with few exceptions, not only full, but have filled early, thus ensuring plentiful "maha" and "meda" harvests. In the latter, the work on Minneriya has been vigorously pushed forward, and there is every hope that 1902 will once more see that splendid reservoir in working order. I trust, too, that a serious effort will be made to open the sluice of Giritala tank, which has been blocked for the last five years.

Though the average rainfall for the Province has been only 47·84 inches, even less than the 47·91 of 1899 and the 48·83 of 1900, the fall has come in heavier "plumps," especially in November and December. This is the kind of rain wanted for tank filling; light rains spread over several days are of little or no use for that purpose.

The annexed table shows how greatly the rainfall has varied at the different stations in the Province during the year, Madawachchiya and Kalawewa especially suffering from a deficiency during the first seven or eight months :—

Rainfall, 1901.

Station.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total.
Anuradhapura ...	·76	3·70	2·58	5·53	2·05	·18	—	—	5·24	6·91	11·70	7·01	45·66

Average ...	1·74	2·62	2·60	5·14	2·35	·51	·05	·70	5·32	5·25	14·04	7·52	47·84

A comparative statement of prices in 1900 and 1901 is annexed :—

1900. Name of Article.	Value. Rs. c.	1901. Name of Article.	Value. Rs. c.
Rice (imported), per bushel Rs. 4 to ...	6 0	Rice (imported), per bushel Rs. 4·25 to ...	5 0
Rice (locally grown), per bushel Rs. 3 to ...	4 75	Rice (locally grown), per bushel Rs. 4 to ...	4 25
Paddy, per bushel Re. 1·12 to	1 75	Paddy, per bushel Re. 1·50 to	1 75
Cow ghee, per measure	1 50	Paddy in Tamankaduwa, per bushel ...	2 0
Buffalo ghee	1 0	Cow ghee, per measure	2 50
Cocoanuts, per 100	5 0	Buffalo ghee, per measure	1 50
Cocoanut oil, per measure	0 30	Cocoanuts, per 100	6 0
Maldive fish, per lb.	0 43	Cocoanut oil, per measure	0 50
Kerosine oil, per tin of 4 gallons ...	4 25	Maldive fish, per lb.	0 37
Kurahan, per bushel	1 0	Kerosine oil, per tin of 4 gallons Rs. 4 to ...	4 25
Chillies, per lb.	0 12	Kurahan, per bushel	1 0
Salt, per measure	0 10	Kurahan in Tamankaduwa, per bushel ...	1 50
Tobacco, per leaf	0 6	Chillies, per lb.	0 12
Honey, per measure	0 62	Salt, per measure	0 10
Onions, per lb.	0 12	Tobacco, per leaf	0 6
		Honey, per measure	0 62
		Onions, per lb.	0 12

It will be seen that the prices of rice, both imported and locally grown, have not gone so high this year as they were at the end of 1900, though the average through this year has been higher. This has been due probably to the short local crops, both of 1900 and 1901. The same cause accounts for the higher average price of locally grown paddy. Owing to the scarcity in Tamankaduwa the prices both of paddy and kurahan have been considerably higher than in Nuwarakalawiya.

The rise in the prices of cow and buffalo ghee, cocoanuts, and cocoanut oil has probably been due to a greater demand for these articles, brought about by the influx of strangers seeking employment on the various large public works in progress.

III.—IRRIGATION.

A.—*Village Tanks.*

1. *Nuwarakalawiya.*—There are 1,419 village tanks in charge of the Chief Irrigation Inspector and his five Assistant Inspectors, under the supervision of the Government Agent. During the year 12 tanks were added to the list of tanks under restoration. 825 tanks are classed as completed; the remaining 594 are in various stages of restoration.

I should have been glad to have been able to contrast these figures with those of 1891, so as to give some idea of the progress made during the last ten years, but no reliable figures are available until 1894. In that year 1,141 village tanks were more or less in working order. During the last seven years, therefore, 278 new tanks have been taken in hand, an average of nearly 40 a year.

Of the tanks added to the list during the year, Rampatwila in Kanadara korale of Nuwaragam palata is by far the most important. It is the second largest village tank in the Province. No work had been done on this tank, the shareholders labouring under a mistaken idea that they could not be compelled to work. They would not work voluntarily, though their fine tank had fallen into a positively dangerous state, as they themselves admitted to me when I visited it in June. Finding persuasions useless, I reported the state of affairs to Government, and with its approval took measures in accordance with the village rules to compel the shareholders to work. The Chief Irrigation Inspector now reports that, after some slight resistance at first, they have performed almost all the work ordered.

The quantity of earthwork done during the year was 400,296 cubic yards. This is 60,608 cubic yards less than the quantity performed in 1900, but it must be remembered that in 1900 a great deal

of leeway had to be made up owing to the short quantity done in 1899, when the villagers neglected their work under the idea that the end of the world was at hand. There have, however, been defaults. For some there is no excuse; for others the villagers are not altogether to be blamed. Many of them have work to do on more than one tank, and must therefore let some of it wait till late in the season. This year the unusually early rains took them by surprise before they had finished all.

The unsatisfactory position in which the issue of permits for restoration of abandoned Crown tanks stood was referred to in my report for last year. During this year the matter has been under the consideration of Government, and a new form of permit, with strict, though very liberal, terms, was issued in December. The new conditions define precisely the amount of work to be done each year, and the period within which the restoration must be completed. They also provide for provisional grants of land under the tank each year in proportion to the value of the work done, to be made final when the restoration has been satisfactorily accomplished. Should the restorer fail to faithfully carry out his agreement, his permit and any provisional grants of land made to him will be liable to cancellation. Steps are being taken to call in the existing permits and to re-issue them in the new form. There will be no difficulty about this, on account of the attractions offered by the prospect of provisional grants of land during restoration, for which the old permits did not provide. Numerous new applications are also likely to be received. It is satisfactory to feel that this important matter has now been placed on a sound footing.

The estimate for making cement concrete pipes for sluices of village tanks, referred to in my previous report, was sanctioned in March. The equipment of a factory, building sheds, making appliances, and procuring materials, engaged attention till August, when actual pipe-making commenced. At the end of the year 1,555 4-inch pipes of 2 feet length, 573 4-inch pipes of 1 foot length, 46 4-inch junction blocks, and 448 6-inch pipes of 2 feet length had been manufactured. Mr. Balfour, Irrigation Engineer, very kindly assisted the Chief Irrigation Inspector, in whose immediate charge the factory is, with advice as to the proportion of the different materials and the methods to be used in the manufacture of the pipes, with the result that the Chief Irrigation Inspector reports that considerable improvement has been effected in the quality of the pipes turned out. As soon as the tanks are sufficiently empty, sets of pipes will be supplied to those requiring sluices.

Twenty-five tanks breached during the year. Some of the breaches were due to leaks in the bunds, others to the bunds being overtopped by floods. In all the cases but one, coffer-dams have been put up across the breaches so as to retain water in the tanks. The breaches will be filled in as early as possible.

2. *Tamankaduwa.*—There were 52 village tanks and 7 small Crown tanks under restoration by the villagers during the year. All are in a more or less advanced stage of efficiency, but none are yet fully restored. Forty-seven of them are sluiced. These tanks are in charge of the Revenue Officer, subject to the orders of the Government Agent.

Earthwork is performed annually on all of them, and their bunds and spills are kept clear of jungle. The quantity of earthwork done in 1901 was 17,784 cubic yards. There is a default of about one-fourth of this quantity; the Revenue Officer reports that the defaulters are pushing on with the work as fast as they can in order to avoid prosecution.

These tanks were half-full at the end of the year. Prospects for both meda and yala harvests next year are reported to be good. No tanks in this division breached during the year.

B.—*The Larger Works.*

1. *The City Tanks.—Nuwarawewa* has not filled this year, but its water supply has been ample for the extent at present cultivated under it.

Tissawewa was to have been filled in May, preparatory to the closure of the lower 29 miles of the Yoda-ela for repairs, but owing to an unfortunate breach in the latter at the beginning of that month it was filled only to within about a foot of its full capacity. With this supply it had not only to provide water for the yala harvest for its own fields, but also constantly to replenish Basawakulam, which was leaky and could not be filled. By the exercise of rigid economy in the distribution of the water, which was issued only in the daytime, the sluices being closed at night, very fair crops were secured under both tanks. At the end of the harvest in September there was still a foot of water on the high-level sluice, whereas in the previous year the same sluice had run dry by the end of August.

Basawakulam, as stated, was in a leaky condition. This continued for the greater part of the year, but after the yala harvest Mr. Balfour, Irrigation Engineer, took the repairs in hand so successfully that the leaks are now effectually stopped. The tank is now, after three years, once more retaining its full head of 16 feet of water.

2. *Kalawewa and the Yoda-ela.*—Fair crops were secured both from the fields directly irrigated by this tank and from those under the village tanks, which are filled from the Yoda-ela.

As has already been incidentally remarked, the lower 29 miles of the Yoda-ela were closed for repairs towards the end of May. Mr. Balfour, Irrigation Engineer, has kindly supplied me with the following particulars of the work:—

> These works were commenced in June, 1901, when a body of "Otta" coolies, numbering some 400, came from the Giant's tank works to carry out the earthwork. These numbers rose to 600 or 650 just before the commencement of the rainy season, when the scarcity of work caused a fall. There are now about 400 of them at work. The whole of the earthwork in the lower 29 miles of the Yoda-ela has been completed, giving a total quantity of 33,000 cubes, or 122,000 cubic yards. There is no remark to make about the work, except that already an improvement is noticeable in the working of the channel. Masons were got together during August and September and worked until the rainy weather, when work was practically stopped. Some of the gangs of masons have all been down at once with fever. Masonry work will be re-commenced about February, 1902.

3. *Maha Illuppallama.*—I am indebted to the same officer for the following:—

> The masonry portion of this work has progressed steadily. The masonry spillway is completed, and the sluiceway is now in hand. This will be finished by about April, 1902. The earthwork carried out during the year has amounted to 2,400 cubes (8,880 cubic yards), of which the villagers turned out by you are responsible for 900 cubes (3,300 cubic yards). These villagers all turned out satisfactorily.

4. *Minneriya.*—Mr. Gordon, Irrigation Engineer, has been good enough to furnish me with the following details, which show very satisfactory progress :—

Valve Tower Low-level Sluice.—I took over this work from my predecessor on 7th January last at the sill level, being then under 10 feet of water, and resumed building operations in the middle of February. On the 31st December the height of the completed work was 32 feet 6 inches above the sill, or 9 feet from full height. The sluice valve door was in position before the rains set in, and I received orders at the end of October to keep it open so as to allow the water to escape rapidly, also the other two sluices. Notwithstanding this the water in the tank rose to 20 feet on the sill on the 12th January, and now stands at 17 feet 11 inches. The villagers took advantage of this and have been preparing their fields for cultivation. I consider that if they work vigorously they can easily secure a crop of paddy before the tank is drained.

Yoda-ela Channel.—The jungle clearing was commenced by villagers on 5th February. The earthwork was commenced on 1st May by Indian coolies, and has steadily progressed towards completion on the first 4 miles, the first mile and a half being completed with distribution gates, spillways, &c., and now in working order. The remaining 2½ miles will also be finished this year, and work will be started on the last 5 miles of the channel next month.

Spillwater at 12¼ mile on the Habarana road is approaching completion, and the *12th mile spillwater* has been put in hand. These will be ready before the next rainy season.

Labour Force for Earthwork has been sufficient, there having been about 400 men steadily employed from May to December, the majority being Telugus and Tamils. The Sinhalese force has been comparatively small and uncertain, coming and going at all times for intervals of a couple of weeks at a time, and not to be depended upon.

General health was fairly good through the dry season, but fever, dysentery, and pneumonia have been prevalent since the rains set in, causing the death of several Indian coolies.

5. *Giritale.*—The sluice of this tank is still blocked, and no irrigation under it is possible. In the section "Food Supply" I have expressed my hope that vigorous measures may ere long be taken to re-open the sluice. This, it must be admitted, is likely to prove no easy task, as there is some 16 feet of water on the sluice.

6. *The Nachchaduwa-Nuwarawewa-Mahá Galkadawala Scheme.*—Messrs. Doxat, Park, and Chute have been engaged throughout the year on surveys, directly or indirectly, connected with this scheme. Until July, when he took over from Mr. Nunn, Mr. Balfour was also employed on the same work. Messrs. Park and Chute have given attention more particularly to Maha Galkadawala, the survey of which they have practically completed. They have also taken preliminary levels on proposed channels to connect Nachchaduwa, Maha Kanadarawa, Maha Galkadawala, and Pavatkulam, the last named a tank in the Vavuniya District. Mr. Doxat has worked chiefly on the survey of Nachchaduwa tank, on the investigation of possible connections between it and the Kalawewa Yoda-ela, and on surveys of channels from Nachchaduwa to Nuwarawewa and Anuradhapura.

The plans of these works are now being prepared, and it is expected that construction will commence during 1902 on one or more of them. They are works of the first magnitude, which will tax the energies of the Irrigation Department in Nuwarakalawiya for some years to come.

The immediate future is therefore well provided for. I should, however, be glad to see the enlargement of the capacity of Kalawewa taken in hand at no distant date. In my last report I dilated on the advantages of this work, and, indeed, I think they can hardly be exaggerated. Understanding that the question of raising the bund at each end of the spill wall was under consideration, I suggested to the Director of Irrigation in October last that the raising of the spill itself and of providing a bridge over it or over the river below should be considered at the same time. The bridge is very much required, and if the spill be selected as the most convenient place for it to cross, it will be necessary to make provision for it in the design for raising the spill. The road from Kekirawa to Galewela, which now crosses just below the spill, is a main road, but all traffic is completely suspended whenever the tank spills more than a few inches. Moreover, such a bridge would greatly assist in the development of the Kalawewa works.

A comparatively small work which might with much advantage be carried out at once is the improvement of the channels under the city tanks. Many of these have fallen into such disrepair that the ordinary upkeep vote will not suffice to put them into thoroughly good order ; a special estimate and vote are required.

Besides the works indicated in my report for 1900, there are many others which might with advantage, and doubtless will, be taken up in course of time. It will be sufficient merely to indicate some of them, *e.g.*, the restoration of Maha Kanadarawa, Eruwewa, and Maha Vilachchiya, all large storage reservoirs, of the Yoda-ela which runs from Uluketuwewa on the Mirisgoni-oya to Eruwewa, and the enlargement of the first class village tanks Manankattiya, Maminiyawa, and Horiwila.

IV.—LEGISLATION.

(*a*) It should be made legal for registrars of Kandyan marriages to register unions in the villages in which the parties reside. At present section 11 of Ordinance No. 3 of 1870 only admits of this in special cases, but the same facility should be extended to all cases in which the provincial registrar gives his written authority. The people have no objection to registration as such, but they do not attach sufficient importance to it to take the trouble of travelling any great distance to reach the registrar. If registration is to become anything like the general practice, it must be made easy. I understood from the Hon. the Kandyan Member of the Legislative Council, when he was in Anuradhapura in September last, that he was strongly in favour of such a step.

(*b*) Provision should be made under "The Road Ordinance, 1861," and its amending Ordinances, that in Provinces which consist of only one district all the powers and functions of a District Committee may be exercised by the Provincial Committee. As the Ordinances now stand, all matters relating to the preparation of lists of those liable to labour, to exemption, to calling out labour, to collecting the commutation money, and so on, are exclusively in the hands of the District Committees. So long as there were no Provinces which were not subdivided into districts, as was the case when "The Road Ordinance, 1861," was passed, this system was suitable enough. Since then, in 1873, this

Province, which consists of but one district, was created. It does not seem worth while to subdivide it into districts, which are not wanted, merely for the sake of complying with the technical requirements of the Ordinance, particularly as there are very few persons, outside the town of Anuradhapura, of sufficient education to be fit to serve on the District Committees. The simplest way to meet the case seems to be by the amendment of the Ordinances as above suggested.

V.—THE RAILWAY.

The Assistant Engineer, Northern Railway Extension, has kindly supplied me with the following account of works carried out in this Province during the year:—

1. The railway trace for 25 miles has been cleared of jungle mostly by local labour.
2. About 68,000 cubic yards comprised in 7 miles of earthwork are complete; 23,500 cubic yards of this at bank No. 207 were constructed by village labour. Some additional 3½ miles are now in hand.
3. One bridge has been completed and numerous culverts, while all the other bridges and most of the culverts for 5 miles each side of Anuradhapura are in progress. The masons, consisting largely of men from other districts, have suffered much from fever, thus somewhat delaying the works.
4. Talawa station building is about three-fifths complete. Anuradhapura station and goods shed are practically complete. Madawachchiya station foundations are now being built. Anuradhapura railway hospital wards were finished in the early part of the year.

The amount of work done by the villagers is gratifying, especially the earthwork, to which they were supposed to be so very much averse. The result shows that when properly managed and fairly treated the villager is by no means worthless as a labourer. L. B. Bulankulam, Ratemahatmaya of Nuwaragam palata, his brother M. B. Bulankulam, Korala, and the other Koralas of the palata deserve much credit for the manner in which they turned out the people, and my thanks are due to Mr. Firbank, Assistant Railway Engineer, for his considerate treatment of the labourers, and the trouble he took to pay them promptly. Though during three months there were often as many as 300 or 400 people at work on bank No. 207, I did not receive a single complaint.

In addition to the work on the railway proper, an estimate of Rs. 149,000 for the approach road from Anuradhapura town to the railway station and from the railway station to join the Rambewa road has been sanctioned. The survey of the land which it will be necessary to acquire for this road has been made, but the plans have not yet been received.

VI.—WORKS MOST REQUIRED.

The following, exclusive of irrigation works, which are dealt with in another section, are the works most required:—

(1) *Roads.*

(*a*) *Improvement of the Anuradhapura-Trincomalee Road viâ Mihintale.*—All levels have been taken and plans finished for that portion of this road which lies in this Province. The Director of Public Works, I believe, proposes to put a foundation on this road and to metal it throughout. This will cost a large sum, but, if future communication between Anuradhapura and Trincomalee is to be by road and not by a light railway, it will be money well spent.

(*b*) *Feeder Roads to the Railway.*—The most important of these is the road from Kekirawa to Talawa railway station. An estimate of Rs. 216,700 for converting this into a first class road has been prepared, but has not been sanctioned, nor has any vote on account been given. Only its ordinary upkeep as a gravelled road has been provided for.

(*c*) *Improvement of the Maradankadawala-Habarana Road.*—Rs. 4,411, the unexpended balance of the Rs. 10,000 voted in 1900 for this purpose, has been brought forward, but no additional amount has been allowed. The Provincial Engineer would like to have a survey of the whole of this road made, so that he might prepare a complete estimate for its improvement. No doubt it is much better to improve the road on a systematic plan than to do it piecemeal.

(*d*) *Extension of the Road from Topawewa through Tamankaduwa to the Batticaloa District.*—I have pointed out in my previous Administration Report, and in special representations to Government, of what immense benefit this road would be to the Tamankaduwa district of this Province, which has not hitherto received its fair share of the attention bestowed upon the rest of the Province, but which, though now languishing, has in itself all the elements of prosperity when once its irrigation works are restored and it is made accessible. In reply, I have been assured that the Government sympathizes with the proposal, but is not able at present to undertake the work, in view of the large undertakings elsewhere to which it is already committed. The principle having been admitted, the work will no doubt follow when funds are available. All that is wanted to begin with is Rs. 4,250 for the survey of the road. The Director of Irrigation has travelled through the country which it would traverse and considers that its construction would be cheap, and would present no difficulties as the land is flat throughout.

(2) *Bridges.*

(*a*) *New Bridges on the Horowapotana-Vavuniya Road.*—Only three more bridges are wanted to make this road passable in all weathers. Rs. 10,000 has been voted towards their construction in 1902. A further Rs. 17,400 will be required to complete them.

(*b*) *The conversion of the Kanugahawewa Bridge on the Central Road into an Iron One.*—The estimate for this is Rs. 9,100. As the upkeep of the present wooden bridge cost Rs. 1,470 during 1901, and costs nearly the same amount every year, it would be true economy to replace it by an iron one.

(*c*) *Bridges and Culverts on Village Roads.*—In pursuance of its policy of assisting the villagers, where the latter have cleared and done earthwork on their village roads, by granting money towards the building of bridges and culverts and other skilled work which the villagers cannot do, the Government has this year granted Rs. 3,000 towards this object. It is hoped that this grant will be made annually until all the village roads are provided with bridges and culverts. At present most of them are almost impassable during the wet season and for some time after it.

(3) *Buildings.*

(*a*) *Police Station and Barracks, Anuradhapura.*—Plans and estimates for this work have been submitted, and the site has been selected and approved by the Inspector-General of Police and by Government. It was pointed out in my last report how urgently this building would be required by the time the railway is opened. If it is to be ready by that time, provision must be made for it in the Estimates for 1903.

(*b*) *Quarters for a Cadet.*—The Cadet attached to the Kachcheri lives with the Office Assistant, but were the latter a married man, as has often been the case before, the Cadet would be homeless. The building would eventually come in useful as the Judicial Officer's house. The Office Assistant will be unable for more than another year or two to discharge the double duties of Assistant to the Government Agent and Commissioner of Requests and Police Magistrate, but it will be necessary to appoint a separate Judicial Officer.

(*c*) (1) *Quarters for the Kachcheri Record-keeper ;* (2) *Quarters for the Court Record-keeper.*—These officers at present depend on their friends for house room. Quarters should be provided for them as for all other Government officers.

(*d*) *Quarters for Jail Officers.*—The present building is in so bad a state of repair as not to be worth any considerable expenditure on its improvement. It would be better, and in the long run cheaper, to build new quarters.

(*e*) *Cement or Concrete Floors in all Houses occupied by Government Servants in Anuradhapura.*—Some of the officers' quarters have only mud floors. These become damp in the wet season, always unhealthy enough without this additional source of insalubrity. During November and December the despatch of public business is often seriously impeded by the number of officers either on the sick list or more or less unfit for work. So obvious a means of increasing the efficiency of their work should not be neglected.

(*f*) *Improvements to the Kachcheri Mudaliyar's Quarters.*—It is proposed to add two rooms at a cost of Rs. 3,092. These quarters at present consist of only three rooms. An officer of the standing of the Kachcheri Mudaliyar, who is likely to have a family, as the present holder of the office has, should have more accommodation than this.

(*g*) *Court-house, Anuradhapura : Completion of Design.*—This building is under construction, but the sum voted will only permit of carrying out a part of the full design. It would in the end be cheaper and more satisfactory in every way to complete the full design while the work is still in hand.

(*h*) *Offices and Stables for the Archæological Commissioner.*—The new residence for this officer is nearly ready for occupation, but no provision has yet been made for his offices or for stables. Both should be provided. His offices are at present a part of the house in which he now lives. When he moves into his new quarters, it will be most inconvenient both for himself and for the future occupants of his present house that he should continue to use his old offices.

(*i*) *Two Resthouses on the Habarana-Topawewa Road, one at Minneriya, the other at Topawewa.*—This road is every year becoming more frequented by visitors to the ruins at Polonnaruwa and by other travellers, for whom some accommodation should be provided. The Provincial Road Committee has no funds for the purpose. A sum of Rs. 8,000 for each would probably be required.

(4) *Miscellaneous.*

(*a*) *Water Supply for Anuradhapura Town.*—This is an important matter in view of the past rapid expansion of the town and of its probably still more rapid future expansion. It might be taken up with very little delay were the Government so disposed, as the Director of Public Works is, I believe, prepared to submit a scheme, if called upon to do so.

(*b*) *Cement Concrete Drains for Roadside Bazaars.*—These drains have been built along some of the roads in Anuradhapura and in the bazaars of Tirappane, Madatugama, and Madawachchiya. Rs. 2,480 have been allowed this year for similar work at Rambewa. Habarana, Irambakkulama, Kahatagasdigiliya, Maradankadawala, Nochchiyagama, and Talawa still remain to be done. An extension of the drains along the Puttalam-Trincomalee road in Anuradhapura for about 1,000 feet and a drain for the market street along the Kurunegala road are also very desirable.

(*c*) *Shelves for the Kachcheri Record-room and Painting of the Ceiling of the Kachcheri Ground Floor.*—The first of these two small improvements would give more room and conduce to the orderly preservation of the records ; the second would give brightness and light in the downstair offices, which are at present very dark, not only in cloudy weather, but also when the sun blinds have to be closed to keep the afternoon sun from streaming in.

(*d*) *Substantial Fences round all Government Buildings in Anuradhapura.*—The present fences are most untidy and quite inefficient. Clerks on small salaries cannot be expected to bear the expense of putting up good fences, but were such once provided, they might fairly be made responsible for keeping them in good order.

VII.—PLANS FOR THE IMPROVEMENT OF THE PROVINCE.

The particular and immediate plans which I have in view for the improvement of the Province are indicated in other sections of this report.

The general lines on which it must advance and the results already achieved were outlined in my report for last year and need not be repeated. I cannot, however, refrain from quoting from Mr. Ievers's Administration Report for 1888 :—

> A close, personal, and continuous observation of over three years convinces me that the policy of tank and channel restoration begun by Sir William Gregory and Sir J. F. Dickson, and successfully followed up by the present Government, has gone greatly not only to relieve distress and misery, but to prevent this Province from appearing a blank waste on the map. That it was speedily destined to become, had not these measures been taken before it was too late. It has been said that it would have been less costly to have deported the population to a more healthy district. Those who say so little know the Sinhalese

villager, who would die rather than leave his ancestral lands. If owing to our neglect of this Province for fifty years the villager has sunk into disease and misery, the reply of Government can hardly be, "If he will not go, let him die."

Government has now honestly retrieved past neglect by a large expenditure of money, and all that is required is time. A review of what has been accomplished in the past fifteen years shows great progress in improvement, and if the administration proceed upon the same lines, the future prosperity of the Province is assured.

This prophecy has already in great measure come true, but as Mr. Ievers foresaw, time is necessary for its perfect fulfilment. The great system of irrigation works with which the Province is intersected is now being systematically examined, and will be as far as possible restored. Side by side with this, the railway will bring new settlers, and will create new wants and incentives to the villager to improve his moral and material condition.

Though we, whose service is more than half run out, may not be here to see it, the time will come when this Province will once more take its place among the most flourishing districts of the Island.

VIII.—SANITARY CONDITION OF THE PEOPLE.

The health of the people was fairly good on the whole until the last two months of the year, when fever, always prevalent at that time, became more than usually severe. This was no doubt due to the heavy rains then experienced. Their immediate effect has been prejudicial to the general health; their ultimate effect will more than compensate for this in the abundant water supply secured.

The rainy season has been particularly trying to residents in Anuradhapura town, most of our small European community having suffered from fever at one time or another. Very few of the clerks of the Kachcheri and other Departments have escaped.

Measles was present during nine months of the year in Nuwaragam palata, during seven months in Kalagam palata, and during six months in Hurulu palata, but was nowhere reported as being severe. Tamankaduwa was entirely free from it.

Several cases of dysentery were treated at the Anuradhapura, Habarana, Horowapotana, Kekirawa, Tamuttagama, and Yakalla dispensaries.

I am glad to say that the Province has been free of smallpox, and of cholera which played such havoc in Tamankaduwa last year.

It may be worth noting, as indicating the state of the general health of the population, that the percentage of those liable to labour under the Roads Ordinance who were exempted on the ground of sickness was 1·74. It would be interesting to compare this with other Provinces.

There are two hospitals in the Province, one at Anuradhapura, the other at Mihintale, each with an outdoor dispensary attached to it; ten other main dispensaries, each in charge of an apothecary, and twenty-five other dispensaries, to which the apothecaries in charge of the main dispensaries itinerate. Ten years ago there were only seven main and two itinerating dispensaries in this Province.

These dispensaries are freely resorted to by the people. An average of 2,054 visits was made by patients to each one during the year. The most frequented dispensaries are Anuradhapura, with 10,682 patients treated, and Kekirawa, with 8,886. The least frequented is Kayinattama, visited once a week by the apothecary stationed at Yakalla, with 612 patients.

During the year an apothecary was stationed permanently at Minneriya, on account of the large labour force employed on the irrigation works there. This relieved the apothecary at Topawewa of the duty of itinerating there; instead of doing so he extended his visits into the Egoda pattuwa, to Mutugalla as well as to Mannampitiya.

I should be glad to see three more apothecaries allotted to the Province:—

(*a*) One in the Egoda pattuwa of Tamankaduwa, with headquarters at Mutugalla and itinerating stations at Mannampitiya and other convenient places.

(*b*) One at Andiyagala in the Kiralowa korale of Kalagam palata, itinerating to Madawachchiya in Negampaha korale and to Unduruwa in Unduruwa korale.

(*c*) One at Kalawewa, itinerating to Kunchikulama in the Kalagam korale of Kalagam palata and to Eppawala in the Eppawala korale of Nuwaragam palata.

I will give my reasons for each of these proposals in order:—

(*a*) At present the Egoda pattuwa is served only by the apothecary at Topawewa on this side of the Mahaweli-ganga, who is frequently cut off altogether from the Egoda pattuwa by floods in that river. I have pointed out the serious results which this involved last year, when a flood coincided with an outbreak of cholera. The same thing happened again this year, when two or three sudden deaths were reported from the Egoda pattuwa, but the apothecary could not get there for some days. Fortunately, when he did succeed in crossing the river, the attacks turned out only to have been acute diarrhœa.

Another advantage of this proposal would be that the apothecary at Topawewa would be free to itinerate to the villages in the east and north-east of the Sinhala and Meda pattu. Some of these are more than 20 miles from the nearest dispensary, and practically out of all reach of medical aid.

(*b*) The Kiralowa, Negampaha, and Unduruwa korales, which it is proposed to serve by an apothecary at Andiyagala, are at present very badly off for medical attendance. The people have to go long distances, and can only be treated once a week in fine weather by the apothecary from Kekirawa. When the Kala-oya is in flood, as it is whenever Kalawewa spills more than a few inches, they get no treatment at all.

(*c*) There would be ample work for an apothecary at Kalawewa. 4,556 patients were treated there during this year, and at Eppawala and Kunchikulama, the two other stations which he would visit, 2,185 and 1,166 respectively. These numbers would doubtless increase if the apothecary's visits were more frequent and certain. There is already a substantial dispensary building at Kalawewa put up by the Gansabhawa, so that no expense would be required on this account.

The above arrangements (*b*) and (*c*) would give much-needed relief to the overworked apothecary at Kekirawa. He at present itinerates to Kalawewa and Andiyagala, and also has to visit Madatugama in the opposite direction. He is expected to visit each of these places once a week.

Yet at Kekirawa alone, the busiest dispensary in the Province, with the sole exception of Anuradhapura, the number of patients treated during the year was 8,886. At Madatugama it was 2,018 and at Andiyagala 1,741. The figures for Kalawewa have already been given above. In all this one officer treated 17,201 persons during the year.

The Maradankadawala apothecary would also be relieved of Kunchikulama to the advantage of his work. He already has a very busy dispensary at his headquarters, where 5,984 cases were treated during the year, and has besides Galkulam and Tirappane, where the number treated was 1,983. If it were found that, with the relief given them, either of these officers could undertake more work, new itinerating stations could be provided for them to the great advantage of the people.

The sanitation of all villages has been steadily kept in view. The constant burning or burial of all rubbish, the whitewashing of houses, and the rule requiring that a belt at least 30 fathoms wide round each hamlet shall be kept free of jungle, have been strictly enforced. There can be no doubt though that many villages are rendered insanitary by stagnant water. Situated as they usually are just under the tank bund the ground near them is often swampy, and owing to the bad practice which appears to have been at one time permitted, of excavating the earth for the restoration of the bunds from outside the tank, pits have been sunk in which water collects. This practice has for some time been strictly prohibited. Whenever practicable these swamps and pits are filled in or drained, but in most cases very little can be done. The ground being flat, drainage is often impossible, and one pit can only be filled in by sinking another. I am, however, impressing on the headmen the extreme importance of doing this work whenever it is possible. The best remedy seems to be to encourage the people, by free grants of new sites, to transfer their dwellings from the low ground near the tank to higher ground. It has for many years been the practice to do this, and applications for permission are still frequent. The difficulty about it is that, though the people are ready enough to ask for sites, ostensibly for building new houses, when they get them they content themselves with growing a chena crop or two and planting a few plantains and vegetables, while they go on living in their old houses. In order to prevent this I have lately taken to demanding a deposit of Rs. 5 from each applicant as a guarantee of good faith, to be returned to him if he builds his new house within the prescribed time, otherwise to be forfeited.

The people of Tamankaduwa, as a rule, have an excellent water supply. They have the river and the "villus," and the large reservoirs have not been so ruined as in Nuwarakalawiya.

In Nuwarakalawiya, wherever reservoir tanks to feed the smaller village tanks have not been repaired, the latter dry up in August, and for three months the people must use water which is often most impure. Efforts are made to induce the people to bathe in one part of the tank and to take water from another, but it is to be feared that they pay but little heed to such matters. Even were they particular, when the water in a tank gets very low, it is churned into liquid mud by the number of buffaloes which wallow in it, and to get pure water is an impossibility. The people do sometimes sink wells at this time in the beds of the tanks, but the result is not satisfactory. Writing on this subject Mr. Levers says :—

> It has been suggested by persons who speak from theory, and not experience, that the sinking of wells would be a benefit. There may be a few places where this could be done. Wells have been sunk and are kept up at every cooly station on the North road. The water from them in dry weather closely resembles "Epsom salts." There is no doubt that the great central plain from Dambulla to Jaffna was once submerged below an ancient sea, and that a deep-lying and salt-impregnated stratum remains. If the well is shallow, it dries up; if it is deep, it is salt.

I may add that the people generally, from the Ratemahatmayas downwards, have a great prejudice against well water, which they unanimously condemn as unwholesome. They say that surface water is the only good water in this Province. No doubt they speak from experience. There is, I think, no immediate remedy; we must wait for the gradual restoration of the large reservoirs, from which the village tanks will be replenished with a constant fresh water supply.

The various plague camp sites have been kept clear of jungle. It has not been found advisable to keep stocks of building and roofing materials always on hand, as they soon rot or get eaten by white ants, with constantly recurring expense of renewal. Were a case of plague to occur at any time, a small shed could be run up in a day, and buildings of the full size within a week. This course has been approved by the Plague Committee.

The periodical inspection of bazaars by the officers of the Civil Medical Department, kindly permitted by the Principal Civil Medical Officer last year, has worked well. I now get regular reports of the state of each bazaar, which enable me at once to check any laxness on the part of the headmen. Anuradhapura town itself has been carefully scavenged, especially since the establishment of the Local Board in July.

The members of the Board are the Government Agent as Chairman; the Provincial Engineer; the Assistant Colonial Surgeon; Mr. S. Sampandar, Crown Proctor; Mr. Krisnaratna, Proctor; and Mr. S. M. Cader Meedin. The Crown Proctor is a Hindu, Mr. Krisnaratna a Sinhalese, and Mr. Cader Meedin a Moorman, so that all classes are represented.

A statement of the revenue and expenditure of the Board from 1st July to 31st December is annexed :—

REVENUE.	Amount. Rs. c.	Total. Rs. c.
Balance transferred ...	—	2,599 81
Taxes	709 80	
Licenses	2,791 72	
Fines	69 25	
Rents	1,764 94	
Sundries	370 1	
		5,705 72
		8,305 53

EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.
Establishment ...	602 0	
Office Contingencies ...	157 67	
Revenue Service ...	25 6	
Police Charges ...	95 21	
Sanitary Charges ...	2,265 57	
Public Works	1,304 30	
Lighting	141 95	
Miscellaneous	624 96	
		5,216 72
Balance on 31st December, 1901	—	3,088 81
		8,305 53

Special precautions were taken both before and after each pilgrimage.

The three ponds used for drinking water, for bathing, and for washing clothes were cleared of all weeds and refuse.

The whitewashing of all houses has been strictly insisted upon, and special attention has been paid to the cleanliness of the market, and of bakeries, and to the keeping open of all drains. All night soil is conveyed outside the town and buried in the jungle beyond Mirisawetiya.

A large number of stray dogs were seized and destroyed, but to this work there is no end. It is said that they receive a fresh accession with each pilgrimage.

IX.—BIRTHS, DEATHS, AND MARRIAGES.

The following table of births, deaths, and marriages shows the totals registered during the last three years, with details regarding births, deaths, and Kandyan marriages for each quarter of 1901 :—

Year.	No. of Births.	No. of Deaths.	General Marriages.	Kandyan Marriages.	Mohammedan Marriages.
1899 ...	2,904 ...	3,608 ...	39 ...	538 ...	4
1900 ...	3,171 ...	2,901 ...	95 ...	796 ...	5
1901 ...	3,797 ...	3,041 ...	76 ...	1,330 ...	2

1901.	Births.	Deaths.	Kandyan Marriages.
First Quarter ...	928 ...	870 ...	173
Second Quarter ...	896 ...	729 ...	297
Third Quarter ...	1,002 ...	678 ...	487
Fourth Quarter ...	971 ...	764 ...	373
Total ...	3,797	3,041	1,330

The large increase of births, 893 more than in 1899 and 626 more than in 1900, is very satisfactory, but is somewhat counterbalanced by the regrettable increase of 140 in the deaths, as compared with 1900, though the total is still very much lower than that of 1899. As usual, the greatest number of deaths has occurred in the first and fourth quarters, which include the rainy season, always the most unhealthy time of the year.

The death-rate per 1,000 during 1901, calculated on the Registrar-General's figures for the population, on which alone comparison can be made with former years, has been 40·3, as against an average of 41·5 during the previous five years. Calculated on the Census figures, which are 3,781 more than those of the Registrar-General, and which are the nearest approximation to the actual population at the end of the year, it has been 38·4. This is still high, but it is satisfactory to note the steady decrease.

It will be seen that the number of Kandyan unions registered exceeds the number registered in 1900 by more than 66 per cent., while the figures for the third quarter alone are only 51 less than the total for the whole of 1899. Still registration is by no means universal; it will need the amendment of the Ordinance advocated in section IV. above to make it so.

There were 5 applications for divorce pending at the beginning of the year and 60 were received during the year, making 65 in all. In 40 per cent. of these the application came from the husband, in 33 per cent. from the wife, and in 27 per cent. from husband and wife jointly. Divorces were granted in 38 cases, 13 applications were rejected, 5 were withdrawn, and 9 remain pending at the end of the year. In 1900 the number of applications for divorce dealt with was 94. It is worth noting that in spite of the large increase in the number of unions registered there has been a considerable falling off in divorces.

X.—THE VILLAGE COMMUNITIES' ORDINANCE, NO. 24 OF 1889, AND THE IRRIGATION ORDINANCE, NO. 23 OF 1889.

The Village Communities' Ordinance, No. 24 of 1889, is in force throughout the Province.

There are four Presidents of Village Tribunals, one for each chief headman's division :—. Nuwaragam palata, Hurulu palata, Kalagam palata, and Tamankaduwa.

The President of Nuwaragam palata holds court at Ulukkulama and at Rambewa. Until this year he sat at Mihintale, but a permanent court-house and quarters for the President having been provided at Rambewa, a more convenient centre than Mihintale, he transferred his court there in the early part of the year. This building was erected by the Ratemahatmaya at a cost of some Rs. 1,500 out of voluntary subscriptions collected from the people. I have every reason to believe that the people were glad to contribute. A permanent building relieves them of the ever-recurring and irksome duty of patching a temporary building. I hope to see more of these permanent buildings before long.

Similar collections are on foot for a permanent school at Kebitigollewa and for a dispensary at Kahatagasdigiliya. Sufficient sums, to be supplemented in each case by a grant from Gansabhawa funds, have been subscribed to justify an early commencement of both buildings.

The President of Hurulu palata sits at Welimapotana, Ilukwewa, and Yakalla; the President of Kalagam palata at Kalawewa and Kekirawa; and the President of Tamankaduwa at Moragaswewa, Topawewa, and Manampitiya. At Moragaswewa he has jurisdiction over the Matombuwa tulana of Hurulu palata, that subdivision being much nearer to Moragaswewa than to Yakalla, the nearest court of Hurulu palata.

All these Village Tribunals were inspected by me during the year. In all, save Kalagam palata, I was well satisfied with the manner in which the work was being done. In Kalagam palata, though there was no reason to suppose that substantial justice was not on the whole being meted out, the records of the different steps taken in each proceeding were too often defective and the evidence meagre, so that it was often difficult to form a clear idea of what had taken place.

Institutions in these courts during the year amounted to 1,568 civil and 3,348 criminal cases. Inclusive of the previous year's balance, 1,554 civil and 3,266 criminal cases were disposed of, leaving a balance of 22 civil and 83 criminal cases pending on 31st December, 1901.

There were 98 appeals in civil cases and 72 in criminal cases to the Government Agent. The President's judgments were affirmed in 59 civil and 35 criminal cases; the rest were either set aside, or the cases were sent back for further hearing. There were 14 appeals to His Excellency the Governor in Executive Council against the Government Agent's decisions. None were reversed. There were no outstanding fines at the end of the year.

About 77·5 per cent. of the criminal cases instituted were for breach of Gansabhawa or irrigation rules, chiefly default in performing earthwork on tanks, neglect to clear village roads, to keep the hamlets in a sanitary condition, and so on. Very few cases for offences criminal in themselves as opposed to constructive offences were instituted, *e.g.*, the total number of charges of petty thefts for the whole Province during the year was only 22. Of these, 13 resulted in acquittals on evidence, 8 were amicably settled, and only 1 resulted in conviction. The strong probability is that nearly all the other 21 charges of theft were not theft at all, but mere cases of disputed ownership of property. The fact is that the simple villager, whatever faults he may have, is essentially an honest person. This is strongly corroborated by the Police Court returns, and is also shown by the confidence with which the people habitually leave their houses unprotected. Very little care is taken to safeguard property with locks and bolts.

Fines amounting in all to Rs. 6,837·62 were inflicted in 1,060 cases, an average of about Rs. 6·50 per case, or Re. 1·35 per person. This will not appear a high average, when it is considered that most of the fines were imposed in prosecutions for default of performance of earthwork due on the village tanks. The practice is on conviction to fine the defaulter the value of the work he should have, but has not, performed, plus a small percentage as additional punishment. The value of the work so recovered is credited to the tank in respect of which the default occurred, and is spent by the Chief Irrigation Inspector, subject to the approval of the Government Agent, on the improvement of that tank.

Where the default has been purged subsequent to the institution of the case, but before trial, it is usual to fine the offender only one-tenth of the value of the default work, which is similarly credited to the tank. In some cases, where there has been some excuse for delay in performance of the work, and the work is afterwards done, the fines are remitted on application to the Government Agent.

Village Committee Members were elected in March, April, and May, in terms of section 19 of the Village Communities' Ordinance, for Kende, Kadawat, and Nuwaragam korales of Nuwaragam palata to replace Committees whose terms of office had expired.

There were several changes among the Presidents during the year. In February, on the appointment of H. B. Hurulle Banda, President of Nuwaragam palata, as Ratemahatmaya of Hurulu palata, Mr. Pohath Kehelpannala was transferred from the Presidentship of Hurulu palata to that of Nuwaragam palata. Mr. Dodanwela took his place as President, Hurulu palata. In July Mr. Pohath Kehelpannala was transferred to the Kandy District, and was replaced by Mr. Samaratun. In October Mr. Udugama took the place of Mr. Dodanwela as President of Hurulu palata, the latter returning to his native district in the North-Western Province. Mr. Rajakaruna, President of Kalagam palata, retired at the end of the year on attaining the age of sixty years. Mr. T. B. Relapanawa, Ratemahatmaya of the Sinhalese division, of the Vavuniya District, has been appointed to succeed him.

The Irrigation Ordinance, No. 23 of 1889, is also in force throughout the Province. All matters connected with paddy cultivation—the times of commencing to plough and sow, the extents to be cultivated, the times of reaping, the fencing and watching of the fields, &c.—are regulated by the rules passed under its provisions. Breaches of the rules are tried either by the Presidents of the Village Tribunals or by the chief headmen, to whom the Government Agent has deputed his powers as President of the Village Council in that behalf in terms of chapter VI. I have found, however, that some of the Ratemahatmayas do not, as they might with advantage, exercise these powers with sufficient frequency. There could be no method more convenient for the people than that the Ratemahatmaya should, on the division days which he holds at stated times and places every month throughout his palata, deal with complaints of the wrongful taking of water, or neglect to keep a channel open, and so on, close to the place where the parties reside. Instead of doing this, the Ratemahatmaya often seems to forget that he possesses the necessary powers, and is too apt to content himself with sending a report to me, or with referring the aggrieved party to the Gansabhawa.

Every irrigation case without exception, whether it results in a conviction or not, and whether an appeal is lodged against the President's or Ratemahatmaya's decision or not, is referred to the Government Agent for his approval and confirmation of the proceedings.

XI.—EDUCATION.

There are 14 Government vernacular schools in the Province, with a total of 1,456 boys on their lists, or an average of 104 for each school. The average daily attendance at each has been 62·32. Though this is nearly 5 boys per school better than the average of 1900, it still leaves much to be desired. As stated in my last year's report, "it is uphill work to maintain the attendance at anything like a fair proportion of the numbers of children of school-going age on the lists. The parents, and even the headmen, are not yet enlightened enough to appreciate the benefits of education. The schoolmasters, too, are in many cases by no means efficient; they are, however, perhaps as good as can be expected for the poor salaries which the Public Instruction Department is able to offer."

Kendewa, Ratmalagahawewa, Kebitigollewa, and Tammanewa continue to be the best schools in the Province, in the matters both of attendance and of the instruction imparted. The daily attendance at Kendewa has increased from 112 in 1900 to 119·71 in 1901; at Ratmalagahawewa, from 103·79 to 110·71; and at Kebitigollewa, from 79·79 to 95·88. Tammanewa has fallen slightly from 77·25 to 74·50.

There are, besides, 9 Church Missionary Society schools, with an average daily attendance of 18·77, out of 41 on the books; 5 Roman Catholic schools, with an average of 33·6, out of 55 on the books; and 2 Buddhist schools, one at Anuradhapura, the other at Kekirawa. The former had an average daily attendance of 20, the latter of 55 boys. There are also 123 pansala schools with 392 boys attending them and 21 Mohammedan schools with 155 boys.

The number of children receiving education has more than doubled during the last ten years. In 1891 it was 1,620 boys and 10 girls, or about 1 in 45 of the population. In 1901 it was 3,204 boys and 203 girls, or about 1 in 22 of the population.

I annex the Revenue Officer's report on the schools in Tamankaduwa :—

There were 16 Gansabhawa schools in Tamankaduwa at the beginning of the year 1901. Of these, 11 were Tamil schools and 5 Sinhalese. The average attendance was 35, including boys and girls. Some of the children were reading the first reader and some were learning only the alphabet. Four new schools were opened during the year, 3 Tamil and 1 Sinhalese, making a total of 20 schools, 6 Sinhalese and 14 Tamil. The average attendance at the end of the year has been 34. Those who were reading the first reader at the beginning of the year were able to read the second reader at the end of the year, and those who were learning the alphabet were able to read the first reader, so there were three classes in each of the schools by the end of the year. Eleven new schools have been built during the year, 4 school buildings have been enlarged, and 5 are in course of construction.

During the year Rs. 1,755·77 was spent on these schools. Of this sum, Rs. 1,000 was granted by Government and the balance was from Gansabhawa funds. The chief items in this expenditure were furniture Rs. 541·75—a blackboard, desk, chair, and some mats for the children to sit upon for each of 24 schools—pay of teachers Rs. 972 50. and stationery Rs. 154·97.

During August the Director of Public Instruction made a tour with me, visiting Kahatagasdigiliya, Kebitigollewa, Kendewa, Maha Diwulwewa, Ratmalagahawewa, and Tammanewa schools. I think I may say that he was pleased with the condition of the schools and with the signs of progress which he observed. He was particularly struck with the healthy appearance of the children, compared with what it was when he was stationed in the Province as Office Assistant to the Government Agent in 1884 and 1885.

XII.—CRIME.

The number of serious charges of which the Police Court took cognizance during the year was 119, divided as follows :—

Offences against Property.	Cases.	Persons.	Offences against the Person.	Cases.	Persons.
Cattle theft ...	10	9*	Abduction ...	3	10
Criminal breach of trust ...	8	9	Hurt, section 314 ...	32	48
Theft, section 367 ...	22	26	Hurt, section 315 ...	6	7
Theft, section 369 ...	19	22	Grievous hurt	1	1
Theft, prædial	3	7	Murder	2	2
Theft by servant ...	5	5			
Robbery	8	35			
	75	113		44	68

* In one case no one was charged.

Of these 119 cases, 18 were lettered A, no offence committed ; and 28 were lettered B, charge designedly false. The latter consisted mostly of charges of theft, theft from dwelling-houses, and robbery. Of the 73 remaining true cases, 10 were marked F, as the offenders were unknown. These were almost all cases of theft from dwelling-houses. In 5 other cases the accused absconded ; and in 9 others the accused were discharged, as the evidence was insufficient. In the remaining 49 cases the accused were found guilty. Of these, 28 were simple hurt under section 314, of which 11 were allowed to be compounded. This leaves 21 cases other than simple hurt in which the accused were convicted.

The percentage of convictions in the 73 true cases is 67. If the 28 hurt cases are excluded, the percentage is only 46. The undiscovered thieves from dwelling-houses have largely contributed to this result. Of the 12 true cases under section 369, convictions were obtained only in 2, in 2 there was not sufficient evidence, and in 8 the offenders were unknown. From its nature this offence is often difficult to bring home to the guilty party ; it is generally committed when the inmates of the house are either absent or asleep, and in this Province often by strangers passing through the locality whom the injured parties, even if they see them, cannot describe or identify.

An analysis of the 63 true cases in which definite persons were charged shows that in 20 cases, with 30 persons, the accused were Sinhalese villagers, and that in 8 cases they were Moors, probably also villagers. In the remaining 35 cases the accused were settlers from other districts, in 19 cases, with 26 persons, they were low-country Sinhalese, and in 16 cases, with 38 persons, they were Tamils.

Of the 20 cases in which Sinhalese villagers were charged, 11 were simple hurt, 3 were theft (section 367), 3 theft from houses (section 369), 1 was theft of cattle, 1 hurt with knife, and 1 breach of trust by servant. Of these, 4 hurt cases were compounded, and 9 cases, including 6 of simple hurt, resulted in conviction. In 5 of the remaining cases the accused were discharged for want of evidence, and in 2 cases, one a theft from a house, the other the breach of trust case, they absconded.

The villagers therefore, though they form 87·5 per cent. of the population, have committed only a very small fraction of the crime in the Province. Indeed, only 5 serious offences can with certainty be laid to their charge.

The distribution of the 73 true cases among the chief headmen's divisions is as follows :—

	Cases.
Anuradhapura Town	33
Nuwaragam Palata (excluding Anuradhapura)	22
Hurulu Palata	11
Kalagam Palata	7
Tamankaduwa	Nil

And among the korales as follows :—

Nuwaragam Palata.

Anuradhapura Town	33
Kanadara Korale	8
Kende Korale	5
Enpawala Korale	4
Nuwaragam Korale	2
Wilachchiya Korale	2
Kadawatu Korale	1

Hurulu Palata.

	Cases.
Matombuwa Korale	3
Kunchuttu Korale	2
Uddiyankulama Korale	2
Ulagalla Korale	2
Kalpe Korale	1
Mahapotana Korale	1

Kalagam Palata.

Kalagam Korale	4
Kiralowa Korale	3

The Maminiya, Negampaha, and Unduruwa korales of Kalagam palata, and the whole of Tamankaduwa have been entirely free from serious crime.

It will be seen that Anuradhapura town, with its population of 3,672 persons, is responsible for 45 per cent. of the crime committed in the Province, among a population of 79,110. This fact strongly corroborates my defence of the villager from any imputation of criminal proclivities; the population of Anuradhapura town consists almost entirely of settlers from other parts of Ceylon.

Out of the 28 cases of simple hurt, 15 occurred in Anuradhapura. This leaves 18 other more serious offences committed there, or about 4·9 cases for every 1,000 persons. There is reason to believe that some of these offences were committed by persons who were in the town only for a few days and bolted after committing an offence. Even Anuradhapura therefore is not very much addicted to crime.

The statement of the Police Magistrate last year that "this Province is singularly free from crimes of violence, and all crime of an organized nature," may, I think, be safely made again.

Murder Cases.

Two cases of suspected murder were inquired into by the Magistrate, but neither was proved. In one case the deceased was sent to hospital and was discharged on apparent recovery. He died subsequently of the after effects of his wounds. His wife was tried before the District Court for causing grievous hurt, and was sentenced to three months' rigorous imprisonment. The weapon used was a katty, and the cause was a quarrel between husband and wife while both were drunk. The second case was found by the Magistrate to have been a pure accident. Deceased was the mother-in-law of the accused, and it seems that when the latter was in his room cleaning the lock of his gun the gun went off and killed the deceased, who was standing in the compound opposite the doorway. Deceased and accused seem to have been on the best of terms, and accused was under many obligations to the deceased.

Knife Cases.

There were six knife cases during the year. In four the accused were convicted, one was found to be false, and in one the offence was found to have been committed, but the accused was discharged owing to insufficiency of evidence.

Cattle Stealing.

There were ten complaints of cattle theft in the year. In only one of these cases was the accused convicted, in three others the offence was found to have been committed, but in two of them accused was discharged owing to insufficiency of evidence, and in the other the accused absconded. Of the remaining six cases, four disclosed no offence and two were found to be false.

Co-operation of the Headmen in the detection of Crime.

There is, happily, no great occasion for display of energy by the headmen in connection with crime. As a rule, they promptly report all such cases as do occur, but there is room for improvement in the matter of producing the accused, and in sending up all witnesses, before the court. No instances of attempts by headmen to compound offences came to my notice.

Police.

The regular police force consisted of one sergeant and eight constables. All complaints of offences committed in the town are invariably made to the police. In non-cognizable cases parties are referred to court. In cognizable cases the police have, as a rule, produced the accused. A few cases have, however, occurred in which offenders have managed to escape and have not been traced. The police are hardly to be blamed in all these cases, as in many of them the offences have been committed by newly-arrived strangers with whom the police have not had time to make themselves acquainted.

XIII.—CATTLE.

There was no murrain in the Province during the year. Hoof-and-mouth disease broke out in May, was very prevalent during June, July, and August, and gradually diminished during September, October, and November, until in December it had entirely disappeared. Though 1,404 cases were reported, none died from the disease.

The Stock Inspector reports that the people are fairly careful in isolating sick cattle, but otherwise take no care of them whatsoever. A good deal of straw which is now wasted might be stored as food for cattle during the dry weather from June to October. There is then but little grass, and the condition of the cattle becomes very poor. When the young grass begins to grow with the rains the animals feed greedily upon it and many die of diarrhœa.

The breed might, I think, be considerably improved, if owners would consent to the castration of all but the finest bull-calves. I should hesitate to entrust the present Stock Inspector with this duty, but had I a more experienced man I should endeavour to introduce the practice. I should not anticipate much opposition from cattle owners. At present low-country dealers buy many of the

best bulls for slaughter; were castration common, the castrated bulls would probably be preferred for this purpose, and the best stud bulls would remain in the villages to propagate their species. If fewer calves were born, it would be an unmixed blessing, for cattle are at present far too numerous. The returns show twice as many cattle, including buffaloes, in the Province, as there are people. Cattle trespass is a great and almost universal evil, and though there are Gansabhawa rules for the herding and caretaking of cattle, as Mr. Ievers has before remarked, "the passive obstruction and laziness of the villagers are invincible. Complaints are frequent, but inquiry generally shows that the complainant has been as remiss as the accused."

XIV.—Land Sales and New Areas of Cultivation.

The Ratemahatmayas estimate the extent of new land brought under cultivation during the year at 450 acres, but this, in my opinion, is under the mark, considering that 1,424 acres were sold in 1900 and 2,396 acres in 1901. Almost all the land sold has been irrigable land; there is no demand for garden land.

The average price per acre realized this year has been Rs. 14·43, as against Rs. 12·90 in 1900. There has perhaps been more competition this year than last, but not sufficient to have had any great effect in raising the average price. Competition is still the exception, the shareholders usually purchasing the land in common. The chief factor in the rise has been the increased value of the land, purchasers being ready to pay a higher upset price.

The total price realized by land sales this year has been Rs. 34,596, or Rs. 16,213 more than in 1900, an increase of nearly 47 per cent. Most of the land has been sold under Sir Henry Ward's Minute, which permits of payments in four annual instalments. Considerably less than half the amount therefore has been credited to this year's revenue; the remainder will be brought to account during the next three years.

In 1900 no large blocks of land were sold, but in this year, though the average size of each lot sold was little more than 4 acres, there have been signs that the people are beginning to find means to purchase larger extents. Ten lots, averaging nearly 38 acres each, were sold during the year, the three largest being respectively 73 acres, 51½ acres, and 44¾ acres in extent. All these were purchased by villagers; the only lands sold to Europeans were four small lots of a total extent of 2½ acres purchased by the Right Reverend the Roman Catholic Bishop of Jaffna.

Towards the end of the year I received an application from a European planter to purchase from 500 to 800 acres for aloe cultivation. The applicant professes to be in possession of a secret process for extracting the fibre, and has undertaken, if his first experiment be successful, to bring 2,000 acres under cultivation within a fixed period. The Director of the Royal Botanic Gardens considers this Province well suited to aloe cultivation, and sees no reason why that industry should not be made profitable here, as it has been made in India and Mauritius. The application is now before the Government, at whose hands it will, I hope, receive favourable consideration.

XV.—Working of the Waste Lands Ordinances.

Though a large extent has been surveyed, very few plans were received during the year, and consequently the claims dealt with have not been many.

The Issenbessawewa reserve, which was dealt with in 1900, has this year been declared a "reserved forest" under Ordinance No. 10 of 1885.

The agreement arrived at with the claimants to Madawalagama village in 1900 having been approved by His Excellency the Governor in the early part of this year, the final order under section 4 of the Ordinance was published in March. Thereupon, the Bogahawewa and Ihalagama claims, action with respect to which had been deferred until the Madawalagama case should be decided, were taken up. In the Bogahawewa claim the inquiry was completed, but before an agreement was entered into with the claimants, it transpired that they claimed another village Indiwewa on the same "talpata" (ola deed) as that on which they based their claim to Bogahawewa. Steps were therefore taken to deal with the second claim, and meanwhile the final decision on the first has been held over. As the two villages which are claimed adjoin one another, it will be more convenient to make one agreement with the claimants respecting both than a separate agreement for each. The notice relative to Indiwewa was nearly ready for publication at the end of the year. In the Ihalagama claim an agreement was entered into with the claimants, and approved by His Excellency the Governor, whereby an extent of 135 acres, out of a total of about 250 acres claimed, was allotted to the people for chena cultivation. The final notice will be published as soon as the land allotted for chena cultivation has been defined by survey.

Preliminary steps are being taken towards the publication of notices in the following claims:—Ambagahawewa, Getalagama and other villages, Kunchikulama and other villages, and Kiwulekada. All these will shortly be published. Action has been taken on all the plans so far received.

XVI.—Surveys.

Mr. R. B. Campbell has been Superintendent in charge of surveys in the Province during the year, with three assistant surveyors and nine supernumerary surveyors under him. In addition, Mr. Robertson, Assistant Superintendent, has worked on block surveys north of Anuradhapura, along the railway line, with three supernumerary surveyors under his direct supervision.

A large area, which I am unable to specify accurately, but probably not short of 80,000 acres, was covered by the block surveys. Acquisition surveys for railway and other purposes, application surveys, and surveys of encroachments in and around Anuradhapura town also received attention.

The activity in field work leaves nothing to be desired; it is a pity that the Head Office in Colombo cannot keep pace with it in turning out the plans.

XVII.—Forests.

From the released areas in charge of the Government Agent timber to the value of Rs. 3,256·16 was supplied to Public Departments. Sales of timber, firewood, and other produce to private parties and forest fines realized Rs. 5,611·13. Free grants of timber were made to the value of Rs. 1,082·96. The expenditure was Rs. 708·42.

The Assistant Conservator of Forests, Northern Circle, reports that 6,280 acres, or 9¾ square miles, were inspected and released, there being no valuable timber on the land. The boundaries are natural ones. He proposes to commence the demarcation of the Issenbessawewa reserve on receipt of the cadastral survey plans. No fellings were carried out by him in the Province during the year.

The Assistant Conservator of Forests, Eastern Circle, informs me that Rs. 30,584·28 were realized during the year by sale of timber from that portion of this Province which belongs to his Circle. None of this was brought to account in the Anurádhapura Kachcheri; it does not therefore appear in the revenue returns of the Province. The Assistant Conservator further states that 625 ebony logs, equal to 192 tons, were felled and removed departmentally during 1901 from the released area near Horowapotana.

XVIII.—CHENA CULTIVATION.

The number of chena permits issued, and the extent which they cover, has been very much larger this year than last. It by no means follows that the extent of chena cultivated has increased in proportion. I am myself of opinion that it has increased slightly owing to the tanks not having filled for the third year in succession and consequent restriction of field cultivation, but some of my Ratemahatmayas deny that it has increased at all.

The true reason for the larger number of permits issued is that the people have at last been taught that it does not pay to cultivate chenas without permit. In my report for 1900 I touched upon the difficulties connected with the chena question in this Province, and pointed out that, while this form of cultivation cannot for the present be much restricted, the main object kept in view must be to secure that a permit should be taken out in every case. This object has now been attained; it may, I think, be safely asserted that cases in which chenas have been cultivated this year without permit have been the rare exception. It has been necessary to deal severely with offenders, and no less a sum than Rs. 2,500 has been collected in fines, chiefly on account of unlicensed chenas cultivated during the last quarter of 1900. This has been a sharp lesson to the people, which I trust it will not be necessary to repeat.

The above remarks apply to Nuwarakalawiya only; in Tamankaduwa, owing to the scarcity mentioned in a previous section, the rule that no chena cultivation shall be allowed has so far been relaxed that permits have been granted for 169 acres, as against 20 acres in 1900. A rent of Re. 1 per acre is charged in this part of the Province.

Tavalu cultivation, or cultivation of the tank bed with paddy, has been much more extensively practised than in the previous year. This is a form of cultivation to be encouraged when the tanks do not fill, and it is satisfactory to find that the people have so extensively adopted this means of supplementing their store of paddy.

A rent of 50 cents per pela is charged when the land cultivated is open tank bed, and Rs. 2 per pela if jungle is cleared. A double rent is charged when payment is not made in advance before cultivation. The revenue from this source has been Rs. 3,268. Much credit is due to the headmen for the promptitude with which they have recovered this rent and the chena fines from a people whose fixed principle it is to defer all payments until the last possible moment.

XIX.—SALES OF LAND BY VILLAGERS.

759 sales of land occurred during the year. All but 34 were sales by villagers to villagers. There were 17 sales by villagers to Tamils and low-country Sinhalese, and 17 sales by Tamils and low-country Sinhalese among themselves. All the lands sold were fields and gardens. In only 5 cases were gardens with houses on them sold. There is no reason to suppose that any lands have been sold to which the vendors had insufficient title.

XX.—WORKING OF THE THOROUGHFARES ORDINANCE.

Returns in the prescribed forms are annexed:—

Statement showing the Comparative Working of the Thoroughfares Ordinance in 1900 and in 1901.

	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A)	—	74,606	—	—	78,985	—
2. Number on lists (B)	—	22,253	—	—	23,073	—
3. Effective in the district:—						
(a) Paid Re. 1·50	19,879		89·33	20,924		90·68
(b) Paid Rs. 3	268		1·20	133		·57
(c) Laboured 6 days	45		·20	27		·11
(d) Laboured 12 days	—		—	—		—
4. Not effective in the district, but have discharged their liability:—						
(a) Exempted	582		2·61	570		2·47
(b) Paid and laboured elsewhere ...	485		2·17	567		2·45
(c) Committed to jail	3		·01	—		—
(d) Fined	16		·07	11		·04
(e) Worked 24 days at labour centre ...	—		—	—		—
(f) Double entries, &c. ...	139		·62	118		·51
(g) Dead ...	162		·72	113		·48
5. Non-effective:—						
(a) Reported to have left the village ...	661		2·97	606		2·62
(b) Otherwise not arrested ...	13		·05	4		·01

Return of Local Revenue raised and appropriated under the authority of the Provincial Road Committee in the North-Central Province and not accounted for in the General Revenue of the Colony for the Year 1901.

REVENUE.	Amount. Rs. c.	Total. Rs. c.
Balance on January 1, 1901 ...	—	4,401 34
Collected for the year 1901, under the provisions of the Road Ordinances of 1861, 1884, and 1900, viz.:—		
Commutation realized in money ...	31,785 0	
Do. in labour ...	43 50	
Miscellaneous receipts, &c. ...	1,638 80	
		33,467 30
Resthouses.		
Balance on January 1, 1901 ...	215 23	
Collection in 1901 ...	2,882 34	
		3,097 57
Markets and Galas.		
Balance on January 1, 1901 ...	262 59	
Collection in 1901 ...	1 516 22	
		1.778 81
		42,745 2

EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.
Payments made on account of principal roads and resthouses from the commutation money during the year 1901, under the provisions of the Road Ordinances of 1861, 1884, and 1900 ...	13,040 0	
Minor roads, &c.... ...	10,682 5	
Miscellaneous payments, &c. ...	2,067 83	
		25,789 88
General Charges.		
Pay of establishment, including pay of Superintendent of Minor Roads	3 682 0	
Percentage to division officers ...	3,448 4	
Petty expenses	453 58	
Purchase of tools ...	443 39	
		8,027 1
Resthouses.		
Payments made in 1901 ...	—	2.092 44
Markets and Galas.		
Payments made in 1901 ...	—	1,778 81
Balances of 1901.		
Balance on Road Ordinance Fund	4,051 75	
Do. Resthouse Fund ...	1,005 13	
Do. Market Fund ...	—	
		5,056 88
		42,745 2

The total revenue for the year was Rs. 33,467·30 made up as follows :—

	Rs. c.
In Cash	31,785 0
In Labour	43 50
Miscellaneous Receipts	1,638 80

The single and double rate commutation recoveries, excluding miscellaneous receipts, exceeded all previous recoveries by Rs. 1,138·50, as will be seen from the following statement :—

	Rs. c.		Rs. c.
1893	27,118 50	1898	29,355 0
1894	27.481 50	1899	29,688 0
1895	29 436 0	1900	30.690 0
1896	29,470 50	1901	31,828 50
1897	28,474 50		

The number of men remaining unaccounted for at the end of the year, out of the 23,073 on the division officers' lists, was 4.

The expenditure on account of establishment, commission to division officers, petty expenses, and purchase of tools was Rs. 8,027.

The amount expended on principal roads and resthouses was Rs. 13,040 and on minor roads Rs. 10,682.

During the year the road to the irrigation officer's quarters was extended to join the cart track from the Puttalam road. Mileposts were fixed on the Madawachchiya-Horowapotana road and on portions of the Eppawala-Timbiriwewa and Alutoya-Minneriya roads. Two deviations were made on the latter road at the 16th and 19th mileposts in order to improve the gradients. Small improvements were made on other roads, but the funds of the Committee do not admit of more than bare provision for the upkeep of most of them. I am considering whether, when all the village tanks have been restored, and the villagers are consequently relieved of earthwork on them (a work which I intend to take up in Hurulu palata in 1902, in Kalagam palata in 1903, and in Nuwaragam palata in 1904), it will not be advisable to hand over the less important minor roads temporarily to the Village Committees to keep open. We shall then be able to concentrate the resources of the Road Committee on the more important roads and effect really substantial improvements to them one by one, instead of, as now, having to spread our funds over such a large mileage that very little permanent benefit is secured.

Punkahs have been provided in all resthouses—a very desirable improvement—for some of them are intolerably hot in the dry season. Boarded ceilings have been put up in Kahatagasdigiliya and Alutoya resthouses, also with a view to mitigating the heat. The bathroom at Habarana resthouse has been improved by opening communication between it and the bedroom.

A shed for the barbers was erected at Anuradhapura. Hitherto these men had had to ply their trade under the trees near the market, not at all a nice arrangement.

The town minor roads, markets, and galas were transferred to the Local Board on its establishment on 1st July.

The following sums were spent on the upkeep and improvement of the existing minor roads, &c.:—

Particulars.	Rs. c.
Upkeep of the town minor roads	486 55
Upkeep of Green path	16 25
Upkeep of the road from Basawakulam to Sacred road	1 25
Upkeep of the road from Tissa bund to Kurunegala road	37 16
Upkeep of Allakatu road	13 50
Upkeep of Anuradhapura-Arippu road	346 29
Upkeep of Alankulama-Turuwilla road	164 30
Upkeep of Andarawewa-Ottuppuwa road	130 0
Upkeep of Eppawala-Timbiriwewa road	400 0
Upkeep of southern minor roads	269 56
Upkeep of Maradankadawala-Kunchikulam road	115 0
Upkeep of Tonigala road	60 0
Upkeep of Madatugama-Andiyagala road	160 0
Upkeep of eastern minor roads	650 0
Upkeep of Galenbindunuwewa-Sipukulam road	219 62
Upkeep of Alutoya-Horowapotana road	500 0
Upkeep of Alutoya-Minneriya road	360 0
Upkeep of Madawachchiya-Horowapotana road	459 56
Upkeep of Madawachchiya-Kebitigollewa road	319 35
Improving the cart track from Irrigation Officer's quarters	205 46
Improving Madawachchiya-Kebitigollewa road	560 83
Improving Madawachchiya-Horowapotana road	29 0
Improving eastern minor roads	400 0
Fixing mileposts on minor roads	81 90
Fixing punkahs for resthouses	194 0
Additional culvert on Anuradhapura-Arippu road	85 5
Additions to Provincial Road Committee Head Clerk's quarters ...	68 98
Upkeep of Provincial Road Committee Head Clerk's quarters ...	56 15
Upkeep of quarters of Superintendent of Minor Roads	90 0
Improvement to Alutoya resthouse	78 0
Gates for Anuradhapura resthouse	48 0
Additions to the bathroom at Habarana resthouse	42 14
Building culverts on the eastern minor road	3 75
Gates for Mihintale resthouse	25 0
Clearing roads a second time on the Green path	18 0
Strong door for the stores of the Superintendent of Minor Roads ...	16 0
Purchase of tools	378 71
Transferred to Local Board on account of town minor roads (estimate) ...	683 45
Construction of road from Sacred road to Basawakulam bund ...	13 67
Improving the Green path	1,627 0
Improving the Kahatagasdigiliya resthouse	4 70
Deviation at the 16th mile on the Alutoya-Horowapotana road ...	142 0
Deviation at the 19th mile on the Alutoya	256 0
Ceiling for Alutoya resthouse	285 43
Ceiling for Kahatagasdigiliya resthouse	259 44
For gravelling the Green path	221 0
Additional bathroom and closet for the Kekirawa resthouse	100 0
	10,682 5

XXI.—THE CENSUS.

The preliminary Census was taken during the first week in February, and the final Census on the night of 1st March. The totals were telegraphed to the Superintendent of Census on 5th March, and all schedules were despatched by 13th March. I am confident that the Census was correctly taken; the preliminary totals telegraphed to the Superintendent of Census differed only by 138 from those finally adopted by him, and no serious errors have been discovered. Suspecting that perhaps the enumerators might have in some cases shirked the final counting on the night of 1st March, and have sent in the preliminary Census figures only, I made a point of inquiring at every village which I visited for several months afterwards whether the enumerator had come at night and counted every one there. The invariable reply was that he had done so.

The result of the Census shows a total population of 79,110. Assuming the figures of the Census of 1891 to be correct, there has been an increase of only 5 per cent. in the population. It has occurred in every part of the Province, save Tamankaduwa, where there has been a decrease of 3·69 per cent.

The increase is most remarkable in Anuradhapura town, its population having risen by no less than 46·4 per cent. since 1891. Simultaneously the growth of trade has been rapid, especially during the last few years. In illustration the figures realized by the arrack and market rents at the last three sales are given :—

	1900. Rs.	1901. Rs.	1902. Rs.
Arrack Rent ...	31,200 ...	37,620 ...	42,880
Market Rent ...	1,555 ...	2,515 ...	2,820

Anuradhapura undoubtedly takes the larger portion of the arrack consumed in the Province. It will be seen that the value of the market rent has nearly doubled.

The population of the town was, at the Census, 3,672. By the next Census, when the railway will have had time to produce its effect, it may not be far short of 10,000.

In the Nuwaragam, Hurulu, and Kalagam palatas the rate of increase has been from 5·46 to 3·33 per cent. Only a rough analysis of the figures has yet been possible, but even so it is, I think, safe to say that they show a close relation to the facilities for irrigation within reach of the people. For example, in those parts of the Kalagam palata and of Nuwaragam palata, including Anuradhapura, which are watered by the never-failing supply of the Kalawewa system, the increase has been 15 or 16 per cent.; in the remaining parts of the Nuwaragam and Kalagam palatas and in Hurulu palata, which have no perennial water supply, but the village tank systems of which have to a large extent been restored, the average increase has been about 4 per cent.; while in Tamankad uwa, whereas yet little has been done for irrigation, there has been a decrease of 3·69 per cent.

Though the increase in the population has been disappointing, it is a matter of common remark by those who knew the Province ten or fifteen years ago, and now re-visit it, that the improvement in the condition of the villagers in the interval has been most marked. I am frequently told, too, by those whose acquaintance with the Province is recent, of their surprise at the good physique of the people, their preconceived notions having led them to expect to see a half-starved, disease-stricken population.

The advance of the Province, not only during the last ten years, but ever since its creation, has no doubt been more in the direction of moral and material progress than in that of increase of population. It is not possible to put progress of this kind into the concrete form of dry figures, or to give statistics of the degree to which disease and human misery have been alleviated or averted, nor can the sums saved to Government on account of medical charges, relief works, and so on be set down. Some instances of solid improvement, which can be expressed in figures, are however given in other sections of this report.

XXII.—WORK OTHER THAN ROUTINE.

During the first nine months of the year, that is, during the fine weather, frequent circuits were made, and all the inhabited parts of the Province were visited. Tamankaduwa, where scarcity was threatened, received a particular share of my attention. These circuits are necessary, not only for the purpose of inquiries and inspections of all kinds, but in order to make the Government Agent accessible to the people, and to keep the headmen up to the mark by frequent admonition and encouragement. In this Province the distances and expenses of long journeys are too great for the people to come to headquarters. Therefore, the Government Agent must go to them. There is hardly a village one visits where something is not wanted: a defect in a tank to be remedied, a request for a new site for a hamlet, a complaint of damage by cattle, or a dispute to be settled, or one of a hundred other things which can be best dealt with on the spot. Many of these are no doubt trivial to all but those concerned; nevertheless, the contentment of the villager depends largely on his opportunities for direct communication with the Government Agent. The minor headmen, too, though generally animated by the best intentions, are but the more intelligent of an ignorant and apathetic set of villagers. Unless constantly kept up to the mark, they are too apt to relapse into their normal condition of doing nothing. The forests, the revenue, and all other interests of the Crown suffer, and the "village machinery," on which sanitation, schools, roads, and almost everything else connected with village life depend, gets rusty.

In January and February the Census, referred to in another section, demanded much of my time. In those two months and in March all the rents of leased lands and of lands held on tickets of occupancy were collected as I travelled round the Province.

In April I attended the Durbar of Chiefs held in Kandy by His Royal Highness the Duke of Cornwall and York. My principal chiefs and I had the honour of being presented.

In May the lower 29 miles of the Yoda-ela was closed for repairs, previous to which arrangements had to be made for a sufficient supply of water to the village and city tanks under it to enable them to hold out until the rainy season. In this month and in June there was a good deal of preliminary work in connection with the Local Board, which came into existence in July.

In July I went to Colombo by command of His Excellency the Governor to receive his instructions with regard to steps to be taken to alleviate the threatened scarcity in Tamankaduwa.

During this month and August considerable anxiety was felt for the safety of the crops under the city tanks, it being impossible to replenish the supply of water in Tissa owing to the closure of the Yoda-ela. Not only had Tissa to water its own fields, but those under Basawakulam also, as the latter tank was in too leaky a condition to make it safe to store water in it. By dint of most rigid economy in the issue of water, which in spite of protests from the cultivators was issued only during the daytime, the sluices being closed at night, a good crop was eventually secured.

During August a round of school inspections was made in company with the Director of Public Instruction. This has been referred to in a preceding section.

At the end of August and in the early part of September I was a good deal engaged in court in connection with the prosecutions of the Fiscal's Clerk and of a Gansabhawa Clerk on charges of criminal misappropriation, in which I was the complainant. Both were convicted in the District Court, but the former was subsequently acquitted on appeal. The question of his retention in Government service is still under consideration.*

During the greater part of the remainder of the year I was in Anuradhapura, though in December I travelled from end to end of the North road, my principal objects being to inspect the condition of the roads, and to see that the horses used in the coach were not being cruelly treated. Considering the heavy condition of the road, the horses were in much better condition than I expected to find them. At the same time there can be no doubt that they are often used when unfit for work. I should be glad to see the introduction of more systematic supervision than now exists.

This year being one of the years in which the capture of elephants in this Province is permitted, 47 licenses for that purpose were issued, upon which 19 elephants were captured. No appreciable effect has been produced on the number of elephants at large in the Province; the number captured is of course insignificant, and the operations of the trappers do not seem to have scared the herds away.

XXIII.—EVENTS OF IMPORTANCE.

In *January* all else was overshadowed by the lamented death of Her Most Gracious Majesty Queen Victoria. I was travelling in the villages when the sad news reached me, and can say from personal experience that it was received by the simple kindly people with unaffected grief, and a feeling at first almost akin to dismay. The love which her late Majesty bore to all her subjects was felt by all, and to even the lowliest villager in this distant Province the great and good Queen was a most vivid personality, which called forth all his reverence and affection.

Relapanawa, late Ratemahatmaya of what was in his time the Western Division, but is now the Nuwaragam palata, died at the age of 89. He had been Ratemahatmaya for thirty-seven years, and had retired in 1879. He was a most interesting old gentleman, with a wonderful memory unimpaired to the last, full of reminiscences and information, which he was always ready to impart.

* He has since been dismissed.

Messrs. Chute and Park, Irrigation Engineers, started the survey of the abandoned store tank Maha Galkadawala near Madawachchiya.

Nikawewa Ratemahatmaya of Hurulu palata retired after twenty-six years' service, and was succeeded by H. B. Hurulle, President of Nuwaragam palata Village Tribunals.

February.—The 2nd, the day of the funeral of Queen Victoria, was observed as "Memorial Day." It was universally kept as a day of deep mourning throughout this Province, as throughout the rest of Ceylon and the whole British Empire.

Mr. H. E. Beven, Office Assistant, was succeeded by Mr. L. W. C. Schrader.

The new road from the Tissa bund to the Kurunegala road was opened for traffic.

The "Small Tenements Ordinance" was brought into force in Anuradhapura.

March.—The Census was taken.

June.—Cottagers' Shows were held at Habarana and Rambewa.

Two men were killed by elephants in Tamankaduwa: one, a trapper, by the mother of a calf which he was trying to capture; the other, a cultivator, on his way to his field after dark.

A serious robbery occurred at Issembessewa pansala. Two priests were injured, one severely. The offenders were not captured. They were not identified, and the priests, the only eye-witnesses, could give no description of them, but such evidence as there was pointed to the fact that they were strangers travelling to or from the Madu pilgrimage.

July.—Mr. Nunn, Irrigation Engineer in charge of Kalawewa and the Yoda-ela, resigned, and was succeeded by Mr. J. A. Balfour.

A Receiving Office was opened at Madatugama.

August.—A Friend-in-Need Society for the Province was established. Up to the end of the year its receipts amounted to Rs. 748·86, for Rs. 380·22 of which the Society is indebted to Government, being the balance fines imposed on subordinate officers. The expenditure was Rs. 130·83, which included the support of eight pensioners, and casual relief in a number of cases. Some persons left destitute here, far from their friends, have been sent back to their homes. The monthly receipts have so far slightly exceeded the monthly expenditure. All but Rs. 30 of the balance in hand, Rs. 618·03, is deposited in the Postal and General Savings Banks. The thanks of the Society are due to Mr. C. Stouter, Head Clerk of the Kachcheri, for his valuable services as Honorary Secretary and Treasurer.

A very extraordinary, if not unprecedented, occurrence was the appearance of a man-eating leopard in the village of Ratmale in Tamankaduwa. The brute seized a man sleeping in the verandah of the Vel-vidane's house, dragged him out, and killed him. It was driven off with difficulty by the villagers, who assembled hearing the victim's cries, but continued to prowl round even after a watch had been set and fires lighted. It was shot by the villagers a day or two afterwards.

September.—A tornado occurred in Anuradhapura. The "kota" or pinnacle of Ruwanweli Dagaba was blown down, and trees were uprooted and branches torn off all through the town. Luckily but little damage was done to buildings. It was very local; at Isurumuniya, a mile out of the town, it was hardly felt.

The new irrigation bungalow at Minneriya was finished.

A line of tappal was established by the Provincial Engineer and myself between Mihintale and Horowapotana, with receiving offices at Kahatagasdigiliya and Horowapotana, mainly for carrying our official letters, but incidentally for the benefit of the public, if they cared to use it. It has been very useful, 1,411 official and 1,928 private letters and packets having been carried up to the end of December. I hope that when the line develops a little more it will be taken under the official wing of the Post Office.

October.—The Rev. H. E. Heinekey of the Church Missionary Society was removed to Baddegama. This will defer the building of the church, for which over Rs. 8,000 have been collected and plans have been made and approved by the Bishop.

A Receiving Office was opened at Rambewa.

November.—Mr. Schrader, Office Assistant, was succeeded by Mr. T. B. Russell.

December.—Mr. H. G. D. Turnbull was attached to the Kachcheri as a Cadet at the end of the year.

XXIV.—ARCHÆOLOGY.

The following interesting synopsis of the work done by Archæological Survey during the year has been kindly furnished to me by the Archæological Commissioner:—

Mr. Dashwood, the Assistant to the Archæological Commissioner, after struggling for months against the malarial fever of the North-Central Province, had to leave the Island on furlough in May, in order to recruit his health. Subsequently he resigned his appointment; and for the last eight months of the year the Archæological Commissioner had, once more, to carry on the work of his Department single handed. The conduct of the Archæological Survey has necessarily been again hampered, and its progress delayed, by the want of an Assistant during the greater part of 1901. Concurrent work at two sites was not, feasible, as in 1900, during the dry months of last year. All work had to be suspended at Anuradhapura, whilst the Archæological Commissioner was engaged at Polonnaruwa between May and September.

Anuradhapura.

Ruwanveli Area.—Excavations were pushed on at the south of the Ruwanveli area, in the strip bordering the Basawakkulam tank, to the west of the Assistant Agent's and the Government Agent's residencies and the Kachcheri.

A small monastery with the customary quincunx arrangement of the main buildings (central *vihare* and four corner *pirivenas*) was fully freed of the earth on all sides, so as to show up well from the Inner Circular road, which skirts it. The *vihare* is noticeable for its pair of Naga guard-stones, and the ornamental balustrades of the steps.

A little south of this monastery was laid bare the brick basement of some circular ruin (perhaps a *watadage* ("round relic-house") surrounded by an outer wall, octagonal in outline, with an entrance passage on the east.

Ruins below Tisavewa.—Immediately below the embankment of Tisavewa, and two to three hundred yards north of the Issurumuniya rocks and temple, is a smaller line of boulders. The over-hanging sides of these rocks were utilized as cave-shelters, and their summits for superstructures; whilst at their foot, on the east, other buildings were erected.

The chief interest of this small group of ruins (now isolated, but formerly without doubt connected with Issurumuniya and the Vessagiri caves situated further south) lies in the two beautifully designed baths, with attached dressing rooms (still in excellent preservation) built of dressed stone. The semi-arched recess, rock-cut, at the smaller bath is flanked on either side by realistic carvings in low relief of elephants emerging from a lotus pond.

These ruins—like those of Vessagiriya and Issurumuniya—go back to the earliest days of ancient Anuradhapura, though (as frequent elsewhere) they have suffered later alterations.

Mirisavetiya.—Commencement was made with the thorough excavation of the ruins surrounding the Mirisaveti Dagaba. This area lies between the Anuradhapura-Puttalam road and Basawakkulam tank on the north.

The only building of importance unearthed so far is the chief *pirivena* of the Mirisavetiya monastery. This is of the type of the similar oblong buildings known at Abhayagiriya, Thuparama, and Jetawanarama. Its proximity to the high road and the modern town has unfortunately long bereft it of practically all but its monolithic columns.

It is likely that, though the area may not yield much of artistic value, the general plan of the ancient buildings and by-streets of the sacred precincts to Mirisavetiya will be disclosed with considerable certainty.

Polonnaruwa.

As in the previous year, operations were conducted at Polonnaruwa in 1901 under the personal supervision of the Archæological Commissioner from May to September inclusive.

(i.) The ruins excavated in 1900 ("Council Chamber," "Audience Hall," &c.) standing on the promontory at Topavewa, which had become overgrown, were first cleanly weeded.

(ii.) Attention was next turned to the excavation of the "Irrigation work lying immediately below the tank," at which point digging had ceased the year before. This has proved to be a *pokuna*, or large pond, with rock bottom, supplied from Topavewa by a sluice. The tank water was passed by three conduits (*nalal*) diagonally into a narrow brick "well" (*bisokotuwa*), and thence, through a second similar "silt-trap," under the tank bund to the pond, along and over a paved spill, neatly finished. At the north side of this *pokuna* is an ornamented shower bath built of cut stone, fed from a spout and drain above, which is apparently led through a circular walled room at a higher level from a "water-tower." The sides of the *pokuna* on the north and south are formed by high ground and rock; on the east the water was retained by a stout wall in brick and mortar, bellying outwards. Beyond this convex wall is a small pond, rectangular in shape, connected with the *pokuna* by a single inlet, and discharging, similarly, into a channel (now obliterated) which probably carried the surplus water into low land to the south-east by a sluice, yet traceable, under the south embankment of the promontory. The level area through which this channel flowed, between the ruined buildings standing on the tank bund and the western wall of the citadel, is traditionally known as "the King's Garden." Excavation has, here, distinctly tended to confirm tradition.

The spoil resulting from the heavy earth-cutting (at places 25 ft. deep) at the *pokuna* and *bisokotu*, was advantageously used in forming a banked-up cross road, much needed to unite the Government buildings near the tank bund with the new driving road from Minneriya.

(iii.) The "pillared building close to the Irrigation Bungalow on the tank bund" was also excavated. It is shown to be a *vihare*, with a moulded brick basement, fronting east. A well-carved stone Buddha (headless and limbless) was exhumed inside the shrine.

(iv.) The new road from Minneriya between the 25th and 26th miles, and about a mile from Topavewa, under construction last year, exposed some pillared ruins. It seemed desirable by dealing with this group promptly to anticipate not improbable illicit digging by wayfarers and others. During September the labour force was moved to the site. The decision was amply repaid by results. The quadrangle of a Hindu *devale*, containing three or four shrines, was followed out by trenching. The chief *kovil* (a mound of fallen *débris*, but once domed like others at Polonnaruwa) yielded, *inter alia*, a finely carved stone Nandi (bull) and a *lingam* and yoni, unbroken, *in situ*. On the rock hummock adjoining the *devale* premises was discovered a long Sinhalese inscription of forty-five lines, in good preservation. The record belongs to "Siri Sang Bo Nissanka Malla Kalinga Parakrama Bahu." There are more ruins around this rock, not improbably forming part of the *entourage* of the *devale*, which must have been of some note.

(v.) In addition to parking the promontory area, the gradual clearing of undergrowth at present hiding much of "Pulastipura" was begun by a system of paid *rajakariya, i.e.*, compulsory service for seven days of a limited number of adults from each village remunerated by fair cash payment at the week's close. The Moor villagers of the Megoda pattuwa of Tammankaduwa, thus judiciously employed, year by year, will gradually open out the whole of the old capital, with benefit alike to the Government and to themselves.

L. W. BOOTH,
Government Agent.

February 27, 1902.

PROVINCE OF UVA.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, PROVINCE OF UVA, FOR 1901.

I.—REVENUE AND EXPENDITURE.

THE revenue of the year amounted to Rs. 164,858·48, exceeding that of the previous year by Rs. 1,735·93. The increase is mainly due to larger sales of judicial, postage, and revenue stamps, to more fines in the Police Courts and by the Government Agent, and to larger receipts from sale of land.

2. The following statement gives the details of the rise under the specified heads of revenue :—

	Rs. c.
Judicial stamps	1,759 24
Postage stamps	3,264 65
Revenue stamps	115 67
Fines	489 17
Land sales	667 11
Other minor heads of revenue	1,621 64
	7,917 48
Deduct decrease in 1901 under other heads of revenue	6,181 55
Increase	1,735 93

3. A detailed statement of the revenue collected during the year under review in comparison with the previous year is appended :—

Comparative Statement of Revenue collected in the Province of Uva for 1900 and 1901.

Heads of Revenue.	Year. 1900.	Year. 1901.	Increase.	Decrease.
Licenses, &c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.
Arrack, rum, and toddy.	109,666 66	105,627 50	—	4,039 16

4. The expenditure was Rs. 34,255·18, as against Rs. 31,008·39 in 1900. The following statement gives the details of the rise under the specified heads of expenditure :—

Comparative Statement of Expenditure for 1900 and 1901.

Particulars.	1900. Rs. c.	1901. Rs. c.
Personal Emoluments	18,043 16	17,868 0
Pensions	2,920 13	2,814 82
Other Charges	10,045 10	13,572 36*
	31,008 39	34,255 18

* Increase due to expenses connected with the purchase of the Bandarawela Hotel and special charges on account of cholera.

The expenditure was 20·77 per cent. of the revenue

II.—FOOD SUPPLY.

6. The following table indicates the nature, sources, and sufficiency of the food supply of the people, exclusive of immigrant Tamils and residents in bazaars. The amount required for each korale is taken at 100 :—

Kórale.	Locally-grown. Consumed. Rice.	Kurakkan.	Indian Corn.	Vegetables.	Surplus. Rice.	Kurakkan.	Indian Corn.	Imported Rice.
Udukinda Division.								
Gampaha	50	20	20	10	—	—	—	—
Yatipalata and Medapalata ...	60	—	—	10	—	—	—	30

Buttala	40	20	10	10	20	—	—	—
Buttala Wedirata	20	40	20	20	—	—	—	—

Korale.	Locally-grown.							Imported Rice.
	Consumed.				Surplus.			
	Rice.	Kurakkan.	Indian Corn.	Vegetables.	Rice.	Kurakkan.	Indian Corn.	
Bintenna Division.								
Araluppitiya ...	30	30	30	10	—	—	—	—
Palwatta ...	30	20	20	10	—	10	10	—
Bintenna ...	—	40	30	20	10	—	—	—
Wiyaluwa Division.								
Wiyaluwa ...	5	45	40	10	—	—	—	—
Oyapalata ...	20	40	30	10	—	—	—	—
Soranatota ...	20	40	30	10	—	—	—	—
Yatikinda Division.								
Rilpola	60	20	10	10	—	—	—	—
Bogoda	50	20	20	10	—	—	—	—
Kumbalwela ...	60	20	10	10	—	—	—	—
Passara	60	20	10	10	—	—	—	—
Pattipola ...	60	20	10	10	—	—	—	—

7. With the exception of Udukinda and a part of Wellawaya, the supply is home-grown.

8. The other section of the population, namely, the immigrant Tamils and employés on tea estates, and the residents in bazaars, live sufficiently well. Their rice is imported.

9. Crops generally were fair. A table of the prices of ordinary kinds of food is annexed :—

Imported rice, Rs. 4·37 to Rs. 6 per bushel.
Country rice, Rs. 4·37 to Rs. 5·50 per bushel.
Paddy, Re. 1·75 to Rs. 2 per bushel.
Kurakkan, Re. 1·50 to Rs. 2 per bushel.
Indian corn, Re. 1 to Re. 1·25 per bushel.
Kollu, Rs. 2·50 to Rs. 3·75 per bushel.
Mun, Rs. 4 to Rs. 4·75 per bushel.
Chillies, 15 cents per pound.
Salt, 12 cents to 15 cents per measure.
Onions, 6 cents to 7 cents per pound.
Cocoanuts, Rs. 5 to Rs. 8 per 100.

10. The rainfall at Badulla was 51·58 inches, in comparison with 65·64 inches during 1900.

III.—IRRIGATION.

11. The expenditure during the year was Rs. 12,009·84, as against Rs. 10,506·31 in 1900, as follows :—

	Rs. c.
For maintenance of existing works	1,851 99
For works of construction	2,719 0
For irrigation surveys	272 46
Expenditure on staff	4,710 0
Repairs and improvements	2,456 39
Total ...	12,009 84

12. Details are specified in the annexed statement :—

Maintenance.

No.	Name of Work.	Expenditure. Rs. c.
1 ...	Okkampitiya Yoda-ela	1,507 77
2 ...	Sorabora and Kudawewa	344 22
	Total ...	1,851 99

Construction.

1 ...	Katupellewewa, building sluices and spills	2,169 0
2 ...	Irrigation Sub-Inspector's quarters, temporary ...	550 0
	Total ...	2,719 0

Irrigation Surveys.

1 ...	Survey of Alut-ela	20 50
2 ...	Survey of Komarika-ela	5 0
3 ...	Survey of Nagalawewa	96 36
4 ...	Survey of Ditagamuwa	26 0
5 ...	Survey of Hambegamuwa	16 0
6 ...	Survey of Usgamayawewa	53 0
7 ...	Survey of West Gala-oya	15 60
8 ...	Survey of Kadadora-ela	40 0
	Total ...	272 46

Expenditure on Staff.

No.		Salaries. Rs.	Allowances. Rs.
1	First Irrigation Sub-Inspector	1,000	500
2	Second Irrigation Sub-Inspector	720	240
3	Clerk	360	—
4	Two earthwork overseers	720	—
5	Two messengers	240	—
6	Hambegamuwa Guardian	120	—
7	Sudupanawela-ela Guardian	60	—
8	Gala-oya anicut Guardian	120	—
9	Horabora and Kudawewa Guardian	120	—
10	Okkampitiya Guardian	480	—
11	Cement pipe factory watcher	30	—
		3,970	740

Repairs and Improvements.

Name of Work.	Description.	Expenditure. Rs. c.
Dikwella-ela	Supplying deficit planks	51 0
Medabeddewewa	Repairs to sluice	110 0
Irrigation bungalow, Hambegamuwa	Improvement and repairs	142 0
Do.	Repairing the roof and damaged walls	203 73
Hambegamuwa irrigation channel	Improvement	45 36
Taldena-ela	Repairs	345 40
Irrigation bungalow, Hambegamuwa	Rethatching the roof	72 10
Mawela-ela, near Dikwella	Repairs to the retaining wall attached to the masonry anicut	123 60
Dehigolle Maha-ela	Minor repairs	24 50
Hanwella-ela	do	84 4
Badulupitiya-ela	Repairs to the damaged portion	10 0
Hingurugamuwa-ela	Improvement	272 90
Yapamme-ela	Minor repairs to the masonry and replacing the washed away planks	236 70
Mahatalawewa	Repairs	144 35
Gala-oya anicut	do.	165 10
East Gala-oya channel	Building distributing gates	309 8
Hambegamuwa tank	Repairs to the sluice	116 53
		2,456 39

3. As regards the future, the following is a list of the works proposed for 1902 :—

Alut-ela : reconstruction of stream crossings.
Nagalawewa : entire restoration.
Komarika-ela : restoration of headworks.
Gaduguduwewa, restoration of.
Gala-oya west ela : repairs to masonry, &c.
Aranamuna : repairs to existing ancient anicut.
Hambegamuwa tank : repairs to masonry.
Wahugoruwa tank, restoration of.
Hewanarawa tank in Maha Wedirata : construction of sluice and spill.
Manufacture of cement pipes.
Buttala-ela, repairs to.
Iron trough to Usgamayawa.

IV.—LEGISLATION.

14. A set of new rules, 109 in number, under "The Village Communities' Ordinance, 1889," was made and approved during the year under review.

15. Rules and regulations made by the Government Agent under "The Butchers' Ordinance, 1893," were published in the month of July, and by-laws to the same effect were subsequently framed by the Local Board of Badulla.

16. The Local Board also made by-laws in connection with the water supply.

17. No special legislation appears to be required for the benefit of the Province of Uva, nor has the writer of this report any to suggest in the general interest.

V.—PUBLIC WORKS.

18. Among the works required and already recommended are the following :—

(1) Further extension of the road from Bibile towards Medagama and Obbekota.
(2) Further improvement of the road from Muppane to Pottuvil.
(3) Completion of the road from Bibile to Alutnuwara.
(4) Construction of a serviceable cart road from Taldena to Migahakiwula and onwards.
(5) Construction of a road from Kumbukkan to Okkampitiya.
(6) Construction of a road from Dambagalla to Irakkamam.
(7) Construction of a cart road from Passara to Alupota and onwards towards Muppane.
(8) Construction of a road from Tanamalwila to Hambegamuwa.
(9) Scheme of water supply for Bandarawela. A vote has been taken on account.
(10) Water supply for Koslanda.
(11) Sinking of new wells in localities to be selected.
(12) Establishment of a dispensary at Welimada.
(13) Erection of building for dispensary at Bibile. A site has been selected.
(14) House at Badulla for the Office Assistant. Plans and an estimate have been prepared.

19. Money was voted in the Supply Bill of 1901 for the execution of the following among other works in 1902 :—

	Rs.		Rs.
Bibile-Medagama-Obbekota road	... 20,000	Horse bridge at Nakkala	... 3,000
Badulla-Spring Valley road	... 12,000	Sidings, Kumbalwela-Passara road	... 6,000
Haputale-Dambetenna road	... 5,000	Bandarawela water supply	... 10,000
Improvements, Muppane-Pottuvil road	... 5,000	Additions to Badulla Post Office	... 1,460
Horse bridge at Leangahawela	... 2,550		

VI.—SPECIALLY DESIRABLE MEASURES.

20. Irrigation in the low-country is what is chiefly required, and a systematic restoration of village tanks has to be undertaken. This subject was discussed in the Administration Report for 1899.

VII.—PUBLIC HEALTH.

21. The sanitary condition of the people is on the whole satisfactory. Means for obtaining treatment for sickness are provided by the establishment of the following hospitals and dispensaries, exclusive of estate dispensaries :—

Hospitals.	Dispensaries.	Divisions.
Haputale ...	Bandarawela ...	Udukinda
	Maspana ...	do.
Badulla ...	Madulsima ...	Yatikinda
Lunugala ...	Passara ...	do.
	Pinarawa ...	do.
	Taldena ...	Wiyaluwa
Medagama ...	Bibile ...	Wellassa
	Baduluwela ...	do.
Buttala ...	Muppane ...	Buttala
	Wedikumbura ...	do.
Alutnuwara ...	Ekiriankumbura ...	Bintenna
	Haldummulla ...	Wellawaya
	Koslanda ...	do.
	Tanamalwila ...	do.
	Hambegamuwa ...	do.

22. As to the sanitary condition of the small towns, namely, Badulla, Bandarawela, Haldummulla, Haputale, Koslanda, Passara, Lunugala, and Welimada, the drainage generally is bad, except at Bandarawela. There is, however, no overcrowding of bazaars, and the water supply is on the whole fair, except at Bandarawela, where a scheme is under consideration. The sanitation of the villages is provided for by the machinery of the Village Communities' Ordinance.

23. There were two outbreaks of cholera during the year under review, one in Bintenna and one near Welimada in Udukinda.

24. The disease was first reported from Bintenna on the 28th November, and from this centre there were 28 cases, 16 of which proved fatal. Temporary hospitals and a segregation camp were erected, and all necessary action was promptly taken by the authorities concerned, with the result that the last case was reported on the 9th December.

25. The other outbreak was distinct, and occurred in some villages about 4 miles north of Welimada, the first case happening on the 12th December. All necessary precautions were taken, the required buildings were put up, and a force of guards was stationed on all roads to prevent the spread of the disease. There were 18 cases, 11 of which proved fatal. The last case occurred on the 24th December.

26. Particulars are contained in the following registers :—

Register of Bintenna Outbreak.

No.	Age in Years.	Sex.	Date of Attack.	Date of Recovery.	Date of Death.	Village.

27. The following is a summary of the precautionary measures taken against plague :—

(*a*) Sites for plague buildings are in readiness at the following places :—

(1) Haputale, Udukinda division.
(2) Bandarawela, Udukinda division.
(3) Dikwella, Yatikinda division.
(4) Passara, Yatikinda division.
(5) Lunugala, Yatikinda division.
(6) Bibile, Wellassa division.
(7) Medagama, Wellassa division.
(8) Muppane, Buttala division.
(9) Alutnuwara, Bintenna division.
(10) Wellawaya, Wellawaya division.
(11) Koslanda, Wellawaya division.
(12) Haldummulla, Wellawaya division.

(*b*) At numbers (1), (2), (4), (6), and (7) buildings have been erected and are fit for immediate use, subject to minor repairs, which can be effected within six hours.

(*c*) At numbers (5), (8), (10), (11), and (12) materials have been collected and are stored. The sites can be cleared of weeds and buildings can be erected within six hours.

(*d*) At numbers (3) and (9) the sites can be cleared of weeds and materials can be collected within six hours.

28. In addition to this, in every village throughout the Province a house has been selected for occupation by plague patients in case of necessity.

VIII.—CRIME.

29. There was only one murder during the year. This was a case in which a villager killed his wife in a fit of jealousy; he was sentenced to death, but owing to the state of his health the sentence was subsequently commuted to one of twenty years' rigorous imprisonment. There were in addition three cases of homicide, resulting in convictions, the sentences being as follows :—Ten years' rigorous imprisonment, one year's rigorous imprisonment, and six months' simple imprisonment. There were three other cases of homicide discharged under the instructions of the Attorney-General.

30. The number of knife cases reported was 51, of which 50 were brought to trial, and in 19 of which convictions were obtained. There were 26 such cases in the preceding year, 53 in 1899, and 50 in 1898. Results are tabulated below :—

Division.	Population, exclusive of Military and Estates.	No Offence.	Designedly False.	True Cases.				Total.
				Committed to District Court.	Accused absconded.	Evidence insufficient.	Convicted in Police Court.	
Yatikinda ...	28,185	—	2	1	—	4	9	16
Udukinda ...	31,663	1	1	1	—	10	5	18
Buttala ...	15,706	—	—	—	—	2	1	3
Wellassa ...	23,097	—	—	—	—	1	1	2
Wiyaluwa ...	17,007	—	1	—	—	4	1	6
Wellawaya ...	8,528	—	1	—	1	2	2	6
Bintenna ...	10,549	—	—	—	—	—	—	—
Total ...	134,735	1	5	2	1	23	19	51

31. There was no lack of co-operation on the part of the headmen in the detection of crime, though none of them particularly distinguished themselves in this respect. The Police, both regular and rural, discharged their duties satisfactorily; among the latter, Sariady, Town Arachchi of Lunugala, and M. La Saibo Lebbe, Town Arachchi of Dikwella, did the best service.

32. The strength of the regular police was as follows :—An Inspector at Badulla; five sergeants at Badulla, two sergeants at Bandarawela, one sergeant at Haputale, one sergeant at Diyatalawa, and one sergeant at Welimada; twenty-three constables at Badulla, six constables at Bandarawela, four constables at Haputale, four constables at Diyatalawa, and five constables at Welimada. And the rural police consisted of eleven town arachchies at the following places :—Haputale, Welimada, Dikwella, Passara, Lunugala, Kandegedara, Bibile, Muppane, Alutnuwara, Haldummulla, Koslanda.

33. There was a marked diminution in the prevalence of cattle stealing, the number of cases reported being only 36, as compared with 65 in the previous year. Of these 36 cases, 7 resulted in convictions and 18 in acquittals: in the remaining 11 cases the offenders were unknown. As usual, the division of Udukinda had the largest proportion of cases.

IX.—CATTLE DISEASE.

34. There was no murrian during the year under review, but foot-and-mouth disease prevailed to some extent during the first six months. It broke out in the division of Yatikinda in January, and spread to the divisions of Udukinda and Wellassa in February, to the divisions of Buttala, Bintenna, and Wellawaya in March, and to the division of Wiyaluwa in April. It disappeared before the end of July in all the divisions except Wiyaluwa, where it was finally abated in August.

X.—NEW AREAS.

35. The extent of land, exclusive of chena, which was newly brought under cultivation during the year was inconsiderable.

XI.—WASTE LANDS ORDINANCES.

36. Action was taken in respect of 1,719 acres of land in the division of Udukinda, with the result that at the close of the year final notices declaring this extent to be the property of the Crown were in preparation. The following is a schedule of the lands in question :—

	Extent. A.	R.	P.
Bedde-ellepatana	225	1	10
Gollekandehula, &c.	149	3	32
Land at Galanihe	211	3	3
Land at Hinnarangolla	180	2	15
Deyalduwa, &c.	543	0	0
Kirindebedda, &c.	238	2	10
Yahalabedda, &c.	170	0	10
	1,719	1	0

37. Fifty-three acres of land in the village of Pitawela, adjoining the town of Badulla, were finally declared to be the property of the Crown.

38. At Telulla, in the division of Wellawaya, a claim of over 3,000 acres was surveyed, but the preliminaries required for the publication of the notice had not been completed at the close of the year.

39. There was no hitch in the working of these Ordinances.

XII.—CHENA CULTIVATION.

40. There was no material increase in chena cultivation. The extent of private chena land available for cultivation being slightly less than in the preceding year, there followed a proportionate expansion of the area of Crown chenas allowed.

41. The estimated acreage of Crown chenas cultivated during the year under review was 985 acres, as against 795 in 1900 and 959 acres in 1899. The issue of permits for this cultivation is restricted as far as possible, but there are many cases of necessity, especially in the division of Wiyaluwa.

XIII.—SALES BY VILLAGERS.

42. The sales of land by villagers during the year included 931 fields, 610 gardens (in some cases with houses), and 176 chenas ; but there is no reason to suppose that the vendors of any of these had insufficient title. Figures showing the extent of the property so transferred are not available. No improper sales of land by villagers were reported.

XIV.—GENERAL.

43. Work other than mere routine was involved in making arrangements for the Census. The results of the enumeration are shown in the following table :—

Population, excluding the estates, military, and prisoners of war ...	134,735
Increase, per cent.	6
The estate population	51,793
Increase, per cent.	61·4
Total population, including military and prisoners of war	191,925
Increase, per cent.	20·6

44. A comparative return in the prescribed form of the working of the Thoroughfares Ordinance is appended :—

Statement showing the Working of the Thoroughfares Ordinances for the last Two Years.

	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A)	—	159,201	—	—	188,964	—
2. Number on lists (B)	—	32,885	—	—	33,696	—
3. Effective in the district :—						
(a) Paid Rs. 1·50	27,535		83·73	28,933		85·86

Total ...	6,966 67	3,767 59	10,734 26	3,779 9	6,955 17

48. Mr. C. D. Vigors, C.C.S., was Government Agent until April, when he was relieved by the return from leave of Mr. G. A. Baumgartner, C.C.S., in October. Mr. F. H. Price, C.C.S., succeeded Mr. Baumgartner. At the beginning of the year Mr. J. W. Viner took Mr. J. L. Hampton's place as Superintendent of Surveys, and Dr. Felix Oorloff became Dr. Griffin's successor in the post of Colonial Surgeon.

Badulla, February 22, 1902.

F. H. PRICE,
Government Agent.

PROVINCE OF SABARAGAMUWA.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, PROVINCE OF SABARAGAMUWA, FOR 1901.

THE usual statement of revenue is given below :—

Return of the Revenue received by the Government Agent and the Assistant Government Agent of the Province of Sabaragamuwa during the Year 1901.

* Recoveries under Bridge Tolls are included under this sub-head.

I.—FOOD SUPPLY.

The reports of the various Ratemahatmayas are quoted below.

Ratemahatmaya, Meda and Kadawatu korales, writes :—

There is hardly anything by way of improvement in the food supply to report. It was very scarce during the last half of the year, and the price of imported rice went high, and country-grown rice and other food products were less by one-half than the previous year. The failure of crops is due to the continued drought which prevailed during the period of cultivation.

I beg to point out what measures would tend to improve the food supply :—

(1) The extension of the Uggalkaltota scheme.
(2) Sanctioning of the Diyawinna scheme.
(3) Irrigation of the Madabedda lands.
(4) Improving the breed of cattle.
(5) Introduction of new seed paddy.
(6) Introduction of new garden products.
(7) Encouragement to plant fruit gardens.
(8) Assisting cultivation by establishing agricultural banks.
(9) Establishing a system of profitable chena cultivation in place of the present unprofitable system.
(10) Immediate settlement of claims to lands.
(11) Partition of property in Tattumarutenna.

If called upon, I shall gladly submit my views on the subject more fully.

Ratemahatmaya, Kolonna korale, writes :—

Food Supply and its Nature.	How far grown by the People of the Village.	Price. Rs. c.		Remarks.
Rice ...	— ...	5 50	per bushel ...	—
Paddy ...	2,800 amunams ...	1 75 to 2 0	do. ...	—
Kurakkan ...	8,010 bushels ...	1 50 to 1 75	do. ...	—
Tana ...	300 do. ...	1 0 to 1 25	do. ...	—
Indian corn ...	970,000 pods ...	0 37	per 100 pods	—
Sweet potatoes ...	— ...	0 4	per lb. ...	Scarce
Jak ...	— ...	0 3	per fruit ...	Plentiful in season
Breadfruit ...	— ...	0 2	do. ...	do.

Note.—About 550 bushels of paddy taken from this korale to Giruwa pattu ; except that, no other exports from this korale.

Ratemahatmaya, Kuruwiti korale, writes :—

The articles used by the inhabitants of this korale as their food are rice, amu, kurakkan, meneri, manioc, jak fruits, sweet potatoes, &c., and the supply is not sufficient to meet the demand in the korale itself. Rice imported from Indian ports is consumed by the inhabitants, and out of the articles used as food nearly three-fifths is Coast rice, and there is enough rice in the market to meet the demand. The price of rice is as that of last year, varying from Rs. 4·50 to Rs. 5·50 a bushel.

Ratemahatmaya, Atakalan korale, writes :—

The food supply has been for the most part ample. In this korale it consists mainly of rice (home-grown and imported), kurakkan, tana, Indian corn, mun, cocoanut, jak, breadfruit, plantains, and different kinds of yams. In the Bintenna portion of the korale the staple food is kurakkan, yams, and Indian corn. Very little imported rice is used in the Bintenna parts and along the Madampe-Hambantota cart road. Imported rice is chiefly used by estate coolies, low-country traders, and in plumbago pits. The paddy grown in the korale, which is chiefly supplemented by kurakkan and other products enumerated above, is quite sufficient for the year's consumption for the natives of this korale, as the weather has been favourable through the year for cultivation. A table of the prices for ordinary kinds of food is annexed :—

	Rs. c. Rs. c.		Rs. c. Rs. c.
Rice (home-grown), per bushel ...	4 25 to 5 0	Yams, per lb....	... 0 1½ to 0 3
Rice (imported), per bushel ...	4 50 to 5 0	Cocoanuts, per nut	... 0 3 to 0 7
Salt, per measure ...	... 0 10 to 0 15	Plantains, per 100	... 0 37½ to 0 75
Mun, per bushel ...	... 3 0 to 4 50	Breadfruits, each	... 0 1½ to 0 3
Kurakkan, per bushel	... 1 0 to 1 25	Jak, each ...	... 0 3 to 0 10

Ratemahatmaya, Nawadun korale, writes :—

The food supply of the people of this korale during the past year has been the same as in previous years reported on by me, and there is no change whatever worthy of mention. It is rice, both home-grown and imported, supplemented, in the case of the villagers, with amu, kurakkan, meneri, tana, and garden products, such as jak, breadfruit, and yams. Of the rice consumed, it is difficult to say what proportion is imported and what home-grown, but in the case of the villagers, I think, it may be put down generally as one-third of the quantity consumed being imported. Low-country traders and many villagers living in the neighbourhood of the town, roads, and estates depend entirely on imported rice, the price of which ranged from Rs. 3·50 to Rs. 5 throughout the year. There has been no scarcity of imported rice at any time of the year.

Ratemahatmaya, Kukulu korale, writes :—

The principal food supply of the people is imported rice, a bushel of which is from Rs. 5 to Rs. 6·50. The native rice consumed is about one-fourth of the whole consumption. Sometimes imported rice is not obtainable, as the boutique-keepers who sell same run short of their supplies owing to difficult transport from Colombo. Scarcity of native rice is due to the limited number of fields in the korale The price of native rice is from Rs. 4 to Rs. 5·50 a bushel.

The Coast and country rice are supplemented by jak fruits, breadfruits, sweet potatoes, yams of different varieties, amu, meneri, and kurakkan in their season.

On the whole, no one suffers much from want of food.

II.—IRRIGATION.

I quote from the various Ratemahatmayas' reports :—

Meda Korale.—There is no progress. Very few new lands were cultivated at Uggalkaltota; owing to several deaths among the cultivators, and for want of water at the proper season.

Kolonna Korale.—No progress has been made during this year. The Kitulabokka channel is full of silt since three years, and very little water only could be taken. The masonry works of all the sluices in Panamure channels are out of order and require repairing, and the rest of the tanks are in good order. Nothing is done yet under land at Hinguruarawewa, or the lands under Rakwana-ganga scheme irrigable at Kumburugamuwa. The fields under Rambukkanawewa tank were never cultivated since the repairing of the tank for want of water, and unless a channel is opened from Hulanda-oya, those fields can never be cultivated.

Atakalan Korale.—No new works have been undertaken during the year. The existing irrigation works of some importance are Malwatta, Ranwala, and Rakwana-ganga schemes.

My predecessor has made reference in his last year's report to the purchase of lands by Mrs. Obeyesekere under the Rakwana-ganga scheme, and he predicted that most of the land so purchased would be opened up soon, but not an acre of land has yet been irrigated. There are lands yet available for asweddumization under the Malwatta and Ranwala schemes. I will not suggest any new work until I see progress has been made under the Rakwana-ganga scheme, on which so much money has been laid out. There is a breach in the bund of this channel, which should receive early attention of Government.

Kukulu Korale.—There are, literally, no irrigation works in this korale. There are large tracts of owiti lands in Kukulegama, which could be brought under cultivation if a channel is opened out to them from Kukule-ganga. I understand that His Excellency the Governor, Sir Arthur Gordon, paid a special visit to this village to see if this work could be brought about, but unfortunately the estimate on the work showed a prohibitive expenditure.

I append copy of the report of the Irrigation Sub-Inspector :—

I took charge of the irrigation works of this district in last July, and as there are no records of the works done previous to my assuming duties, I cannot give information as to the works done during the first half of last year.

As almost all the irrigation works were out of order, the President, Provincial Irrigation Board, ordered me to make up estimates for all the necessary works. The prepared estimates were kept to be submitted to a meeting of the Provincial Irrigation Board for consideration, but the Provincial Irrigation Boards were subsequently abolished, and I received order about the middle of November last to do the necessary works as much as possible from the upkeep votes, and the following works have been done :—

Meda Korale: Mulgama Tank.—All the leaks have been cut open and clay puddled in and blocked, and rubble stones arranged in the inner slopes to prevent scouring, and the spill has been temporarily repaired and work completed.

Irrigation Bungalows.—The bungalow and outhouses at Kaltota have been thoroughly repaired and limewashed. The outhouses of Rajawaka bungalow have been repaired.

Kadawatu Korale: Kinchigune Anicut.—The anicut has been supplied with planks, and a huge tree standing on the bank of the channel inclined towards the oya has been cut down.

Nawadun Korale: Batugedara Channel.—The sluices of the channel have been provided with ball shutters.

Atakalan Korale: Malwatta Anicut.—The Malwatta anicut and channel have been provided with planks.

Rakwana-ganga Scheme.—The breach in the channel near the anicut has been blocked, and sand and mud are being removed and depressions in bed of channel are being filled up in the first mile.

Kolonna Korale: Hingura Tank.—A bridge in round timber to lower sluice has been constructed, and a padlock and key to sluice has been provided.

Embilipitiya Tank.—The iron door to the Bisokotuwa sluice has been fixed.

Irrigation Bungalows.—The bungalow at Panamura was repaired, limewashed, and tiles shifted, and the outhouses were also limewashed and tiles shifted and put into good order. The outhouses of Tunkeme bungalow were thatched and repaired.

III.—LEGISLATION.

I have none to suggest. One Ratemahatmaya suggests that plumbago mine owners should be obliged to register the names of their employées, to facilitate the arrest of criminals.

IV.—WORKS MOST REQUIRED.

From last year's list I take the following :—

(1) Continuation of Madampe-Hambantota road.
(2) The Badureliya-Kukulegama road would open up the Kukulu korale, but the cost is apparently prohibitive.
(3) The road from Ratnapura to Karawita and Kalawana requires to be improved and made passable for carts. This is beyond the funds of the District Road Committee, and Government assistance is asked.
(4) Road from Balangoda to Kaltota much wanted for the improvement of the Kaltota irrigation works. About 5½ miles of this is now passable for carts.
(5) Deviation of Madampe-Rakwana road between 77¾ and 80¾ mileposts is being undertaken.
(6) Improvement of road from Ellearawa to Pinnawala, 6 miles towards Kotiyagala, would benefit some tea estates and village traffic.
(7) Permanent court-house and police station, Balangoda.
(8) Houses at Ratnapura for the Office Assistant, District Engineer, and Police Inspector.

V.—PLANS FOR IMPROVEMENT OF THE PROVINCE.

I repeat the list of previous year :—

(1) The speedy settlement of titles to lands. This is an important subject, and causes a deal of trouble.
(2) Improvement of communication throughout the Province. This can only be done by Government assisting the Road Committee and Village Committees.
(3) Extension of railway to Ratnapura.
(4) The development of the mineral wealth of the district.
(5) The development of irrigation in Kolonna korale and Atakalan korale and Meda korale.
(6) The employment of itinerating schoolmasters for out-of-the-way villages.
(7) Receiving post office at Kalawana in Kukulu korale.
(8) The building of permanent schools in place of the temporary ones now in use.

VI.—SANITARY CONDITION OF THE PEOPLE.

I take the following from the Ratemahatmayas' reports :—

Meda and Kadawatu Korales.—The sanitary condition of the people is good. Two dispensaries and a central field hospital are wanted. The Medical Officer, Mahawalatenna, now visits Molamure once a week, with advantage to the people.

Kolonna Korale.—Health of the people satisfactory, except a few cases of fever and parangi. Parangi patients are treated at Kolonna hospital, and medicine is supplied at Embilipitiya dispensary.

Kuruwiti Korale.—Health satisfactory, with the exception of a few cases of smallpox at Ratnapura, Hidellana, and Weralupe. The dispensaries at Ratnapura, Parakaduwa, Avisawella, and Ellagawa are used by people of this korale.

Atakalan Korale.—The health of the people is good, except in Kandawel and Tambagam pattus, where they suffer much from fever and parangi. These two pattus are served by the hospital at Godakawela, and the dispensary at Embilipitiya. The bazaars were kept clean.

Nawadun Korale.—There was an outbreak of dysentery at the end of the year in the villages at the foot of the Karawita hills. The Medical Officer, Ratnapura, paid a visit to the villages. Several deaths occurred. The Ratemahatmaya asks for dispensaries at Dippitigala, Doloswala, Bambarabotuwa, and at some central place in the Palle pattu.

Kukulu Korale.—The health of the people is very satisfactory. There is a dispensary at Kalawana, the Medical Officer visiting the Uda and Palle pattus monthly.

VII.—CRIME.

I append a list of murders and of cases of serious crime. In four cases the Magistrate prohibited for six months the wearing of a knife :—

Murders in the Ratnapura District during 1901.

1. On 28th January, 1901, at Rassagala in Kadawatu korale, one Wellakumbure Kattadige Kaluwa *alias* Kiri Batha, aged 25 years, Sinhalese, cut with a katty and killed his grandfather named Ukkuhatana, 70 years of age, in anger, because he did not make over his lands to him. The accused was convicted, and underwent the extreme penalty of the law.

2. On the 14th April, 1901, at Wellandura in Atakalan korale, one Allis Appu, Sinhalese, aged 25 years, stabbed with a clasp knife and killed one Rattarana (a Rodiya), 40 years of age. It was proved in the Supreme Court that it was done in self-defence. The accused was acquitted and discharged.

3. On 26th May, 1901, at Yatipawwa in Kuruwiti korale, one Pattiri Arachchilage Peeris Appu, 22 years, Sinhalese, cut with a table knife and killed his mistress Alpinahamy, 30 years. Anger and jealousy was the motive of the offence. The accused has not yet been arrested.

4. On 14th July, 1902, at Kuttikanda in Kukulu korale, one Gamaetige Appu Sinno, 42 years, Sinhalese, beat with a club and killed one Punchi Etana, a woman, aged 50. The cause was a dispute regarding the removal, without payment, of some jaggery. The accused was tried by the Supreme Court, convicted of grievous hurt, and sentenced to five years' rigorous imprisonment.

Number of Cases of Serious Crime, 1901.

VIII.—HEADMEN.

The headmen are reported to have co-operated in the prevention and detection of crime. No one particularly distinguished himself in this respect.

IX.—POLICE.

The police, regular and rural, discharged their duties satisfactorily.

X.—CATTLE STEALING.

I append a list of cattle stealing cases :—

Number of Cases of Cattle Stealing (Section 368 of Ceylon Penal Code).

Atakalan Korale ...	7	1	1	4	1
Kolonna Korale ...	2	—	—	—	1
Total ...	42	4	17	8	9

XI.—CATTLE DISEASE.

I gather the following from the Ratemahatmayas' reports :—

Meda and Kadawatu Korales.—Thirty-six animals died of hoof-and-mouth disease, 116 from other causes.

Kolonna Korale.—There was hoof-and-mouth disease in Vijeriya only. Eighteen black cattle and 15 buffaloes were attacked, and only one of the former died.

Kuruwiti Korale.—A great number died of murrain and hoof-and-mouth disease. The former disease was specially fatal to buffaloes.

Nawadun Korale.—Rinderpest occurred among some Coast cattle which came from Colombo with carts. Precautions were taken, and none of the village cattle were attacked.

The other korales were practically free from disease.

XII.—NEW AREAS OF CULTIVATION.

New areas of cultivation :—

Meda and Kadawatu Korales.—150 acres of tea.

Kuruwiti Korale.—12 amunams of paddy.

Atakalan Korale.—A few patches of cocoanuts.

The above is all that is reported by the headmen.

XIII.—WASTE LANDS ORDINANCE.

I annex a statement of the work done under the Waste Lands Ordinance.

[For Statement see page J 7.]

XIV.—CHENA CULTIVATION.

The Ratemahatmayas report as below :—

Meda and Kadawatu Korales.—Chena cultivation has decreased immensely, as Government will not allow the cultivation of its lands. The Ratemahatmaya records the cultivation of the large tract of country between the hills and Bintenna.

Kolonna Korale.—There is no increase since Government refused permits for Crown chenas. The people of Kella especially, being in want of food, cleared Crown chenas without permit.

Kuruwiti Korale.—Chena cultivation has decreased from the same cause.

Atakalan Korale.—An increase is reported, as people who worked at plumbago had to go back to their chenas on losing their occupation in the pits.

Kukulu Korale.—This cultivation has decreased, people taking to work in gem and plumbago pits and on tea estates.

XV.—SALE OF LAND BY VILLAGERS.

Some Crown lands adjoining Badekandamukalana in Kolonna korale were sold by private parties. The other Ratemahatmayas report that there was not much speculative selling, owing to there being no demand. Sales of village houses and gardens have not been many.

Statement showing Cases taken up under the Waste Lands Ordinances, 1897, 1899, and 1900, and how disposed of, during the Year 1901.

XVIII.—CENSUS.

The figures of the Census taken on 1st March, 1901, as compared with the previous Census taken on 26th February, 1891, are as follows :—

	1901.	1891.
(*a*) Population, including (*b*) and (*c*)	132,667	108,148
(*b*) Local Board, Ratnapura	4,084	3,527
(*c*) Estate population	16,735	6,064

XIX.—FOREST DEPARTMENT.

Information under this head will be found in the Conservator's report.

GENERAL.

The 2nd February was observed, as the memorial of the death of our late Queen Victoria, with due solemnity and mourning, the people throughout the district showing every sign of their real regret and sympathy.

A Garden Product Show, the first of its kind, was held at Ratnapura at the end of October. The show building was full of exhibits. The building was put up and decorated by the Ratemahatmayas and headmen, and the prizes were chiefly contributed from the Village Committee funds. The exhibits were much beyond what was expected.

There were various changes in the Office Assistant, Messrs. Weerakoon, Wickwar, Loftus, and Thaine, all working in that capacity during the year.

Mr. Pieris was District Judge till Mr. Loftus succeeded him in December.

Mr. A. F. Molamure, Ratemahatmaya of Atakalan korale, was under suspension for some months and resigned. He was succeeded by Mr. E. A. Elapata, and Mr. H. A. Gunasekera was made Ratemahatmaya of the Kukulu korale.

Mr. E. M. Byrde was taken ill in February, 1902, and I was sent to relieve him on the 18th March, which will partly, I hope, explain why this report is so meagre.

April 29, 1902.

G. SAXTON,
Government Agent.

REPORT ON THE KEGALLA DISTRICT FOR 1901.

INTRODUCTION.

As I did not become Assistant Government Agent of Kegalla till February of the current year, and only held the office for a few weeks, this report must necessarily be brief.

I.—REVENUE.

The revenue collected at the Kegalla Kachcheri during 1901 was Rs. 252,100·22, as compared with Rs. 278,721·99 in 1900, a decrease of Rs. 26,621·77.

The following comparative statement shows the revenue credited at the Kachcheri in 1900 and 1901 under each head of service :—

Heads of Revenue.	1900.	1901.	Increase.	Decrease.	Remarks.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.	
Licenses.					
Arrack, Rum, and Toddy ...	169,700 22	154,943 73	—	14,756 49	Less arrears credited and less punctual payment in 1901
Opium	750 0	260 0	—	490 0	The value of the Yatiyantota and Dehiowita licenses was credited in 1901 to the Board of Health
Rents exclusive of Lands.					
Road Tolls	5,744 16	4,332 50	—	1,411 66	The rents realized less than in 1900
Bridge Tolls	10,595 0	11,410 0	815 0	—	The rents realized more than in 1900
Ferry Tolls	850 0	890 92	40 92	—	do.

Heads of Revenue.	1900.	1901.	Increase.	Decrease.	Remarks.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.	
Stamps.					
Revenue (various Services) ...	22.509 37	21.765 9	—	744 28	—
Fines and Forfeitures.					
District Courts	330 0	205 0	—	125 0	—
Police Courts	2,239 55	1,683 35	—	556 20	—
Government Agents ...	233 0	159 37	—	73 63	—
Other Departments ...	433 25	482 75	49 50	—	—
Fines for Forest Offences ...	469 58	433 14	—	36 44	—
Fees of Court or Office, Payment for Specific Services, &c.					
Judicial Stamps ...	9,210 78	9,355 18	144 40	—	—
Survey Fees	1.888 20	2,016 70	128 50	—	—
Hospital Stoppages ...	45 5	57 5	12 0	—	—
Collections at Dispensaries ...	717 23	253 76	—	463 47	The decrease is due to the opening of dispensaries on estates
Medical Aid Dues ...	13,598 68	11,857 68	—	1,741 0	There was a decrease in the Indian cooly population treated in hospitals
Sale of Drugs	1,328 13	1,134 72	—	193 41	—
Value of Prison Labour ...	1 37	—	—	1 37	—
School Fees	278 78	268 45	—	10 33	—
School Books and Stationery ...	166 31	268 23	101 92	—	—
Fees for Title Deeds ...	566 7	541 44	—	24 63	—
Sundries	173 50	510 37	336 87	—	Increase due to the recovery of stamp duty in certain civil Crown cases
Maintenance of Prisoners ...	64 23	54 12	—	10 11	—
Post and Telegraph.					
Postage Stamps... ...	153 41	—	—	153 41	Postage stamps were obtained in 1901 only from the Postmaster-General
Rents of Government Property.					
Rent of Lands	166 77	210 7	43 30	—	—
Interest.					
On Arrears of Revenue ...	317 35	932 94	615 59	—	—
Miscellaneous Receipts.					
Sale of Old Stores ...	23 6	0 25	—	22 81	—
Overpayments recovered ...	2 30	—	—	2 30	—
Unclaimed Deposits ...	300 16	167 77	—	132 39	—
Sundries	63 95	128 63	64 68	—	—
Sale of Government Property.					
Timber	6,259 93	11,941 25	5,681 32	—	More timber sold to estate superintendents
Crops on Crown Lands ...	15 50	56 40	40 90	—	—
Sundries	1,156 7	0 82	—	1,155 25	No plumbago sold. The one-tenth system was abandoned
Land Sales.					
Crown Lands Sold ...	24,371 3	13,003 54	—	11,367 49	Less demand for Crown land
Premia on Leases ...	4,000 0	2,775 0	—	1,225 0	
Total ...	278,721 99	252,100 22	8,074 90	34,696 67	
Deduct Increase ...	—	—	—	8,074 90	
Nett Decrease ...	—	—	—	26,621 77	

The chief items of decrease are Rs. 14,756·49 under the head Licenses, Arrack, and Rs. 11,367·49 under that of Crown Lands Sold. Though the arrack rent due for each year was the same, the arrears of 1899 paid in 1900 largely exceeded those of 1900 paid in 1901, and one monthly instalment of the Three Korales rent due in 1901 was not paid within the year.

The demand for Crown land was not brisk, owing to the condition of the tea and plumbago industries. Several lots advertised for sale did not obtain any bids.

Other decreases of over Rs. 1,000 under each of the heads Road Tolls, Medical Aid Dues, Sale of Government Property, Sundries (including Plumbago), Premia on Leases, are counterbalanced by a satisfactory increase of revenue derived from the sale of Crown timber.

The total revenue collected in the district, including the amount credited at Ratnapura on account of the sale of firewood to the Railway, and the contribution made by the District Road Committee to the general revenue, was Rs. 284,584·12, as compared with Rs. 311,699·61 in 1900, a decrease of Rs. 27,115·49.

II.—EXPENDITURE.

The total expenditure of the Assistant Government Agent's, District Judge's, and Prison Departments was Rs. 31,613·35, or 12 per cent. of the revenue credited at the Kachcheri. The percentage was the same in 1900.

III.—FOOD SUPPLY.

The chief article of diet is rice. It is estimated that 336,000 bushels were produced locally during the year. Owing to the scarcity of land suitable for paddy cultivation, Coast rice is very largely imported. It is supplemented by kurakkan, amu, and other chena crops. The chena yield was estimated at 60,800 bushels. Jak, breadfruit, and yams of different kinds also contribute to the food supply. At the railway stations plantains find a ready sale.

There was no scarcity of food during the year. The prices of the chief articles of food were as follows:—

Rice (Indian)	... Rs. 4 to Rs. 5·50 a bushel	Cocoanuts	... Rs. 3 to Rs. 5 per 100
Rice (home-grown)	... Rs. 3 to Rs. 4 a bushel	Breadfruit	... 2 cents to 5 cents each
Salt	... 10 cents a measure	Jakfruit	... 2 to 6 cents each.
Bread	... 25 cents a pound	Plantains	... 36 cents to Re. 1 per bunch
Mun	... Rs. 3·50 to Rs. 4·50 a bushel	Beef	... 18 to 20 cents a pound
Kurakkan	... 75 cents to Re. 1 a bushel	Eggs	... 3 to 4 cents each
Amu	... 75 cents a bushel	Chickens	... 37 to 50 cents each
Cassava	... 1½ to 2 cents a pound	Fowls	... 62 to 75 cents each
Yams	... 3 cents a pound	Dry fish	... 37 to 75 cents each

IV.—IRRIGATION.

The anicut across the Andana-ela at Gangekumbura, described in Mr. Hill's Administration Report for 1900, is the only irrigation work in the district. He recommends that an estimate be framed showing the cost of substituting a masonry anicut for the present structure, which consists of iron uprights supporting a number of trees, which are laid across the river, and suggests that if this improvement is made it might be found worth while to cut a channel along the north of the river, with a view to the cultivation with paddy of 80 acres of land, of which 50 belong to the Crown.

The rainfall at Ruanwella was 161·10 inches, as compared with 160·45 inches in 1900; but at Ambanpitiya it was only 98·97 inches, as against 125·67 inches in 1900.

Gauges have been erected at the Kacheheri and at the resthouses in the district. There is some doubt about the correctness of the fall registered at the former place, owing to the situation of the gauge. It has now been moved. I am unable to say whether the figures obtained at the various resthouses can be depended on.

V.—LEGISLATION.

I have no suggestions to make.

VI.—PUBLIC WORKS.

The Land Registry Office at Kegalla has been completed. The building of the new Post and Telegraph Office at Kegalla on land acquired for the purpose will soon be commenced. A new ward at Karawanella hospital and another at Kegalla hospital are being erected.

Cement drains have been built in the Rambukkana bazaar. The hollow between the Jailer's quarters and the main road in Kegalla was selected by the Local Board as a suitable site for a very small recreation ground, and the work of filling it up for the purpose was begun during the year.

My acquaintance with the district was too short to enable me to decide what new works are most required. Mr. Hill's list was as follows:—

(1) A causeway across the Maha-oya at Andiramada on the Karandupone-Rambukkana road. Mr. Noyes recommends that until this causeway is built there should be a ferry toll instead of a road toll on this road, and that a ferry boat should be provided for the Maha-oya. At present while this river is in flood traffic has to cease.
(2) The conversion of the Karandupone-Rambukkana road into a principal road.
(3) The conversion of the Kelani-Panawitiya bridle path into a road to serve as an approach to the Railway at Yatiyantota for estates in Lower Dolosbage.
(4) Cement drains for Dehiowita and Yatiyantota bazaars.
(5) Cattle sheds and halting-places for carts in the Kelani Valley.
(6) Market for Kegalla town.
(7) Quarters for Government clerks.

A work which would meet a want felt by villagers and the estate population of Panawal korale is the construction of a bridge wide enough for hackery traffic at Maniyangama over the Getahetta-oya, close to its junction with the Sitawaka-oya. I was trying to find out what such a bridge would cost, when I had to leave the district. If its cost is not very large, money might be provided for the purpose by the District Road Committee and by the Village Committee of Three Korales, with the help of a contribution from Government, and perhaps of one from the local authorities in the Western Province, as the bridge would connect Hewagam korale with Panawal korale.

VII.—PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

The few weeks that I spent in the district were insufficient to allow me to acquire that knowledge of the country and of the wants of the people, on which alone any useful plans for improvement can be based. Nor do I find that my immediate predecessor Mr. Noyes has left on record any sketch of his plans.

Mr. Hill's Administration Report for 1900 shows what his views in this respect were three months before he left the district, with which he had been intimately acquainted for nearly four years.

VIII.—PUBLIC HEALTH AND SANITATION.

The year was a much healthier one than 1899 or 1900. The birth-rate and death-rate for the three years were as follows:—

	1899.	1900.	1901.
Birth-rate per mille	48·8	47·3	37·8
Death-rate per mille	41·9	41·4	27·8

No serious outbreak of fever occurred, requiring, as in the two preceding years, the employment of itinerating medical officers.

There are Government hospitals and dispensaries at the following places:—

Hospitals.

1. Kegalla.
2. Karawanella.

Dispensaries.

1. Nelundeniya
2. Pindeniya
3. Parakaduwa
4. Mawanella
5. Rambukkana
6. Kitulgala
7. Aranayaka

The Local Board provides for the sanitation of Kegalla town. The sanitary condition of the villages generally is fairly good. They have a good water supply. Some attention has been given in the Three Korales to the filling up of stagnant pools in the neighbourhood of houses.

A sum of Rs. 734·12 was spent out of Gansabhawa funds on the sanitation of Hingula, Rambukkana, and Mawatagoda bazaars. Coolies were employed on scavenging work at Aranayaka and Undugoda. Dehiowita and Yatiyantota were brought under the Small Towns Sanitation Ordinances. The revenue and expenditure of these towns for the year were as follows :—

	Revenue. Rs. c.	Expenditure. Rs. c.
Dehiowita	635 25	87 95
Yatiyantota	712 25	88 43

The reason that so little was spent is that the revenue was only obtained late in the year. No sanitary rate was levied until the current year.

Cement drains along the Rambukkana bazaar were made by the Public Works Department. Similar drains are, as already stated, required for Dehiowita and Yatiyantota bazaars. In these two towns public wells were being dug at Government expense at the end of the year. Wells are also required at Pindeniya, Wahakula, and Hingula. At Walagama in Beligal korale a well was made and paid for out of Gansabhawa funds.

Orders to whitewash village houses were enforced, defaulters being prosecuted under the Village Communities' Ordinance.

The existing plague hospitals and quarantine sheds, and sites suitable for the erection of more buildings of this kind, received the attention they needed during the year.

IX.—MARRIAGES AND DIVORCES.

1,255 marriages were registered, of which 1,075 were Kandyan. The number of applications for divorce under the Kandyan Marriage Law was 329, of which 173 were granted. To facilitate the registration of births, marriages, and deaths, four large registration divisions were subdivided during the year, viz., Kandupita pattuwa, Dehigampal korale, Atulugam korale, and Panawal korale.

X.—SERIOUS CRIME.

The criminal statistics hitherto compiled at the Kegalla Kachcheri are insufficient to show whether serious crime is on the increase or decrease in the district generally or in any particular village or korale. The crime report system was certainly not thoroughly understood by the headmen, and was not being properly worked when I came to the district in February of the current year. Being well acquainted with the system as worked in the Western Province, and fully explained in recent Administration Reports of that Province, I had begun to teach it to the headmen, when I had to relinquish charge of the district. Judging from my short experience of their work, I suspect that many alleged cases of serious crime, especially where the offender is unknown, are not reported by them.

The following statement gives the number of serious crime reported by the headmen in 1901 :—

Crime.	Number of Cases reported.	Number brought to Trial.	Convictions.	Pending at the end of the Year.
Homicide	12	6	5	1
Hurt with knife	46	46	25	14
Grievous hurt under section 316, Penal Code	9	9	3	3
Grievous hurt under section 317, Penal Code	10	10	3	2
Highway robbery	27	27	7	8
Cattle theft	66	52	23	8
Burglary and theft from houses ...	91	48	11	17
Rape	4	4	—	1
Arson	9	9	2	—
Abduction and kidnapping ...	3	3	—	1
Total ...	277	214	79	55

This return does not show in how many of the 277 cases the Magistrate or the higher court found that no offence had been committed. The fact therefore that in 1901 277 cases were reported, as against 241 in 1900, does not necessarily indicate that serious crime increased in 1901. It may be that such crime did not increase, but that a larger number of false cases was instituted and duly reported by the headmen. It is to be hoped that the A B C classification of serious crime will be adopted in statistics compiled for administration reports in future. It will then be possible to show the increase or decrease of any particular kind of serious crime. The Gan Arachchi's division should be made the geographical unit for the purposes of criminal statistics, then the variation of serious crime in any part of the district could be traced.

Homicides.—As regards homicides, better statistics are fortunately available. Twelve alleged crimes of this nature were reported to the Magistrates during the year. It was found that only in six cases had any offence been committed. In four of them the offenders were committed for trial before the Supreme Court. In two of these sentence of death was passed, but it was commuted in one of them to twenty years' rigorous imprisonment. In two cases the Supreme Court passed sentences of ten years' and one month's rigorous imprisonment respectively. In one case the accused was committed for trial before the District Court on a minor charge, and was sentenced to six months' rigorous imprisonment. The remaining homicide was a brutal murder committed at the end of the year by four Sinhalese coolies belonging to a plumbago pit at Siyambalawala, who entered at night the boutique of a Chetty at Tumbage intent on plunder. A scuffle with the Chetty ensued, in which he was strangled to death. The offenders fled at once, and the special measures adopted with a view of ascertaining their whereabouts and arresting them have hitherto resulted in the capture of only one of the men. Out of the six offences, three were committed with knives.

Cattle Stealing.—New Gansabhawa rules, framed at the instance of Mr. Hill, have during the current year been brought into force. They deal, *inter alia*, with the branding, registering, and removal of cattle. The framers hope that the enforcement of these rules will lead to a reduction in the number of cattle thefts. If they do not, it will be well to ascertain how far the new rules framed

under Ordinance No. 10 of 1898, and applied experimentally last year to the Western Province, have had any effect in diminishing cattle stealing in that Province.

XI.—HEADMEN AND CRIME.

My absence from the district throughout the year under review prevents me from offering any opinion, based on personal observation, as to the manner in which the headmen performed their police duties. As far as I am able to judge from my acquaintance with their work during a few weeks of the current year, they are not sufficiently alive to the importance of promptly reporting every allegation that any serious crime has been committed.

Rewards amounting to Rs. 516·12 were paid to them for good work done. The following headmen distinguished themselves :—

Name.	Office.	Service performed.	Reward. Rs.
Punchi Banda ...	Mohottala of Kiraweli pattu east	For successful prosecution of cattle theft, Police Court, Kegalla, case No. 21,652 ...	5
Ukku Banda ...	Gan Arachchi of Dedigama	do. ...	5
Suwandihamy ...	Gan Arachchi of Mattumagoda	For arresting accused in District Court, Kegalla, case No. 4,848 ...	10
Unus Lebbe ...	Gan Arachchi of Madege	do. ...	10
Awula Marikkar ...	Mohottala of Atulugam korale	For arresting accused in Police Court, Avisawella, case No. 4,846 ...	10
Davith Silva ...	Gan Arachchi of Badullawala	For successful prosecution in Police Court, Avisawella, case No. 5,026 ...	10
Appuhamy ...	Gan Arachchi of Uduwa	For securing conviction in Police Court, Kegalla, case No. 22,460 ...	10
Medduma Banda ...	Gan Arachchi of Imbulgala	For successful prosecution in Police Court, Kegalla, case No. 22,472 ...	5
Ibrahim Lebbe ...	Town Arachchi of Dehiowita	For arresting accused in Police Court, Panadure, case No. 8,510 ...	25
H. M. Appuhamy ...	Gan Arachchi of Hakurugammana	For successful prosecution in Police Court, Kegalla, case No. 22,170 ...	5
Appuhamy ...	Gan Arachchi of Imbulana	For arresting accused in Police Court, Avisawella, case No. 4,707 ...	20
P. B. Rankotdiwala ...	Korala of Galboda pattu	For successful prosecution in Police Court, Kegalla, case No. 22,736 ...	10
Omaru Lebbe ...	Town Arachchi of Rambukkana	For successful prosecution in Police Court, Kegalla, case No. 22,735 ...	10
Unus Lebbe ...	Gan Arachchi of Madige	For successful prosecution in Police Court, Kegalla, case No. 23,196 ...	15
Punchi Appuhamy ...	Korala of Kandupita pattu north	For successful prosecution in Police Court, Kegalla, case No. 22,881 ...	5
Mudalihamy ...	Gan Arachchi of Nabereyawa	do. ...	5
W. M. Fernando ...	Town Arachchi of Wahakula	For successful prosecution in Police Court, Avisawella, case No. 5,654 ...	10
Ibrahim Lebbe ...	Town Arachchi of Dehiowita	For arresting and prosecuting a burglar in Police Court, Kegalla, case No. 4,848 ...	10

Only a few of the headmen have yet received Act Books. As soon as funds allow, every headman should be provided with one. These Act Books give an epitome of a headman's duties, and are intended to contain a record of his good and bad service. Silver badges of office are being made for these officers.

During the year the duties of eight out of the eleven special police officers, called Mohottalas, were transferred to twenty-one Koralas. The consequent reduction in the area to be supervised for police purposes should make the Koralas more useful than Mohottalas were able to be in assisting the Gan Arachchies to prevent and detect crime.

XII.—CONDUCT OF THE POLICE.

The regular police force at Kegalla consists of the Additional Superintendent (the Assistant Government Agent), one sergeant, one constable clerk, and five constables.

The Police Sergeant T. S. Bakman has continued to discharge his duties well. He was rewarded during the year for special zeal and intelligence in prosecuting three thieves.

Police Constables Jamaldeen (No. 1,428) and P. Pieris (No. 1,613) received rewards for special courage displayed in arresting an armed bully and habitual criminal, who was afterwards sentenced to one year's rigorous imprisonment for criminal intimidation. Only one constable was punished during the year.

XIII.—CATTLE DISEASE.

Twenty-four cases of rinderpest occurred in Three Korales and Lower Bulatgama. Nineteen of the cattle affected died. Foot-and-mouth disease existed in parts of Kinigoda, Beligal, and Paranakuru korales, but none of the animals attacked died. The new Gansabhawa rules contain the following regulations on the subject of Cattle Disease :—

21. *Segregation of Diseased Cattle.*—The owner or person in charge of any animal attacked with any contagious or infectious disease shall segregate it, and give immediate notice to the headman of the village in which the animal may then be.

22. *Removal of affected Animals to Hospital Sheds.*—The owner or person in charge of cattle, if directed so to do by the village headman, shall at once have an animal affected with any contagious disease removed to a well-ventilated hospital shed and leave it in charge of a person appointed by the headman to tend, feed, and treat it.

23. *Disinfectants.* — The headman shall forthwith apply to the Chairman of the Committee for a supply of disinfectants and medicines.

24. *Cattle in infected Areas to be kept tethered.*—In every village in which cattle disease exists or has within ten days previous existed, and in every village within a radius of three miles, all cattle owners and persons in charge of cattle shall keep their animals tethered or securely pen them so that they cannot stray. No one shall, however, tether any animal near a road or near any public place.

25. *Removal of Animals from infected Areas.*—No animal shall be brought into or removed from any villages mentioned in rule 24.

26. *Burial of Carcases.*—It shall be the duty of every owner or person in charge of deceased cattle to burn or bury at a depth of 6 feet the carcase, dung, litter, &c., of any deceased animal, and also to disinfect the spot with disinfectants provided by the headman, and to thoroughly disinfect himself before he approaches healthy cattle.

27. *Disposal of Carcases found unburied.* — Every person who within an infected area finds the carcases of any cattle lying dead and unburied shall report the same to the nearest headman, who shall forthwith cause them to be buried in manner aforesaid.

28. *Disinterring Carcases.*—No person shall disinter the carcase of any animal which died from infectious or contagious disease, or remove the flesh or hide or other parts of the carcase of such animal.

29. *Inoculation.*—Owners of cattle in an infected herd or village shall, subject to the advice of the Government Veterinary Surgeon, or on the orders of the Chairman of the Village Committee, have their cattle inoculated or subjected to approved treatment at any spot selected by the Government Veterinary Surgeon or his subordinates.

30. *Segregation after Recovery.*—Cattle that have recovered from an infectious or contagious disease shall not be allowed to mix with the healthy herd until fourteen days have elapsed after complete recovery.

XIV.—NEW AREAS OF CULTIVATION.

252 acres are reported to have been opened in tea, 705 acres in cocoanuts, 595 acres in plantains, and 308 acres in arecanuts. During the year 476 acres 1 rood and 35 perches of Crown land were sold for Rs. 13,003·54, an average of Rs. 27·29 per acre. In 1900 745 acres were sold at an average price of Rs. 33 per acre. In the present condition of the tea and plumbago markets there is not much demand for land, except for the cultivation of plantains and cocoanuts.

Only eleven plumbago pits were registered during 1901. The amount realized by the lease of Crown plumbago land was Rs. 2,775.

XV.—WASTE LANDS ORDINANCES.

The following statement shows the progress made in this district. That it is so satisfactory is due to the energy displayed by Mr. Hill in visiting the lands dealt with and in promptly inquiring into the claims that were brought forward :—

	Declared Crown. A. R. P.	Allowed as Private. A. R. P.
1898		
By Assistant Government Agent ...	969 1 38 ...	126 2 17
By District Judge	6 1 0 ...	—
1899.		
By Assistant Government Agent ...	886 3 18 ...	39 0 17
By District Judge	188 1 30 ...	—
1900.		
By Assistant Government Agent ...	3,883 0 0 ...	190 0 0
By District Judge	110 0 0 ...	—
1901.		
By Assistant Government Agent ...	4,274 2 33 ...	233 1 27
By District Judge	571 2 31 ...	—
Total ...	10,890 1 30	589 0 21

The cost of working the Ordinances in 1901, including the cost of special surveys, was Rs. 2,260·62. 833 acres 2 roods and 1 perch were surveyed by the special surveyor employed for work under the Ordinances.

The services of Mr. D. J. W. Edirisingha having been discontinued early in the year, most of this work was done by his successor Mr. G. P. Weeraratna.

XVI.—CHENA CULTIVATION.

The villagers own large extents of chena land, and no Crown land is allowed for chena cultivation. 148 alleged offences under the Forest Ordinance were disposed of by the Assistant Agent during the year. Out of 28 prosecutions in the Police Court, 16 ended in convictions, 9 in acquittals, 2 were withdrawn, and 1 case was pending at the end of the year.

XVII.—SALES OF LANDS BY VILLAGERS.

Sales of lands by villagers are said to have been rare. No instances in which the vendors are believed to have had insufficient title have come under my notice.

XVIII.—WORK OTHER THAN ROUTINE.

Kelani Valley Railway.—184 lots of land, in extent 49 acres 2 roods and 30·52 perches, were acquired for the construction of about 5 miles of the Kelani Valley Railway from Talduwa to Magammana. The compensation paid amounted to Rs. 32,085·61. The construction of the Railway has been steadily progressing.

Census.—In January and February the education of the enumerators had to be completed by Mr. Hill on circuit.

XIX.—VILLAGE COMMUNITIES' ORDINANCE.

In this district the Ordinance is vigorously worked, and, in return for the tax of 50 cents levied on each villager who chooses to commute his liability to labour for three days on village works, much is done to benefit village communities. The Village Committee revenue and expenditure were as follows :—

REVENUE.	Rs. c.	EXPENDITURE.	Rs. c.
Balance at end of 1900	17,959 25	Payments...	19,630 50
Receipts...	19,167 41	Balance at end of 1900	17,496 16
	37,126 66		37,126 66

The amount received in commutation of labour was Rs. 12,067, as compared with Rs. 12,002·50 in 1900. As the tax has hitherto been collected late in the year, the collections of one year are not spent till the following year. The expenditure covered the upkeep of 550 miles of village paths, the repair of edandas and of the Dippitiya bridge, the repair and extension of village schools, the upkeep of markets and latrines and the pay of scavengers, the erection of two new school buildings, the conversion into cart roads of (1) another half mile of the Weligamuwa-Hewadiwala path at a cost of Rs. 464, (2) half a mile of the Nelundeniya-Dedigama path at a cost of Rs. 1,511·27, (3) a little over half a mile of the Yatattawala-Yattagoda District Road Committee path at a cost of Rs. 1,009·43, of which only Rs. 185·63 was paid during 1901, additions to Rambukkana and Mawanella court-houses, equipment of Dedigama and Beligala court-houses, and the construction, at a cost of Rs. 850, of part of a bridge at Alpitiya.

I regret to state that owing to want of proper supervision after Mr. Hill's departure from the district, an absurdly steep trace was adopted for the deviation of the Yatattawala-Yattagoda road, with the result that much of the expenditure incurred has been wasted.

The market at Mawatagoda continues to be a great success. It is only open on Sundays, when estate coolies flock there to buy village produce. The fees recovered average Rs. 25 a month. The right to collect fees at Rambukkana market during 1901 was sold for Rs. 1,400, but difficulty was experienced in stopping the sale of plantains elsewhere than in the market, owing to the failure of some prosecutions in the Gansabhawa. For the right to collect fees in 1902 only the sum of Rs. 850 has been obtained. The market at Dehiówita has been a dead failure and is deserted.

The new Gansabhawa rules framed in 1900 were not finally approved and promulgated till the current year. They provide, *inter alia*, for—

(1) The proper protection of village paths.
(2) The branding and registering of cattle and their removal on permit.
(3) The prevention of the spread of cattle disease.
(4) The recovery of tax at double rate from villagers who have failed to perform the labour due or to commute such labour by the end of July.

Education.—There are 28 Government schools in the district; the average daily attendance was 2,286 in 1901, as compared with 1,851 in 1900, a satisfactory increase. The figures for each chief headman's division are as follows:—

	1899.	1900.	1901.		1899.	1900.	1901.
Galboda and Kinigoda Korales	455	504	580	Beligal Korale	489	472	676
Paranakuru Korale	364	392	441	Three korales	471	483	589

The average attendance at the various denominational schools in the district was 1,037. A new school was built at Deraniyagala to take the place of the one at Mapitigama. Progress was made with the erection of a permanent school building at Kahambiliyawala. Ruanwella, Pinnawala, and Ganetenna schools were enlarged, and cement floors were provided for those at Mawanella, Pinnawala, Molagoda, and Aranayaka. Steps are being taken to open some experimental school gardens.

Village Tribunal and Committee Cases.—The following return shows the number of cases disposed of:—

	Galboda and Kinigoda Korales.	Paranakuru Korale.	Beligal Korale.	Three Korales and Lower Bulatgama.	Total.

XX.—CENSUS.

The Decennial Census of the district was taken on the night of 1st March, 1901. As Mr. Hill made a special report on the subject last year to the Superintendent of Census, the following figures and observations will suffice here :—

The population of the district was found to be 188,595, as compared with 150,453 in 1891, an increase of 25·3 per cent. The increase in the previous decade was 25·6 per cent. Excluding the estate population the figures are :—

1891	128,484
1901	147,234
Increase in the decade	14·6 per cent.
Increase in the previous decade	10·1 per cent.

The estate population has risen from 21,969 in 1891 to 41,361 in 1901, an increase of 88·3 per cent. In 1881 this population only numbered 3,268.

The Kegalla District continues to rank ninth in population among the districts of the Island. It contains more people than either the Eastern or North-Central Province, and only 3,330 less than Uva. Kalutara and Matara are the only districts, administered by an Assistant Government Agent, which have more inhabitants. Excluding the estate population, Uva ranks below Kegalla. The only districts with a larger estate population are Kandy, Nuwara Eliya, and Uva. The increase per cent. in each division of the district is as follows :—

Division.	Population, excluding Estates.	The Estate Population.	Total Population.
Paranakuru Korale, including Kegalla Local Board	4·4	120·2 ...	14·6
Beligal Korale	10·5	603·9 ...	12·3
Galboda and Kinigoda Korales ...	6·8	170·9 ...	7·8
Three Korales and Lower Bulatgama	27·4	80·7 ...	46·7

The population within the Local Board limits of Kegalla was 2,340. These figures show that the rate of increase has been much larger in the Kelani Valley than in the rest of the district. Three Korales and Lower Bulatgama contain 84 per cent. and Paranakuru korale 13 per cent. of the estate population.

The sex distribution of the total population is as follows :—

Males	102,959
Females	85,636
Total ...	188,595

In each division the males exceeded the females.

The following statement gives the racial distribution in 1891 and 1901 :—

	1891.	1901.
Europeans	107 ...	173
Burghers and Eurasians	242 ...	280
Sinhalese	122,076 ...	138,501[a]
Tamils	21,208 ...	41,421
Moors	6,776 ...	7,567
Malays	133 ...	235
Others	435 ...	438

[a] Of whom 123,974 are Kandyan Sinhalese.

The largest increase is that of the Tamils, who have almost doubled their numbers in ten years. The expansion of the tea and plumbago industries during the decade is responsible for the prosperity indicated by the figures given above.

XXI.—MISCELLANEOUS.

On 22nd January news of the death of Queen Victoria was received at Kegalla. Public offices and many of the shops were closed out of respect for her memory. At a public meeting held at the court-house on 2nd February, the day of the funeral, an Address to His Majesty King Edward VII., giving expression to feelings of condolence and loyalty, was read and passed. It was signed by representatives of the different sections of the community.

At the memorial service the Anglican Church was crowded. The congregation included three Buddhist priests.

On 15th February Mr. Harry Whitham of Yellangowry estate died. He was succeeded as Unofficial Police Magistrate by Mr. J. R. Fairweather of Yatideriya estate. On 29th October Mr. H. P. Marshall of Dedugala estate was killed by lightning within half a mile, as the crow flies, of the bungalow on Gangwarily estate, where Mrs. Capp and her son were similarly killed seven months earlier.

Changes of Officials.—On 22nd May the Assistant Government Agent Mr. Bertram Hill was succeeded by Mr. E. T. Noyes. Mr. Hill's vigorous administration had lasted nearly four years. From 12th August to 4th September Mr. Allan Beven acted as Assistant Agent, in addition to his duties as District Judge, during the absence of Mr. Noyes on leave. From 5th September till after the close of the year Mr. Noyes remained in office.

On 14th June Mr. W. B. Gregson was relieved as District Engineer, Ambanpitiya, by Mr. F. Ludovici.

On 16th June Mr. W. T. Mapitigama displaced Mr. P. B. Nugawela as Ratemahatmaya of Galboda and Kinigoda korales.

On 26th November Mr. A. W. Wijesinha succeeded Mr. E. J. Wijesinha as Registrar of Lands.

H. O. FOX,
Assistant Government Agent.

Return of the REVENUE received by the several Government Agents and their Assistants during 1901.

REPORTS

ON THE

WORKING OF THE THOROUGHFARES ORDINANCES,

No. 10 of 1861 and No. 31 of 1884.

WESTERN PROVINCE.

THE working of the Thoroughfares Ordinances continues to be satisfactory. The following is a comparative statement of the working during 1899, 1900, and 1901 :—

	1899.		Per-centage on B.	1900.		Per-centage on B.	1901.		Per-centage on B.
COLOMBO DISTRICT.									
1. Population (A) ...	—	341,410	—	—	341,410	—	—	379,631	—
2. Number on lists (B) ...	—	86,271	—	—	89,580	—	—	92,550	—
3. Effectives in the district :—									
(a) Paid Re. 1·50 ...	80,294		93·07	83,292		92·98	85,870		92·78
(b) Paid Rs. 3 ...	319		·36	415		·46	352		·38
(c) Laboured 6 days ...	—		—	—		—	—		—
(d) Laboured 12 days ...	—		—	—		—	—		—
		80,613	93·44		83,707	93·44		86,222	93·16
4. Not effective in the district, but have discharged their liability :—									
(a) Exempted ...	2,031		2·35	2,116		2·36	2,236		2·41
(b) Paid and laboured elsewhere ...	1,269		1·47	1,329		1·48	1,372		1·48
(c) Committed to jail ...	21		·02	20		·02	20		·02
(d) Fined ...	70		·08	79		·09	48		·05
(e) Double entries ...	1,473		1·707	1,568		1·75	1,442		1·55
(f) Dead ...	151		·17	136		·15	153		·16
		5,015	5·81		5,248	5·86		5,271	5·69
5. Non-effective :—									
(a) Reported to have left the village ...	643		·74	625		·69	1,057		1·14
(b) Otherwise, not arrested	—		—	—		—	—		—
		643	·74		625	·69		1,057	1·14
NEGOMBO DISTRICT.									
1. Population (A) ...	—	123,600	—	—	123,600	—	—	126,774	—
2. Number on lists (B) ...	—	32,102	—	—	32,892	—	—	32,758	—
3. Effectives in the district :—									
(a) Paid Re. 1·50 ...	30,047		93·59	30,395		92·40	30,734		93·80
(b) Paid Rs. 3 ...	21		·06	34		·10	21		·06
(c) Laboured 6 days ...	—		—	—		—	—		—
(d) Laboured 12 days ...	—		—	—		—	—		—
		30,068	93·66		30,429	92·51		30,751	93·87
4. Not effective in the district, but have discharged their liability :—									
(a) Exempted ...	953		2·96	1,367		4·15	677		2·06
(b) Paid and laboured elsewhere ...	705		2·19	762		2·31	894		2·72
(c) Committed to jail ...	4		·01	5		·01	14		·04

		589	1·17		361	·77		358	·68

Roads.—The roads have been maintained in good condition during the year. Difficulty has been experienced in getting metal. It is very desirable that some of the important roads should be taken over as principal roads, which will enable the Committee to take over a few village roads. Applications are frequently made for the improvement of such roads, particularly where large culverts and bridges are required, which cannot be done by village labour, and the cost of which are beyond the resources of the limited funds of Village Committees.

Resthouses.—All the resthouses of the Province are well equipped. The construction of the Matugama resthouse has at last been completed. It has been fully furnished, and is now ready for use. A new resthouse for Henaratgoda has been sanctioned, and will be completed in the course of the year. The erection of a new resthouse at Negombo is in contemplation. The site selected is the plot of ground adjoining the old police station, which the Local Board is prepared to lease to the Committee at a nominal rent. But before a final decision is arrived at, the present resthouse must be sold. It is a commodious building on a valuable site, and should command a ready sale at a fair figure. If the building is sold, it will be arranged that it should be rented to the Committee till a new building is erected.

The statements of receipts and expenditure of the Provincial Road Committee and of the District Road Committees are annexed, together with the reports of the Chairmen of the District Road Committees of Negombo and Kalutara and of the Superintendent of Minor Roads, Colombo District.

April 11, 1902.

J. S. DRIEBERG,
for Chairman.

Annexure.

Abstract of Receipts and Disbursements of Funds of the Provincial Road Committee, Western Province, under Ordinances Nos. 10 of 1861 and 31 of 1884, during the Year 1901.

NEGOMBO DISTRICT.

THE annexed comparative statement shows the working of the Road Ordinance in this district for the last three years :—

	1899.		Per-centage on B.	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A) ...	—	123,600	—	—	123,600	—	—	126,770	—
2. Number on lists (B) ...	—	32,102	—	—	32,892	—	—	32,758	—
3. Effectives in this district :—									
(*a*) Paid Rs. 1·50 ...	30,047		93·59	30,395		92·40	30,730		93·80
(*b*) Paid Rs. 3·00 ...	21		·06	34		·10	21		·06
(*c*) Laboured 6 days ...	—		—	—		—	—		—
(*d*) Laboured 12 days ...	—		—	—		—	—		—
		30,068	93·66		30,429	92·51		30,751	93·87
4. Not effective in this district, but discharged their liability :—									
(*a*) Exempted ...	953		2·96	1,367		4·15	677		2·06
(*b*) Paid and laboured elsewhere	705		2·19	762		2·31	894		2·72
(*c*) Committed to jail ...	4		·01	5		·01	14		·04
(*d*) Fined	10		·03	7		·02	21		·06
(*e*) Double and erroneous entries	27		·08	17		·05	31		·09
(*f*) Dead	91		28	91		·27	99		·30
		1,790	5·57		2,249	6·83		1,736	5·29
5. Non-effective :—									
(*a*) Reported to have left the village	244		·76	214		·65	271		·82
(*b*) Otherwise, not arrested ...	—		—	—		—	—		—
		244	·76		214	·65	—	271	·82

The revenue from commutation in 1901 amounted to Rs. 46,158, against Rs. 45,694·50 in 1900, an increase of Rs. 463·50, which is satisfactory, as there was a decrease of 134 men on the division officers' rolls. This decrease is probably due to the unusually large number exempted (1,367) in 1900 and to the closing of several plumbago pits in the district.

The number of men who discharged their liability under the Ordinance is 30,786, an increase of 345 over the previous year. Twenty-one men were fined and 14 committed to prison, of whom 6 were discharged on payment of the fine and 1 on account of ill-health.

In addition to the ordinary upkeep of roads, several temporary culverts were converted into permanent ones. The second bridge, 50 feet span, on the Ewariwatta-Yagodamulla road was completed in February at a cost of Rs. 1,500; and the third bridge, 30 feet span, in November at a cost of Rs. 750. This road is now opened to wheeled traffic, though the gravelling has not been completed.

Funds were voted to open a new road from Minuwangoda to Dagonna. The necessary bridges and culverts have been built, and about two-thirds of the road has been gravelled.

The traffic on the Naiwala-Divulapitiya road is very heavy, and this Committee cannot afford the expenditure necessary to maintain it in proper order. It connects two principal roads, viz., the Negombo-Mirigama and Negombo-Veyangoda roads, and should be taken over by the Public Works Department. I invite attention to the recommendations in the reports for 1897 and 1898.

I must again point out the necessity for a better resthouse for Negombo. The present building has not sufficient accommodation for visitors, and is, besides, very badly situated, being on the side of a much-frequented road, and also so near the lake as to be always infested with mosquitoes. There is room to build a new resthouse on the plot of land between the old police station and Kuttiduwa. The building would face the sea, and would not encroach on that portion of the esplanade which is frequented by the public.

Statement of revenue and expenditure is annexed :—

REVENUE.	Amount. Rs. c.	Total. Rs. c.	EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.
Balance on January 1, 1901 ...	—	1,328 15	Amount paid and labour expended on account of principal roads, canals, and resthouses ...	20,200 19

Negombo, January 28, 1902.

E. F. HOPKINS,
Chairman.

KALUTARA DISTRICT.

THE following statement shows the working of the Thoroughfares Ordinances in 1901 as compared with 1899 and 1900 :—

	1899.		Per-centage on B.	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A) ...	—	178,795	—	—	178,795	—	—	201,455*	—
2. Number on lists (B) ...	—	50,423	—	—	51,874	—	—	52,366	—
3. Effectives in the district :—									
(a) Paid Re. 1·50 ...	44,356		87·97	46,351		89·35	46,710		89·20

(f) Dead ...	223		·44	145		·28	158		·30
5. Non-effective :—		4,961	9·84		4,962	9·56		4,984	9·52
(a) Reported to have left the village ...	589		1·17	326		·63	358		·68
(b) Otherwise, not arrested	—		—	35		·07	—		—
		589	1·17		361	·07		358	·68

* Based on the Census of 1901.

Though the number of men on the division officers' lists was larger by 492 than in 1900, and the period for commuting labour closed on 31st March instead of as hitherto at the end of February, the percentage of persons who were not proved to have discharged their liability anywhere by the end of the year was only ·68, as compared with ·7 in 1900 and 1·17 in 1899.

For the first time since 1898 a few men elected to labour. Fewer persons were exempted than in either of the two preceding years. It will be noticed that there is a large decrease in the number of men who have paid and laboured elsewhere, and a corresponding increase under the head "Double Entries." The explanation is that in 1901 a man who paid or laboured in any division of this district other than the one in which his name was on the division officer's list was classified under the head "Double Entry," instead of being described as having paid or laboured elsewhere.

The number of men committed to jail was one less than in 1900, but the number who were fined rose from 45 in 1900 to 73 in 1901. The number of defaulters punished by fine or imprisonment thus amounted to three out of every 2,000 persons included in the division officers' lists.

The annexed statement shows the revenue and expenditure of the Committee :—

RECEIPTS.	In Money. Rs. c.	In Labour. Rs. c.	Total. Rs. c.
Balance on January 1, 1901 ...	—	—	9,452 20
Commutation realized in money and labour ...	70,983 0	12 0	70,995 0
Miscellaneous ...	4,245 43	—	4,245 43
Toll grant contribution ...	7,675 98	—	7,675 98
			92,368 61
PAYMENTS.			
Amount paid and labour expended on account of principal roads ...	29,638 50		
Amount paid on account of resthouses ...	3,293 0	—	32,931 50
Amount expended on minor roads ...	30,821 94	12 0	30,833 94
Salaries of establishment, commission to division officers, &c. ...	17,191 98	—	17,191 98
Miscellaneous payments ...	5,685 56	—	5,685 56
			86,642 98
Balance on December 31, 1901 ...	—	—	5,725 63
			92,368 61

The toll grant contribution was based on the toll rents of 1901, which were sold for a higher figure than those of 1900.

Miscellaneous Receipts consisted mainly of—

(1) Remittances received from Provincial Road Committee to pay resthouse-keepers and on account of resthouse repairs.
(2) Amounts received in settlement of advances.
(3) Deposits of Road Ordinance fines.
(4) Rent of timber kraals in the Panadure river.

As regards expenditure, the increase of Rs. 1,925·65 under the head Salaries of Establishment, Commission to Division Officers, &c., is due to the payment in 1901 of commission amounting to Rs. 1,999·53 to the division officers on account of 1900.

The expenditure on minor roads, Rs. 30,833·94, compares favourably with the figures for 1900, viz., Rs. 24,310·98.

The item Miscellaneous Payments includes—

(1) Additional gratuity to the late Superintendent of Minor Roads.
(2) Refund to Government of Road Ordinance fines.
(3) Refund of deposits of resthouse collections to Provincial Road Committee.
(4) Advances made for road work to be settled within the year.

The balance at the end of the year was Rs. 5,725·63, made up as follows :—

	Rs. c.
(1) Commission to be paid to division officers for 1901	695 72
(2) Amount to be paid for road work done in 1901	70 90
(3) Unexpended balances on votes to be re-voted	2,122 97
(4) Unexpended balances lapsed	2,515 51
(5) Unappropriated balances	320 53
	5,725 63

The amount voted and spent on each minor road was as follows :—

Name of Road.	Miles.	Amount Voted.	Spent on Upkeep.	Spent on Special Works.	Spent on Bridges.	Total.
		Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.

Total ...	—	35,372 42	18,886 39	6,984 59	4,962 96	30,833 94

At the beginning of 1901 many of the roads, especially those in Pasdun korale, were in a bad condition owing to failure in previous years to pay proper attention to surface drainage. The new Superintendent of Minor Roads, Mr. P. Gunaratna, did good work during the year in barrelling the roads and in improving their surface generally.

Special attention was devoted to the three important roads—

(1) Horawala to Pelawatta ;
(2) Nagoda to Agalawatta ;
(3) Agalawatta to Badureliya—

the sums spent on them being Rs. 3,573·41, Rs. 5,407·27, and Rs. 2,822·65, respectively, as compared with Rs. 2,655·87, Rs. 2,679·70, and Rs. 1,313·55 in 1900. More money would have been spent on the first-named road had there not been a difficulty in obtaining labour in such close proximity to plumbago pits. At the end of the year the section from Horawala to Moragala of this road was handed over to the Public Works Department.

The next road which, owing to the heavy traffic it has to bear, should cease to be a minor road is the one from Nagoda to Agalawatta.

Other roads on which considerably more money was spent than in 1900 are—

(1) From Dodangoda to Tebuwana.
(2) From Paiyagala to Dodangoda.
(3) From Udaowita to Agalawatta.
(4) Yala road.

Bridges and unsafe abutments of bridges were substantially rebuilt on the following roads :—

(1) Udaowita to Agalawatta ;
(2) Nagoda to Agalawatta ;
(3) Ratmalgoda to Handapangoda ;
(4) Palannaruwa to Kotiangoda ;
(5) Yala road—

and a culvert was rebuilt on the Nagoda-Agalawatta road.

In October, 1901, the road from Badureliya to Kukulegama (4¼ miles in length) was handed over to the Committee by the Public Works Department. Its condition is very bad, with the exception of the bridges, and its improvement will for some time involve heavy expenditure. Progress was made with the extension of the bridle path (which runs from Tebuwana to Narthupana factory) towards the bank of the Kalu-ganga opposite Anguruwatota, but a flood in the river prevented the bridges from being finished by the end of the year. It is hoped that the path will be open for hackery traffic early in the current year. The Committee voted Rs. 2,000, to which private contributions amounting to Rs. 380 were added. The amount spent during the year was Rs. 1,746·96.

On the other side of the Kalu-ganga the only work done on the road that is to connect the Yala road at Indilanda estate with Anguruwatota was the construction of five small bridges, the contribution of Odris Vidane, a retired headman interested in the road. Three bridges are required on the section between Neuchatel estate and Anguruwatota, for which it is expected that the Committee will be able to make provision during the current year.

The villagers residing near the Moragala-Bellana village road did a good deal of earthwork on it under the superintendence of the Mudaliyar in 1901. Their request for a vote from the Committee for the construction of culverts and bridges now deserves consideration. This road which connects the two main thoroughfares of Pasdun korale east will be very useful when it has been made available for cart traffic.

The new resthouse at Matugama was completed by the Colombo Superintendent of Minor Roads and opened to the public in December. A substantial resthouse is now wanted at Moragala to take the place of the temporary building that has hitherto served the purpose.

Proceedings for the acquisition of a strip of land behind the Panadure resthouse for the extension of the premises, which were commenced during the previous year, were continued, but as the claimant would not accept the compensation offered, the matter has been referred to the District Court.

In 1900 Government offered a contribution of Rs. 10,000 towards the cost of a bridge at Galpata on the Yala road over the Kepu-ela canal. A revised estimate for the bridge was made by the Public Works Department in 1901 amounting to Rs. 30,444. The Committee decided that such an expensive bridge was beyond their means, and are about to submit an estimate for a cheaper type of bridge for the approval of the Government.

The constitution of the Committee remained unchanged throughout the year.

H. O. FOX,
Chairman.

March 16, 1902.

REPORT ON THE MINOR ROADS IN THE COLOMBO DISTRICT FOR 1901.

THE amount expended on each of the minor roads in the year is given in the annexed statement, making a total of Rs. 41,070·42 on metal roads and Rs. 7,850·69 on gravel roads, an average of Rs. 253·91 and Rs. 105·73 per mile respectively, as against Rs. 271·19 on the former and Rs. 115·88 on the latter for the previous year.

The contract system, first introduced in 1899, has been since continued, and was during this year availed of to the fullest extent ; thus a sum of Rs. 48,921·11 was expended in upkeep and Rs. 19,935·69 for special purposes, that is, in the renewal of bridges, improvements to roads, upkeep of resthouses, repair of ferry boats, hand and water carts, out of which only Rs. 2,453·47 was disbursed by me in small sums for transport charges and on pay and check-rolls, whilst Rs. 66,403·33 has been paid to the contractors on presentation of vouchers in their names at the Kachcheri.

I have again found some difficulty in getting in within the year all metal provided for, and thus Rs. 1,639·54 remains unexpended from upkeep votes, which lapses, and for the same reason a sum of Rs. 7,641·20 is brought forward for expenditure this year for improvements to roads. The difficulty in obtaining the metal is not because the quantity required is large, but because the different roads for which it is wanted are spread in so many directions, that in place of two or three contractors, who would in a very short time deliver the supply, I have to secure at least eleven or twelve to do the work.

Rock blasting and metal breaking are not the kinds of work the Sinhalese villager is used to, hence my wants in this direction have to be supplied by the Tamil labourer, and contractors find it difficult to secure Tamils without large advances, resulting frequently in heavy loss from a gang of sometimes as many as twenty disappearing in one night, leaving no trace by which they could be successfully followed.

In the renewal of bridges and culverts, I would specially mention five platform culverts of 11 feet to 12 feet built on the road from Tudella to Pamunugama with rubble masonry abutments, old rail girders, and durable timber platforms. The estimate for this work amounted to Rs. 4,548, which was sanctioned in November, 1900, so that I was in a position to make all arrangements and have all the necessary material on the spot within the first six months of the year. I was also thus prepared, with the cessation of the south-west monsoon rains, to start work, and with four contractors for the five bridges to so far complete them in two months as to have the masonry abutments well above flood waters, which at times submerge the road during the monsoon rains; these are all now completed, and with the masonry cross drains put in the previous year all the bridges and culverts on the road are now placed on a permanent footing. It is worthy of note that it has taken the District Road Committee over twenty-five years to place this road of less than 4 miles, with its surface gravelled, wheel tracks metalled, bridges and culverts completed, in as satisfactory a condition as other minor roads. It is, however, only fair to add that the formation of the road is uninterruptedly over tracts of fields and low ground through its entire length; it is therefore one of the most costly to maintain in a satisfactory condition, especially owing to the absence of any gravel or cabook earth within 4 to 5 miles from its nearest point, and metal within a distance of 8 to 9 miles.

Several small drainage culverts have been built on special votes on some of the other roads in place of those requiring renewal, and a 33-ft. platform bridge at Polgasowita on the Colombo-Kesbewa road has been replaced by a one-span bridge with suitable iron girders.

I have been unable to undertake the renewal of six culverts on special votes which were sanctioned too late in the year, but which will be now commenced and, I hope, completed within the first quarter of the year.

The present improved condition of the minor roads, I am pleased to say, bears favourable comparison with that of previous years; much more could be done to them if some relief were afforded by the transfer of one or two of the more important thoroughfares to the Public Works Department, which has been repeatedly urged, but without avail; and until this is done, I cannot recommend any of the District Road Committee's funds should be expended in the improvement of any Gansabhawa or village roads, for which constant applications are made.

The new Matugama resthouse was commenced in September, 1900. I regret to say I was unable to complete it as early as I anticipated, being much handicapped by having to secure the artificers and to despatch the necessary labour from Colombo. These men being unused to the district after a few days suffered greatly from fever, and returned to their homes creating quite a panic, and it was with difficulty that I was able to secure sufficient labour to finish the work satisfactorily.

I am pleased, however, to add that I was able to hand over the building in November last well finished, at a total cost of Rs. 7,654·50, being Rs. 923·50 less than the estimate submitted by the District Road Committee of Kalutara; to this saving must also be added as much again on account of the difference in the value of the timber used by me in its erection as compared with the inferior description of wood recommended by the District Road Committee when forwarding the estimate, so that at least about Rs. 1,800 must now be reckoned as having been saved altogether in the building of this resthouse.

HENRY L. DANIEL,
Superintendent of Minor Roads.

Colombo, February 18, 1902.

In the Kandy District the decrease in the percentage of effectives was ·13, against 2·35 in 1900. In the Matale and Nuwara Eliya Districts the increase was 1·30 and ·13, respectively. Twenty-five persons were imprisoned and 38 fined Rs. 10 each, against 10 imprisoned and 22 fined in 1900. Of the 25 imprisoned in 1901, 8 paid the fine of Rs. 10 each after imprisonment. The increase in "imprisonments" and "fined" was due to the necessity of more rigorously enforcing penal provisions of the Ordinance against Road Ordinance defaulters.

Statement of Revenue and Expenditure for 1901.

Revenue.	Rs.	c.	Expenditure.	Rs.	c.
Balance on January 1, 1901 ...	9,165	94	Apportioned to principal roads ...	20,844	75

			Miscellaneous expenditure ...	346	59
				75,506	41
			Balance	7,011	26
	82,517	67		82,517	67

The balance of Rs. 7,011·26 carried forward to 1902 includes the balance vote of Rs. 6,317·28 from Legislative Council for extension of the road from Nugatenna to Bintenna. The survey of the further trace of this road up to Weragama was made, and the construction of 3 miles of the road, viz., 36th, 37th, and 38th, given on contract, to be completed and opened to cart traffic at end of June, 1902.

Work done in 1901.

The sum of Rs. 9,804·49 was voted for the ordinary maintenance of roads, and the following votes were sanctioned for improvements, &c., viz.:—

Kadugannawa to Paranapattiya road: Rs. 16 for renewing planks of a bridge, and Rs. 121·80 for construction of a culvert at Kadugannawa at entrance to the road from Kadugannawa to Gampola.

Embilmigama to Allagalla road: Rs. 122·55 for removing landslips.

Katugastota to Bokkawela road: Rs. 30·20 for repairs to Arulu-ela bridge.

Nugatenna to Madugalla road: Rs. 100 for putting the road in order.

Ampitiya to Uduwela road: Rs. 37 for repairing two culverts.

Gampola to Paranapattiya road: 10·58 for removing landslips.

Gampola through Udahentenna to Dolosbage road; Rs. 577·50, being moiety of cost of construction of a culvert, Rs. 82·35 for reconstruction of a culvert on the 5th mile-post, and Rs. 55 for spreading and consolidating metal in wheel tracks on 1st and 2nd miles.

Maha oya to Ahupine-ela road: Rs. 54 for renewing planks of the bridge at Ahupine-ela.

Udahentenna to Appalawatta ford road: Rs. 294 for construction of a retaining wall at Panwatta.

Planters' Roads.—A sum of Rs. 1,110 was voted towards the maintenance of the following roads in the planting districts, the estates interested also contributing, viz. :—

	Rs.	c.
Ancoombra to Alawatugoda road	250	0
Udispattu to Rangalla road	100	0
Horagalla to Blackstone road	100	0
Coolbawn to Strathellie road	100	0
Moragahagalla bridge to Tunisgala Gap road	100	0
Kandal-oya to Rambukpitiya road	100	0
Nugatenna to Kobonella road	50	0
Vernacular school to Angroowella road	50	0
Vernacular school to Wattagalla factory road	50	0
Cottaganga to Tunisgala road	50	0
Madulkele and Elkaduwa to Matale District road	100	0
Connecting road between the Nugatenna to Kobonella and Rangalla-Nitre Cave road	30	0
Waitalawa to Urugala road	30	0
Total ...	1,110	0

A sum of Rs. 445·18 was voted for construction of a wire bridge over the Situla-ganga on the Pilgrim's road, the wooden bridge having been swept away by the flood; Rs. 100 for blasting rocks in dangerous places on the Udispattu-Rangalla road; Rs. 26·93 for repairs to Galagedara-Bokkawela road; Rs. 100 for repairs to Bogawantalawa-Horton Plains road; Rs. 100, being moiety of cost of two bridges on the Ferndale-Nitre Cave road, the estates interested contributing the other moiety; and Rs. 75, moiety of cost of repairs to the bridge over the Kelani-ganga on Broadlands estate.

The following sums were granted for the upkeep of the under-mentioned inter-district or travellers' roads in the districts of Ambagamuwa, Dikoya, Maskeliya, Hewaheta, Pussellawa, and Kandy, the apportionments having been made as recommended by the Planters' Associations concerned :—

	Rs.	c.
Deltota hospital to Le Vallon road	50	0
Patiagama to Great Valley road	50	0
Amblamana to Gallantenna road	50	0
Deltota to Patiagama road	50	0
Kirimetiya to Bowlana road	50	0
Loolecondera to Stellenberg gap road	50	0
Vedehette to Le Vallon road	60	0
Galaha to Kitoolamulla road	50	0
Oodewelle to Kitoolamulla road	200	0
Severnake to Nayapana road	250	0
Rajatalawa to Yarrow gap road	100	0

	Rs.	c.
Pussellawa to Nilambe road	200	0
Pussellawa to Deltota road	150	0
Pussellawa to Nawalapitiya road	50	0
Gampola to Bukanda road	100	0

Tarf road	25	0
Total ...	3,030	0

The annexed reports from Messrs. Wallbeoff and De Motte show the work carried out by them and the permanent improvement effected during 1901.

There has been a marked improvement in the condition of the roads in the divisions taken over by Mr. de Motte from the late Superintendent of Minor Roads, Mr. A. M. Perera, during the past year. The condition of the roads in charge of Mr. Wallbeoff still leaves much to be desired.

Revenue and Expenditure on Account of Resthouses in the Province.

Revenue.	Rs.	c.	Expenditure.	Rs.	c.
Balance on January 1, 1901 ...	17	60	Maintenance, repairs, and improvements...	7,409	87
Voted in Supply Bill	8,776	75	Equipment	2,679	9
Resthouse collections	6,049	30	Salaries	4,212	20
Miscellaneous receipts	109	38		14,301	16
			Balance ...	651	87
	14,953	3		14,953	3

Resthouses.—The following sums were voted for maintenance, repairs, and improvements, viz.:—

Weragantota resthouse : Rs. 240·50 for certain repairs.
Madugoda resthouse : Rs. 755 for certain repairs and improvements to roof and outhouses.
Nalanda resthouse : Rs. 240 for certain repairs.
Wattegama resthouse : Rs. 411 for certain repairs and improvements.
Matale resthouse : Rs. 2,510 for certain alterations, additions, and improvements.
Ragalla resthouse : Rs. 64 for repairing and whitewashing.
Galagedara resthouse : Rs. 59·55 for certain repairs to resthouse and approach road.
Teldeniya resthouse : Rs. 700 for certain repairs and alterations to drainage.
Panwila resthouse : Rs. 555·80 for certain repairs and additions.
Kadawala resthouse : Rs. 695 for certain repairs and improvements.
Wattegama Post Office : Rs. 285·22 for repairing and cleaning, and for new surface drains round the building.

The resthouses throughout the Central Province are now in good condition and well equipped.

Ambalams.—A sum of Rs. 450 was voted for upkeep of ambalams and bungalows in the Matale District, Rs. 41·50 for repairs to the Ampitiya ambalam, Rs. 124 for Katugastota ambalam, Rs. 96·50 for Polgasdeniya ambalam, Rs. 22·75 for Pussellawa ambalam, and Rs. 75 for water service for the Headmen's Lodge, Nuwara Eliya.

The resthouse at Maskeliya was closed from 1st July, 1901, for reasons stated in my last report.

A vote for Rs. 15,200 was taken in the Supply Bill of 1900 for construction of a resthouse at Peradeniya, and the work was approaching completion at end of 1901.

Kandy, June 21, 1902.

H. WACE,
Chairman.

Annexure.

REPORT from Mr. H. J. Wallbeoff, Superintendent of Minor Roads.

I HAVE the honour to report that, besides the annual upkeep of the minor roads in my charge in 1901, the following permanent improvements were effected on the following roads :—

Kadugannwa to Paranapattiya.—A sum of Rs. 292·16 was spent in cutting hill and diverting road and turfing same near Alpitikanda, Rs. 73·12 for reconstructing a cover drain on the 2nd mile, and Rs. 16 for renewing four planks of bridge on the 1st mile.

Gampola to Dolosbage.—A sum of Rs. 82·35 was spent in reconstructing a culvert on the 5th mile.

Atabage to Dunukeulla.—A sum of Rs. 47·70 was spent in reconstructing a 2-ft. single cover drain.

Nanu-oya to Daulagala.—A sum of Rs. 47·25 was spent in constructing a culvert on the 1st mile.

Kadugannawa to Gampola.—A sum of Rs. 121·80 was spent in constructing a culvert across the road at Kadugannawa.

Katugastota to Bokkawala.—A sum of Rs. 30·20 was spent in reconstructing a wing wall of Arulu-ela bridge and repairs to pillars.

Maha-oya to Ahupine-ela.—A sum of Rs. 54 was spent in renewing twenty planks of Ahupine-ela bridge and tarring same.

Udahentenna to Applawatta.—A sum of Rs. 294 was spent in building a retaining wall at Panwatta.

Galagedara to Henabowa.—A sum of Rs. 280 was spent in metalling and gravelling parts of the road.

Gampola to Lantern Hill.—A sum of Rs. 55 was spent in metalling wheel tracks in parts of the road.

Landslips were removed in the following roads at a cost of Rs. 171·79, viz.:—

	Rs.	c.
Gampola to Dolosbage	3	96
Embilmigama to Alagalla	122	55
Nanu-oya to Daulagala	13	48
Gampola to Paranapattiya	15	34
Ginigathena to Laxapana	16	46
Total ...	171	79

Certain portions of the following roads were metalled on the upkeep estimates, viz. :—

Gampola to Lantern Hill.
Angunawala to Daulagala.
Barigama to Halloluwa.
Katugastota to Halloluwa.
Galagedara to Henabowa.

Certain repairs were effected to the Galagedara resthouse building and to the approach road at a cost of Rs. 59·55.

HENRY J. WALLBEOFF,
Superintendent of Minor Roads.

REPORT from Mr. G. de Motte, Superintendent of Minor Roads.

I HAVE the honour to forward two separate statements on roads and buildings of works carried out by me in 1901:—

Statement of Expenditure on Ordinary Works on Maintenance Estimates for 1901.

	Rs.	c.
Ampitya to Uduwela	94	0
Talatu-oya to Kershaw's bridge	200	0
Talatu-oya to Hanguranketa	640	0
Nugatenna to Bintenna	1,416	0
Nugatenna to Weragantota	400	0
Nugatenna toll grant	450	0
Udispattu to vernacular school	50	0
Guru-oya to Kimbulgantota	180	0
Lewella to Madawala	150	0
Sirimalwatta to Hakketugalla	160	0
Napana to Walala	262	0
Walala to Wawinna	340	0
Walala to Pitiagedara	130	0
Hurikaduwa to Naranpanawa	135	0
Naranpanawa to Putuhapua	70	0
Putuhapua to Gabbela	60	0
Teldeniya to Panwila	260	0
Polgolla to Etgala	240	0
Wattegama to Andayama	75	0
Total ...	5,312	0

Note.—General maintenance of roads throughout the year, including the cleaning and tarring of bridges, mileposts, and renewing and painting the signposts.

Road Works Extraordinary.

Kanahanpitiya to Madugoda, Rs. 100.—Rocks and boulders blasted and road surface improved.

Road called "The Flash," Rs. 100.—Surface repaired, drains and scuppers opened, jungle cleared, &c.

Ampitiya to Uduwela, Rs. 37.—Two culverts at junction of Uduwela and Gurudeniya roads raised.

Nugatenna to Madugula, Rs. 100.—Surface filled, rocks blasted, and road improved to the school.

Napana to Walala, Rs. 250.—Retaining wall by Hunuange bridge built to retain embankment

Ferndale-Nitre Cave Road, Rs. 200.—Two bridges fitted on rail iron with wooden platforms and hand rails

Urugalla-Rangalla, Rs. 184.—Dangerous side rocks blasted and the bridge at Bambra-oya concreted and improved.

Nugatenna-Bintenna Road Extension, Rs. 14,300.—Three miles of new cart road from 35th to 38th miles in progress on contract work, to be completed in June, 1902.

Statement of Expenditure on Resthouses and Buildings Ordinary.

Teldeniya Resthouse, Rs. 700.—Repairs to roof, shifting tiles, white and colour washing walls, painting, oiling, and tarring, relaying verandah floor, renewing decayed timber in stables, repairs to gate and floor, and metalling and gravelling the approach road.

Panwila Resthouse, Rs. 262.—Repairs to outhouses, renewing decayed timber, white and colour washing, painting, oiling, and tarring, and repairs to cement floor, &c.

Wattegama Post Office, Rs. 146.—Shifting tiles and whitewashing walls, thatching shed, and renewing temporary bathroom, &c.

Weragantota Resthouse, Rs. 38.—Repairs to leaks, &c.

Madugoda Resthouse Rs. 755.—Re-shingling roof, providing new valleys, shifting tiles, whitewashing walls, cleaning roof timber, and oiling doors, &c.

Katugastota Ambalam, Rs. 124.—Renewing decayed timber, rebuilding broken walls and pillars, re-setting roof, whitewashing, and general cleaning up.

Ampitiya Ambalam, Rs. 41·50—Whitewashing, shifting tiles, general repairs to broken walls, plaster, valley gutters, and cleaning up.

Wattegama Post Office, Rs. 150.—New surface drains built all round the building.

Panwila Resthouse, Rs. 293·80.—New bath and earth closet built and new window inserted and glass panes stained, &c.

G. DE MOTTE,
Superintendent of Minor Roads.

MATALE DISTRICT.

Summary of the Revenue and Expenditure for the Year 1901.

RECEIPTS.	Rs. c.	EXPENDITURE.	Rs. c.
Commutation realized in money and labour ...	21,247 50	Amount paid in cash and labour expended on principal roads and resthouses ...	9,888 25
Miscellaneous receipts	470 70	Amount spent on minor works ...	7,071 18
Unexpended balance of 1900 ...	5,163 75	Grant to Mr. J. Westland, Gammaduwa road	500 0
		Grant to Mr. R. Wilson, Kandenuwara road	300 0
		Salaries of establishment and commission to division officers	3,437 20
		Advance to Assistant Government Agent on Sigiri road account	1,275 0
		Miscellaneous expenses	260 85
		Balance	4,149 47
	26,881 95		26,881 95

The following is a comparative statement of the working of the Thoroughfares Ordinances during 1900 and 1901 :—

	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A)	—	72,317	—	—	87,350	—
2. Number on lists (B)	—	14,728	—	—	15,138	—
3. Effective in the district :—						
(*a*) Paid Re. 1·50	13,412		91·06	13,984		92·38
(*b*) Paid Rs. 3	78		·53	·76		·50
(*c*) Laboured 6 days	38		·26	41		·27
(*d*) Laboured 12 days	—		—	1		—
4. Not effective in the district, but discharged their liability :—		13,528	91·85		14,102	33·15
(*a*) Exempted	478		3·25	430		2·84
(*b*) Paid and laboured elsewhere ...	550		3·73	456		3·01
(*c*) Committed to jail	1		—	3		·02
(*d*) Fined	1		—	23		·15
(*e*) Double entries	27		·18	21		·13
(*f*) Dead	62		·42	38		·25
5. Non-effective :—		1,119	7.58		971	6.40
(*a*) Reported to have left the village ...	81		·55	65		·44
(*b*) Otherwise, not arrested	—		—	—		—
		81	·55		65	·44

Beyond the usual upkeep and repairs of the roads, &c., culverts and bridges were built on the following roads :—

(1) A platform bridge on the Maningomuwa road.
(2) One culvert on Koholanwela road.
(3) One culvert on Balakaduwa minor road.
(4) One culvert on Wariyapola road at the turn to Ulpotapitiya.
(5) Two culverts on the Yatawatta-Mahawela road.
(6) A bridge with iron plates on Kaikawela-Kohongahawela road.
(7) A culvert on Yatawatta road.
(8) A wire rope, dandumaruwa, over Elagomuwa-Kadawata.
(9) Two new canoes were supplied to Hembarastota ferry.

E. B. ALEXANDER,
Chairman.

NUWARA ELIYA DISTRICT.

THE usual comparative statement of the working of the Ordinance is annexed :—

	1900.		Percentage on B.	1901.		Percentage on B.
1. Population (A)	—	21,379	—	—	29,787	—
2. Number on lists (B)	—	14,074	—	—	14,373	—
3. Effective in the district :—						
(a) Paid Re. 1·50	12,768		90·72	13,047		90·77
(b) Paid Rs. 3	137		·97	151		1·05
(c) Laboured 6 days	23		·17	28		·19
(d) Laboured 12 days	3		·02	—		—
4. Not effective in the district, but discharged their liability :—		12,931	91·88		13,226	92·01
(a) Exempted	206		1·47	299		2·08
(b) Paid and laboured elsewhere ...	304		2·16	321		2·24
(c) Committed to jail	—		—	1		·01
(d) Fined	1		·01	3		·03
(e) Double entries, &c.	361		2·57	373		2·59
(f) Dead	25		·16	14		·09
5. Non-effective :—		897	6·37		1,011	7·04
(a) Reported to have left the village ...	246		1·75	—		·95
(b) Otherwise, not arrested ...	—		—	136		—
		246	1·75		136	·95

The satisfactory figures of 1900 were not only maintained, but slightly exceeded. The collections were larger than any preceding year, and the number unaccounted for at the end of the year was the smallest on record. The only man committed to jail was a wilful and persistent defaulter.

The extension of the time for single rate payment to the 31st March was a great boon to villagers, who had time to reap their crops and so avoid borrowing the money at exorbitant rates. It is estimated that the villager who has to borrow his Re. 1·50 does not clear himself of the debt under Rs. 5 to Rs. 6.

The amount spent on minor works was Rs. 8,644·32, distributed as follows :—

Name of Road.	Mileage.	Rs. c.
Nuwara Eliya-Pedrotalagala road ...	3 ...	100 0
Suriyagahapatana-Gomalie road ...	2 ...	100 0
Gonapattiya-Kandapola road ...	6 ...	173 2

Nildandahinna-Kurunduoya road	... 4·40 ...	242 25			
Kurunduoya-Mahauva road	... 5 ...	70 0			

The list includes the upkeep of 320 miles of bridle road, repairs to five bridges at a cost of Rs. 632·17, and the upkeep of two ferry boats.

Thanks to the interest taken in the matter by Messrs. N. C. Davidson and C. H. Bagot, a new bridle path was opened during the year from the Amherst Gap to the Kandapola road *vid* Hethersett estate. This road opens up direct communication between Nuwara Eliya and Uda Pussellawa, and adds another to the list of useful connections between Nuwara Eliya and the outlying districts; half the cost of the road was paid by the estates interested.

Two-thirds of the population of the district consists of Tamil immigrants, who pay no road tax, and hence the limited funds at the disposal of the Committee.

E. M. DE C. SHORT,
Chairman.

Nuwara Eliya, February, 1902.

NORTHERN PROVINCE.

THE statement given below shows in comparison the results of the operation of the Ordinances during the years 1900 and 1901 in the Jaffna District :—

	1900.		Percentage on B.	1901.		Percentage on B.
1. Population (A)	—	279,629	—	—	300,774	—
2. Number on lists (B)	—	70,392	—	—	72,147	—
3. Effective in the district :—						
(*a*) Paid Re. 1	57,790		82·09	63,776		88·40
(*b*) Paid Rs. 2	1,071		1·52	567		·78
(*c*) Laboured 6 days	590		·84	162		·22
(*d*) Laboured 12 days	—		—	2		—
		59,451	84·46		64,507	89·41
4. Not effective in the district, but have discharged their liability :—						
(*a*) Exempted	1,432		2·03	979		1·36
(*b*) Paid and laboured elsewhere ...	1,980		2·81	2,371		3·29
(*c*) Committed to jail	10		—	4		—
(*d*) Fined	70		·09	102		·14
(*e*) Double entries	250		·35	311		·43
(*f*) Dead	430		·61	872		1·20
		4,172	5·93		4,639	6·43
5. Non-effective :—						
(*a*) Reported to have left the village ...	2,957		4·20	978		1·36
(*b*) Otherwise, not arrested ...	3,807		5·04	2,023		2·80
		6,764	9·62		3,001	4·16

The Collection of Commutation and calling out of Labour.—The collection of commutation and calling out of labour was carried on as usual.

The annexed statement shows the amount collected under the Thoroughfares Ordinances and the amount expended during the year 1901 :—

Statement of Receipts and Expenditure under the Thoroughfares Ordinances for 1901.

	Balance on December 31, 1900.	Collected in 1901.	Total.	Expended in 1901.	Balance on December 31, 1901.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.

The Apportionment of One-third Labour and Money.—The one-third labour and money available for minor works was devoted to the upkeep and improvements of the existing minor roads in the Jaffna District.

A sum of Rs. 2,522·91 was spent in constructing new roads, and a further sum of Rs. 249·42 was spent in planting trees by the road sides.

Annexed statement shows the expenditure by the Provincial and District Road Committees for 1901:—

Resthouses.—A sum of Rs. 3,305·05 was spent on the repairs and improvements of the resthouses and madams in the Province.

Government Grant.—The Government grant of Rs. 600 allowed for 1901 was apportioned to Mannar and Mullaittivu as follows :—Mannar, Rs. 300 ; Mullaittivu, Rs. 300.

The collections shown in statement give a considerable improvement on the figures of the previous year.

The unexpended balance of 1901 was somewhat larger than in 1900. There is always a considerable balance at the end of the financial year, which is expended in the early months of the succeeding year before the collections come in.

A new road to serve the isolated villages on the north-east of the central lagoon is being pushed on, and will connect with a Government road which is being traced from Pallai as a railway feeder road. Both will be of great benefit to the cocoanut industry in Pallai and Vadamaradchi east.

During the year under review the Committee lost the services of Mr. J. N. Sandrasagra, with much regret. He had well and faithfully served for nearly thirty years.

I think it well to repeat the remarks made in the report for 1900 as to the increased difficulty experienced from the low rate of the existing labour commutation rate. I think the time has come when the rate should be uniform with that of the other Provinces :—

> Owing to the rise in price of provisions and of labour it becomes increasingly difficult for this Committee to upkeep the roads properly on the existing one-third labour commutation. The Committee has to refuse to open roads, which are very necessary, from want of funds. It is becoming a serious question whether the existing rate of one rupee poll tax should not be increased, as the existing rate does not suffice for proper upkeep of roads, much more the opening and upkeep of new roads.

R. W. IEVERS,
Chairman.

Jaffna, February 26, 1902.

MANNAR DISTRICT.

THE working of the Thoroughfares Ordinances continues satisfactory, as the following statement will show:—

	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A)	—	25,396	—	—	25,062	—
2. Number on lists (B)	—	6,232	—	—	6,417	—
3. Effective in the district:—						
(a) Paid Re. 1·25	6,053		97·13	6,183		96·35
(b) Paid Rs. 2·50	2		·03	6		·09
(c) Laboured 6 days... ...	—		—	—		—
(d) Laboured 12 days ...	—		—	—		—
		6,055	97·16		6,189	96·44
4. Not effective in the district, but have discharged their liability:—						
(a) Exempted	37		·59	18		·28
(b) Paid and laboured elsewhere ...	59		·95	116		1·81
(c) Committed to jail ...	—		—	—		—
(d) Fined	1		·02	2		·03

Manatkulam to Arippu ...	75 0	
Jungle clearing	38 75	
		2,551 90
		7,922 87
Balance on December 31, 1901 ...	—	299 95
Total ...	—	8,222 82

As usually noted, the amount at the disposal of the District Road Committee for minor roads is sufficient only for jungle clearing and filling up ruts and holes. The only other work carried out by the District Road Committee has been constructing the second half of the road from Chilavatturai to Periyapillachchipotkeni, the first half having been completed last year. The Mannar town streets have been kept in good order at a cost of Rs. 1,150.

The Public Works Department reports the following work on the principal roads:—"Yakkavai to Pesalai: length worked on 52·2 miles, metalling road, gravelling road, cutting side drains, clearing jungle, repairing culverts, upkeep of bungalows, supervision, repairing flood damages, levelling surface of natural portions of roads, &c. Coast road: length worked on 77·4 miles, repairing flood damages, gravelling, levelling road surface, clearing jungle, upkeep of bungalows, repairing culverts, &c."

There is yet no road to Mannar along which a carriage can be driven, but it is hoped that the Mannar-Madawachchi road will be made a good first class road at an early date.

District Road Committee,
Mannar, February 5, 1902.

B. CONSTANTINE,
Chairman.

MULLAITTIVU DISTRICT.

THE following comparative statement shows the working of the Thoroughfares Ordinances in the years 1900 and 1901 :—

	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A)	—	13,925	—	—	15,160	—
2. Number on lists (B)	—	4,171	—	—	4,172	—
3. Effective in the district :—						
(*a*) Paid Re. 1·25	3,888		93·21	3,902		93·53
(*b*) Paid Rs. 2·50	22		·53	11		·26
(*c*) Laboured 6 days ...	15		·36	8		·19
(*d*) Laboured 12 days ...	—		—	—		—
		3,925	94·10		3,921	93·98
4. Not effective in the district, but have discharged their liability :—						
(*a*) Exempted	79		1·90	52		1·25
(*b*) Paid and laboured elsewhere ...	31		·74	41		·98
(*c*) Committed to jail ...	—		—	—		—
(*d*) Fined	5		·12	3		·07
(*e*) Double entries	76		1·82	61		1·46
(*f*) Dead	25		·60	38		·91
		216	5·18		195.	4·67
5. Non-effective :—						
(*a*) Reported to have left the village	20		·48	32		·77
(*b*) Otherwise, not arrested ...	10		·24	24		·58
		30	·72		56	1·35

The non-effectives show an increase, but the percentage of effectives in the district, 93·98, very nearly 94 per cent., is satisfactory, being only just behind last year's, and better than any other in Ceylon, except Mannar.

The revenue and expenditure of the Committee are shown in the following statement :—

Revenue in 1901.	Rs. c.
Balance on January 1, 1901	1,279 47
Collection in money	4,905 0
Collection in labour	10 0
Government grant in aid of minor works	300 0
Government grant for upkeep of relief work roads	550 0
Miscellaneous receipts	111 93
Total ...	7,156 40

Expenditure in 1901.	Rs. c.
Salary of Committee clerk	360 0
Additional pay of bungalow-keepers	69 72
Commission to division officers	356 14
Pay of boatmen	178 49
Allowance of District Road Committee storekeepers	60 0
Contribution to principal roads	1,617 50
Expenditure on minor roads	2,440 21
Commission to headmen for supervising work on minor roads ...	186 15
Miscellaneous charges	287 10
Unexpended balance of Government grant remitted to the Chairman, Provincial Road Committee, Northern Province	55 4
Balance carried forward	1,546 5
Total ...	7,156 40

The particulars of the expenditure on minor works are as follows :—

	Road Ordinance Funds. Rs. c.	Government Grant. Rs. c.	Total. Rs. c.
Jungle clearing on 190¼ miles of minor roads ...	463 50	156 0	
Cutting a new road from Kulankulam to Mara Iluppai	1,000 0	—	
Cement pipe culverts and repairing bridges ...	320 25	96 0	
	1,783 75	252 0	2,035 75
Sloping rivers, alavakkais, repairing, levelling, and cutting side drains :—			
Mullaittivu to Kokkulai	20 0	—	
Mullaittivu town roads	2 50	—	
Oddusuddan to Nedunkeni	50 0	—	
Nedunkeni to Kulankulam	25 0	—	
Nainamadu to Chamalankulam	25 0	—	
Puvarasankulam to Vengalacheddikulam ...	40 0	—	
Tuderikulam to Vengalacheddikulam ...	—	69 20	
Makilankulam to Iranai Iluppaikulam ...	—	88 96	
Irampaikkulam to Palaimoddai	—	19 4	
Mundumurippu to Palaimoddai	—	25 56	
Iratperiyakulam to Madukanda	—	39 20	
	162 50	241 96	404 46
Total ...			2,440 21

The expenditure of Rs. 1,000 in opening a new road from Kulankulam to Mara Iluppai, a distance of 10 miles, is likely to afford a useful connection between Nedunkeni and Mamadu, and to benefit the villages of the interior by opening up communication with Vavuniya. It is at present a cart track, cut straight through the forest, and passable even in wet weather; but it requires a little more attention and expenditure to make it really serviceable.

I have remarked the need for some expenditure on certain roads in the district, including the town roads in Mullaittivu and Vavuniya.

The market account stands as follows:—

Revenue.	Rs.	c.	Expenditure.	Rs.	c.
Balance on January 1, 1901... ...	551	47	Cementing floor of the Mullaittivu market ...	200	0
Collection on account of Mullaittivu market	152	0	Repairing Tanniyuttu market ...	20	0
Collection on account of Tanniyuttu market	101	0	Balance carried forward... ...	584	47
Total ...	804	47	Total ...	804	47

The balance due for cementing the floor of the Mullaittivu market, which cost Rs. 400, was paid this year.

The Committee met twice in the year. The following composed the Committee:—Messrs. J. O'K. Murty, succeeded in November by L. W. C. Schrader, Chairman; J. O. Ebert, District Engineer; T. B. Ralapanawa, Ratemahatmaya; E. R. MacDonnell; A. Ariacutty.

L. W. C. SCHRADER,
Chairman.

Mullaittivu, January 18, 1902.

SOUTHERN PROVINCE.

THE statement of receipts and expenditure of the Provincial Road Committee and of the District Road Committees, with the annual reports of the Chairmen of the District Road Committees, are annexed.

The following sums were expended on the improvement of resthouses during 1901:—

	Rs.	c.
Temporary resthouse, Uragaha	75	0
Improvements to Matara resthouse	160	0
Venetian doors and windows to Matara resthouse	500	60
Repairing roof of outhouses, Weligama resthouse	301	0
Repairing roof of outhouses and passage, Kamburupitiya resthouse ...	317	56
Repairing roof of Dikwella resthouse	346	0
Additions, &c., Deniyaya resthouse	1,082	73
Approach road, Deniyaya resthouse	100	0
Improving ground round Urubokka resthouse	255	0
For stalls and well at Urubokka resthouse	1,046	98
Native resthouse, Tangalla	1,366	12
Repairs, &c., to Tangalla resthouse	413	57
	5,964	56

GALLE DISTRICT.

THE result shown by the comparative statement cannot be considered satisfactory. Though the number of taxpayers has materially increased, the percentage of non-effectives has risen also. This is due partly to increased care in making up the lists of taxpayers on the one hand, and on the other to the large number of taxpayers who have left the district in search of employment.

There is a considerable increase in the number of defaulters imprisoned and fined, owing to strict observance of the rule prohibiting acceptance of tax after issue of warrant. The practice in this respect seems to vary in different districts.

The usual return showing the receipts and expenditure is annexed.

Statement of expenditure on minor roads, together with the report of the Superintendent of Minor Roads, Galle, are annexed.

April 11, 1902.

GEORGE M. FOWLER,
Chairman.

Comparative statement showing the working of the Thoroughfares Ordinances during 1900 and 1901.

	Mileage.
Cart roads	185½
Bridle roads	20
Towpath	40

REPORT ON MINOR ROADS IN THE GALLE DISTRICT FOR 1901.

THERE has only been a small increase to the mileage of cart roads, about 3 more miles of the Opata road extension being made passable, so that the mileage is as follows :—

185½ miles cart road.
20 miles bridle road.
40 miles towpath.
6 ferries (increased by one).

The cost of maintenance has not been enhanced, although year by year the district is opening out and developing, with the material consequence of an increase in the number of carts; amounts that sufficed in former years for material and superficial repairs are now found totally inadequate to meet present requirements; further, the cost of labour and material has gone up, and gravel pits, which were once found close by, are now alienated from the Crown and owners look for compensation; all these items tell against a small working vote of under Rs. 100 per mile per annum. It was very fortunate that the system of wheel track metalling was taken up in small sections where traffic was heavy; this has saved many roads from being rendered difficult for carts, especially in a district like this, with a heavy rainfall and really no good gravel, but red cabook earth. The plumbago "boom" having collapsed, the roads have since greatly improved; and the rainfall last year was moderate, there being only three or four abnormal falls, which washed out many places, but these were soon repaired. On the whole, the road surface throughout the 185½ miles at the end of the year could be considered as in very fair order.

Bridges and Culverts.—Under this head I have nothing special to report; the sum allowed for this work is Rs. 2,000 annually. Sixteen new culverts of wedged stone were constructed, displacing a few of the many old "cross drains." The total lineal feet of bridging now exceeds the great length of 3,600 feet; a portion of this length has to be covered every year, which I estimate at one-fifth, so it can be readily understood how the vote has to be tardily spent to keep this length of bridging (some of the bridges have piles) passable and prevent complaints. In future years no attempt will be made to build culverts under this vote, as the bridges must receive more attention.

New Works.—Considering that the older and more important roads through populous villages have so little expended on them, it would almost appear to be a suicidal policy to spend Rs. 1,000 annually on a new road through far off Hinidum pattu, a place that I have known for over twenty years showing little or no progress; this is easily accounted for by the nature of the country, which is hilly. The sides of the hills being washed out, and there being no flat lands to asweddumize, this road once it reaches Opata, the limit of the pattu, will have to be opened for some miles in the Matara District, to effect a connection with the Galle-Morawak korale road. I expect the road to be passable for carts in two years more at present rate of progress. Government very considerately allowed Rs. 1,000 to help towards its advance.

Towpath and ferries are kept up by the Committee; both these are a great boon to a populous and thriving pattu (Gangaboda), in fact the boat traffic is always on the increase. Many "na wood edandas," or foot bridges on the path, were renewed this year, and there are still a large number required to displace cocoanut logs.

Labour Rates.—I am glad to say these are on the decline. I hope the old rate of 30 cents per diem will be reached next year. As for stone wedgers, masons, and other artificers, they have all temporarily left the district for the railway extensions, where the pay is very high.

J. W. ERSKINE,
Superintendent of Minor Roads.

MATARA DISTRICT.

THE usual comparative percentage statement is annexed, showing the working of the Road Ordinance for 1900 and 1901 :—

	1900.		Percentage on B.	1901.		Percentage on B.
1. Population (A)	—	167,079	—	—	188,408	—
2. Number on lists (B)	—	41,455	—	—	41,366	—
3. Effective in the district :—						
(*a*) Paid Re. 1·50	34,739		83·79	33,902		81·95

(*f*) Dead	143		·34	203		·49
5. Non-effective :—		4,551	10·97		4,639	11·21
(*a*) Reported to have left the village ...	1,135		2·73	1,349		3·26
(*b*) Otherwise, not arrested ...	—		—	17		·04
		1,135	2·73		1,366	3·30

The record left by Mr. Hill on the District Road Committee work is annexed to the Assistant Government Agent's Administration Report on the Matara District for 1901. I annex an extract of it with regard to the decrease in the number of those who paid commutation, as compared with the previous year :—

> The road tax collections were poor this year, as compared with last. Only 33,902 paid at single rate, as compared with 34,739 in 1900 ..... The unsatisfactory nature of the collections is attributed to the decline of the plumbago industry, which formerly provided many with employment, and to the fact that many left the district early in the year to work

on the Kelani Valley Railway. Many, too, were under the impression that they would be exempted from payment of their road tax owing to the death of Her late Majesty Queen Victoria.

The following statement shows the revenue and expenditure of 1901:—

RECEIPTS.	In Money. Rs. c.	In Labour. Rs. c.	Total. Rs. c.
Balance on January 1, 1901 ...	—	—	11,635 37

Milestones	—	165 0	
			3,191 72
		Total	25,368 26

A sum of Rs. 1,291 was spent on permanent culverts and milestones. Two new bridges were constructed on the Mulatiyana-Denagama road at a cost of Rs. 1,166·50.

A report on the minor roads of the district by Mr. Erskine, Superintendent of Minor Roads, has been annexed to my Administration Report as Assistant Government Agent.

District Road Committee's Office,
Matara, February 10, 1902.

K. MACLEOD,
Chairman.

HAMBANTOTA DISTRICT.

THE following comparative statement shows the working of the Thoroughfares Ordinances in the Hambantota District in 1901 as compared with 1900 :—

	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A)	—	89,091	—	—	104,863	—
2. Number on lists (B)	—	22,136	—	—	22,783	—
3. Effective in the district :—						
(a) Paid Re. 1·50	18,601		84·01	18,222		79·98
(b) Paid Rs. 3	190		·85	462		2·02
(c) Laboured 6 days ...	906		4·09	1,090		4·78
(d) Laboured 12 days ...	31		·14	7		·03
		19,728	89·12		19,781	86·82
4. Not effective in the district, but have discharged their liability :—						
(a) Exempted	1,075		4·85	1,695		7·43
(b) Paid and laboured elsewhere ...	682		3·08	634		2·78
(c) Committed to jail ...	16		·07	3		·01
(d) Fined	14		·06	6		·02
(e) Double entries	33		·14	83		·35
(f) Dead	83		·37	104		·45
		1,903	8·59		2,525	11·08
5. Non-effective :—						
(a) Reported to have left the village	—		—	32		·14
(b) Otherwise, not arrested ...	505		2·28	445		1·95
		505	2·28		477	2·09

2. The percentage of effectives is slightly less than last year owing to an increase of non-effectives on the division officers' lists, but it will be seen that, though the number on the lists is greater than in 1900, the total number left unaccounted for is less.

3. There is an increase in the number who worked and paid double commutation, due to a belief, which found ground in some of the more remote villages, that the tax would be remitted on account of the Queen's death, a belief which was strengthened by the extension by one month of the last date of payment.

4. It is too early yet to judge of the effects of the extension, but the postponement of the receipt of the revenue of the Committees seems to me to render advisable an alteration of the year of working and account, which should now be from 1st April to 31st March, instead of as now 1st January to 31st December.

5. The year being a dry one, the minor roads, which are all either gravel or natural surface, remained in good order, and good progress was made with the work, referred to in previous reports, of renewing the old bridges. More culverts are also required.

6. The following is the report of Mr. Brunton, Superintendent of Minor Roads :—

In my last report I mentioned that towards the close of 1900 the roads got into bad condition owing to continuous wet weather. The rains ceased towards the end of January, 1901, and in February the roads were put in order again, and have continued so throughout the year.

It is true that during the rains in June and July portions of the Beliatta-Katuwana road got much cut up, especially near Beliatta, but that is unavoidable, the cart traffic at the point being heavier than any gravel road can bear, and it must re-occur every wet season until funds can be provided to metal it, or even the wheel tracks. The road was put in order again at the end of July, when the rains ceased, and has stood well since.

A better class of overseers for supervising the road work has been procured (without raising the wages), and the number reduced by nearly one-half, giving those remaining more regular work and consequent interest in their labour, and also making it more easy for me to check their work.

Bridges and Culverts.—Weliamuna bridge, near 10th milepost on Beliatta-Katuwana road : a pile bridge of 60 ft. span on three rows of piles was entirely rebuilt, solid masonry abutments and one row of piles with 40 ft. span being substituted. The work was completed in July at a cost of Rs. 2,142·84.

Beragama-aar bridge No. 2, near the 13th milepost : a 36 ft. pile bridge was rebuilt at a cost of Rs. 400, new piles and beams being used, and such sound timber as was available from the other rebuilt bridges being utilized for the platform, hand rails, &c.

Beragama-aar bridge No. 3, near the last, was rebuilt in the same manner as the last, at a cost of Rs. 585·56.

Kadigamuwa bridge, near 7th milepost, same road, with a span of 28 ft., with masonry abutments, was thoroughly repaired (practically rebuilt) at a cost of Rs. 338·23.

All other bridges and culverts in the district have been kept in repair during the year, but about thirty new culverts are required to replace temporary ones as funds become available.

Resthouses.—The resthouses in the district have been kept in thorough repair during the year.

A vote amounting to Rs. 448·77 for special repairs to Tangalla resthouse was sanctioned in November, and the work carried out before the end of the year.

Sawn timber gates hung to masonry pillars have been provided for Tissa and Wirawila resthouses, and the compounds properly fenced in.

The native resthouse in Tangalla was opened to the public in March.

7. I annex comparative statement of revenue and expenditure of the Committee for the last five years, with a detailed statement of receipts and expenditure and work done in minor roads in 1901. Both revenue and expenditure are the largest in the history of the Committee :—

Statement showing Revenue and Expenditure from 1897 to 1901.

Year.	Revenue. Rs. c.	Expenditure. Rs. c.

District Road Committee,
Hambantota, April 4, 1902.

B. HORSBURGH,
Chairman.

EASTERN PROVINCE

BATTICALOA DISTRICT.

A COMPARATIVE statement of collections for the District of Batticaloa is annexed :—

Comparative statement of the working of the Thoroughfares Ordinances in the Batticaloa District for 1900 and 1901.

	1900.		Percentage on B.	1901.		Percentage on B.
1. Population (A)	—	122,573	—	—	134,173	—
2. Number on lists (B)	—	29,428	—	—	30,424	—
3. Effective in the district :—						
(*a*) Paid Re. 1·50	24,094		81·87	26,332		86·55
(*b*) Paid Rs. 3	2,072		7·04	962		3·16
(*c*) Laboured 6 days	172		·58	58		·19
(*d*) Laboured 12 days	—		—	27		·08
		26,338	89·49		27,379	89·99
4. Not effective, but have discharged their liabilities :—						
(*a*) Exempted	965		3·27	926		3·04
(*b*) Paid and laboured elsewhere ...	630		2·14	653		2·14
(*c*) Committed to jail	5		·01	14		·04
(*d*) Fined Rs. 10	14		·04	—		—
(*e*) Worked 24 days in labour centres ...	—		—	—		—
(*f*) Double entries	224		·96	276		90
(*g*) Dead	279		·94	308		1·01
		2,117	7·19		2,177	7·15
5. Non-effective :—						
(*a*) Reported to have left the district ...	973		3·30	868		2·85
(*b*) Otherwise not accounted for ...	—		—	—		—
		973	3·30		868	2·85

There was a considerable increase in the collections at single rate, which is attributed to the extension of time allowed under Ordinance No. 10 of 1900 to a season when the majority of the poorer classes of the people are in a position to pay the tax, *i.e.*, after reaping the munmari crops. The outturn of labour and the number who paid at the double rate in consequence of the extension granted have in consequence become reduced, with a corresponding increase in the percentage of effectives.

A statement of the revenue and expenditure for the year is annexed :—

REVENUE.	Amount. Rs. c.	Total. Rs. c.
Balance on January 1, 1901 ...	—	345 57
Commutation realized in money ...	42,384 0	
Do. in labour ...	127 50	
		42,511 50
Resthouse collections ...	—	1,775 34
Miscellaneous receipts ...	—	1,234 36
Government contribution on account of resthouse-keepers' salaries	—	900 0
Government grant in aid of minor works	—	1,500 0
		48,266 77

EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.
Amount expended on account of principal roads, resthouses, and canals :—		
In money	17,010 0	
In labour	87 0	
		17,097 0
Repair of resthouses, &c. ...	—	2,987 14
Salaries of establishment, commission to division officers, &c. ...	—	7,353 16
Amount expended in minor works :—		
In money	6,416 22	
In labour	40 50	
		6,456 72
Pay of resthouse-keepers ...	—	2,783 62
Miscellaneous	—	2,491 53
		39,169 17
Balance	—	9,097 60
		48,266 77

The work on minor roads during the year was not satisfactory owing to neglect of duty on the part of the Superintendent of Minor Roads, whose services have been dispensed with.

A statement of work done on the minor roads during the year is annexed:—

Statement of Work done, with Expenditure.

Name of Road.	Miles.	Nature of work performed.	Amount.
			Rs. c.
Valaichenai-Kalkuda	2½	Constructed two wooden bridges of 12 ft. and 8 ft., and one temporary causeway, laid coral and gravel, cleared side jungle	958 81
Urani-Vallerevu road, called Mariammankoil road	2½	Sides cleared, gravel laid, two culverts repaired ...	203 38
Veechikalmunai-St. Ann's ...	½	Earthwork in surface and embankments, sides cleared, mangroves planted	55 84
Chettukuda-Vallerevu... ...	1	Laid gravel, sides cleared, side drains renewed ...	149 91
Vavunativu-Tumpalancholai ...	12½	Sides cleared, earthwork in surface repaired, grass weeded	353 43
Cheddipalayam-Pulugunawa ...	10½	Constructed two bridges 30 ft. and 16 ft., sides cleared, earthwork in breaches, grass weeded ...	681 24
Naippadimunai to sea	2	Laid gravel, sides cleared, surface drains re-opened	140 62
Kalmunai to sea	½	Sides cleared, gravel laid, surface drains cleared ...	56 62
Saindemandu village road ...	½	Laid gravel, earthwork in fillings	66 76
Karaitivu village and temple ...	1½	Gravel laid as upkeep	96 58
Mandur-Samanturai ...	12	Constructed 1 wooden bridge 20 ft. length, clay work in approaches	368 84
Bintenna village roads... ...	6	Overgrown jungle cleared on roads leading to Veddah settlement (by labour)	40 50
Punanai to North-Central Province boundary	4	Jungle cleared and road opened	150 0
Kattankudi village road ...	¼	Live fence removed and put further back, laid clay, drains cleared	543 84
		Total ...	3,866 37

The resthouses in the district were maintained in fair order. An excellent new resthouse at Senkaladi, designed by Mr. Tomalin, was finished in April last, and another similar but more commodious one, also designed by him, is at present under construction at Kalmunai, half the cost of which has been contributed by Government.

The report for the Trincomalee District has not yet been received from the Chairman, District Road Committee, who is, I regret to say, in indifferent health, but it may be mentioned that the work of the Provincial Road Committee in that district for the year includes the completion of an excellent new resthouse at Kanthalai.

S. HAUGHTON,
Chairman.

Provincial Road Committee's Office,
Batticaloa, February 25, 1902.

TRINCOMALEE DISTRICT.

THE following statement showing the result of the working of the Thoroughfares Ordinance in 1900 and 1901 is satisfactory, for though there were fewer names shown on the division officers' lists (due probably to fewer immigrants from the Jaffna peninsula), there was an increase in the number of persons effective in the district and a considerable decrease in the "non-effectives," and only 31 persons remained at the end of the year reported to have left the district :—

Particulars.	1900.		Percentage on B.	1901.		Percentage on B.
1. Population (A)	—	14,811	—	—	18,010	—
2. Number on lists (B) ...	—	4,153	—	—	4,046	—
3. Effective in the district :—						
(*a*) Paid Re. 1·50	3,670		88·36	3,688		91·15
(*b*) Paid Rs. 3	7		·16	26		·64
(*c*) Laboured 6 days	167		4·02	161		3·98
(*d*) Laboured 12 days	—		—	—		—
		3,844	92·54		3,875	95·77
4. Not effective in the district, but have discharged their liability :—						
(*a*) Exempted	85		2·04	34		·84
(*b*) Paid and laboured elsewhere ...	56		1·34	53		1·31
(*c*) Committed to jail	—		—	—		—

5. Non-effective :—						
(*a*) Reported to have left the district ...	66		1·58	31		·77
(*b*) Otherwise, not arrested ...	—			—		—
		66	1·58		31	·77

The total amount of road tax amounted to Rs. 5,610 in cash and Rs. 241·50 in labour. Of this amount, a sum of Rs. 2,098·50 was remitted to the Provincial Road Committee for expenditure on the principal roads and Rs. 525 was apportioned to the resthouses, while a sum of Rs. 1,708·35, including the Government grant of Rs. 500, was expended on the minor roads as per annexed statement :—

Expenditure incurred on Minor Roads, &c., in the Trincomalee District during 1901.

Name.	Length in Miles.	Expenditure.			Total.
		Labour.	Commutation.	Government Grant.	
Koddiyar Pattu.		Rs. c.	Rs. c.	Rs. c.	Rs. c.
Mallegaitivu road	1	78 0	9 0	18 0	105 0
Sampur road	5	85 50	—	15 0	100 50
Kaddukulam Pattu.					
Sinhalese section road, from the 17th milepost to Tiriyai end	21	—	370 60	102 0	472 60
Tamblegam Pattu.					
Tamblegam road	2	—	515 25	105 0	620 25
Ferrymen's salary	—	—	150 0	—	150 0
Allowance to Superintendent of Minor Roads ...	—	—	—	260 0	260 0
Total ...	29	163 50	1,044 85	500 0	1,708 35

In addition to these works, the Road Committee now undertakes the upkeep of the North Coast road from Nilaveli to the boundary of the Mullaittivu District and the section of natural road in Koddiyar pattu known as the old Toppur road. For this work it receives from Government a vote of Rs. 1,202·50, which is at the rate of Rs. 15 per mile, with an allowance for upkeep of ferries.

A considerable improvement has been commenced and partially carried out by the construction of about 2¼ miles over high ground from Kuchchaveli to Salappaiaru. This section avoids five river fords and a long expanse of swampy ground, substituting a single river crossing by ferry, while the whole trace is along high firm ground.

Further improvements of a similar nature along the whole route are planned and a new trace examined, which will take the road from Nilaveli to Kuchchaveli along 11 miles of high firm ground, with two ferries, instead of 13 miles of low marshy ground with eight fords. The present trace is quite impassable during rainy weather.

His Excellency the Governor passed over the whole of this road early in the year and had a somewhat rough experience, though the rainy season was past. He was so much struck by the fertility of the lands which *ought to be* served by the road, as well as by the improved section near Kuchchaveli, that he at once sanctioned an annual grant of Rs. 4,000 for the improvement of the road. Unfortunately the vote for 1901 was lost owing to some question as to the proper authorities who should undertake the expenditure, and the vote for 1902 is to be expended on iron factory-built ferry boats to replace the double canoes hitherto in use. It is hoped, however, that after the proposed new trace has been examined and reported on, work in this direction, which will make the road passable all the year round, may be sanctioned.

At present there is no means of communication between Trincomalee, Tiriyai, and Pulmoddai for weeks together owing to the flooding of the old track, and all paddy and other produce has to be kept unsold until the sea is sufficiently smooth for coasting vessels to take up goods at those places. A good road over high ground will open up some of the best cocoanut land in the district.

Resthouses.—A grant in aid of Rs. 500 is given towards the salaries of resthouse-keepers, which amount to Rs. 653·25. Repairs cost a sum of Rs. 340·53 and equipment Rs. 420·84, while the collections amounted only to Rs. 339·44.

There was no resthouse accommodation for nine months at Kanthalai, as the materials of the old resthouse were utilized in building the new one, which was only completed in the middle of December. This is a handsome stone building at the north-east end of the bund and overlooking the Kanthalai tank.

The old resthouse at Kuchchaveli collapsed at the end of the year, but as very few travellers visit this resthouse it is proposed to erect only a small one-roomed building in its place.

An account in the usual form is annexed :—

Revenue.	Amount. Rs. c.	Expenditure.	Amount. Rs. c.
Balance on January 1, 1901	141 10	Salaries of resthouse-keepers ...	653 25
Resthouse collections	339 44	Furnishing resthouses	420 84
Two-thirds commutation for resthouses ...	525 0	Repairs to resthouses	340 53
Government grant in aid of resthouse-keepers' salaries	500 0	Miscellaneous	12 0
Miscellaneous receipts	141 25		1,426 62
		Balance	220 17
Total ...	1,646 79	Total ...	1,646 79

District Road Committee's Office,
Trincomalee, March 20, 1902.

C. M. LUSHINGTON,
Chairman.

NORTH-WESTERN PROVINCE.

KURUNEGALA.

THE annexed comparative statement shows the working of the Road Ordinance in the Kurunegala District for the years 1900 and 1901 :—

	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A)	—	227,530	—	—	240,000	—
2. Number on lists (B)	—	60,406	—	—	63,701	—
3. Effective in the district :—						
(a) Paid Re. 1·50	55,454		91·80	57,778		90·70
(b) Paid Rs. 3	543		·89	307		·48
(c) Laboured 6 days	28		·04	34		·05
(d) Laboured 12 days	—		—	3		—
		56,025	92·74		58,122	91·24
4. Not effective in the district, but have discharged their liability :—						
(a) Exempted	2,541		4·20	3,302		5·18
(b) Paid and laboured elsewhere ...	1,396		2·31	1,806		2·83
(c) Committed to jail	2		—	6		—
(d) Fined	3		—	15		·02
(e) Double entries	81		·13	63		·09
(f) Dead	351		·58	379		·59
		4,374	7·22		5,571	8·71
5. Non-effective :—						
(a) Reported to have left the district ...	—		—	—		—
(b) Otherwise, not arrested ...	7		·01	8		·01
		7	·01		8	·01

The tax continues to be collected without difficulty, and there were only eight persons entirely non-effective at the end of the year. In 1899 there were over 500 unaccounted for on the 31st December. Although the percentage of recoveries to the names on the division officers' lists was slightly lower than in the previous year, the actual number who paid showed an increase of over 2,000, the figures being—

1900	56,025
1901	58,122

Expenditure on Minor Roads.—A sum of Rs. 30,840·79 was spent in the course of the year for the maintenance and repair of 383 miles of minor roads, being more than Rs. 3,000 in excess of the expenditure for the previous year. Even this increased sum is insufficient, for the reasons given in last year's report, to adequately maintain many of the roads under the strain of the heavy traffic to which they are subjected. The roads are thirty-three in number :—

	Miles.
Metalled cart roads	7
Gravelled cart roads	62¾
Natural cart roads...	308¼
Bridle roads	5
	383

It is proposed to hand over five of the natural roads in the western and five in the eastern divisions on which there is little or no cart traffic to the care of the Village Committees, who will in all probability keep them in better condition as Gansabhawa roads than they are at present. The money thus saved is to be devoted to permanent improvements, such as building culverts on the more important roads, where traffic is considerable. At present the sums spent on many of these natural roads are too small to be of any practical benefit, and in wet weather these thoroughfares are practically impassable. The Superintendents of Minor Roads will be able to devote more of their attention to roads of real importance, and this concentration of effort should enable the Committee to make up in quality for the lack of quantity. It is better to have 200 miles of road which are passable in all weathers than 300 which are impassable during a considerable portion of the year.

In last year's report it was pointed out by the late Mr. Fisher that there were but few tolls allowed in this district, though the increasing traffic justifies their imposition. A cart can now go from the extreme south of the district (Katugampola hatpattu) to the extreme north, the Kala-oya, on the main road to Anuradhapura, a distance of over 50 miles, without paying a single toll. Nearly the whole of this mileage is in charge of the Public Works Department, and the few miles of minor road are up to the standard of the principal roads. It is doubtful whether there is any similar stretch of principal road in any other Province without a toll.

Resthouses.—The resthouses throughout the Province were maintained in excellent order, those in the Chilaw District being specially good. At Hiripitiya a resthouse has been built, from which the first feeder road to the railway starts, and a second is in contemplation at Polpitigama near the junction of the second feeder to the railway. The Chilaw resthouse, complaints of which were referred to in last year's report, has been greatly improved.

Statement of Revenue and Expenditure of the Provincial Road Committee, North-Western Province for 1901.

The following statements show the amounts remitted to the Public Works Department on account of principal roads and the amounts expended on minor works :—

Statement of Amounts remitted to the Public Works Department on account of Principal Roads in the Puttalam District during the Year 1901.

Name of Road.	In Labour. Rs. c.	In Money. Rs. c.	Total. Rs. c.
Akkaraipattu road	— ...	799 94	
Puttalam-Nikaweratiya road	— ...	755 0	
Puttalam-Kalaoya road	— ...	400 0	
Puttalam-Battuluoya road	— ...	605 95	
Puttalam-Madurugama road	— ...	173 0	
			2,733 89

Statement showing the Amounts expended on Minor Works in the Puttalam District during 1901.

Particulars.	Rs. c.	Particulars.	Rs. c.
Work done on—		Kottukachchiya-Kubukkadawela road ...	86 87
Anamaduwa-Andigama road ...	160 1	Pomparippu to Kokkavi	90 0
Halmillewa to Kottukachchiya ...	29 75	Pomparippu to lake shore	40 0
Andigama-Madurankuli road ...	323 87	Nawagattegama to Karuwalagaswewa ...	120 0
Jaffna road to ambalam	20 0	Kadayamottai causeway	425 20
Vannativillu to Karaitivu... ...	50 0	Keeniyankalli-Andigama road ...	79 39
Kanamullai to Kandatoduwa ...	39 50	Anamaduwa-Palugaswewa road ...	109 62
Kanamullai causeway	135 50		
Approach road to resthouse, Madurankuli...	36 0	Total ...	1,782 21
Kattakadu road	36 50		

The former head overseer was appointed Korala of Karambe pattu, and as his work had not been satisfactory, and the District Road Committee could not afford to pay an adequate salary to a qualified superintendent, the appointment was not filled, but the chief headmen were requested to look after the minor roads in their divisions. This system has not worked successfully.

The chief headmen do not apparently take much interest in road work, and the large unexpended balance at the end of 1901 shows that the work has not been pushed forward with energy. The District Road Committee have, therefore, decided to appoint an overseer with salary and allowances amounting to Rs. 480 a year.

The great majority of the minor roads in this district are mere bridle paths, and the expenditure on such roads is restricted to clearing the jungle at intervals.

The road from Anamaduwa to Andigama has been considerably improved, and it is now possible to drive a carriage over it. This section should be further improved, and the section from Anamaduwa to Nawagattegama should also be improved into a driving road. The road is important, as it will connect the two proposed feeder roads to the railway at Galgomuwa and Maho.

The two causeways at Kanamullai and Kadayamottai, giving access to the Akkarai pattu south, require further improvement, and a road should be constructed across the plain to the bridge at Kattakadu.

The metalling and gravelling of the Kalpitiya town roads was commenced in 1901.

One of the road reservations connecting the Kurunegala and Anuradhapura roads near the 4th milepost should be opened up for cart traffic.

A sum of Rs. 746·06 was spent in repairs to resthouses. The bungalow at Andigama has been taken over by the Provincial Road Committee and requires some improvements, and resthouses will be required at Nawagattegama and Andigama when the feeder roads are constructed. The new trace from Nikaweratiya to Andigama should be carried through to Kiriyankalli on the Chilaw road as a main road. The road is at present only a bridle path.

The two Public Works Department bungalows at Karuwalagaswewa and Kala-oya, which had been allowed to fall into a ruinous state, were repaired in 1901, and the Provincial Road Committee has supplied some furniture for them.

Puttalam, January 31, 1902.

H. W. BRODHURST,
Chairman.

CHILAW DISTRICT.

THE following statement shows the working of the Thoroughfares Ordinance in this district in 1900 and 1901 :—

	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A)	—	65,495	—	—	74,336	—

			10,460 56
			20,297 63

1, The principal item in the expenditure incurred was the working of the important lines of communication, and this expenditure statement, showing the amount spent on each of the roads, will sufficiently explain.

2. The policy adopted in the previous year was followed this year with regard to the improving of roads. It is a matter worthy of mention, and not one in the annals of this Committee, that the landowners along the various sections of these roads contributed about Rs. 3,000 for the upkeep and improvements of their respective roads, mainly through the exertion of the late Chairman. The roads taken up for improvement on this basis are :—

(1). Uraliyagara-Paiyrendawa road.
(2) Pulichchakulama road, one mile.
(3) Vilattawa-Paiyrendawa road.
(4) Bangadeniya-Karukkupone road, one mile.
(5) Wattakkaliya road, one mile.
(6) Walahapitiya-Muttibendiwila road, one mile.
(7) Construction of an 18 ft. bridge on Bolawatta-Dankotuwa road.
(8) Building side drains at Madampe and Nattandiya.

3. The "considerable progress" reported on the Uraliyagara-Paiyrendawa road during the year 1900 has now ended in final completion. The section of the Compasara road from Paiyrendawa to Vilattawa has now been extended 3 miles to meet the Chilaw-Wariyapola main road. On these roads over 600 cubes of earthwork was done in raising, 620 cubes gravel were transported and spread, and 9 culverts were constructed. The one important piece of work required to make these roads suitable for any kind of traffic is the raising of the section of this road at Puliyankara.

4. The total amount of gravel spread on the minor roads exceeded by 300 cubes the quantity spread in the previous year.

5. The "wretched condition of the Bangadeniya-Mandalana road" was alluded to in the previous year's report. With the contribution of some of the estate proprietors, and this Committee contributing an equal sum, there is a likelihood of the work of improving this road to the extent of one mile from the Puttalam-Chilaw main road being taken in hand in 1902.

6. The recommendation of the Committee to establish a toll on the Nattandiya-Dunkannawa road having been approved, a toll has now been established since June, 1901. The sum of Rs. 2,176·77 realized by the sale may now well be utilized for improving this road, and the work will be undertaken in 1902.

7. All the toll grant roads were kept in fair order. The condition of Madampe-Dankotuwa road was further improved by metalling the wheel tracks for another 1¼ mile. No trouble was experienced as regards the two ferry boats at Bandirippuwa and Lunuwila.

8. The only addition made to the plant of the Committee was the ordering out of a new theodolite and levelling staff.

9. A start has been made in the direction of building side drains in important places. The side drains have been completed both at Madampe and Nattandiya and have proved a great success. In both cases the boutique-keepers contributed towards the improvement.

10. Nothing of any importance has been done towards the improvement of resthouses beyond general repairs. The opinion of the late Chairman that the Haldanduwana resthouse should be removed to a better site is worthy of consideration.

11. The amounts voted for the carrying out of works during the year under reference have all been expended, save that for the construction of Koswatu-oya bridge, which had to be held over till 1902, owing to the difficulty in getting the necessary timber.

12. The condition of the roads in general has been fairly maintained. Great difficulty is experienced in obtaining labour owing to the great demand on the part of cocoanut estate proprietors. This difficulty is likely to increase rather than decrease.

J. H. LEAK,
Chairman.

District Road Committee's Office,
Chilaw, March 11, 1902.

NORTH-CENTRAL PROVINCE.

Statement showing the comparative working of Thoroughfares Ordinances in 1900 and 1901.

	1900.		Percentage on B.	1901.		Percentage on B.

		3,097 57
Markets and Galas.		
Balance on January 1, 1901 ...	262 59	
Collection in 1901 ...	1,516 22	
		1,778 81
		42,745 2

EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.
Payments made on account of principal roads and resthouses from the commutation money during the year 1901, under the provisions of the Road Ordinances of 1861, 1884, and 1900	13,040 0	
Minor roads, &c.	10,682 5	
Miscellaneous payments, &c. ...	2,067 83	
		25,789 88
General Charges.		
Pay of establishment, including pay of Superintendent of Minor Roads	3,682 0	
Percentage to division officers ...	3,448 4	
Petty expenses	453 58	
Purchase of tools	443 39	
		8,027 1
Resthouses.		
Payments made in 1901 ...	—	2,092 44
Markets and Galas.		
Payments made in 1901 ...	—	1,778 81
Balances of 1901.		
Balance on Road Ordinance Fund ...	4,051 75	
Do. Resthouse Fund ...	1,005 13	
Do. Market Fund ...	—	
		5,056 88
		42,745 2

The total revenue for the year was Rs. 33,467·30, made up as follows :—

	Rs. c.
In cash	31,785 0
In labour	43 50
Miscellaneous receipts	1,638 80

The single and double rate commutation recoveries, excluding miscellaneous receipts, exceeded all previous recoveries by Rs. 1,138·50, as will be seen from the following statement :—

	Rs. c.		Rs. c.
1893	27,118 50	1898	29,355 0
1894	27,481 50	1899	29,688 0
1895	29,436 50	1900	30,690 0
1896	29,470 50	1901	31,828 50
1897	28,474 50		

The number of men remaining unaccounted for at the end of the year out of the 23,073 on the division officers' lists was 4.

The expenditure on account of establishment, commission to division officers, petty expenses, and purchase of tools was Rs. 8,027·01. The amount expended on principal roads and resthouses was Rs. 13,040 and on minor roads Rs. 10,682·05.

During the year the road to the Irrigation Officer's quarters was extended to join the cart track from the Puttalam road. Mileposts were fixed on the Madawachchiya-Horowapotana road and on portions of the Eppawala-Timbiriwewa and Alutoya-Minneriya roads. Two deviations were made on the latter road at the 16th and 19th mileposts in order to improve the gradients. Small improvements were made on other roads, but the funds of the Committee do not admit of more than bare provision for the upkeep of most of them. I am considering whether, when all the village tanks have been restored and the villagers are consequently relieved of earthwork on them (a work which I intend to take up in Hurulu palata in 1902, in Kalagam palata in 1903, and in Nuwaragam palata in 1904), it will not be advisable to hand over the less important minor roads, temporarily, to the Village Committees to keep open. We shall then be able to concentrate the resources of the Road Committee on the more important roads and affect really substantial improvements to them one by one, instead of, as now, having to spread our funds over such a large mileage that very little permanent benefit is secured.

Punkahs have been provided in all resthouses—a very desirable improvement—for some of them are intolerably hot in the dry season. Boarded ceilings have been put up in Kahatagasdigiliya and Alut-oya resthouses, also with a view to mitigating the heat. The bathroom at Habarana resthouse has been improved by opening communication between it and the bedroom.

A shed for the barbers was erected at Anuradhapura; hitherto these men had had to ply their trade under the trees near the market, not at all a nice arrangement.

The town minor roads, markets, and galas were transferred to the Local Board on its establishment on 1st July.

The following sums were spent on the upkeep and improvement of the existing minor roads, &c.:—

Particulars.	Amount. Rs. c.
Upkeep of Town minor roads	486 55
Upkeep of Green Path	16 25
Upkeep of road from Bassawakulam to Sacred road	1 25
Upkeep of road from Tissa bund to Kurunegala road	37 16
Upkeep of Ellakattu road	13 50
Upkeep of Anuradhapura-Arippu road	346 29
Upkeep of Alankulam-Turuwilla road	164·30
Upkeep of Andarawewa-Ottappuwa road	130 0
Upkeep of Eppawela-Timbiriwewa road	400 0
Upkeep of Southern minor road	269 56
Upkeep of Maradankadawala-Kunchikulam road	115 0
Upkeep of Tonigala road	60 0
Upkeep of Madatugama-Andiyagala road	160 0
Upkeep of Eastern minor road	650 0
Upkeep of Galenbindunuwewa-Sipukulam road	219 62
Upkeep of Alutoya-Horowapotana road	500 0
Upkeep of Alutoya-Minneriya road	360 0
Upkeep of Madawachchiya-Horowapotana road	459 56
Upkeep of Madawachchiya-Kebitigollewa road	319 35
Improving the cart track from Irrigation Officer's quarters ...	205 46
Improving Madawachchiya-Kebitigollewa road	560 83
Improving Madawachchiya-Horowapotana road	29 0
Improving Eastern minor road	400 0
Fixing mileposts on minor roads	81 90
Fixing punkahs for resthouses	194 0
Additional culvert on Anuradhapura-Arippu road	85 5
Additions to Provincial Road Committee Head Clerk's quarters ...	68 98
Upkeep of Provincial Road Committee Head Clerk's quarters ...	56 15
Upkeep of Superintendent of Minor Road's quarters	90 0
Improvements to Alut-oya resthouse	78 0
Gates for Anuradhapura resthouse	48 0
Additions to the bathroom at Habarana resthouse	42 14
Building culverts on the Eastern minor road	3 75
Gates for Mihintale resthouse	25 0
Clearing weeds a second time on the Green Path	18 0
Strong door for the Superintendent of Minor Road's stores ...	16 0
Purchase of tools	378 71
Transferred to Local Board on account of town minor roads estimate ...	683 45
Construction of road from Sacred road to Bassawakulam bund ...	13 67
Improving Green Path	1,627 0
Improving Kahatagasdigiliya resthouse	4 70
Deviation at the 16th mile on the Alutoya-Horowapotana road ...	142 0
Deviation at the 19th mile on the Alutoya-Horowapotana road ...	256 0
Ceiling for Alut-oya resthouse	285 43
Ceiling for Kahatagasdigiliya resthouse	259 44
For gravelling the Green Path	221 0
Additional bathroom and closet for the Kekirawa resthouse ...	100 0
Total ...	10,682 5

L. W. BOOTH,
Chairman.

Provincial Road Committee's Office,
Anuradhapura, February 27, 1902.

PROVINCE OF UVA.

THE working of the Thoroughfares Ordinances during the past two years is shown in the following comparative table :—

	1900.		Percentage on B.	1901.		Percentage on B.
1. Population (A)	—	159,201	—	—	188,964	—

Provincial Road Committee's Office,
Badulla, January 24, 1902.

F. H. PRICE,
Chairman.

PROVINCE OF SABARAGAMUWA.

RATNAPURA DISTRICT.

THE statement of receipts and expenditure of the Provincial Road Committee of the Province of Sabaragamuwa for the year 1901 is annexed :—

Receipts.	Amount. Rs. c.	Total. Rs. c.
Balance on January 1, 1901	—	3,280 50
Amount received from Road Committees on account of two-thirds commutation for principal roads and resthouses	38,245 50	
Refund by Government of tolls levied on minor roads ...	6,424 0	
Resthouse collections	4,440 52	
Government grant in aid of minor works	650 0	
Contribution from District Committees on account of Provincial Road Committee establishment	1,099 0	
Miscellaneous receipts	4,964 35	
		55,823 37
Total ...	—	59,103 87

Payments.	Amount. Rs. c.	Total. Rs. c.
Amount remitted to Director of Public Works on account of two-thirds commutation for principal roads ...	31,436 50	
Amount expended on upkeep, repair, and improvements of resthouses	9,898 4	
Toll grant amounts remitted to District Committees ...	6,424 0	
Pay of resthouse-keepers	3,643 25	
Contribution in aid of minor works remitted to District Committees	650 0	
Salary of Provincial Road Committee establishment ...	1,098 0	
Miscellaneous charges	5,001 84	
		58,151 63
Balance on December 31, 1901 ...	—	952 24
Total ...	—	59,103 87

2. The resthouses in the Province were maintained in good order. The new resthouse at the Horton Plains was furnished.

3. The receipts and expenditure of the District Road Committee, Ratnapura, are as follows :—

	Amount. Rs. c.	Total. Rs. c.
RECEIPTS.		
Balance on January 1, 1901...	—	7,368 87
Commutation realized in labour	70 50	
Commutation realized in lieu of labour	36,093 50	
		36,164 0
Government contribution in aid of minor works ...	450 0	
Toll grant on minor roads	1,140 0	
Miscellaneous receipts	281 0	
		1,871 0
		45,403 87
PAYMENTS. Total ...	—	
Amount expended in money and labour on account of principal roads and resthouses	12,545 50	
Amount expended on minor works, including toll grants and Government contribution in money and labour ...	12,553 18	
		25,098 68

Percentage ...	11·52	10·52	10·99	10·40	9·12	8·35	8·50	8·50	7·15	8·75

The minor roads were maintained with the amounts available at the disposal of the Committee.

Provincial Road Committee's Office,
Ratnapura, May 9, 1902.

G. SAXTON,
Chairman.

KEGALLA DISTRICT.

THE following statement shows the working of the Thoroughfares Ordinances :—

	1899.		Per-centage on B.	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A) ...	—	150,490	—	—	150,490	—	—	186,255	—
2. Number on lists (B) ...	—	38,026	—	—	37,951	—	—	38,633	—
3. Effective in the district :—									
(*a*) Paid Re. 1·50 ...	34,584		90·95	34,942		92·07	34,717		89·87
(*b*) Paid Rs. 3 ...	325		·85	231		·61	385		1·00
(*c*) Laboured 6 days ...	45		·12	13		·03	24		·06
(*d*) Laboured 12 days ...	1		·002	—		—	1		·003
4. Not effective in the district, but have discharged their liability:—		34,955	91·92		35,186	92·71		35,127	90·93
(*a*) Exempted ...	1,156		3·04	1,056		2·78	1,351		3·50
(*b*) Laboured and paid elsewhere	1,318		3·47	1,089		2·87	1,331		3·44
(*c*) Committed to jail ...	20		·05	17		·05	14		·04

(*e*) Double and erroneous entries ...	27		·07	47		·12	13		·03
(*f*) Dead ...	90		·24	92		·24	150		·39
5. Non-effective :—		2,656	6·99		2,338	6·16		2,899	7·50
(*a*) Reported to have left the district ...	415		1·09	427		1·13	607		1·57
(*b*) Otherwise, not arrested ...	—		—	—		—	—		—
		415	1·09		427	1·13		607	1·57

The figures for 1901 are not so satisfactory as those for either of the two preceding years. The persons who have discharged their liability form a smaller percentage of the number on the division officers' lists than in 1899 or 1900, and more persons have had to be exempted. But three fewer persons were committed to jail than in 1900. Three more, however, were fined.

The expenditure on each path and cart road in 1901 was as follows:—

Name of Road.	Length as Cart Road.	Length as Bridle Path.	Toll Grant.	Private Contributions.	District Road Committee Funds, including Labour.	Total.
			Rs. c.	Rs. c.	Rs. c.	Rs. c.
Karandupone-Rambukkana ...	5¾	—	765 46	—	439 49

			5,290 1	197 80	15,186 55	20,674 36

I have not been able since my arrival in the district a few weeks ago to inspect many of these roads. The Galigomuwa-Arandara and Arandara-Ritigahaoya roads are not at present in sufficiently good order. The section from Galapitamada to Ruanwella of the road from Warakapola to Ruanwella is in bad order. Late in the year the bridge at Niyadandupola on this road collapsed. The repairs will be effected this year.

The following new works and improvements were completed in 1901 :—

	Total Cost. Rs. c.
(1) Cutting of 1½ mile of cart road from Kegalla to Andiramada to facilitate transport of gravel into Kegalla	849 60
(2) Completion of the new North Circular path through the forest to the north of Kegalla town, 1 mile cut	500 0
(3) Cutting of another mile of cart road from Nelundeniya towards Dedigama	548 20
(4) Wire footbridge across the Watura-ela at Kehelwatta on the Kehelwatta-Morontota road	256 0

The construction of a causeway or bridge across the Maha-oya at Andiramada on the Karandupone-Rambukkana road is still under the consideration of Government.

The resthouse account is given below :—

Statement showing the Total Receipts and Expenditure on account of Resthouses in the Kegalla District during the Year 1901.

RECEIPTS.	Amount. Rs. c.	Total. Rs. c.	EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.
Balance of 1900	—	1,090 75	Amount spent on equipment ...	603 40	
Amount apportioned for resthouses	3,672 75		Do. repairs ...	2,063 60	
Resthouse collections ...	1,760 20		Do. improvements, &c.	997 69	
Amount remitted to Provincial Road Committee on account of lost and broken articles ...	115 42		Pay of resthouse-keepers ...	1,372 50	
			Unexpended balance remitted to Provincial Road Committee ...	1 61	
		5,548 37			5,038 80
			Balance on December 31, 1901* ...	—	1,600 32
Total ...	—	6,639 12	Total ...	—	6,639 12

* This includes a sum of Rs. 991·38 in the hands of the District Road Committee to meet claims on account of work sanctioned in 1901.

Additional stable accommodation and a coach-house were constructed at Kegalla resthouse at a cost of Rs. 651·88, and a sum of Rs. 317·50 was spent in providing Kegalla ambalam with an outhouse.

A statement of revenue and expenditure of the District Road Committee is annexed :—

Statement of Revenue and Expenditure of the District Road Committee, Kegalla, for the Year 1901.

RECEIPTS.	Amount. Rs. c.	Total. Rs. c.	EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.
Balance on December 31, 1900 ...	—	2,611 61	Amount paid and labour expended on account of principal roads and resthouses ...	25,710 50	
Commutation realized in money...	53,230 50		Amount expended on minor roads, including toll grant and Government contribution in money ...	20,635 36	
Do. in labour ...	39 0		Do. in labour ...	39 0	
Resthouse collections ...	1,760 20		Repairs to resthouses, &c. ...	3,664 69	
Miscellaneous receipts ...	6,009 56		Resthouse collections remitted to Provincial Road Committee ...	1,760 20	
Government grant in aid of minor works	200 0		Pay of resthouse-keepers ...	1,372 50	
Toll grant on minor roads ...	5,284 0		Salaries of establishment and commission to division officers...	10,349 59	
		66,523 26	Miscellaneous charges ...	1,586 6	
					65,117 90
			Balance on December 31, 1901* ...	—	4,016 97
Total ...	—	69,134 87	Total ...	—	69,134 87

* This includes a sum of Rs. 2,925·38 on account of work sanctioned but not completed in 1901.

The Miscellaneous Receipts include Rs. 5,071·22 received from the Chairman of the Provincial Road Committee for resthouse expenditure.

Mr. Bertram Hill was succeeded as Chairman of the District Road Committee on 22nd May by Mr. E. T. Noyes, who was still in office at the end of the year.

The District Engineer, Mr. Gregson, left the district in June. His successor, Mr. F. Ludovici, took his place on the Committee. There were no other changes in the constitution of the Committee.

H. O. FOX,
Chairman.

Kegalla, May 1, 1902.

REPORTS

ON THE

WORKING OF THE LOCAL BOARDS IN 1901.

WESTERN PROVINCE.

KALUTARA.

A COMPARATIVE statement of revenue and expenditure for 1900 and 1901 is annexed :—

Revenue.	1900. Rs. c.	1901. Rs. c.	Expenditure.	1900. Rs. c.	1901. Rs. c.
Balance at the beginning of the year ...	3,438 69	299 53	Establishment ...	2,164 0	2,214 0
Taxes ...	5,897 1	5,823 92	Office Contingencies ...	179 78	162 0
Licenses ...	6,028 5	11,474 95	Revenue Services ...	1,684 99	710 32
Fines ...	171 25	380 7	Police Charges ...	3 89	9 71
Rents ...	806 75	820 75	Sanitary Charges ...	3,717 75	3,465 92
Slaughter-house ...	627 75	629 75	Plague Charges ...	400 98	226 13
Cemeteries ...	156 0	177 50	Public Works ...	6,730 4	10,128 77
Sundries ...	603 57	477 53	Lighting ...	1,722 19	1,700 41
			Miscellaneous ...	685 7	332 49
			Cemeteries ...	—	456 0
			Contribution towards the cost of Audit ...	140 85	187 2
			Balance on December 31 ...	299 53	491 23
Total ...	17,729 7	20,084 0	Total ...	17,729 7	20,084 0

REVENUE.

The decrease under the head "Taxes" is accounted for by a falling off in recoveries on account of the commutation and dog taxes. Fewer people paid road tax to the Board than in 1900. The tendency of inhabitants of the town to pay this tax to division officers of the District Road Committee requires to be checked.

The assessment tax produced a larger revenue than in 1900.

The large increase under the head "Licenses" is due to the fact that the opium revenue for 1901, amounting to Rs. 4,800, was brought to account in that year; whereas that for 1900, amounting to only Rs. 910, was credited to the revenue of 1899.

Police Court fines show an increase.

Recoveries on account of cattle trespass were credited under the head "Fines," instead of as hitherto under "Rents."

The rent obtained for the use of the Town Hall only amounted to Rs. 66. The rates charged had to be lowered, as they were found to be prohibitive.

EXPENDITURE.

The causes of the abnormal expenditure on Revenue Services in 1900 are stated in my report for that year.

The sum spent on cemeteries is shown separately for 1901. In the figures for 1900 it is included under the head "Miscellaneous."

The large increase in the opium revenue, due to the sale of the rent in Colombo instead of in Kalutara, enabled the Board to increase the expenditure on Public Works by Rs. 3,398·73. The amount spent on the upkeep of roads was Rs. 4,925·75.

The improvements made during the year were as follows :—

	Rs. c.
Building cemented cabook drains	4,260 2
Construction of cesspits for public latrines	134 91
Construction of an iron bridge on Riverside road	228 47
Erection of a Horbury latrine near the old road	84 76

Cemented cabook drains were provided for both sides of—

(1) The station road;
(2) The goods shed road; and
(3) The Colombo-Galle road in the vicinity of the hospital, as well as for the northern side of hospital road, and the western side of Gregory road as far as the southern end of the hospital premises.

Cesspits were built for the public latrines behind the post office and cattle pound.

The large amount obtained for the opium license of 1902 will enable the Board to continue to spend money on sanitary improvements.

Health.

The general health of the town was fairly good. There were cases of chickenpox in Kalutara north, but none of them were fatal.

In the interests of the public health the large swamp that lies between Riverside road and Adam street ought to be acquired and filled up, but the cost of this improvement has hitherto proved to be prohibitive.

Meetings.

Meetings of the Board were held monthly. The *personnel* of the Board remained unaltered throughout the year. I am indebted to the District Engineer Mr. C. F. Emerson and to the Sanitary Officer Dr. C. B. Lourensz for the advice and assistance which they so readily gave me. On 2nd December the unofficial members of the Local Board, Mr. Domingo de Silva, Mr. C. Van Royen, and Mr. S. Goonatilaka, were re-elected for the ensuing two years.

Thoroughfares Ordinances.

The following comparative statement shows the working of the Thoroughfares Ordinances in 1900 and 1901 :—

	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A)	—	11,431	—	—	11,431	—
2. Number in list (B)	—	2,969	—	—	3,133	—
3. Effective in the district :—						
(*a*) Paid at single rate ...	2,473		83·29	2,411		76·95
(*b*) Paid at double rate ...	21		·71	34		1·09
(*c*) Laboured 6 days ...	—		—	3		·10
		2,494	84·00		2,448	78·14
4. Not effective in the district, but have discharged their liability :—						
(*a*) Exempted	103		3·47	96		3·06
(*b*) Paid and laboured elsewhere ...	293		9·87	491		15·67
(*c*) Committed to jail ...	1		·03	—		—
(*d*) Fined	4		·14	12		·38
(*e*) Double entries... ...	28		·94	51		1·63
(*f*) Dead	13		·44	14		·45
5. Not effective :—		442	14·89		664	21·19
(*a*) Reported to have left the village	33		1·11	21		·67
(*b*) Otherwise not arrested ...	—		—	—		—
		33	1·11		21	·67

This return is satisfactory. There was a substantial increase in the number of persons entered in the division officers' lists. Nevertheless the number of those who were not proved to have discharged their liability was only 21, as compared with 33 in 1900 and 78 in 1899. There was a decrease in the number of exemptions, and, though 12 defaulters had to be fined, as compared with 4 in 1900, not a single man had to be imprisoned.

June 9, 1902.

H. O. FOX,
Chairman.

NEGOMBO.

A COMPARATIVE statement of the revenue and expenditure of the Board for 1900 and 1901 is annexed :—

REVENUE.	1900. Rs. c.	1901. Rs. c.	EXPENDITURE.	1900. Rs. c.	1901. Rs. c.
Balance on January 1 ...	4,072 3	7,226 27	Salaries	3,419 88	3,417 36
Taxes	10,432 0	9,994 0	Office Contingencies ...	477 10	598 73
Licenses	14,856 56	12,007 86	Revenue Services ...	1,126 84	945 6
Fines	160 0	323 50	Police Charges ...	62 50	102 28
Sundries	1,279 78	678 14	Sanitary Charges ...	4,206 34	5,732 68
Rents	756 74	690 43	Interest and Sinking Fund...	186 67	1,026 66
			Plague Account ...	137 8	130 8
			Public Works ...	12,116 99	12,791 51
			Lighting	2,075 9	1,960 8
			Audit Charges ...	253 33	—
			Miscellaneous ...	269 2	292 15
			Balance on December 31 ...	7,226 27	3,923 61
Total ...	31,557 11	30,920 20	Total ...	31,557 11	30,920 20

Deducting from both years the balance carried forward, and from 1900 the sum of Rs. 3,850, being the amount of the opium licenses which should have been sold in 1899, the nett revenue of 1901 shows a small increase of Rs. 50·85 (Rs. 23,693·93 for 1901 and Rs. 23,635·08 for 1900). This is not at all satisfactory, as the opium licenses realized Rs. 6,400, against Rs. 5,450 for the previous year, which again showed an increase of Rs. 1,600 over the licenses of 1899. These licenses rose from Rs. 3,850 to Rs. 6,400 in two years, and it can hardly be expected that this high rate can be maintained. There was a heavy fall in the road tax recoveries of Rs. 458, representing 229 persons. This is partly due to a quarrel between the kattumaram fishermen of Sea street and Duwa, which resulted in a number of Indian fishermen leaving the district, and partly to the fact that a number of Duwa and Pitipana fishermen paid their tax in the Puttalam District.

The expenditure for the year amounted to Rs. 26,996·59. The roads within Local Board limits were maintained in fair order at a cost of Rs. 5,399·37. There were two large sums expended in repairing bad work. The parapet wall in front of the resthouse collapsed, and a sum of Rs. 1,983·70 was spent in rebuilding it; whilst repairs to a badly built abutment of Munnakkara bridge cost Rs. 700.

There was an increase of Rs. 1,526·34 under "Sanitary Charges." This includes Rs. 806·89 spent on account of cholera and smallpox. There were some cases of smallpox towards the end of the year, but the outbreak was not serious. The general health of the town was normal. Negombo is far from being a healthy town, owing mainly to defective drainage, a defect which, I fear, cannot be remedied except at a prohibitive cost.

The usual statement of the working of the Throughfares Ordinance is appended. Out of a total of 5,867 on the division officers' returns, 5,064 persons have paid commutation, and only 421 are unaccounted for. These figures are fairly satisfactory, though not so good as last year :—

		1901.	1900.
1.	One-fifth of inhabitants of town by last Census, exclusive of immigrant Tamil agricultural labourers ...	3,964	3,772
2.	Number of names borne on division officers' returns ...	5,867	5,935
3.	Percentage of 2 to 1	148	157·34
4.	Number of persons exempted from labour ...	139	154
5.	Percentage of 4 to 2	2·36	2·59
6.	Number of persons borne on division officers' lists less exemptions—2 less 4	5,728	5,781
7.	Percentage of 6 to 1	144·50	153·26
8.	i. Paid commutation	5,064	5,293
	ii. Performed labour	12	17
	iii. Fined	6	9
	iv. Imprisoned	Nil	Nil
	v. Total of i., ii., iii., and iv., being number of persons who discharged their liability	5,082	5,319
9.	Percentage of those who discharged their liability to number liable, being 8 (v.) to 6	88·72	92·01
10.	Percentage of those who discharged their liability to one-fifth of inhabitants, being 8 (v.) to 1 ...	128·20	141·01
11.	Accounted for as dead, paid elsewhere, double entries, and erroneous entries	225	132
12.	Unaccounted for on last day of year	421	331

Negombo, May 16, 1902.

E. F. HOPKINS,
Chairman.

MINUWANGODA.

ANNEXED is a comparative statement of revenue and expenditure for the years 1900 and 1901 :—

REVENUE.	1900. Rs. c.	1901. Rs. c.	EXPENDITURE.	1900. Rs. c.	1901. Rs. c.
Balance on January 1 ...	590 70	1,430 17	Establishment ...	120 0	175 0
Taxes	471 97	739 31	Sanitary Charges ...	706 50	720 0
Licenses	1,539 30	1,867 38	Public Works ...	332 50	491 31
Rents	191 76	149 32	Lighting ...	117 50	120 0
Sundries	194 34	82 50	Office Contingencies ...	—	39·16
			Miscellaneous ...	281 40	1,367 84
			Balance at end of Year ...	1,430 17	1,355 37
Total ...	2,988 7	4,268 68	Total ...	2,988 7	4,268 68

The revenue for the year amounted to Rs. 2,838·51. There was a balance of Rs. 1,430·17 brought forward from 1900, making a total of Rs. 4,268·68.

The expenditure amounted to Rs. 2,913·31, and a sum of Rs. 1,355·37 remained in hand on 31st December, 1901.

Public Works.—The principal works carried out during the year were :—

(1) The construction of a cattle pound for exposing the animals before they are slaughtered.
(2) Fencing the park with barbed wire.
(3) Building another public well near the mosque.
(4) Two wooden gates were erected at the two entrances to the "Ellis Court" and the ground levelled by cutting the hillocks and filling up the hollows.
(5) A bathing-place was constructed near the oya by building a cemented wall about 10 ft. in height with three steps and a tiled shed for people to undress.

Public Health.—The health of the town was satisfactory. A few cases of chickenpox occurred at intervals. It is a matter of thankfulness to record that, although the epidemic of cholera broke out at Negombo, it did not invade the town at all, although fish were brought from Negombo both morning and evening to the town. This may be accepted as a proof that the attention paid to the conservancy of the town was not altogether unsuccessful.

Sanitation.—The scavenging of the roads and drains was given on contract as in the previous year, and the town was kept fairly clean throughout the year. A latrine of four seats for females was erected on a portion of the teak garden, and will be opened for use from the beginning of next year.

Lighting.—Three lamps on one stand called "Havelock" lamp, which is at the centre of the town, is lit regularly. Four more will be indented for in 1902.

Roads.—The roads were re-gravelled, side drains deepened, two bridges built and kept in good order. A new road called the Cross road was opened at the beginning of the year.

Scavenging.—The latrines were efficiently maintained during the year, but they are of an unsatisfactory type as the roof is cadjan. It is the intention of the Board to make the roofs permanent, by roofing them with corrugated iron sheets.

General.—Eleven meetings of the Board were held during the year. Two of the unofficial members resigned as they had to leave the district, and successors have been elected.

Statement showing the working of the Thoroughfares Ordinance is annexed :—

	1901.		Percentage on B.
1. Population (A)	—	580	—
2. Number on list (B)	—	218	—
3. Effective within Local Board :—			
(*a*) Paid Re. 1·50	206		94·50
(*b*) Paid Rs. 3	1		—
		207	46
4. Not effective within Local Board, but have discharged their liability :—

	4,000 0

EXPENDITURE.	Amount.
	Rs. c.
Amount repaid	400 0
Amount payable	3,600 0
	4,000 0

On the whole, the revenue of the Board for the year under review compares favourably with that of the previous year. There has been a slight decrease under a few headings, but this has been made good by a corresponding increase under some others. There was a great drop in the bid for the opium license for 1902—Rs. 1,100, against Rs. 1,850 for 1901.

The expenditure was Rs. 10,505·05, against Rs. 16,545·28 of the previous year. But in 1900 the market construction cost Rs. 5,300.

The health of the town was satisfactory.

Water Supply.—The water service has been increased by a pipe carried along the west of the esplanade with two standpipes and by a pipe to the market. The question of an increase to the supply still remains unsettled. It has been established that the soundest scheme is to bring water from the Wiltshire stream to the reservoir and to strengthen and enlarge the reservoir. Unfortunately the Company which owns Wiltshire estate is still in a state of liquidation, and till the Company is reformed no settlement can be effected.

Town Drainage.—Estimates have been sent in by the District Engineer for the consideration of Government.

Market.—The proposal to extend the vegetable market was abandoned, as it was found that the building provided was quite sufficient for present demands. The lease of the market for 1902 was sold by public auction and fetched Rs. 1,155, as compared with Rs. 1,100 in 1901.

Election.—At the biennial election in December the same members were re-elected for 1902 and 1903, namely, Messrs. D. Joseph, F. A. Prins, and D. A. C. de Alwis.

E. B. ALEXANDER,
Chairman.

Matale, April 22, 1902.

GAMPOLA.

THE year 1901 was one of prosperity and progress. The revenue collected was the largest yet realized.

The expenditure kept pace with the increase in the revenue, and the amounts spent on Police and Sanitary Charges and Public Works were in advance of the sums voted in previous years.

The following statement shows the actual figures:—

REVENUE.	1900. Rs. c.	1901. Rs. c.
Licenses ...	2,429 60	4,157 29
Fines ...	49 0	140 0
Rents ...	1,063 94	1,608 9
Taxes ...	3,207 76	4,678 53
Miscellaneous ...	204 7	1,072 44
	6,954 37	11,657 5
Balance on January 1, 1900 and 1901 ...	1,015 72	862 25
Total ...	7,970 9	12,519 30

EXPENDITURE.	1900. Rs. c.	1901. Rs. c.
Establishment ...	979 0	1,315 0
Revenue Charges ...	346 8	404 69
Office Contingencies ...	178 65	197 7
Police Charges ...	337 60	1,077 18
Sanitary Charges ...	1,597 20	3,106 37
Public Works ...	3,429 75	4,620 63
Miscellaneous ...	239 56	150 82
	7,107 84	10,871 76
Balance on December 31, 1900 and 1901 ...	862 25	1,647 54
Total ...	7,970 9	12,519 30

REVENUE.

Licenses.—The increase is mainly due to the amount of Rs. 2,300 realized by the sale of opium license, against Rs. 995·10 of the previous year.

Fines.—The increase is due to the larger number of prosecutions which were found necessary to maintain the town in a sanitary condition. Under this head the poundage on stray cattle is credited.

Rents.—Three new sources of income were added this year, viz., grazing fees, cemetery fees, and market rents.

Taxes.—The increase under this head is due to the extension of the limits of the Board and the levying of an increased rate (assessment tax) of 4 per cent., against 2½ per cent. recovered during the previous year, and also to the recovery of taxes for the first time on vehicles and animals under section 36 of the Local Boards' Ordinance, No. 13 of 1898.

Miscellaneous.—The increase under this head is made up of a refund of an overpayment of Rs. 228·12 in 1899 to Messrs. Richardson & Cruddas, Bombay, and Rs. 577·50 contribution by the District Road Committee, Kandy, for the construction of an iron bridge on Singhapitiya-Dolosbage road.

EXPENDITURE.

The increase under the head Establishment is due to the appointment of a cemetery-keeper on a salary of Rs. 240 per annum. The chief increase in expenditure was under the heads:—

(1) Police Charges.
(2) Sanitary Charges.
(3) Public Works.

(1) *Police Charges.*—Six new street lamps of a superior pattern were purchased from Messrs. Walker, Sons & Co., Colombo, and were erected on approved sites at a cost of Rs. 602·75, and twelve lamps were maintained in an efficient condition. The board has made provision for six more street lamps for 1902, bringing the number to eighteen.

(2) *Sanitary Charges.*—An additional Horbury latrine was provided for Kirapone at a cost of Rs. 479·93, including value of site and cost of erection. Four latrines on the dry-earth system were maintained during the year. A latrine cart for the removal of night soil was purchased from the

Kandy Municipality. A piece of land, in extent 0A. 3R. 25P., at Kahatapitiya was acquired at a cost of Rs. 414·76, to be used as a sewage farm. The scavenging of the town was efficiently carried on during 1901 on contract.

(3) *Public Works.*—The principal works carried out during the year were :—

(1) The construction of a meat, vegetable, and fish market with the loan of Rs. 6,200 from Government for this purpose.
(2) The erection of an iron bridge with a metalled roadway over the water-course on the road leading to Dolosbage at Singhapitiya at a cost of Rs. 1,055.
(3) The extension of the brick and concrete side drains in Kandy street for a distance of 210 feet at a cost of Rs. 500·52.
(4) Metalling of Malabar street and providing side drains (358 feet) at a cost of Rs. 687·40.
(5) Apportionment of land in the new cemetery among the different religious communities of the town and opening of roads leading to same at a cost of Rs. 370·50.
(6) Erection of a pound for stray cattle near the police station at a cost of Rs. 320.

Health.—The health of the town was good, there were only a few cases of measles and sore-eyes.

WATER SUPPLY.

The most pressing need of the town is a larger, purer, and more widely distributed water supply. It is proposed to supplement the present supply from Mount Temple by utilizing two streams on Ambulluwakanda ; two gauges were fixed at the foot of this hill above Singhapitiya estate, and readings were taken during the year. The water has been pronounced by the Public Analyst as fit for drinking purposes. Plans and estimates for the new scheme were prepared and were submitted to the Board by Mr. Powell, the District Engineer. The Board approved of the proposed scheme, which is now awaiting the approval of the Director of Public Works before final submission to Government for sanction and for the loan which it will be necessary to raise to carry out the work.

GENERAL.

During the year eleven meetings of the Board were held.

In April Mr. J. H. Sproule, junior, a member of this Board for a number of years, resigned upon leaving the Island. Mr. Leon d'Espagnac was nominated by His Excellency the Governor for the vacant membership, in the absence of any meeting of the electors.

At the biennial meeting of electors held during December the following gentlemen were elected for 1902 and 1903, viz., Mudaliyar K. A. James Pohath, the Rev. C. P. Ranasingha, and Mr. M. H. Marikar. The limits of the town were extended for about half a mile along the Kandy road, including the suburb called Kahatapitiya.

A public market consisting of three buildings for fish, meat, and vegetables was opened for use on the 16th December, 1901.

The new general cemetery was opened from 1st April.

The fountain which was at the junction of Ambagamuwa, Kandy, New Nuwara Eliya, and Old Nuwara Eliya streets, put up during the administration of the Right Hon. Sir William Gregory in 1876, was removed, as it interfered with free traffic, two standpipes being put up in its place. It is proposed to rebuild the fountain on a better site, when the new waterworks scheme has been perfected.

Lands, tenements, and buildings within the limits, including the new area, were re-numbered and tin labels affixed.

A good number of cadjan buildings in the prominent parts of the town were pulled down on the orders of the Board by the owners, and substantial buildings with tiled roofs substituted, to the great improvement alike of the appearance and sanitation of the town.

The Census of the town taken on the 1st March, 1901, by the Secretary of the Board and ten enumerators, showed a population of 3,654 persons residing within Local Board limits.

The working of the Road Ordinance is shown in the return given below :—

Progress Return of Collections under the Road Ordinances Nos. 10 of 1861 and 31 of 1884.

		Current Half-year.	Same Half of preceding Year.
1.	One-fifth number of inhabitants of Province or District by last Census, exclusive of immigrant Tamil agricultural labourers	730	588

NAWALAPITIYA.

THE following comparative statement of revenue and expenditure for 1900 and 1901 is annexed :—

REVENUE.	1900. Rs. c.	1901. Rs. c.
Licenses ...	2,085 4	3,980 38
Fines ...	24 0	25 50
Rents ...	1,898 0	2,059 0
Taxes ...	4,370 6	4,368 95
Miscellaneous ...	4,046 21	30 90
	12,423 31	10,464 73
Balance on January 1, 1900 and 1901 ...	1,023 94	3,619 32
Total ...	13,447 25	14,084 5

EXPENDITURE.	1900. Rs. c.	1901. Rs. c.
Establishment ...	970 0	1,249 50
Revenue Services ...	561 36	284 55
Office Contingencies ...	230 65	345 14
Police Charges ...	37 63	1,014 5
Sanitary Charges ...	1,441 89	2,400 34
Public Works ...	5,046 48	1,404 76
Miscellaneous ...	1,539 92	6,338 38
	9,827 93	13,036 72
Balance on December 31, 1900 and 1901 ...	3,619 32	1,047 33
Total ...	13,447 25	14,084 5

REVENUE.

Licenses.—The increase is due to the amount of Rs. 2,562·50 realized by the sale of opium license, against Rs. 754·90 of the previous year.

Rents.—The small increase under this head is due on account of the market rents.

EXPENDITURE.

The main increase in expenditure was under the following heads :—

(1) Police Charges.
(2) Sanitary Charges.
(3) Miscellaneous.

(1) *Police Charges.*—Six new street lamps were purchased from Messrs. Walker, Sons & Co. at a cost of Rs. 593·25, and were put up—one at the junction of Kotmale and Ambagamuwa roads in the centre of the town, two in Ambagamuwa, one in Kotmale road, one near the railway approach to Dolosbage road, and one in Gampola street near the post office.

(2) *Sanitary Charges.*—An additional Horbury latrine was erected near the railway level crossing at Dolosbage road.

(3) *Miscellaneous.*—The increase is due to a watcher for the waterworks being appointed at Rs. 15 per month; interest and sinking fund paid both on water and drain works loan; contribution towards cost of audit; refund to drainage account: acquisition of land (general), night soil depôt, and cemetery land.

PUBLIC WORKS.

(1) *Drainage.*—Concrete drains were constructed in Kotmale road beyond the hospital and in Ambagamuwa and Elphinstone streets during the year at a cost of Rs. 4,891·64 out of the loan of Rs. 10,000 from Government in 1900.

(2) *Dog Kennel.*—A dog kennel was put up near the slaughter-house at Kotmale street for the purpose of keeping stray dogs seized.

(3) *Street Improvement.*—Three small houses were acquired in Elphinstone street at a cost of Rs. 300 for the purpose of widening the road at its junction with Ambagamuwa road.

(4) *Roads.*—The new road to Médagahawatura from Kotmale street was improved.

(5) *Night Soil Depôt.*—A sum of Rs. 850 was paid for an acre of land for deposit of street refuse and burying night soil.

(6) *Cemetery Ground.*—The cemetery ground (18½ acres in extent) at Imbulpitiya was acquired at a cost of Rs. 925; a portion of it has been fenced in and roaded and apportioned among the different religious communities of the town, and came into use from January, 1902.

HEALTH.

The health of the town was satisfactory throughout the year.

WATERWORKS.

The supply during the year was sufficient, and the water is of excellent quality. It is doubtful, however, if the supply can meet the demand of any extended private house services.

GENERAL.

During the year nine meetings of the Board were held. At the biennial meeting of electors held on 17th December, 1901, the following gentlemen were re-elected for 1902 and 1903, viz., Messrs. J. A. F. Atapattu, D. A. Samuel, and H. O. Labbe.

A good number of cadjan buildings in the town were pulled down by the owners by the order of the Board, and substantial buildings with tiled roofs substituted, to the great improvement of the town.

The Census of the town taken on the 1st March, 1901, by the Secretary of the Board and ten enumerators, showed a population of 3,256 persons residing within the Local Board limits.

The working of the Road Ordinance is shown in the return annexed :—

Progress Return of Collections under the Road Ordinances, Nos. 10 of 1861 and 31 of 1884, for the Half-years ended June 30 and December 31, 1901.

		June 30, 1901.		December 31, 1901.	
		Current Half-year.	Same Half in preceding Year.	Current Half-year.	Same Half in preceding Year.

Nawalapitiya, July 15, 1902.

H. WACE,
Chairman.

BOARD OF IMPROVEMENT, NUWARA ELIYA.

THE revenue of the Board amounted to Rs. 34,260·89. This sum includes Rs. 6,449, the balance brought forward from the previous year.

2. The expenditure amounted to Rs. 33,897·05, the principal items being—

	Rs.
Establishment	3,015
Interest and Sinking Fund on Loans	8,903
Sanitation	5,110
Public Works	12,651
Lighting	2,081

The expenditure on Public Works was swelled by the cost of laying out the park, on which Rs. 3,500 was expended. The balance carried forward was Rs. 363 only.

3. *Sanitation.*—The health of the town was good owing to precautionary measures taken; the lake was maintained at a high level during the dry season, with great benefit to the public health. There was no epidemic.

The town is not supplied with hospital accommodation for the isolation of infectious cases (European) in the event of an outbreak, and steps were taken by the Board to bring this fact to the notice of Government. During the season, when every house is more or less crowded, proper isolation is impossible, and removal to hospital is absolutely necessary in the interests of the whole community. It is not to be expected that such accommodation should be provided at the expense of the Nuwara Eliya ratepayers only. The whole Island is more or less interested.

4. The most important works carried out during the year were :—

(1) *Extensions of the Water Mains.*—The mains on either side of the plain were extended 500 and 200 yards respectively. A further extension on the Badulla road side to supply all the new houses will be carried out during the current year. A small additional loan has been asked for for this necessary work.

(2) *Model Dwellings.*—Sixteen rooms out of twenty-five were completed and occupied during the year. An unfortunate subsidence in the foundations caused delay in the completion of the work, but at the time of writing all twenty-five rooms are in occupation. These dwellings have only partially relieved the overcrowding, which has so long existed in the town. Further accommodation for the poorer classes is necessary, and the plans and estimates have been prepared for the conversion of the now unused dharma lines on the Badulla road into dwellings. This will provide twelve more rooms, and at the same time leave sufficient accommodation for native travellers. A further block of twenty-four houses on the ground behind the police station is also in contemplation.

(3) *The Plains.*—Considerable improvement has been effected here. The drains have been cleared and extended, the unsightly swamp near Nanu-oya corner filled in and planted, the cricket ground has been completed, and the polo and football grounds materially improved. All this has been done without expense to the ratepayers, prison labour having been employed throughout.

(4) *The Park.*—An immense deal of work has been done here both with prison and paid labour. The park has been fenced, partly roaded, and laid out in lawns, shrubberies, and avenues; the river has also been bridged.

An extent of 5 acres has, with the sanction of Government, been handed over to the Botanical Department for purposes of experimental cultivation at a high elevation, and much public benefit may be expected therefrom. This garden is under the able supervision of Mr. W. Nock of Hakgala.

(5) *Flood Outlets.*—There was more than one heavy flood during the year, and the question of flood outlets had the serious attention of the Board. Experiments are to be tried at one or two points in the river to relieve the pressure of water and to afford freer escape into the lake.

(6) *The Lake.*—The path round the lake was completed and planted up and is an undoubted improvement. A dredger has been provided for by Government, and will, it is hoped, be well at work before the close of the current year.

(7) *Land Acquisition.*—The Board has taken steps to secure to the public all the land lying between the two roads which encircle the plain, much of which has hitherto been in private hands; the advantage of securing this land for public purposes is obvious, and when acquired it will be gradually laid out as labour and funds permit of.

5. In minor matters much useful work was done. The streets were better lighted, six new lamps being added. The Grand Hotel approach road was widened and a side walk constructed. The road frontages were planted up and improved. Iron roof painting was systematically carried on, and great attention was paid to the outward appearance of all new buildings constructed. The new Bazaar road is in process of transformation from an ordinary bazaar into a fine street. Pillar-boxes have also been erected. In deference to the widely expressed feeling in favour of an Unofficial Member of the Board to represent the taxpayers, Dr. Woutersz, the District Medical Officer, kindly offered to resign his seat on the Board, and Mr. E. Rosling was appointed as an Unofficial Member. Dr. Woutersz's services as sanitary adviser were retained to the Board, which is much strengthened by Mr. Rosling's appointment.

6. Mr. Stanley Colls, District Engineer, was on leave during six months of the year, his seat on the Board being ably filled by Mr. R. W. Smith.

The ratepayers are indebted to both these gentlemen for much useful advice and assistance during the year.

I annex the usual statements of the Board's revenue and expenditure :—

Statement of Revenue and Expenditure for the Year 1901.

			Law Expenses... ...	21 0	
			Audit Charges... ...	159 50	
					17,517 3
			Balance	—	7,248 65
Total ...		24,765 68	Total ...		24,765 68

2. The increase under the head Licenses is due to the fact that in previous years a refund was obtained from the Treasurer of cart licenses for carts within the Local Board limits only, whereas the Ordinance allows the Board a refund of stamp duty paid for all carts, &c., licensed at the Kachcheri. Under this head alone the revenue was Rs. 2,588·52, as compared with Rs. 987·29 in 1900.

3. The opium rent for 1901, sold in 1900, realized a sum of Rs. 3,750. This high figure was the result of outside competition. The licensee increased his profits by providing opium for the purposes of illicit sale in Weligama, 11 miles from Matara. He is said, however, to have been a loser on the whole, and the opium rent for 1902, sold in November, 1901, realized only Rs. 1,750.

4. The subjoined statement shows the comparative working of the Road Ordinance within Local Board limits for the years 1900 and 1901 :—

		1900.		1901.
1.	One-fifth number of inhabitants of Province or District by last Census, exclusive of immigrant Tamil agricultural labourers	2,183	...	2,369

* Since released, having paid the fine.

5. A large number of persons liable elect to work, but I doubt if their work is properly supervised. In future tasks should be given to them, and they should be set to break metal.

6. A sum of Rs. 15,000 was voted in April, 1901, for building a Town Hall, in accordance with plans and estimate furnished by Mr. Caldicott, District Engineer. The site chosen was the Kachcheri garden in the Fort between the Police Court and the Dutch Church.

7. It was subsequently discovered that the Board had not sufficient funds at its disposal to meet the cost of construction, and it was resolved that Rs. 5,000 should be voted from the funds of the Board and an application made to Government for a loan of Rs. 10,000, the balance required. The application was met with the reply that His Excellency the Governor did not consider that a Town Hall should be built until all the sanitary requirements of the town had been satisfactorily provided for.

8. This decision left the Board with a balance at its disposal for effecting numerous minor improvements. The following is a list of lesser schemes proposed or undertaken in the course of the year:—

(1) Construction of a cart to carry chatties for the distribution of drinking water from Pallimulla well. The barrels used by the owners of private water carts are foul with the accumulations of years. The Local Board cart, apart from the cost of its construction and of providing new chatties from time to time, shows a monthly working expenditure of Rs. 18, while its receipts are only Rs. 4·52 per mensem on an average. A less expensive method must be found of distributing pure water.

(2) Retaining wall and steps to the bathing kraal near the Matara iron bridge. Cost Rs. 287·63. Plan and estimate furnished by Mr. Caldicott, District Engineer.

(3) Pillars for four lamps to light the Matara bridge. Cost Rs. 204·58. Design by the District Engineer. Money was also voted for the purchase of the lamps from England.

(4) Preparation of a large plan of the Local Board limits, showing all streets and important buildings. Cost Rs. 50.

(5) Purchase of a new latrine cart at a cost of Rs. 334·07.

(6) Erection of two dust bins. Cost Rs. 110·95.

(7) Purchase of five additional Horbury latrines and three sanitary pans on wheels, to obviate the necessity for relays of buckets.

(8) Paint for latrines, lamp-posts, and Nupe market.

(9) Iron hurdles for the esplanade.

(10) Ornamental railings for the ramparts.

(11) Two additional public seats made of teak.

(12) A vote of Rs. 55 for the purchase of a weather cock.

(13) A vote of Rs. 650 for the construction and cementing of a bathing-place near the Matara island.

(14) A vote of Rs. 250 for improving the approaches to Piladuwa, the District Road Committee voting Rs. 400 for the same purpose.

(15) New bathing kraals at the bridge at Nupe and at Karawa.

9. The Local Board is much indebted to Mr. Caldicott, District Engineer, for his gratuitous services in preparing plans and estimates for the Town Hall, for lamp pillars, for constructing Brown's Hill road, for improvements to the bathing-places near the bridge and at the island, and the Chairman is under personal obligations to him for advice in these and other matters.

10. Overhanging branches have been cut on many of the roads, and the sides reduced and drains cut. Some of the drains in the Fort have unfortunately been cut too deep, and the rain accumulates there instead of running off to the river by the culverts, which are built at a higher level. These drains, however, will soon silt up, and should in 1902 be replaced by permanent waterways in cement. The foliage overhanging the roads in Karawa and Uyanwatta still requires to be cut to admit of light and air to dwelling-houses and to prevent the roads from getting muddy.

11. The crocodiles in Nilwala-ganga still claim their victims. In September a boy of sixteen years of age was seized by one of these beasts whilst bathing a bull in the river within Local Board limits. His brother managed to extricate him from the jaws of the animal, but its victim was so fearfully lacerated that he died the next day. The Board has raised the rate of reward to be paid for the destruction of crocodiles and their eggs. In the course of the year nine crocodiles were destroyed. One was shot near the island in the sea, whither it had been carried by flood. Sixty-two eggs were brought to the office and paid for at the rate of 25 cents each, and destroyed.

12. The Matara island has been improved. It is one of the characteristic features of the town. It is connected with the mainland by a rubble causeway, which has now been provided with a path of cement concrete. There are only four old cocoanut trees left to grace its summit. These will shortly fall. The whole island has been recently planted with young cocoanut trees. There are twenty-three enclosures with thriving young plants; and eleven plants of from three to four years' growth, which were transported from some distance and planted in September and November. With a little attention they will thrive. The swimming bath, for which money has been voted, is still to be built. A *Cassia nodosa* was also planted on the island, and this and other ornamental species of trees have been put in at the back of the market boutiques at Kotuwegoda.

13. The weights and measures used in the boutiques were tested, and those that were not according to standard were destroyed. The Local Board has laid in a supply of these articles for sale to boutique-keepers.

14. Some difficulty was experienced in the course of the year in connection with burials in private gardens. Under Ordinance No. 1 of 1895 the consent of the Chairman of the Local Board is necessary for the removal of bodies for burial outside the limits of the Board. This consent has recently been consistently refused, as there are no licensed burial grounds other than the public cemetery either within or outside the Local Board limits. In spite of the refusal bodies have been removed. The prosecutions which followed resulted in convictions, and in a test case the conviction was affirmed in appeal. If any wish to register private burial grounds, they have only to apply to the Board in terms of the Cemeteries Ordinance, and no reasonable application would be refused in the absence of sanitary objections.

15. Efforts have been made to keep the Seabeach road in a sanitary condition. Patrols have been put on, and prosecutions have been entered against those who commit nuisance on the seabeach and keep their gardens bordering the road in a filthy condition. This road is a favourite promenade for all classes of the town, and should be kept perfectly sweet and clean. It has been much improved in this respect, but is not yet entirely satisfactory. Unflagging vigilance is necessary.

16. The following works should be executed in the near future :—

(1) Metalling market street. This street is important as it runs parallel to the crowded main road through the bazaar, and is an alternative route to Meddawatta.
(2) Carriage and hackery stand near the bo-tree by Kotuwegoda market.
(3) More iron pillars and an improved type of street lamp.
(4) More dust bins.
(5) Cementing Kotuwegoda market.
(6) Cement drains.
(7) A wall along portions of the Beach road to prevent encroachment by the sea.
(8) Separate kraals for (i.) washing clothes, (ii.) for bathing, (iii.) for bathing cattle.
(9) Formation of a road through Brown's Hill connecting the Beach road with the Tangalla road at Meddawatta. The estimated cost of this work is Rs. 12,000, and unless it is executed in sections is much beyond the means of the Board.
(10) Improvements to the Weragampita-Naimana road. This runs through the outskirts of the town. The inhabitants of the locality complain that they pay rates and taxes, but derive little benefit from the Board.

17. In December, 1901, the chief roads and bridges in the town of Matara were proclaimed under section 54 of the Local Boards' Ordinance as no longer vested in the Local Board.

The above report is the work of Mr. Hill, the late Chairman.

K. MACLEOD,
Chairman.

Matara, February 27, 1902.

EASTERN PROVINCE.

BATTICALOA.

ANNEXED is a statement of the revenue and expenditure of the Board for 1900 and 1901. The decrease in 1901 is due chiefly to the fact that the revenue of 1900 included a sum of Rs. 2,000 realized by the sale to Government of land belonging to the Board adjoining the public markets, for the erection of a new police station and barracks, and partly also to the loss to the Board of nearly Rs. 1,000 stamp duty on licenses for carts and boats throughout the district, which by the amendment of the Small Towns Ordinance is now credited to the funds of the Board of Health for the benefit of the five villages of Eraur, Karankuddiruppu, Kalmunai, Saindamarathu, and Sammanturai, which are in its charge under the Small Towns Ordinance.

Comparative Statement of Revenue and Expenditure for the Years 1900 and 1901.

REVENUE.	1900. Rs. c.	1901. Rs. c.	EXPENDITURE.	1900. Rs. c.	1901. Rs. c.

Total ...	17,190 37	13,614 91	Total ...	17,190 37	13,614 91

The expenditure for the year calls for no particular comment. The annexed statement shows the debts of the Board, which have now been reduced from Rs. 23,000 to Rs. 14,660 :—

Statement of Debts.

Name of Body.	Debt.	To whom due.	Rate of Interest.	When incurred, and for what cause.	Provision for Payment of Interest and Sinking Fund, and Enactment by which it is made.	Amount of Original Debt.	Amount repaid.	Balance due on December 31, 1901.
	Rs.					Rs.	Rs.	Rs.
Local Board of Health and Improvement, Batticaloa	14,400	The Government of Ceylon	3½ per cent.	September 8, 1891, and February 29, 1892, for constructing markets	General Revenue, under Ordinance No. 13 of 1898	20,000	5,600	14,400
Do.	260	do.	4 per cent.	April 16, 1898, for establishing the new cemetery and for the general improvement and conservancy of the town	do.	3,000	2,740	260
Total ...	14,660					23,000	8,340	14,660

The following statement shows in detail the collection of road tax:—

Comparative Statement of Collections under the Road Ordinances, Nos. 10 of 1861 and 31 of 1884, for the Years 1900 and 1901.

		1900.	1901.
1.	One-fifth number of inhabitants of Province or District by last Census, exclusive of immigrant Tamil agricultural labourers	1,697·04 ...	1,995·4
2.	Number of names borne on division officers' returns ...	2,445 ...	2,526
3.	Percentage of 2 to 1	144·07 ...	126·61
4.	Number of persons exempted from labour in year ...	70 ...	99
5.	Percentage of 4 to 2	2·86 ...	3·91
6.	Number of names borne on division officers' returns less exemptions—2 less 4	2,375 ...	2,427
7.	Percentage of 6 to 1	139·95 ...	121·65
8.	i. Paid commutation	2,110 ...	2,143
	ii. Performed labour	42 ...	12
	iii. Fined	— ...	2
	iv. Imprisoned	— ...	2
	v. Total of i., ii., iii., iv., being number of persons who discharged their liability	2,152 ...	2,159
9.	Percentage of those who discharged their liability to number liable, being of 8 (v.) to 6	90·61 ...	88·95
10.	Percentage of those who discharged their liability to one-fifth of inhabitants, being of 8 (v.) to 1 ...	126·81 ...	108·22
11.	Accounted for as died, paid elsewhere, double entries, and erroneous entries	223 ...	268
12.	Unaccounted for on last day of the year ...	— ...	—

Public Health.—The health of the town was satisfactory during the year. There was no epidemic disease in any form and no general illness, with the exception of a few cases of measles and dysentery during the hot months.

303 stray dogs and 1,669 rats were destroyed during the year. A much larger number of the latter might have been destroyed but for the superstition of the boutique-keepers and traders, who will not assist in their destruction.

Maintenance of Works.—The 15 miles of road in charge of the Board were kept in fair order. Some of the main roads have been re-gravelled and the rest repaired, and three culverts and one wooden bridge were repaired.

Conservancy.—The conservancy of the public latrines is only carried on with much difficulty and at high wages by means of labour imported from Colombo, and the impossibility of procuring a larger supply of this labour prevents the Board from introducing, much less enforcing, the dry-earth system in private premises instead of the privies and cesspits, which at present constitute a danger to the health of the town.

Water Supply.—There would not, I believe, be any engineering difficulty in supplying the town of Batticaloa with water from the Rugam or Unnichchai irrigation schemes, but the initial cost and annual cost of maintenance places such a project entirely beyond the limited means of the Board, already burdened with debt.

Improvements.—With its limited resources the Board can only introduce improvements gradually and on a small scale. The most insanitary quarters of the town are the Fishers' and Moors' quarters, and estimates amounting to Rs. 1,378 have been passed for their improvement during the present year, which provides for opening three new roads 15 feet wide through these quarters, and providing them with Horbury's iron latrines, which will effect considerable improvement in their state.

SAML. HAUGHTON,
Chairman.

Local Board Office,
Batticaloa, February 20, 1902.

TRINCOMALEE.

THE revenue for the year amounted to Rs. 13,172·59, a falling off of Rs. 251·38 when compared with the revenue of 1900, the decrease being under the heads of Fines and Rents, while the other heads show a trifling increase. A statement of revenue and expenditure is annexed:—

REVENUE.	Amount. Rs. c.	Total. Rs. c.
Balance on December 31, 1900 ...	—	448 7
Taxes	6,622 63	
Licenses	2,314 68	
Fines	241. 1	
Rents	3,337 55	
Sundries	656 72	
		13,172 59
Total ...		13,620 66

EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.
Establishment	2,472 0	
Office Contingencies ...	118 78	
Revenue Services ...	825 10	
Police Charges	7 50	
Sanitary Charges	4,140 54	
Interest and Sinking Fund on Loans	330 0	
Law Expenses	33 0	
Public Works'	3,082 76	
Lighting	1,785 27	
Contribution towards cost of Audit	136 30	
Miscellaneous	150 20	
		13,081 45
Balance on December 31, 1901 ...	—	539 21
Total ...		13,620 66

It will be seen that the expenditure amounted only to Rs. 13,081·45, whereas in 1900 there was an expenditure of Rs. 15,575·56, which was then rendered possible by the balance of Rs. 2,599 brought forward from the previous year. The result has been a considerable reduction of public works, for which only Rs. 3,082·76 was available. In all other branches the expenditure was practically the same as in 1900, and there has been no reduction in the important item of Sanitary Charges, which (with special precaution against plague) absorbed Rs. 4,140·50 out of the total revenue, and a further sum of Rs. 534·63 was expended under the head of Public Works on drainage.

The lighting of the town has been much improved by the adoption of a new type of street lamps, which are being introduced as far as funds will permit, in place of the old lamps, which are being removed to the less frequented highways.

Local Debt.—The annexed statement shows the indebtedness of the Board :—

Name of Body.	Debt.	To whom due.	Rate of Interest.	When incurred, and for what cause.	Provision for Payment of Interest and Sinking Fund, and Enactment by which it is made.	Amount of Original Debt.	Amount repaid.	Balance due on December 31, 1901.
	Rs.					Rs.	Rs.	Rs.
Local Board of Health and Improvement, Trincomalee	2,550	The Government of Ceylon	4 per cent.	April 13, 1894, to improve the town drainage and to open new roads in Moors' quarters	General Revenue, under Ordinance No. 13 of 1898 and 2 of 1901	3,000	450	2,550
Do.	2,610	do.	do.	April 10, 1895, for improvement to Fishers' quarters	do.	3,000	390	2,610
Total ...	5,160					6,000	840	5,160

The original debt has been reduced by Rs. 840.

Thoroughfares Ordinance.—A statement is annexed in the usual form showing the return of collections under the Road Ordinances, Nos. 10 of 1861 and 31 of 1884 :—

		1900.	1901.
1.	One-fifth number of inhabitants of Province or District by last Census, exclusive of immigrant Tamil agricultural labourers	2,577 ...	2,043
2.	Number of names borne on division officers' returns ...	3,231 ...	3,374
3.	Percentage of 2 to 1	125·38 ...	165·15
4.	Number of persons exempted from labour in year ...	36 ...	32
5.	Percentage of 4 to 2	1·11 ...	·95
6.	Number of names borne on division officers' returns less exemptions—2 less 4	3,195	3,342
7.	Percentage of 6 to 1	126·98 ...	163·58
8.	i. Paid commutation	2,869 ...	2,948
	ii. Performed labour	13 ...	1
	iii. Fined	1 ...	1
	iv. Imprisoned	— ...	1
	v. Total of i., ii., iii., iv., being number of persons who discharged their liability	2,883 ...	2,951
9.	Percentage of those who discharged their liability to number liable, being of 8 (v.) to 6	90·23 ...	88·30
10.	Percentage of those who discharged their liability to one-fifth of inhabitants, being of 8 (v.) to 1 ...	111·91 ...	144·44
11.	Accounted for as died, paid elsewhere, double entries, and erroneous entries	169 ...	222
12.	Unaccounted for on last day of quarter ...	143 ...	169

The number on the division officers' roll, which in 1900 fell to 3,231, rose again in 1901 to 3,374, and the total number of persons who discharged their liability rose from 2,883 to 2,951, while 222 were accounted for as died, paid elsewhere, double entries, &c.

Health of the Town.—Last year I noted a very considerable improvement in the health of the town, and I am glad to be able to report that the improvement was maintained in 1901. The numbers of deaths registered were as follows :—

1898	...	...	407	1900	...	...	398
1899	...	...	671	1901	...	...	386

There were a few cases of measles and chickenpox towards the close of the year, but no epidemics of a more serious nature, and for the first time Trincomalee has escaped cholera for a whole decade.

I am also informed that the health of the sailors on His Majesty's ships on this station has been better than it has ever been known to be in former years.

Every precaution was taken to prevent the introduction of plague from the neighbouring continent, and great attention paid to cleanliness in the town.

No less than 8,331 rats were destroyed during the year.

C. M. LUSHINGTON,
Chairman.

NORTH-WESTERN PROVINCE.

KURUNEGALA.

ANNEXED is a comparative statement of the revenue and expenditure for the last two years. With the exception of Sundries, all the heads of revenue show an increase. The increase in Licenses is due to the higher prices for the opium rent. There was keen competition between the old renter and a new bidder, in which the latter was successful. The total amount available for expenditure by the Board was, however, less than in the previous year, as the balance on the 1st January, 1901, was only Rs. 1,000, as against a balance of nearly Rs. 8,500 on the 1st January, 1900, and until the end of the year, when the opium rent was paid in, the strictest economy had to be exercised in respect of Public Works, the expenditure on which fell from Rs. 18,209 to Rs. 8,183. The expenditure in 1900 was, however, abnormal, and absorbed practically the whole balance at the disposal of the Board. In the previous year it had only amounted to Rs. 8,215:—

RECEIPTS.	1900. Rs. c.	1901. Rs. c.
Balance on January 1 ...	8,405 62	1,005 40
Taxes ...	5,777 20	5,920 87
Licenses ...	10,162 70	13,128 1
Fines ...	621 30	651 60
Rents ...	184 75	322 50
Sundries ...	6,020 3	4,219 99
Total ...	31,171 60	25,248 37

EXPENDITURE.	1900. Rs. c.	1901. Rs. c.
Establishment ...	2,509 66	2,404 44

Miscellaneous ...	933 39	—
Plague Precautions ...	209 10	—
Refunds	0 95	648 35
	30,166 20	21,541 2
Balances	1,005 40	3,707 35
Total ...	31,171 60	25,248 37

Water Supply.—Mr. R. W. Smith of the Public Works Department, who was previously engaged in the question of a water supply for the Kurunegala town, returned to Kurunegala towards the end of the year, and it is to be hoped that the work will be commenced in the course of the year. A good supply of water would do much to improve the health of the place.

Drainage.—The system on which drains have been built seems capable of great improvement, but the cost has hitherto been deterrent. They are far too deep, and are consequently difficult to keep clean. With an abundant supply of water they might be sufficiently flushed, but the work as done by coolies, though expensive, is ineffective. A survey has been made and levels taken with a view to improving the drainage, and the plans are with the Provincial Engineer.

Public Market and Recreation Ground.—Sites for both market and recreation ground have been chosen and surveys are now being made. It will be necessary to raise a loan in order to carry out these much-needed improvements.

Sanitation.—The scavenging of the town has been carried out satisfactorily.

Lighting.—A reduction in the number of lamps had to be made last year, but it is hoped that with improving revenue this measure of economy will cease to be necessary.

Roads.—The town roads were maintained in good order throughout the year.

Public Buildings.—The new Land Registry Office has been completed. The new powder magazine is in course of construction, and the site of the old building is to be utilized for a house for the District Judge. The want of a suitable building for a Post Office is generally felt. There is an excellent site available for the erection of a building, which would be an ornament to the town.

Working of Thoroughfares Ordinance.—The usual comparative statement of the working of this Ordinance is appended. It will be seen that there is an increase in the number and in the percentage of those who have discharged their liability. Under the last two heads (ineffectives), the number is 181, as against 206 at the end of 1900:—

		1901.	1900.
1.	One-fifth number of inhabitants of Province or District by last Census, exclusive of immigrant Tamil agricultural labourers	1,200	871
2.	Number of names borne on division officers' returns ...	1,947	1,932
3.	Percentage of 2 to 1	162·25	221·81
4.	Number of persons exempted from labour in year ...	53	55
5.	Percentage of 4 to 2	2·72	2·84
6.	Number of names borne on division officers' returns less exemptions—2 less 4	1,894	1,877
7.	Percentage of 6 to 1	157·83	215·49
8.	i. Paid commutation	1,717	1,671
	ii. Performed labour	—	—
	iii. Fined	2	—
	iv. Imprisoned	—	—
	v. Total of i., ii., iii., iv., being number of persons who discharged their liability	1,713	1,671
9.	Percentage of those who discharged their liability to number liable, being of 8 (v.) to 6	90·44	89·02
10.	Percentage of those who discharged their liability to one-fifth of inhabitants, being of 8 (v.) to 1	142·75	191·84
11.	Accounted for as died, paid elsewhere, double entries, and erroneous entries	60	149
12.	Unaccounted for on last day of year	121*	57

* Left the district.

Kurunegala, February 8, 1902.

H. L. CRAWFORD,
Chairman.

PUTTALAM.

A COMPARATIVE statement of the revenue and expenditure of the Board in 1900 and 1901 is annexed:—

REVENUE.	1900. Rs. c.	1901. Rs. c.
Taxes ...	4,856 90	4,409 93
Licenses ...	4,826 12	5,385 19
Fines ...	166 50	108 20

The loan account stands as follows:—

	Rs.		Rs.
To loan from General Revenue granted on August 5, 1892	7,000	By amount spent on improvements to Water-works in 1892-93	5,000
		By amount spent on the erection of the Infectious Diseases Hospital in 1892-93 ...	2,000
Total ...	7,000	Total ...	7,000

Debt Statement.

	Rs.		Rs.
To amount borrowed of Government on August 5, 1892, as shown above ...	7,000	By amount repaid to Government up to end of December, 1901	1,260
		By balance payable	5,740
Total ...	7,000	Total ...	7,000

The following comparative statement shows the working of the Thoroughfares Ordinance in 1900 and 1901:—

	1900.		Percentage on B.	1901.		Percentage on B.
1. Population (A)	—	4,814	—	—	4,814	—
2. Number on lists (B)	—	1,248	—	—	1,317	—
3. Effective in the town:—						
(a) Paid at single rate	1,082		86·70	1,160		88·07
(b) Paid at double rate	24		1·92	10		·75
(c) Laboured 6 days	—		—	—		—
		1,106	88·62		1,170	88·83
4. Non-effective within Local Board, but have discharged their liability:—						
(a) Exempted	6		·48	12		·91
(b) Paid elsewhere	13		1·04	16		1·21
(c) Committed to jail ...	—		—	—		—
(d) Fined	2		—	—		—
(e) Worked 24 days	—		—	—		—
(f) Double entries	26		2·08	23		1·74
(g) Dead	16		1·28	12		·91
		63	5·04		63	4·78
5. Non-effective:—						
(a) Reported to have left the district ...	62		4·96	80		6·07
(b) Otherwise not accounted for ...	17		1·36	4		·30
		79	6·33		84	6·37

The health of the town was normal, but there is always fever prevailing during wet weather, owing to the insanitary swamps in the vicinity of the town. The work of filling up Kanganykulam is being steadily carried on, and one of the bathing pools on the esplanade was filled up. The other should be filled up in the dry season of 1902.

An outbreak of smallpox occurred in July, the disease being introduced into the district by a pilgrim travelling to St. Anna's. Two cases occurred within Local Board limits, one of which proved fatal.

The scavenging of the town was given on contract, but it is still unsatisfactory. Another contractor has taken the contract for 1902. A burial ground for burial of paupers and hospital patients was established near the plague hospital. The Board maintains a permanent infectious diseases hospital and two temporary plague camps.

A vote of Rs. 960 was taken for the construction of a new market for the sale of beef, mutton, and poultry. The work has still to be carried out.

The new road connecting the Chilaw and Kurunegala roads was completed.

The town is partially lighted by eighteen lamps. More lamps are required, and they should by provided from time to time as funds permit.

The opium licenses for 1902 sold for Rs. 1,755, an increase of Rs. 1,005 over the rate for 1901.

The water supply is still unsatisfactory in quality, but so far it has been found impossible to secure a better source of supply.

H. W. BRODHURST,
Chairman.

Puttalam, February 4, 1902.

19(1)02

CHILAW.

A COMPARATIVE statement of the revenue and expenditure of the Local Board for 1900 and 1901 is annexed:—

REVENUE.	1900. Rs. c.	1901. Rs. c.	EXPENDITURE.	1900. Rs. c.	1901. Rs. c.
Taxes ...	3,582 23	3,264 77	Establishment ...	1,500 0	1,775 0
Licenses ...	10,296 72	10,385 64	Office Contingencies ...	282 33	314 20
Fines ...	212 35	305 40	Revenue Services ...	757 62	938 61
Rent ...	558 39	899 95	Police Charges ...	54 55	35 70
Sundries ...	918 23	6,008 93	Sanitary Charges ...	1,838 63	11,954 82
Loan ...	—	10,000 0	Law Expenses ...	—	10 50
			Public Works ...	9,445 76	8,505 80
			Lighting ...	1,248 97	1,925 57
			Audit ...	88 0	118 33
			Miscellaneous ...	972 90	4,966 11
	15,567 92	30,864 69		16,188 76	30,544 64
Balance...	2,584 29	1,963 45	Balance...	1,963 45	2,283 50
Total ...	18,152 21	32,828 14	Total ...	18,152 21	32,828 14

The above statement includes a loan of Rs. 10,000 obtained from the Ceylon Government for the purpose of reclaiming the low and marshly land lying along the eastern side of the river to the south of the public markets. Of this loan, a sum of Rs. 9,781·93, which is included in the item of Rs. 11,954·82 appearing under the head Sanitary Charges, was spent during the year in building a retaining wall to the length of 272 feet, in payment of compensation for lands acquired, and in the purchase of tip wagons and rails for the purpose of transporting sand from the sandbank on the seaside to the low land referred to above. The balance left of the loan is Rs. 218·07, and which has been brought forward to 1902.

The items of Rs. 4,966·11 and Rs. 6,008·93 under the heads Miscellaneous and Sundries, respectively, are really cross entries, being advances made and repayments of them.

A sum of nearly Rs. 1,400 out of Rs. 6,008·93 appearing against Sundries is made up of sale of town sweepings, petty collections, and the contribution of Government for the upkeep of the main road and the approach road to Government buildings, which were previous to 1901 in charge of the Public Works Department and are now vested in the Board.

There was an increase of Rs. 570 under the head of Opium.

The rates of taxes imposed during the year were as follows :—

Assessment tax	...	At 2½ per cent.
Commutation tax	...	At Re. 1·50 each man
Dog tax	...	At 50 cents each
Vehicle tax — Carriages	...	At Rs. 2·50 each
Vehicle tax — Carts	...	At Re. 1·50 each
Vehicle tax — Horses	...	At Re. 1·50 each

Ninety-two dogs were registered and 79 stray dogs were killed.

The following are the principal works undertaken :—

(1) Completion of the slaughter-house. The building was opened for use in February.
(2) The new entrance road into town, the land for which had to be acquired at a cost of Rs. 1,175, was traced and formed. The necessary materials to complete the work, such as metal and gravel, were also obtained and paid for during the year.
(3) A new bleaching green—extent 2 roods and 27 perches—was provided for the use of the dhobies on the east of the dhobies' tank, at a cost of Rs. 750.
(4) A portion of Punakulam road and the whole length of ferry street were widened to 20 feet, and side drains built for the former.
(5) The northern half of St. Mary's street was widened to 20 feet and carried to meet the Alutwatta road.
(6) The Alutwatta road, which starts from Jetty street junction and meets the Puttalam road—over 60 chains in length—was widened to 20 feet throughout.

Besides the above, the other roads which required maintenance and all the public buildings were kept in good order and repair.

A portion of the premises of the slaughter-house was enclosed and a few kinds of vegetables, such as tomato, capsicum, melon, vegetable marrow, beans, &c., were planted as an experiment with a view to establishing a vegetable garden on a comparative large scale to supply the town. The tomatoes and capsicums came up well, but not the rest.

In the latter part of the year a number of mahogany plants and slips of several kinds of oleanda from Jaffna, and bushy flower plants, such as *Capparis zeylanica*, *Randia mairanthæ*, *Durantæ*, *Plumerid*, and several kinds of *Hibiscus* from Peradeniya were obtained and planted. These are so far thriving well.

Lighting.—Thirty lamps are lighted in the town, 7 lamps till daybreak and the remaining 23 till 10 o'clock in the night. The cost came to about Rs. 900.

Scavenging.—The staff was increased by one cart and a sweeper, thus amounting in all to three carts and six sweepers and two latrine-keepers. The work was done very satisfactorily. The public latrines were well maintained during the year.

Health.—The health of the town was good throughout the year. There were no epidemic diseases. There were 105 births and 126 deaths, as against 110 births and 132 deaths in 1900. The rainfall was 46·02 inches, as against 49·62 in 1900.

Thoroughfares Ordinance.—A comparative statement of the working of the Ordinance is appended:—

	1900.		Percentage on B.	1901.		Percentage on B.
1. Population (A)	—	3,707	—	—	4,384	—
2. Number on lists (B)	—	1,264	—	—	1,375	—
3. Effective in the town :—						
(*a*) Paid at single rate ...	1,118		88·44	1,249		90·83
(*b*) Paid at double rate ...	22		1·74	15		1·09
(*c*) Laboured 6 days ...	—		—	—		—
		1,140	90·18		1,264	91·92
4. Not effective within Local Board, but have discharged their liability :—						
(*a*) Exempted	16		1·26	11		·80
(*b*) Paid elsewhere	37		2·92	31		2·25
(*c*) Committed to jail ...	—		—	—		—
(*d*) Fined	1		·08	—		—
(*e*) Worked for 24 days ...	—		—	—		—
(*f*) Double entries	4		·31	4		·29
(*g*) Dead	5		·39	3		·21
		63	4·11		49	3·56
5. Non-effective :—						
(*a*) Reported to have left village ...	50		3·95	52		3·78
(*b*) Otherwise not arrested ...	11		·87	10		·72
		61	4·82		62	4·50

General.—During the year eleven meetings were held. There was a change in the official members by the transfer of Dr. Philips and the arrival of Dr. Rode. I succeeded Mr. Fraser in August. The unofficial members are the same as in 1900. Mr. Philips, who held the office of Secretary to the Local Board since its establishment, viz., 1889, resigned on December 31, 1901.

There is still room for many further improvements. The following are some of the requirements :—

(1) A general cemetery.
(2) Water supply.
(3) Reclamation of the western side of the river, the eastern side having been taken in hand.
(4) Construction of a new bridge with proper masonry abutments across the river at Chilaw.
(5) The building of a masonry drain along the Colombo-Puttalam road in the town.
(6) An undenominational mixed high school.

Local Board Office,
Chilaw, February 18, 1902.

J. H. LEAK,
Chairman.

PROVINCE OF UVA.

BADULLA.

THE revenue and expenditure of the Board for the years 1900 and 1901 are shown in the comparative statement annexed :—

REVENUE.	1900. Rs. c.	1901. Rs. c.	EXPENDITURE.	1900. Rs. c.	1901. Rs. c.
Taxes	8,078 76	7,824 74	Establishment ...	1,607 42	2,077 48
Licenses	3,792 52	4,430 17	Office Contingencies ...	164 34	184 92
Fines	228 41	434 91	Revenue Services ...	828 28	481 44
Rents	949 28	744 50	Police Charges ...	48 5	32 58
Sundries	692 94	923 20	Sanitary Charges ...	3,634 13	3,208 95
	13,741 91	14,357 52	Interest and Sinking Fund on Loans ...	1,719 87	1,691 28
Balance on January 1, 1900 and 1901 ...	1,275 28	1,651 93	Law Expenses ...	5 40	8 0
			Public Works ...	4,088 62	3,512 42
			Street Lighting ...	818 41	662 15
			Contribution towards cost of Audit ...	128 29	128 83
			Miscellaneous ...	322 45	407 48
				13,365 26	12,395 53
			Balance on December 31, 1900 and 1901 ...	1,651 93	3,613 92
Total ...	15,017 19	16,009 45	Total ...	15,017 19	16,009 45

2. The only item of receipt in which there has been a material fluctuation is the sale of the opium license for the town of Badulla for 1902, the amount for which, Rs. 1,805, is paid in advance in 1901. This shows a substantial increase in the amount received in the previous year of Rs. 1,010.

3. *Taxes.*—Local rate at 3½ per cent. in 1901, the same as in 1900, yielded Rs. 3,176·71, as against Rs. 3,270·46.

4. Water-rate yielded Rs. 2,003·77, as against Rs. 2,167·30.

5. Commutation tax, the single rate being Rs. 2, brought in Rs. 2,202, as against Rs. 2,183·50.

6. The working of the Thoroughfares Ordinance during 1901 is shown in the return given below :—

		1900.	1901.
1.	One-fifth number of inhabitants of town by last Census, exclusive of immigrant Tamil agricultural labourers ...	1,097	1,184
2.	Number of names borne on division officers' returns ...	1,231	1,253
3.	Percentage of 2 to 1	112·21	105·82
4.	Number of persons exempted from labour in year ...	25	27
5.	Percentage of 4 to 2	2·03	2·15
6.	Number of names borne on division officers' returns less exemptions—2 less 4	1,206	1,226
7.	Percentage of 6 to 1	109·93	103·54
8.	i. Paid commutation	1,079	1,070
	ii. Performed labour	20	54
	iii. Fined	—	3
	iv. Imprisoned	—	—
	v. Total of i., ii., iii., iv., being number of persons who discharged their liability	1,099	1,127
9.	Percentage of those who discharged their liability to number liable, being of 8 (v.) to 6	91·12	91·92
10.	Percentage of those who discharged their liability to one-fifth of inhabitants, being of 8 (v.) to 1 ...	100·18	95·18
11.	Accounted for as died, paid elsewhere, double entries, and erroneous entries	55	56
12.	Unaccounted for on last day of quarter	52	43

7. Tax on vehicles and animals brought in Rs. 114·25, as against Rs. 129·50.

8. *Rents.*—The decrease is due to the fall in the rent of the petroleum store. The amount yielded in 1901 was Rs. 56, against Rs. 239·84 in 1900.

9. *Sundries.*—The apparent increase is due to the payment by Ouvah Coffee Company of half cost of building a culvert in Bailey road and to the refund of an advance made to the Kachcheri to meet cholera expenses. Otherwise the receipts were the same as in the previous year.

EXPENDITURE.

10. *Establishment.*—The salary of the Secretary was raised from Rs. 480 to Rs. 600 from April 1, 1901. The apparent large increase in the expenditure of 1901 under this head is due to a matter of accounts, the salary of the cemetery-keeper and coolies and watcher of the Local Board store having been paid under this head.

11. *Office Contingencies.*—The slight increase was on the cost of printing and binding.

12. *Revenue Services.*—The decrease was due to the reduction of the division officer's commission and to the assessors not being paid in 1901, as their lists were not completed within the year.

13. *Sanitary Charges.*—The following is a comparative statement of the principal charges under this head for 1900 and 1901 :—

	1900. Rs. c.	1901. Rs. c.
Pay of latrine coolies	952 0	960 0
Pay of sweepers and cost of ekle brooms	433 99	434 51
Cart hire for removing sweepings	1,343 75	1,368 75
Pay of coolies, flushing drains, and urinal ...	384 8	396 10
Pay of watcher of Infectious Diseases Hospital ...	30 0	—
Burial grounds	254 7	—
Plague precautions	236 24	29 59
Temporary latrines at vihare	—	20 0
Total ...	3,634 13	3,208 95

14. The following are the details of expenditure on public works :—

	Rs. c.		Rs. c.
Cost and repair of tools	148 82	Construction of culverts	225 25
Metalling of roads	98 42	Repairs to seats	30 0
Gravelling of roads	472 47	Trimming fences	5 18
Trimming and small repairs to roads ...	288 77	Village paths	18 75
Maintenance of drains	99 89	Levelling pit behind jail	40 69
Upkeep of esplanades	254 30	Miscellaneous	42 54
Repairs to buildings	1,281 35	Welegedara spout	83 16
Upkeep of waterworks	314 45		
Repairs to bridges	108 38	Total ...	3,512 42

15. *Metal roads.*—Bazaar street was the only road which was metalled during the year.

16. *Gravel Roads.*—The following were the roads which were gravelled during the year :—Jubilee road, Longden road, Cheapside, Gregory road, Church street, Post Office street, Racecourse road, South lane, Jail road, Mosque road, Dewale road, Esplanade path, North lane, Avenue lane, and Milantota road.

17. *Buildings.*—The expenditure on buildings was Rs. 1,281·35 in 1901, against Rs. 927·24 in 1900. The increase was due to the cementing of the Town Hall floor and to the thorough overhauling of the public market. The following buildings were repaired during the year :—

	Rs. c.		Rs. c.
Inspector's quarters	17 11	Dog kennel	1 50
Grandstand and paddock	42 30	Shed over Nikata spring	5 12
Town Hall...	752 65	Market	358 26
Slaughter-house	25 50		
Infectious Diseases Hospital ...	78 91	Total ...	1,281 35

18. The water supply was, as usual, very satisfactorily maintained during the year. The standpipes were repaired and painted.

19. *Street Lighting.* — Another lamp was added during the year, bringing up the total to thirty-five. The total cost of lighting was Rs. 662·15, as against Rs. 818·41. The apparent large expenditure in the previous year was due to the purchase of five second-hand lamps from the Kandy Municipality.

20. The public health of the town was very satisfactory. There was no epidemic in the town during the year.

21. *Local Debt.* — The following statement exhibits shortly the state of the Board's indebtedness for market, waterworks, and drainage :—

	Original Loan. Rs.	Yearly Interest. Per Cent.	Sinking Fund. Per Cent.	Principal repaid up to end of 1901. Rs. c.	Balance due. Rs. c.
Market ...	8,480	3½	2	2,917 12	5,562 88
Waterworks...	15,200	3½	2	2,128 0	13,072 0
Do. ...	4,000	4	2	480 0	3,520 0
Do. ...	2,500	4	2	200 0	2,300 0
Drainage ...	1,000	4	20	800 0	200 0

22. *Staff.* — The staff of the Board consists of the Secretary, Mr. Reginald A. de Silva Gunatilaka, appointed in 1897, salary Rs. 480, raised to Rs. 600 in April, 1901; and the Inspector, Mr. J. C. Jayatilaka, appointed on probation in September, 1900, appointment confirmed in September, 1901, salary Rs. 800 with quarters. The Inspector draws an allowance of Rs. 120 a year as cemetery-keeper.

23. *Meetings.*—The Board held nine meetings during the year.

24. *Members.*—The official members were Mr. C. D. Vigors up to April, and Mr. G. A. Baumgartner, who was succeeded in September by Mr. F. H. Price, Government Agent; Mr. C. A. Lovegrove, Provincial Engineer, Uva; and Dr. Felix Oorloff, Colonial Surgeon, Uva.

The unofficial members were Messrs. B. L. Potger, P. Packir Saibo, and V. Abewickreme. Mr. Abewickreme having resigned, was succeeded by Mr. R. P. Murugasoe in September.

Local Board Office,
Badulla, January 24, 1902.

		Balance payable ...	2,291 65
Total ...	5,500 0	Total ...	5,500 0

1. There is a decrease of Rs. 415·34 in the revenue as compared with last year. This is attributable mainly to the decrease in the sale of the opium license, which is gradually falling in value in this town.

Public Works.—The bridge over the Katugas-ela near the jail was rebuilt at a cost of Rs. 1,425, and the Tiruwanaketiya public latrine rebuilt at a cost of Rs. 110.

2. All the roads, the cemetery, esplanade, and Government grounds were kept in good order. Some ornamental and shade trees were planted round the esplanade, and are doing well.

The plague hospital will require to be rebuilt of new timber entirely. It will be decided as soon as possible whether the present building is to be renewed or an iron structure ordered in its place.

3. A few cases of hoof-and-mouth disease broke out in the town. The Stock Inspector, who was informed of the cases, inspected and prescribed for the diseased cattle.

4. Four cases of smallpox appeared in the town: two of the patients were removed to the infectious diseases hospital and two were treated in their own houses. All the four cases proved fatal. The first case appeared at the end of March, and the last case disappeared in the middle of May. The disease was introduced into the town from the low-country, and if not for the excellent precautionary measures taken, it might have committed greater havoc. A few cases of chickenpox and measles also broke out in the early part of the year. The health of the people in the town for the remainder of the year was satisfactory.

5. *Sanitation* received particular attention; the bazaar, houses, and latrines were constantly visited and the bakeries well looked after.

6. The river overflowed its banks in June, inundating some of the houses and roads; no particular damage was done.

G. SAXTON,
Chairman.

Ratnapura, April 10, 1902.

KEGALLA.

A COMPARATIVE statement of the revenue and expenditure of the Board for 1900 and 1901 is annexed :—

REVENUE.	1900. Rs. c.	1901. Rs. c.	EXPENDITURE.	1900. Rs. c.	1901. Rs. c.
Balance on January 1 ...	1,289 87	1,157 59	Establishment ...	768 0	768 0
Licenses	3,389 65	3,120 55	Contingencies ...	169 42	106 89
Fines	42 25	182 0	Revenue Services ...	184 61	202 48
Taxes	1,026 0	1,112 25	Police Charges ...	84 5	34 66
Rents	82 86	107 73	Law Expenses ...	—	15 55
Sundries	139 14	281 62	Sanitary Charges ...	1,050 60	1,072 62
			Public Works ...	1,155 28	1,221 83
			Lighting	1,279 47	644 90
			Contribution towards cost of Audit	42 0	43 0
			Miscellaneous ...	78 75	63 40
			Balance	1,157 59	1,788 41
Total ...	5,969 77	5,961 74	Total ...	5,969 77	5,961 74

2. The revenue for the year amounted to Rs. 4,804·15, *i.e.*, Rs. 124·15 more than that for 1900. The balance brought forward from 1900 was Rs. 1,157·59.

3. The expenditure amounted to Rs. 4,173·33, and a sum of Rs. 1,788·41 remained in hand at the end of the year.

4. The opium license for 1901 was bought for Rs. 910, as compared with Rs. 300 in 1900. This license for 1902 has fetched only Rs. 750. The success that has during the last two years attended the sale in Colombo of the Kalutara town license leads me to suggest that the experiment of selling the Kegalla one at the Colombo Kachcheri should be tried.

5. The health of the town has been good, except that a few cases of chickenpox occurred towards the end of the year. The rainfall was 98·97 inches. The number of deaths registered, excluding those that occurred at the hospital, was only 38, as compared with 60 in 1900.

6. The scavenging of the roads and public grounds was performed by coolies in the employ of the Board. The public latrines were similarly maintained.

7. The infectious diseases hospital, which was built at the expense of the Government in connection with plague precautions, and the quarantine shed, were repaired and kept in order. A keeper has still to be appointed for the former.

8. The Diamond Jubilee Memorial Hall has at last been completed.

9. Two additional street lamps were fixed, making a total of seventeen lamps. A few more will, I hope, be provided during the coming year.

10. The purchase of a site for a market has been deferred for want of funds.

11. In the absence of suitable and available land in the town for a recreation ground, it was decided to fill up the hollow opposite the jailer's quarters for the purpose. The work was begun during the year, and will be finished during 1902.

12. 115 dogs were registered and 26 stray dogs were seized and destroyed during the year.

13. A statement showing the working of the Thoroughfares Ordinances in 1900 and 1901 is annexed :—

	1900.		Per-centage on B.	1901.		Per-centage on B.
1. Population (A)	—	2,017	—	—	2,340	—
2. Number on lists (B)... ...	—	712	—	—	763	—
3. Effective within Local Board :—						
(*a*) Paid Re 1·50	597		83·85	619		81·13
(*b*) Paid Rs. 3	9		1·26	10		1·31
(*c*) Laboured 6 days ...	1		·14	—		—
(*d*) Laboured 12 days ...	—		—	—		—
		607	85·25		629	82·44
4. Non-effective within Local Board, but have discharged their liability :—						
(*a*) Exempted	18		2·53	19		2·49
(*b*) Paid and laboured elsewhere ...	39		5·48	41		5·37
(*c*) Committed to jail ...	—		—	—		—
(*d*) Fined	1		·14	1		·13
(*e*) Double entries ...	6		·84	9		1·18
(*f*) Dead	1		·14	4		·53
		65	9·13		74	9·70
5. Non-effective :—						
(*a*) Reported to have left the town	40		5·62	60		7·86
(*b*) Otherwise not arrested ...	—		—	—		—
		40	5·62		60	7·86

The percentage of men who are not shown to have discharged their liability at all has increased from 5·62 in 1900 to 7·86 in 1901. This is unsatisfactory.

14. On 22nd May Mr. Bertram Hill was succeeded as Chairman of the Board by Mr. E. T. Noyes, who remained in office till after the end of the year. Mr. W. B. Gregson left the district in June, and his successor, Mr. F. Ludovici, took his place on the Board. No other changes took place in the constitution of the Board.

May 18, 1902.

H. Q. FOX,
Chairman.

PART II.—SCIENTIFIC.

PUBLIC WORKS.

REPORT OF THE DIRECTOR OF PUBLIC WORKS FOR 1901.

I HAVE the honour to submit the following report upon the operations of the Public Works Department during the year 1901.

EXPENDITURE.

2. The total expenditure during the year under review was Rs. 4,554,648·48, classified as follows :—

	Rs.	c.
Personal Emoluments	428,948	98
Annually Recurrent Works	2,112,905	52
Extraordinary Public Works	1,348,031	77
Chargeable to Loans and other Funds	666,027	80
Total ...	4,555,914	7

3. In Appendix 1 will be found the annually recurrent expenditure charged against votes in the Supply Bill, and in Appendix 1 A that charged against commutation and private contribution funds.

In Appendix 2 will be found the expenditure upon extraordinary public works charged against votes in the Supply Bill, and in Appendix 2 A that charged against Road Committee and private contribution funds.

In Appendix 3 will be found the total expenditure classified under the several headings of account in each Province, including that charged against loans and other funds.

4. The total expenditure in the several Provinces was as follows :—

Province.	Annually Recurrent. Rs.	c.	Extraordinary, including Loan Works. Rs.	c.	Total. Rs.	c.
Western	536,585	36*	715,724	19*	1,252,309	55*
Central	419,537	98	333,429	56	752,967	54
Northern	130,280	0	47,988	66	178,268	66
Southern	197,214	2	171,450	76	368,664	78
Eastern	131,414	56	123,272	21	254,686	77
North-Western ...	196,665	17	146,537	55	343,202	72
North-Central	117,119	47	71,671	80	188,791	27
Uva	192,823	79	267,565	86	460,389	65
Sabaragamuwa ...	191,265	17	136,418	98	327,684	15
Total ...	2,112,905	52	2,014,059	57	4,126,965	9
			Establishment ...		428,948	98
			Total ...		4,555,914	7

* Including expenditure under heading "Miscellaneous," Statement No. 3.

MAINTENANCE OF ROADS.

5. The roads in this Colony are classified under the following description :—Metalled, Track Metalled, Gravelled, and Natural. The total length maintained during the year in each Province was as follows :—

Province.	Metalled. Miles.	Track Metalled. Miles.	Gravelled. Miles.	Natural. Miles.	Total. Miles.
Western ...	295·26	—	62·94	—	35820
Central ...	534·33	—	70·74	65·25	67033
Northern ...	310·00	—	86·50	121·00	517·50
Southern ...	272·78	—	47·50	—	320·28
Eastern ...	162·25	—	132·60	54·00	348·85
North-Western ...	175·67	143·00	76·71	30·00	425·38
North-Central ...	101·78	68·75	138·28	8·60	317·41
Uva ...	246·03	—	25·33	102·00	373·36
Sabaragamuwa ...	185·97	80·59	17·94	25·00	309·50
Total	2,284·07	292·34	658·54	405·85	3,640·80

The above statement shows an increase of 51·87 miles of roads in charge of this Department. This is due to the completion of the Annfield road, extension of the Madampe-Hambantota road, and the transfer of the Matara-Akuressa road, Maradankadawela-Habarana, and Kekirawa-Talawe roads from the Provincial Road Committee to this Department.

6. In Appendix 4 will be found a return giving the name of each road, its length, description, and particulars as to cost of maintenance, and the average traffic as far as it can be even approximately ascertained, no special means for this purpose being at the disposal of the Department.

7. The average cost per mile of road upkeep in the several Provinces was as follows :—

Province.	Metalled.	Track Metalled.	Gravelled.	Natural.	General Average.
	Rs.	Rs.	Rs.	Rs.	Rs.
Western ...	806	—	315	—	720
Central ...	629	—	233	77	533
Northern ...	273	—	181	52	206
Southern ...	577	—	180	—	518
Eastern ...	456	—	229	20	302
North-Western ...	409	461	245	33	370
North-Central ...	436	—	174	—	310
Uva ...	651	—	284	71	467
Sabaragamuwa ...	661	437	270	97	535

The general average throughout the Colony was :—Metalled roads Rs. 549 per mile, gravelled roads Rs. 221 per mile, natural roads Rs. 57 per mile.

8. The whole of the roads have been, with few exceptions, maintained in a satisfactory condition, considering their respective classes and the traffic upon them. The improved condition of the roads in the Central Province mentioned in my last report has been maintained. Representation has been made by the Dimbula Planters' Association that additional width and protection are required in respect of some of the roads, and is being inquired into ; this, however, is a question to be dealt with under road improvement rather than that of maintenance.

The improvement of the roads in the Western and North-Western Provinces is being extended.

A considerable amount of rooting out of jungle and scrub on the roadsides has been effected in the Provinces of Uva and Sabaragamuwa, which will have a marked effect for good in the maintenance of the roads in future.

The roads in the Northern Province have been somewhat disturbed by the construction of the railway, but their general condition is good.

In the North-Central Province the expenditure on road maintenance is still low, and I regret the difficulties experienced with regard to labour in the Province has not admitted of full advantage being taken of the increased provision made in the Supply Bill for the year under review.

The following roads have been handed over to the Anuradhapura Local Board :—Approach roads to public buildings, Anuradhapura ; the Inner and Outer Circular roads, Anuradhapura.

On the completion of the Northern Railway it is probable that the through traffic on some of the roads will be considerably reduced, but in course of time the local traffic on those serving the railway will considerably increase.

In the Eastern Province the improvement of the condition of the roads generally is progressing satisfactorily.

The work of replacing the old wooden bridges with iron and concrete structures throughout the Island is making satisfactory progress.

MAINTENANCE OF INLAND NAVIGATION.

9. No exceptional expenditure has been incurred under this heading.

FLOOD OUTLETS.

10. No work of any magnitude has been necessary for the maintenance of the existing flood outlets.

REPAIRS TO BUILDINGS.

11. The buildings in charge of this Department, classified in accordance with the classification in the Supply Bill, were as follows :—

Province.	Government Buildings, exclusive of Police and Hospital Buildings.	Queen's Houses.	Police Buildings.	Medical Aid Hospitals.	Government Hospitals and Dispensaries.	Total.
Western ...	89	1	16	1	31	138
Central ...	94	2	16	19	15	146
Northern ...	172	1	3	—	19	195
Southern ...	82	—	15	—	19	116
Eastern ...	62	—	1	—	17	80
North-Western ...	48	—	4	—	15	67
North-Central ...	55	—	—	—	14	69
Uva ...	35	—	1	4	6	46
Sabaragamuwa ...	46	—	4	4	12	66
Total ...	683	4	60	28	148	923

12. The following tabular statement shows the average expenditure per building during the year in each of the several Provinces :—

Province.	Government Buildings, exclusive of Police and Hospital Buildings.	Queen's Houses.	Police Buildings.	Medical Aid Hospitals	Government Hospitals and Dispensaries.
	Rs.	Rs.	Rs.	Rs.	Rs.
Western	270	3,518	250	752	417
Central	131	1,548	155	336	420
Northern	43	205	151	—	123
Southern	113	—	80	—	93
Eastern	104	—	331	—	88
North-Western	90	—	106	—	131
North-Central	149	—	—	—	159
Uva	99	—	224	201	315
Sabaragamuwa	101	—	135	482	110

Generally speaking, the maintenance of buildings has been much improved of late, especially in the Central Province. This is owing to a considerable extent to the separate provision made in the Supply Bill since 1897 for their maintenance ; previous to that year there was only one vote, instead of two as is now the case, which included additions and alterations as well as maintenance.

REPAIRS TO BRIDGES EXCEEDING FIFTY FEET IN LENGTH.

13. The usual repairs have been effected. The wooden bridge at Dandugama referred to in my last annual report has been replaced by an iron structure having three spans of 80 ft. The work of replacing the bridge at Wellampitiya in the Western Province and those over the Sengal-oya and Lunu-oya in the North-Western Province is in progress.

WORKS UNDERTAKEN DURING 1901.

14. The year under review has been an exceptionally eventful one. On the 23rd January the sad news of the death of our Most Gracious Sovereign Lady Queen Victoria reached the Colony.

On the 12th April Their Royal Highnesses the Duke and Duchess of Cornwall and York landed in Colombo and visited Kandy.

The duties devolving on the officers of this Department in connection with the above events were loyally and efficiently performed.

The following are the more important works that have been under construction during the year :—

In the Western Province.

Magazine for storage of explosives.
Minor Courts, Hulftsdorp.
Dehiwala flood outlet.
Improvements, Kew barracks.
New roads, Havelock park.
New roads in Customs premises.
Improvements of road, Pasyala to Attanagalla.
Construction of Dandugama bridge.
Construction of Wellampitiya bridge.
Renewal of platform and widening Digarolla bridge.
Erection of jetties, sheds, and quay wall, Customs premises, Colombo.
Construction of cooly camp, Ragama.

In the Central Province.

Hospital at Dimbula.
Hospital at Maturata.
Peradeniya resthouse.
Police station and barracks, Dimbula.
Hospital at Pussellawa.
Construction of Annfield road.
Improvement of the Palapatwela-Galawela road.
Improvement of the Aladeniya-Iriyagama road.
Improvement of the Kadugannawa-Alagalla road.
Construction of bridge over the Tammana-oya, Matale Distri
Construction of bridge over the Talwata-oya.
Construction of bridges, Beligamuwa-Mirisgonioya road.
Water supply, Hakgala Gardens.

In the Northern Province.

Construction of Mantai-Illupakadavai road.
Construction of Mannar-Pesalai road.

In the Southern Province.

New Kachcheri, Hambantota.
New court-house, Hambantota.
Improvement of the Hambantota-Bundalla road.
Improvement of the Matara-Akuressa road.
Reconstruction of Galle road bridges.

In the Eastern Province.

Landing jetty, Trincomalee.
District Judge's quarters, Batticaloa.
Kantalai resthouse.
Sengaladi resthouse.
Landing jetty, Kalkuda.
Extension of South Coast road.
Construction of road to Muttur ferry.
Construction of road to Toppur.
Construction of Periyamukatuwaram causeway.
Construction of Mohideentanda bridge and causeway.

In the North-Western Province.

Powder magazine, Kurunegala.
Land Registry Office, Kurunegala.
District Engineer's quarters and workshops, Chilaw.
Construction of bridge over the Battulu-oya.
Construction of bridge over the Sengal-oya.
Construction of bridge over the Lunu-oya.

In the North-Central Province.

Archæological Commissioner's house, Anuradhapura.
Court-house, Anuradhapura.
Construction of Habarana-Topawewa road.

In the Province of Uva.

New court-house, Bandarawela.
New police station, Bandarawela.
Construction of Bibile-Medagama road.
Construction of Nakala bridge.

In the Province of Sabaragamuwa

Permanent wards, Civil Hospital, Kegalla.
Permanent wards, Civil Hospital, Karawanella.
Land Registry Office, Kegalla.
Avisawella hospital extension.
Construction of the Madampe-Hambantota road.
Construction of causeway at Algoda.
Rebuilding bridge on the Ratnapura-Nambapana road.
Rebuilding bridge on the Ratnapura-Halpe road.

15. I will now proceed to briefly enumerate the various works that have been undertaken by the Department during the year in the several Provinces under the headings Annually Recurrent, Extraordinary, and Works chargeable to Loans.

A large proportion of the information has been taken from the annual reports furnished by the Provincial Engineers.

WESTERN PROVINCE.

Annually Recurrent Works.

16. *Maintenance of Roads.*—The Provincial Engineer reports that the roads have been maintained in fair order, and some of them considerably improved, notably the Colombo-Negombo and the Horana-Panadure roads. The Badureliya-Kukulgama road has been handed over to the Kalutara District Road Committee, and this Department placed in charge of the road from Horawella to Moragalla resthouse.

17. *Maintenance of Inland Navigation.*—The canals have been maintained in fair order.

18. *Repairs to Buildings.*—The permanent buildings have been maintained in fair order.

19. *Maintenance of Customs Wharves, Jetties, and Cranes.*—The usual repairs have been effected.

20. *Additions and Alterations to Buildings.*—The following works have been carried out during the year:—

Post Office—re-arrangement of partitions and minor alterations.
General Hospital—minor alterations and additions.
Public Instruction Office—minor improvements.
Convict Hospital, Borella—providing glass tiles.
Kotahena Police Barracks—water service.
Central Timber Depôt—improvements to entrance.
Colombo Customs—minor improvements.
School of Agriculture—new latrine and bathroom.
Census Superintendent's Office—new shelving.
Principal Civil Medical Officer's Office—minor improvements.
Infectious Diseases Hospital, Kanatta—construction of four bathing-places.
Master Attendant's Office—conversion of a portion of verandah into prisoners' dock.
Colonial Secretary's Office—minor improvements.
Bacteriological Institute—conversion of temporary bridge into permanent structure.
Female Ward, Lunatic Asylum—minor alterations.

21. *Repairs to Bridges.*—The usual repairs have been effected.

22. *Miscellaneous.*—Minor works have been carried out at the Customs premises, Hulftsdorp Law Courts, Cinnamon Gardens Police Station, and Pilots' Tower.

A survey of the main road from Horawella to Moragalla, 5 miles in length, has been completed.

Public Works Extraordinary.

23. *New Works and Buildings.*—The following works have been completed :—

Police barracks, Negombo, consisting of a main block containing accommodation for sergeant, single men, office, lock-up, and storeroom, and of subsidiary blocks containing accommodation for eight married men, with the necessary outbuildings. Cost Re. 0·17 per cubic foot.

Cooly lines—a set of six rooms on the 20th mile, Avisawella road, and on the 11th mile, Mugurugampola road.

New orderlies' stables and lines, Galle Buck. The buildings consist of two blocks : one providing accommodation for stabling twenty horses, quarters for twenty-four single men, bathroom, latrine, harness room, forage store, and office. Cost Re. 0·25 per cubic foot. The other quarters for two sergeants and six married men. Cost Rs. 0·23½ per cubic foot.

General magazine for storage of explosives, consisting of two magazines for the storage of dynamite, 63 ft. 6 in. by 35 ft.; small store, 23 ft. by 17 ft., for detonators, surrounded by a boundary wall. The larger magazines have been provided with an inspection passage between the walls of the magazine proper and the outer walls of the buildings. Cost Re. 0·43 per cubic foot.

Permanent wards, Leper Asylum, Hendala, consisting of a new ward providing accommodation for 36 beds, with the necessary outbuildings. Cost Re. 0·17½ per cubic foot.

House for head watcher, Ragama.

Dehiwala flood outlet.

Female ward, Lunatic Asylum. Cost Re. 0·34 per cubic foot.

The following works were not proceeded with by order of Government :—

Residence of Assistant Government Agent, Kalutara.
Public Works Office.
Technical College.
Accommodation for Fort police.
Infectious Diseases Hospital, Panadure.
Modara police station.

24. *Alterations and Additions to Buildings.*—The following works have been completed :—

Negombo jail—infectious diseases ward.
Negombo court-house—clerks' room.
Lighting Colonial Secretary's Office with electricity.
Building latrines and baths for European constables, Kew barracks.
Alterations and improvements to sergeants' quarters, Kew barracks.
Drainage of Kew barracks.
Baths and latrines, Kew barracks.
Improvements to the store, Government Factory.
Improvements, Pilots' Tower.
Boundary wall, Galle Face cemetery.
Improvements, District Court, Colombo.
Improvements, Welikada magazine.
Additions to mail room, General Post Office.

The following works are in hand :—

Permanent roof over treadmill, Welikada.
Drainage, Welikada jail.
Temporary cadjan sheds, Civil Hospital, Colombo.

25. *Special Repairs to Buildings.*—The following works were completed :—

Kew barracks, Slave Island.
General Hospital, Colombo.
Stores and office, Maligakanda reservoir.

26. *New Roads.*—The approach road and fencing to the cemetery at Minuwangoda were completed, and good progress made with the construction of roads in Havelock park, Colombo.

27. *Additions and Improvements to Roads.*—The following works have been completed :—

Veyangoda to boundary of Province.
Jaela-Kotadeniyawa road.
Giriulla-Pasyala.
Grandpass to Negombo.

The following works have been in hand :—

Horana to Alutgama, consisting of metalling 6 miles, the construction of necessary embankments and bridges.
Pasyala to Attanagalla.

28. *New Bridges.*—The following works have been in hand :—

Dandugama bridge, consisting of three spans of 80 ft. on cast iron cylindrical piers and abutments. This bridge is open to traffic, and the approaches only remain to be completed. The bridge is of lattice girder type carrying an iron and concrete roadway 14 ft. in width.

Avisawella road bridges—bridges on this road have been reconstructed to permanent type : three spans of 10 ft. each on the 5th mile, one span of 12 ft. on the 6th mile, and one span of 29 ft. on 29th mile.

Wellampitiya bridge—ironwork completed and abutments in hand.
Hanwella-Bope road, 1st mile—ironwork completed ; erection in hand.
Bentota bridge—ironwork completed, central pier rebuilt, and erection of ironwork in hand.

29. *Repair of Bridges.*—The widening of Digarolla bridge and entire renewal of platform has been completed.

30. *Lands and Buildings to be acquired.*—The following quarries have been acquired :—

Colombo-Avisawella road, 10th mile.
Colombo-Galle road, 8th and 12th miles.

31. *Miscellaneous.*—The following works have been completed :—

Towpath, Hamilton canal, consisting of raising and widening the 1st mile of the eastern towpath, providing four new culverts, and repairing five.
Converting timber bridges into iron ones—five bridges have been converted in the Colombo District, sixteen in the Kalutara District, and two in the Negombo District.

CENTRAL PROVINCE.

Annually Recurrent Works.

32. *Maintenance of Roads.*—The Provincial Engineer reports that the roads have been kept in good order, and points out that the increased traffic on the railway during the last five years has thrown additional traffic on many of the roads.

The slip on 32nd mile of the Pundaluoya-Tawalantenna road continues to move and requires constant attention.

33. *Maintenance of Buildings.*—The buildings are in fair order throughout.

34. *Additions and Improvements to Buildings.*—Various minor additions and improvements to buildings have been effected, principally in the Kandy and Matale Districts.

35. *Repairs to Bridges.*—The bridges have been maintained in a fair state of repair.

36. *Miscellaneous Minor Works.*—Several minor works, mainly in connection with improvements to roads, have been carried out under this heading.

Public Works Extraordinary.

37. *New Works and Buildings.*—The following have been completed :—

Stabling, wood and straw sheds, Queen's Cottage, Nuwara Eliya.
Hospital, Dimbula, including administration block, five wards providing accommodation for 38 beds, operating room, observation ward, Medical Officer's quarters, Sisters' quarters, and attendants' quarters. The grounds comprise an area of 1½ acre of land, and are surrounded by a wire fencing. The total cost of this project, including land and water supply, was Rs. 86,494.
Infectious Diseases Hospital, Nuwara Eliya, consisting of two wards, each providing accommodation for 6 beds, with the necessary outbuildings and fencing. Cost Rs. 11,307.
Dikoya Public Works Department bungalow. This work included the rebuilding of the residential portion of the bungalow consisting of 2 sitting-rooms, 3 bedrooms, enclosed verandahs, and stores. Cost Rs. 9,990, at the rate of 15¾ cents nearly per cubic foot.
Cooly lines and overseer's quarters on the 41st mile, Nanuoya-Nuwara Eliya road. Cooly lines 6 rooms and overseer's quarters consisting of 2 rooms.
At the Mahaiyawa cooly lines 12 rooms.
Dispensary at Madugoda, consisting of a dispensary, a living-room, bedroom, store, and necessary outbuildings. Cost Rs. 3,440.
Quarters for Sergeant-Major of Police, Nuwara Eliya, consisting of sitting-room, 2 bedrooms, verandahs, and the necessary outbuildings. Cost Rs. 4,851.

The following works are in progress :—

Clerk and Foreman's house, Hakgala.
Witness sheds, Police Court, Hatton.
Hospital, Maturata.
House of observation, Kandy.
Police station and barracks, Dimbula.

The sites for erecting police station and barracks, Agrapatana, and for the circuit bungalow, Lindula-Nuwara Eliya road, were not handed over to this Department during the year.

38. *Alterations and Additions to Buildings.*—The following works have been completed :—

Electric lighting the Pavilion, Kandy.
Improvements, clerks' residence, Kachcheri, Nuwara Eliya.
Boilers for cooking food for prisoners, Bogambara jail.
Medical aid hospital, Lindula.
Pussellawa hospital.
Uda Pussellawa hospital, including an infectious diseases hospital, providing accommodation for 30 beds.
Nawalapitiya hospital.
Police station, Hatton.
Powder magazine, Matale.
Post office, Kandy.
Post office, Nawalapitiya.
Post office, Madulkele.

39. *Special Repairs to Buildings.*—The following works have been completed :—

Medical aid hospital, Lindula.
Kandy Kachcheri—part renewal of gutters.
Police station, Nuwara Eliya—re-shingling roof.
Deltota hospital—rebuilding of stables and godowns.
Katugastota hospital—repairs to well.

40. *New Roads.*—The following work has been completed :—

Annfield road. The accounts of the cost of this road and also of the Padiapelella-Kabaragala road are not yet closed, owing to delay in the settlement of compensation for land.

The work on the Nugawela-Ulapane road was not commenced, the private contribution not having been paid into the Colonial Treasury.

41. *Additions and Improvements to Roads.*—The following works have been completed :—

Gampola-Pussellawa road culverts.
Katugastota-Madulkele road.
Haragama-Kurunduoya road.
Deltota road.
Kandapola-Uda Pussellawa road.
Kalawewa-Galawela road culverts.
Balakaduwa to junction of Trincomalee-Anuradhapura road.

The following works are in hand :—

Palapatwela-Galawela road—nearly completed.
Aladeniya-Iriyagama road—2 miles completed.
Kadugannawa-Alagalla road.

42. *New Bridges.*—The following works have been completed :—

Tammana-oya bridge of lattice girder type, iron and concrete, 50 ft. span, 12 ft. in width.
Beligamuwa-Mirisgonioya road, 11th mile—iron and concrete bridge, 27 ft. span, 11 ft. 4 in. in width.
Galawela-Palapatwela road, 33rd. mile—iron and concrete bridge, 15 ft. span, 11 ft. 4 in. in width.

The following works are in progress :—

Beligamuwa-Mirisgonioya road, 7th mile, bridge of lattice girder type, 50 ft. span, 12 ft. in width.
Talwatta-oya bridge, Galawela-Palapatwela road—iron and concrete bridge, 30 ft. span, 11 ft. 4 in. in width.

43. *Repairs to Bridges.*—The following works have been completed :—

Peradeniya satinwood bridge.
Nuwara Eliya-Lindula road—bridges on the 34th and 35th miles.
Gampola-Peradeniya road—bridges on the 5th and 8th miles.

44. *Lands and Buildings to be acquired.*—I regret to state that there appears to be considerable delay in handing over to this Department the lands necessary for public works and quarries in this Province.

45. *Miscellaneous.*—The following works have been completed :—

Water supply, Hakgala Gardens.
Improvements, Nuwara Eliya lake.
Sanitation of Kadugannawa.
Pundaluoya-Watagoda bridge.
Road to new sites, Nuwara Eliya.
Timber bridges on the road to the Government Civil Hospital and Public Works Department Stores, Nuwara Eliya, and at the junction between Dimbula and Uda Pussellawa road have been converted into iron and concrete structures.

NORTHERN PROVINCE.

Annually Recurrent Works.

46. *Maintenance of Roads.*—The Provincial Engineer reports that all the roads were generally maintained in good order. The increased expenditure on the road from Jaffna to Kankesanturai satisfactorily met the increased wear and tear on this road owing to the transport of railway material, and it is anticipated there will be a material reduction in the cost of upkeep during 1902. Difficulty was experienced in obtaining limestone road metal at Elephant Pass, and a short section of the Iranamadu-Kokkavil road suffered towards the end of the year in consequence. The roads in the Vavuniya district were maintained in excellent condition, and reflect great credit on Mr. J. O. Ebert, District Engineer. An improvement has been effected in the condition of the roads in the Mannar District.

47. *Maintenance of Inland Navigation.*—The channels have been well maintained, and the system of transporting the silt to the reclamation in the vicinity of Jaffna continued.

48. *Repairs to Buildings.*—All the permanent buildings were maintained in a fair state of repair.

49. *Additions and Improvements to Buildings.*—The following works were completed :—

Magistrate's quarters, Point Pedro—minor improvements.
Vavuniya hospital—rebuilding ward No. 3.
Jaffna Fort—additions to parapet walls on the ramparts.
Assistant Government Agent's house, Mannar—addition of boarded ceilings.
Police Magistrate's bungalow, Chavakachcheri—minor improvements.
Jaffna Jail—minor improvements.
Mantota hospital—erecting outbuildings to dispenser's quarters.

50. *Repairs to Bridges.*—The bridges have been maintained in fair order.

51. *Miscellaneous.*—The following works have been completed under this heading :—

Bridge—12 feet span, permanent type—over drainage channel, Tellipalai.
Flood-water channel, 1st mile, Mankulam-Mullaittivu road.

The following work was in hand :—

Bridge on the Tellipali-Pandaterruppu road.

Public Works Extraordinary.

52. *New Works and Buildings.*—The following works have been completed :—

Overseer's quarters on the 7th mile, Pesalai-Yakawewa Road. Cost Re. 0·16 per cubic foot.
Cooly lines of 5 rooms in Vavuniya and of 6 rooms on the 136th mile, North-Central road, at a cost of Re. 0·17 and Re. 0·22 respectively.
Quarters for an overseer at Kankarayan, at a cost of Re. 0·18 per cubic foot.
General cemetery, Mullaittivu.
Office for Provincial Registrar, Jaffna, at a cost of Re. 0·12 per cubic foot.

The erection of a post office at Mannar has been delayed owing to a change of site, and the erection of a hospital at Point Pedro has been abandoned by order of Government.

53. *Alterations and Additions to Buildings.*—The following works have been completed :—

Office Assistant's quarters, Jaffna—outbuildings and drains.
Jaffna jail—ceiling cells.
Fiscal's Office, Jaffna—enclosing verandah.
District Engineer's house, Mannar—water tank, capacity 19,500 gallons. Cost Rs. 2,470.

54. *Special Repairs to Buildings.*—The following works have been completed :—

Temporary wards, Vavuniya.
Medical Officer's quarters, Mullaittivu.

55. *New Roads.*—The following work has been completed so far as funds were available :—

Maintai-Illupaikadai road, including gravelling 2 miles of the deviation, earthwork on the 2nd and 3rd miles, and the construction of a causeway on the 4th mile.

The Paranthan-Mullaittivu road works were stopped by order of Government.

56. *Additions and Improvements to Roads.*—The improvement works on 2 miles, viz., 4th and 5th miles, of the Mannar-Pesalai road were completed. The necessary repairs consisting of underpinning the side-walls of the Punnalai causeway were completed.

57. *New Bridges.*—The bridge of 20 ft. span, permanent type, on the Paranthan embankment was completed. The construction of a bridge on the Jaffna-Point Pedro road is in hand.

58. *Repairs to Bridges.*—The necessary repairs to the bridge on Reclamation road, Jaffna, have been completed.

59. *Lands and Buildings to be acquired.*—The acquisition of a site for hospital, Point Pedro, was not proceeded with by order of Government.

60. *Miscellaneous.*—The following works were completed :—

Halting-places for carts on the North road, ten in number, 100 ft. in length and 20 ft. in width.
Protecting sides of Mannar causeway.
Repairs to Jaffna and Mannar Forts.
Boring experiments, Jaffna. The result of these experiments, the Provincial Engineer reports, points to the probability of good water being obtained in large quantities within 4½ miles of Jaffna.
Survey of road from Paranthan to Mullaittivu.

SOUTHERN PROVINCE.

Annually Recurrent Works.

61. *Maintenance of Roads.*—The Provincial Engineer reports that the roads in the Galle and Matara Districts have been maintained in excellent order. The principal roads in the Hambantota District have been maintained in good order, but the others have suffered on account of the scarcity of labour and extreme dryness of the climate.

62. *Repairs to Buildings.*—The permanent buildings have been maintained in good repair.

63. *Additions and Improvements to Buildings.*—The principal works carried out under this heading are :—

Improvements to Calf Vaccine Institute, Galle.
Provision of two cells for lunatics and other improvements, Matara jail.
Constructing bathing tank, Tangalla jail.
Providing rails and fence and other improvements, Hambantota post office.
Constructing lock-up, Hambantota police station.

64. *Repairs to Bridges.*—The usual repairs have been effected. Several of the timber bridges should be replaced by ones of a more permanent character.

65. *Miscellaneous.*—The principal works carried out under this heading were :—

Protecting Galle-Matara road, 86th mile, from the inroads of the sea.
Construction of new culvert, Weligama railway approach road.
Erecting crane, Hambantota jetty.

Public Works Extraordinary.

66. *New Works and Buildings.*—The following works have been completed :—

New cells, Galle jail.
New Kachcheri, Hambantota.
Cooly lines and overseer's quarters, Kottawa.

The following works are in hand :—

Hambantota jetty.
New court-house, Hambantota.

The erection of District Judge's house, Matara, was not proceeded with by order of Government.

67. *Alterations and Additions to Buildings.*—The following works have been completed :—

Alterations to old police station, Pettah, Galle.
Accommodation for Public Works Department, Galle.

68. *Special Repairs to Buildings.*—The repairs to Galle jetty have been completed.

69. *Additions and Improvements to Roads.*—The following works have been completed :—

Hikkaduwa to Gonapinuwela.
Protecting Galle-Matara road, 83rd and 86th miles.

The following works are in hand :—

Hambantota-Bundala road.
Tangalla road, between 126½ and 129th mileposts.
Matara-Akuressa road.

70. *New Bridges.*—The erection of five new bridges on the Galle-Udugama road is nearly completed, and the temporary bridge at Mahamodara has been completed. The iron work for the Mahamodara and Gintota bridges is in hand.

71. *Repairs to Bridges.*—The reconstruction of the bridges Nos. 4 and 5 on the Hambantota road is in hand.

72. *Lands and Buildings to be acquired.*—Land for a cemetery at Weligama has been acquired. The acquisition of land for District Judge's quarters, Matara, has not been proceeded with by order of Government.

73. *Miscellaneous.*—The following works have been completed :—

Town survey, Hambantota.
Sea wall, Tangalla.
Sanitary improvements, Bentota.
Converting timber bridges into iron ones.
Bridges and culverts, Mahadola-Liyangahatota road.

EASTERN PROVINCE.

Annually Recurrent Works.

74. *Maintenance of Roads.*—The Provincial Engineer reports that, with the exception of the 85th and 86th miles of the Maduruoya-Eravur road and the 33rd mile of Karaitivu-Sammanturai road and the 44th mile of Akkaraipattu-Sigamam road, the whole of the roads were maintained in good order and condition. A great deal has been done towards re-shaping the roads and clearing of jungle and waterways during the year.

75. *Dredging Batticaloa Lake.*—During the year 1,635 cubes, or 6,605 tons, of material have been removed by the dredger at a cost of Re. 0·88 per cube, or Re. 0·22 per ton. The dredger was docked in October for general repairs.

76. *Repairs to Buildings.*—The permanent buildings were maintained in a good state of repair, except the apothecary's quarters at Muttur and the salt store at Nilaveli. A project for the reconstruction of the former is in course of preparation, and special provision has been made in the Supply Bill for 1902 for the necessary repairs to the roof of the latter.

77. *Alterations and Additions to Buildings.*—The following works have been carried out under this heading :—

Salt store, Akkaraipattu—re-roofing with Calicut tiles.
Government hospital, Trincomalee—fence and steps.

78. *Repair of Bridges.*—The usual repairs have been effected and the bridges maintained in good order, with the exception of the bridge at Urani, which is being replaced by a causeway and new iron bridge of a permanent type.

79. *Miscellaneous.*—Under this heading the following works have been carried out :—

Trincomalee—erecting tide gauge.
Chavalacadai—providing composite ferry boat.
Kilivetti—providing composite ferry boat.
Kivulakadawa—sinking well 30 ft. in depth.
Maduruoya-Eravur road—rebuilding abutments of bridge No. 21, 73rd mile.
Tillay-aar—providing canoe for ferry.
Karaitivu-Sammanturai road—constructing culvert, 28th mile.
Palamunai—acquiring land for metal quarry near 31⅛ milepost, Coast road south.

Public Works Extraordinary.

80. *New Works and Buildings.*—The following works have been completed :—

District Judge's residence, Batticaloa. The buildings are of a permanent character. Accommodation on ground floor: Drawing room 22 ft. by 17 ft., dining-room 20 ft. by 17 ft., office 17 ft. by 15 ft., store 11 ft. by 9 ft. 7 in. On upper floor: three bedrooms 23 ft. by 18 ft., 20 ft. 9 in. by 18 ft., and 15 ft. 5 in. by 18 ft., respectively; dressing-room 11 ft. 5 in. by 9 ft. 7 in.; and two bathrooms. The necessary outbuildings and stabling for two horses are also of a permanent character. Cost, including approach roads, fencing, drains, &c., was at the rate of 16 cents per cubic foot of building.

Cooly lines and overseer's quarters. Overseer's quarters have been erected near the 17th mile, Coast road north, Batticaloa; cost 11 cents per cubic foot. Cooly lines: 12 rooms have been erected near the 17th mile, Coast road, north, Batticaloa; cost 12 cents per cubic foot.

Landing jetty, Kalkudah. The jetty is constructed of iron, with wooden joists and planking. The piles are of H iron section, 9 in. by 7 in., carried through the stratum of coral about 8 ft. into the sand; on these piles are fixed cast iron shoes, which rest on the coral bed; the bearing of the shoes being 6·25 square feet, distribute the load on the piles over the coral bed, which varies from 1 to 2 ft. in thickness. Substantial cross bracing, longitudinal wallings, rubbing pieces, and vertical fenders protected by iron angle pieces have been provided. The jetty is 165 ft. in length, and has a width of 28 ft., and is provided with the necessary landings. A portion, 122 ft. in length, is covered with corrugated iron roofing supported on iron principals carried by H iron standards 8 in. by 6 in. The depth of water at the end of the jetty is 8 ft. Cost, including crane seat, Rs. 37,744, or at the rate of Rs. 9 nearly per square foot of platform area.

Kantalai resthouse. This building, situated on the Dambulla-Trincomalee road, 25 miles from Trincomalee, is of a permanent character. Accommodation: hall 19 ft. by 16 ft., dining-room 19 ft. by 16 ft., three bedrooms 16 ft. by 13 ft., verandahs 10 ft. in width, carriage porch, and the necessary outbuildings, including stabling for four horses. The cost of the new buildings was at the rate of 17 cents per cubic foot, and that of the stables 6 cents per cubic foot. The materials from the old buildings were used as far as practicable.

Field hospital, Maha-oya. The temporary cadjan roof over the male ward referred to in my last Administration Report has been replaced by a tile roof.

Further proceeding with the erection of the Trincomalee jetty was delayed in accordance with the instructions of Government.

No site having been handed over to this Department for a residence for the Assistant Collector of Customs, the erection of this building was not proceeded with.

81. *Alterations and Additions to Buildings.*—The following works have been completed:—

Trincomalee jail. This work included the demolition and rebuilding of the male portion of the jail. The new buildings are of a permanent character, and consist of the following:—A block of five cells, each 9 ft. by 7 ft.; association ward 20 ft. by 9 ft., with verandah 6 ft. wide; kitchen 9 ft. by 8 ft.; workshop 14 ft. by 7 ft. 6 in.; office 10 ft. by 10 ft.

Trincomalee post office. This work consisted of the erection of quarters for two assistants. Accommodation: two rooms 14 ft. by 12 ft., kitchen 12 ft. by 10 ft., verandah 6 ft. wide on one side, and the necessary outbuildings. Cost 20 cents per cubic foot.

Covered way, Residency, Batticaloa. This work consisted of the erection of a covered way, 118 ft. in length, connecting the Residency with the visitors' quarters.

New salt store, Batticaloa. This work included the rebuilding of the west wall of the existing store, which had been badly cracked by piling salt up against it. Enclosing the verandah on the north side of the store.

Assistant Government Agent's house, Trincomalee. The work done under this heading consisted of providing polished cement floors in the above house.

82. *Special Repairs to Buildings.*—The special repairs to roof and floors of the Fiscal's Office, Batticaloa Kachcheri, were completed.

83. *New Roads.*—The following works have been completed:—

Road to Muttur ferry. This road commences on the 65th mile of the South Coast road, Trincomalee District, is 1·46 mile in length, and a continuation in a direct line of the Coast road from Batticaloa to Trincomalee; the distance from Batticaloa to its termination at Kottiyar is 67 miles. A jetty has been constructed on the banks of the Kottiyar to meet the convenience of traffic crossing the bay to and from Trincomalee. The jetty or quay wall is of cement concrete, 75 ft. in length, and built on a pile foundation 4 ft. below the bed of the river. A ramped concrete carriage way, 12 ft. in width, has also been constructed to afford easy passage of wheeled traffic to and from the ferry boats. The road is on embankment the whole way, and has a coral foundation surfaced with gravel. Provision for the passage of backwater has been made by the construction of a stone causeway. The cost of the works was at the rate of Rs. 11,232 per mile.

North Coast road to Toppur. This road, 1·61 mile in length, commences at the 60th mile of the Coast road in the Trincomalee District, passing through jungle across paddy fields to the village of Toppur, which is situated near Allai tank. The work included the construction of a bridge 1 span of 10 ft. and 5 spans of 15 ft., width of roadway 11 ft. 4 in., also bridges of 8-ft., 12-ft., and 6-ft. spans, and several masonry culverts carrying the road over irrigation channels. A masonry and concrete causeway providing for the passage of the flood water of the Peramboveli stream. Two 4-foot culverts have been provided in the causeway for the passage of irrigation water. Cost, including bridges and contingent works, was at the rate of Rs. 12,178 per mile. All the bridges are of a permanent type.

The extension of the South Coast road, Kalmunai District, was proceeded with.

84. *Additions and Improvements to Roads.*—The construction of a causeway on the 44th mile, Akkaraipattu-Sagamam road, 200 ft. in length, to facilitate the passage of flood water, was completed. The causeway carries a road 16 ft. in width. The roadway is of cement concrete laid on a foundation of hand-packed rubble.

The following works have been proceeded with :—

Causeway, Periya Muhâtuwaram. This causeway carries a roadway 660 ft. in length, 21 ft. in width, 3·5 ft. above mean sea level, and a further length of 794 ft., 20 ft. in width, 2·4 ft. above mean sea level; the length of the ramp is 100 ft., making a total length of 1,550 ft. The roadway is of cement concrete 9 in. thick laid on hand-packed rubble foundation 6 in. thick. Five bridged openings 10 ft. in width have been provided to admit of the passage of the dry weather flow. The north approach is graded 1 in 40 for a length of 282 ft.; the remaining portion, 308 ft. in length, is level. The south approach is graded 1 in 40 for a length of 265 ft., when it joins the South Coast road. The causeway was so far completed as to admit of the passage of wheeled traffic over it in December, and it is anticipated the approaches will shortly be completed.

Additional waterways, 66th mile, South Coast road. This project, consisting of the construction of two small bridges, is nearly completed.

The construction of the causeway on the 65th mile, South Coast road, has not been proceeded with, by order of Government.

85. *New Bridges.*—The following works have been in hand :—

Mohideentanda bridge. This project includes the construction of a causeway 324 ft. in length, carrying a roadway 16 ft. in width, at a level of 9·5 ft. above mean sea level. A bridged opening 5 ft. in width, sill level 3·5 ft. above mean sea level, is provided for the passage of dry weather flow. The roadway is of cement concrete 9 in. thick laid on a foundation of hand-packed rubble 6 in. thick. The upper and lower slopes of the causeway are protected with cement concrete on stone pitching.

Urani bridge and causeway. This project includes the construction of a bridge having a waterway of 90 ft. and a causeway 250 ft. in length on the 63rd mile of the South Coast road, Kalmunai District. The bridge consists of three spans of 30 ft., the abutments are of masonry, and the piers of rolled beams of H section, 12 in. by 6 in., crossed, braced, and erected on cement concrete foundations.

Miscellaneous.—The following works have been completed :—

Well and fence, Customs officers' quarters, and post office, Kalkudah.

Converting timber bridges into iron ones, Badulla-Batticaloa and Trincomalee-Kandy roads. Under this heading one span of 6 ft., four of 30 ft., one of 26 ft. 6 in., and one of 14 ft. 11 in. were converted, the width of roadway being 14 ft. 10 in.

Surveying and preparing plans, proposed Paddiruppu-Divulanai road.

Sinking wells, South Coast road, Kalmunai District. Under this heading three wells have been sunk at Sivalodai, 70¼ mile, south of Batticaloa; Peria Ragamavillu, 74½ mile, south of Batticaloa; Seluwa Kalupua, 83rd mile, south of Batticaloa.

NORTH-WESTERN PROVINCE.

Annually Recurrent Works.

87. *Maintenance of Roads.*—The Provincial Engineer reports that the roads were generally maintained in good order.

The road from Padeniya to Siyambalagama is unable to satisfactorily withstand the heavy traffic on it, and unless the opening of the railway to Anuradhapura materially reduces the traffic on this road, a more substantial roadway than that at present existing will be required.

The portion of the Akkaraipattu road between Palavi and Etalai is in indifferent order, being much cut up by the heavy traffic passing over it during the pilgrimage to St. Anna's Church.

The roads within the Local Board limits of Chilaw were handed over to the Local Board on the request of the Chairman by order of Government.

There is a marked improvement in the condition of the roads in the Dandugama district.

88. *Maintenance of Inland Navigation.*—The usual work of removing shoals and general maintenance has been carried out.

89. *Repairs to Buildings.*—The permanent buildings have been maintained in a good state of repair.

90. *Additions and Improvements to Buildings.*—The following works have been carried out under this heading :—

Maligawa, Kurunegala—improved water supply.
Nikaweratiya hospital—surface drainage.
Kurunegala hospital—cart shed and new pump.
Kalpitiya post office—addition of verandah.
Dandugama District Engineer's bungalow—surface drainage.

91. *Repair of Bridges.*—The bridges were maintained in good order, and the usual repairs carried out during the year.

Public Works Extraordinary.

92. *New Works and Buildings.*—The following works were completed :—

Marawila police station.
Cooly lines and overseer's quarters—cooly lines at Tonigala.
Land Registry Office, Kurunegala.
Public Works Department workshop, Chilaw.

The following are in hand :—

Powder magazine, Kurunegala.
Cooly lines and overseer's quarters, Kurunegala-Puttalam road, 14th mile.
Court-house, Puttalam.
District Engineer's quarters, Chilaw.

93. *New Roads.*—The road from the salt stores at Karativu to the ferry was completed.

Feeder Roads, Northern Railway.—The surveys of the road from (*a*) Villakatapotta to Hiripitiya *viâ* Gonawatta railway station, (*b*) Nikaweratiya to Polpitigama *viâ* Maho railway station, (*c*) Karawalagaswewa to Galgamuwa, and (*d*) Nikaweratiya to Andigama have been completed.

94. *Additions and Improvements to Roads.*—The following works were completed :—

Track metalling Puttalam-Battuluoya road to 14th mile.
Track metalling Toppu-Battuluoya road.
Toppu to Dankotuwa road.
North Coast road—widening causeway, 6th mile, over Mi-oya.
Coast road north of Puttalam—extension to Vanativillu.

95. *New Bridges.*—The following works have been completed :—

Pulichakulam bridge, Chilaw. This was carried out by the District Road Committee.

Battulu-oya bridge. This bridge is of the lattice girder type with iron and concrete platform, and consists of four spans of 30 ft. The shore spans are carried on brickwork and concrete abutments, and the river spans on cast iron cylinders 6 ft. in diameter filled in with cement concrete, two cylinders forming each pier. The width of the roadway is 14 ft. The actual work on the site was commenced in March, 1900. The abutments having been erected, temporary staging was erected suitable for carrying a 5-ton travelling crane to be used in sinking the cylinders and afterwards in the erection of the ironwork. The cylinder sinking was commenced in October. The cylinders are founded in boulder clay, being sunk to depths varying from 14 ft. to 16 ft. The work, including approaches, which had been supervised by the District Engineer Mr. Churchill throughout, was satisfactorily completed at the close of the year.

Bridge over the Kudupitiya-oya. This work consisted of raising the bridge 3 ft. 8 in.

Palavi bridge. Good progress has been made in the erection of the iron bridges over the Sengal-oya and Lunu-oya on the 58th and 54th miles of the Chilaw-Puttalam road. The former bridge consists of four and the latter of five spans of 30 ft. supported on rolled H iron piles fitted with shoes and bedded in concrete. The width of the roadway is 14 ft.

96. *Repairs to Bridges.*—The repairs to groynes at Deduru-oya bridge were completed, and fair progress made with the repair of the Palavi embankment and bridge.

97. *Miscellaneous.*—The following works were completed :—

Fence round District Judge's house, Kurunegala.
Three timber bridges on the Toppu-Battuluoya road, two on the Puttalam-Battuluoya road, and one on the Kurunegala-Giriulla road were replaced by bridges constructed of iron and concrete.
Culverts, Kompaspara road.

NORTH-CENTRAL PROVINCE.

Annually Recurrent Works.

98. *Maintenance of Roads.*—The Provincial Engineer reports that generally the roads have been maintained in fair order.

The road from Galkulam through Mihintale to Rambawa, upon the maintenance of which no expenditure was incurred during 1900 by orders of Government, was little better than a fair weather track during 1901 ; this track has been brought into a better condition with a view to its future maintenance as a gravelled road.

The road from Horawapotana towards Vavuniya requires more bridges as stated in my last annual report, and provision has been made in the Supply Bill for 1902 towards the cost of these works.

The road from Kala-oya to Galgodaheña requires raising on portions of the 85th mile, and increased waterway for the discharge of flood waters from the Yan-oya.

The road from Mirisgoni-oya to Galkandapadu over the last 10 miles has not been in a satisfactory condition. Increased provision for the maintenance of this road was made in the Supply Bill for 1901, but I regret that difficulties experienced with labour prevented full advantage being taken of the funds available.

The road from Mirisgoni-oya to Kituluttu has been maintained in better order, and to some extent the additional provision made in the Supply Bill for 1901 has been utilized.

99. *Repairs to Buildings.*—The permanent buildings have been maintained in a satisfactory state of repair.

100. *Alterations and Additions to Buildings.*—Under this heading the following works have been completed :—

Certain minor alterations to the Kekirawa dispensary. The well has been sunk to a depth of 36 ft., but unfortunately the attempt to find water has not yet proved successful.
Addition of a store and latrine to the Anuradhapura Kachcheri.
Addition of sanitary accommodation to the Sinhalese clerk's house at Anuradhapura.
Erection of a brick wall, Anuradhapura jail.
Erection of a brick wall, Anuradhapura hospital.

101. *Repairs to Bridges.*—The bridges have been maintained in good order.

102. *Miscellaneous.*—Under this heading the following works have been completed :—

Survey of the Anuradhapura-Trincomalee road.
Removal of vegetable growth from the Miriswetiya and Abhagiriya Dagobas.
Repair of damage caused by a falling tree to the Provincial Engineer's Office, Anuradhapura.

Public Works Extraordinary.

103. *New Works and Buildings.*—The following works have been completed :—

One set of permanent cooly lines, six rooms, Anuradhapura. Cost at the rate of 25 cents per cubic foot.
Quarters for Irrigation Clerk, Kachcheri. Cost at the rate of 28 cents per cubic foot.
Powder magazine, Mihintale. Cost at the rate of 39 cents per cubic foot.
Medical Officer's quarters, Mihintale. Cost at the rate of 25 cents per cubic foot.

The following works are in hand and nearly completed :—

Quarters for Sinhalese clerk, Anuradhapura.
Archæological Commissioner's house, Anuradhapura.
One set of permanent cooly lines at Alut-oya.
New court-house, Anuradhapura.

The erection of new residence for Medical Officer, nurses, and dispensary at Anuradhapura was stopped by order of Government.

104. *Alterations and Additions to Buildings.*—The following works have been completed :—

Additions and alterations, Anuradhapura jail, consisting of raising the walls, roofing cells with iron and concrete, and improving the drainage.
Archæological Commissioner's house, Anuradhapura, consisting of constructing road, sinking well, erecting fence and gate.

The following work is in hand :—

Improvements to Kachcheri.

105. *New Roads.*—Fair progress has been made with the construction of the Habarana-Topawewa road, some delay being caused in the difficulty of obtaining masons for the construction of culverts at Topawewa.

No expenditure has been incurred upon the construction of Northern Railway feeder roads.

106. *Additions and Improvements to Roads.*—The following works are in hand :—

Mirisgoni-oya to Galkandamadu road.
Maradankadawela-Habarana road.
Habarana-Topawewa road.
Anuradhapura-Puttalam road.
Anuradhapura-Kurunegala road.

107. *New Bridges.*—Only one of the three bridges on the Kalaoya-Galgodahena road has been completed owing to the difficulty of obtaining masons.

108. *Miscellaneous.*—The following works have been completed :—

Metalling road reservation, Anuradhapura.
Converting timber bridges into iron ones on the Habarana-Topawewa and Anuradhapura-Trincomalee roads.
Roadside drains, Madawachchiya.
Gal-oya well.
Survey of approach road to proposed railway station, Anuradhapura.

Province of Uva.

Annually Recurrent Works.

109. *Maintenance of Roads.*—The Provincial Engineer reports that the whole of the roads, except a portion of the Koslanda-Poonagala gravel road and a portion of the Wellawaya-Tanamalwila road, have been maintained in a satisfactory state of repair.

Considerable progress has been made with the rooting out of jungle on the sides of the road, resulting in the encouragement of the growth of grass, tending to prevent the erosion of the banks and sides of the road, and the consequent silting up of the side drains.

110. *Repairs to Buildings.*—The permanent buildings have been maintained in a satisfactory state of repair.

111. *Alterations and Additions to Buildings.*—Under this heading the following alterations and additions have been completed :—

Haputale post office—improvement of the sanitary condition by cutting back the high ground near the building.
Bandarawela post office—concrete floors and ceilings to bedrooms.
Badulla police station—skylights to cells.
Badulla hospital—addition of clothes room.
Haputale hospital—addition of clothes room, addition of latrine to, and improved lighting of, Medical Officer's quarters.
Lunugala hospital—addition of clothes room.

112. *Repairs to Bridges.*—The bridges have been maintained in good order.

113. *Miscellaneous.*—The following works under this heading have been completed :—

Rebuilding retaining wall at Haputale.
Survey of proposed road, Haputale to Dambatenna.
Acquisition of land, Bandarawela water supply.
Survey of Badulla-Spring Valley bridle road deviation.

The following work is in progress :—

Kiraluiaremade irrigation aqueduct.

Public Works Extraordinary.

114. *New Works and Buildings.*—The following works have been completed :—

New police station, Bandarawela. Cost at the rate of 17½ cents per cubic foot.
Cooly lines and overseer's quarters, Badulla-Haputale road. Cost at the rate of 18¼ cents per cubic foot.

The following works are in progress :—

New court-house, Bandarawela.
Permanent ward, Medagama hospital.
Cooly lines, Passara-Namunakuli road.

115. *Alterations and Additions to Buildings.*—Stables for Superintendent of Surveys have been erected. Cost at the rate of 20 cents per cubic foot.

116. *New Roads.*—The construction of the Bibile-Medagama road has made fair progress. This road, commencing at Bibile on the Badulla-Batticaloa road, passes through Medagama to Obbekota on the Muppane-Pottuvil road. The first 5 miles having been previously constructed, the road is now nearly completed for 7½ miles. I regret to note that the Provincial Engineer reports the prevalence of fever and dysentery amongst the labour force employed on this work.

The construction of the road from Bibile to Alutnuwara was not proceeded with by order of Government.

117. *Additions and Improvements to Roads.*—The following works have been completed :—

Improvement, second section of the Koslanda-Poonagala road.
Improvement, Badulla-Taldena road.
Metalling Wellawaya-Tanamalwila road.
Passara-Muppane road, diversion.

The improvement of the Muppane-Pottuvil road, including the grading of the approaches to streams, construction of culverts, and formation of road, has been proceeded with.

118. *New Bridges.*—The construction of the horse bridge over the Kumbukkan-oya at Nakkala has been proceeded with. The abutments and approaches are completed, and the ironwork has been delivered.

119. *Miscellaneous.*—The following works have been completed :—

Halting-places for carts, Passara-Madulsima road.
Survey for Bandarawela water supply.
Conversion of timber bridges into iron ones—one on the Dikwella-Madulla road, one on the Kumbalwela-Passara road, four on the Bibile-Medagama road, eight on the Bibile-Alutnuwara road, and one on the Wellawaya-Pottuvil road.
The protection of the Panwewa springs, Bandarawela.

PROVINCE OF SABARAGAMUWA.

Annually Recurrent Works.

120. *Maintenance of Roads.*—The Provincial Engineer reports that the roads throughout the Province have been maintained in good order.

121. *Repairs to Buildings.*—The permanent buildings have been maintained in good order.

122. *Additions and Improvements to Buildings.*—The following works have been completed :—

Police barracks, Ratnapura—drainage and latrine accommodation.
Shades, Provincial Engineer's residence.
Ratnapura jail—provision of metal shoot.
Rakwana Police Court—latrine.
Kegalla court-house—witness shed.
Ayisawella District Engineer's quarters—drainage and verandah.
Rakwana police station—drainage.
Karawanella Medical Officer's quarters—lightning conductor.
Karawanella—re-roofing infectious hospital.
Balangoda hospital—providing pump.
Godakawela hospital—conversion of store into ward.
Kolonna hospital—improvement of approach road.

123. *Repairs to Bridges.*—The bridges have been maintained in a good s

124. *Miscellaneous.*—The following works have been completed :—

Morawaka-Rakwana road—repairs of flood damage.
Ardross-Polatagama road—survey of.
Nambapana road—acquisition of metal quarry.
Balangoda-Chetniole road—survey of.
Kandy road—rebuilding parapet wall on 50th mile.

Public Works Extraordinary.

125. *New Works and Buildings.*—The following works have been completed :—

New Land Registry Office, Kegalla, consisting of record-room 50 ft. by 25 ft., clerks' room 50 ft. by 25 ft., Registrar's office 25 ft. by 15 ft., tiffin room 18 ft. by 7 ft., and the necessary outbuildings. Cost Re. 0·17 per cubic foot.
New dispensary, Embilipitiya, consisting of dispensary 12 ft. by 12 ft., consulting room 12 ft. by 7 ft., dining-room 12 ft. by 12 ft., two bedrooms 10 ft. by 10 ft. and 12 ft. by 7 ft., and necessary outbuildings. Cost Re. 0·26 per cubic foot.
Permanent cooly lines, Hambantota road—seven rooms 10 ft. by 10 ft. Cost Re. 0·21 per cubic foot.

Overseer's quarters, Madampe-Hambantota road—two rooms 12 ft. by 12 ft., shed 20 ft. by 12 ft. Cost Re. 0·17 per cubic foot.

Bulatweldeniya bungalow, consisting of three rooms 15 ft. by 14 ft., coach-house, stabling for two horses, and necessary outbuildings. Cost Re. 0·21 per cubic foot.

Quarters for District Engineer's clerk, Avisawella, consisting of three rooms 14 ft. by 14 ft., and necessary outbuildings. Cost Re. 0·25 per cubic foot.

Dispenser's quarters, Balangoda hospital, consisting of two rooms 14 ft. by 12 ft., store 8 ft. by 7 ft., and necessary outbuildings. Cost Re. 0·30 per cubic foot.

Nurses' quarters, Balangoda hospital, consisting of two rooms 12 ft. by 12 ft., one room 15 ft. by 12 ft., and necessary outbuildings. Cost Re. 0·22 per cubic foot.

The following works are in hand :—

New post and telegraph office, Rakwana.
Permanent ward, Kegalla hospital, 24 beds.
Permanent ward, Karawanella hospital, 20 beds.
Cooly lines, Avisawella district.

The erection of a post and telegraph office, Kegalla, was not proceeded with by order of Government.

126. *Alterations and Additions to Buildings.*—The following works have been completed :—

Improvement, Ratnapura post office.

Avisawella hospital extension, consisting of male ward, 12 beds, 50 ft. by 22 ft.; female ward, 8 beds, 34 ft. by 22 ft.; office, 18 ft. by 12 ft.; store, 18 ft. by 12 ft., with necessary covered ways and outbuildings. Cost per bed male ward Rs. 1,000, female ward Rs. 1,100. Cost Re. 0·17½ per cubic foot.

Nurses' quarters—three rooms 12 ft. by 12 ft., stores 12 ft. by 8 ft., outbuildings, and covered way. Cost Rs. 0·25 per cubic foot.

District Medical Officer's quarters—two rooms 12 ft. by 12 ft., storeroom 12 ft. by 12 ft., with necessary outbuildings. Cost Rs. 0·26½ per cubic foot.

Provincial Registrar's Office, Ratnapura—additional accommodation.

Two cells for lunatics, Ratnapura jail.

Additions to Ratnapura Kachcheri.

127. *Special Repairs to Buildings.*—The following works have been completed :—

Repairs to Medical Officer's quarters, Kegalla.
Repairs to District Judge's house, Ratnapura.
Repairs to Kachcheri, Kegalla.

128. *New Roads.*—The Madampe-Hambantota road is now completed and opened for traffic to the 100th mile, viz., 24 miles from Madampe, leaving 13 miles and 2 lines to complete it to Liyangahatota. The expenditure during 1900 and 1901 has been Rs. 33,000, for which 4·75 miles of road, including one bridge of 20 ft. span, one of 30 ft. span, two of 10 ft. span, and one of 8 ft. span, carrying a roadway 11 ft. 4 in. in width, have been constructed. The bridges are of a permanent type.

A sum of Rs. 8,450 was by special resolution of Council paid to Messrs. Finlay, Muir & Co. in respect of the construction of 4½ miles of the Ratnapura-Malwela road, which road has been taken over by Government and placed in charge of this Department.

Good progress has been made with the construction of the Polatagama-Ardross road.

129. *Additions and Improvements to Roads.*—The improvements of the Ruanwella-Veyangoda road have been completed.

I regret to have to report that the unfavourable weather prevented permanent work being done on the Algoda causeway.

130. *New Bridges.*—The following works have been completed :—

Rebuilding bridge on the 2nd mile, Ratnapura-Nambapana road. The bridge is 30 ft. span to type, carrying 11 ft. 4 in. roadway. Abutments of H iron piles on concrete bed with pitched slopes. Cost Rs. 263 per foot run.

Morali-oya bridge, Veyangoda-Ruanwella road. This bridge consists of three spans of 18 ft. with 10 ft. roadway to type. The platform and roadway were converted from timber to iron and concrete. Cost Rs. 90 per foot run.

Mahaoya-ela bridge. Span 50 ft. on masonry abutments. The bridge is of the lattice girder type, carrying a roadway 12 ft. in width. The foundations involved heavy expenditure. Cost Rs. 692 per foot run.

Hulanda-oya bridge. Span 80 ft. on masonry abutments, carrying a roadway 10 ft. in width to type. Cost Rs. 250 per foot run.

The rebuilding of the bridge on the 95th mile, Ratnapura road, consisting of one span of 42 ft., carrying a roadway 10 ft. in width.

131. *Repairs to Bridges.*—The following works have been completed :—

Bridge at 70¼ mile, Pelmadulla-Gilgarron road. Span 16 ft., width of roadway 11 ft. 4 in., type design on masonry abutments. Cost Rs. 176 per foot run.

Re-planking eight bridges in the Kegalla District. The following bridges were entirely re-planked at a cost of Rs. 14 per foot run :—

Kegalla-Bulatkohopitiya Road.

1st mile, 39 ft. in length
3rd do. 30 ft. do.
7th do. 106 ft. do.

Kandy Road.

59th mile, 69 ft. in length

Polgahawela Road.

1st mile, 54 ft. in length
2nd do. 390 ft. do.
4th do. 27 ft. do.
7th do. 80 ft. do.

Rebuilding abutments, Halpe road, 89th mile.

132. *Lands and Buildings to be acquired.*—The site for the Rakwana post office, 30 poles in area, was acquired at a cost of Rs. 250.

133. *Miscellaneous.*—The following works have been completed :—

Drainage, Rambukkana, consisting of 1,005 lineal feet of open masonry drains, at a cost of Rs. 3·28 per lineal foot.

Piling and filling in side of road, 18¾ mile, Rambukkana-Dolosbage road.

The following timber bridges were converted into iron ones :—

Pelmadulla-Gilgarron road. Two bridges of 12 and 22 ft. span, carrying a roadway 11 ft. 4 in. in width to type, on the 75th and 76th miles respectively.

Horse bridge, 14 ft. span, 4 ft. in width, Rakwana-Morawaka bridle road.

Veyangoda-Ruanwella road—

15th mile,	span 7 ft.,	width of roadway	12 ft. 0 in.
16th	do.	9 ft.,	do.	11 ft. 4 in.
17th	do.	19 ft.,	do.	11 ft. 4 in.
17th	do.	9 ft.,	do.	11 ft. 4 in.
18th	do.	7 ft.,	do.	12 ft. 0 in.
19th	do.	10 ft., 6 in.	do.	11 ft. 4 in.

Cost Rs. 43 per foot run.

Rambukkana-Dolosbage road, 1st mile, span 10 feet, width of roadway 11 ft. 4 in. Cost Rs. 58 per foot run.

Surveys and reports have been forwarded to Government on the proposed Polatagama-Ardross road.

Proposed causeway over the Maha-oya at Andramadu on the main road from Kegalla.

Road from Ratnapura to Kalawana.

Ratnapura-Malwela ferry road.

Ellearawa-Pinnawella road.

Works Chargeable to Loans and other Funds.

134. *Customs Premises.*—Considerable progress has been made in carrying out the works asked for by the Chamber of Commerce in the report of the Sub-Committee of that Chamber dated 26th April, 1900 :—

The building of a quay wall in front of the old grain sheds J and K is in hand.

The construction of two jetties on the north-east face of the sea wall is practically completed.

The ironwork for the erection of a light open shed to shelter goods landed adjacent to I warehouse is completed.

Another iron shed adjoining I warehouse of the same length and width has been completed.

Commissariat street has been included in the Customs premises, and the road nearly completed round by G and H warehouses.

The ironwork has been completed for covering in the roadway on the sea front of the export warehouses B, C, and D, and erection is in hand.

The lengthening of the two jetties at Kochchikada has practically been completed.

One-half of the roadway leading to the warehouses at Kochchikada has been paved with Jarrah timber blocks laid on concrete.

Plans and estimate have been prepared and submitted for the reconstruction of the Master Attendant's jetty.

Orders have been placed for the supply of electric cranes for use in the Customs premises.

The work of widening Seashore street is in hand.

135. *Camps for Prisoners of War.*—The maintenance and additions required from time to time at the camps have been duly attended to.

136. *Cooly Camps, Ragama.*—The erection of a new camp similar to camp No. 5 is in hand.

137. *Minor Courts, Hulftsdorp.*—The erection of these buildings has made substantial progress, and it is anticipated they will shortly be ready for occupation.

138. *Sengaladi Resthouse.*—The resthouse at Sengaladi, built by this Department under the supervision of the Provincial Engineer, Eastern Province, for the Provincial Road Committee, has been completed.

Government Factory.

139. This branch of the Department was under the immediate supervision of Mr. G. H. M. Hyde until the return of Mr. E. C. Davies on the 5th October, when Mr. Hyde reverted to the duties of his substantive appointment of Mechanical Engineer, having carried out the duties of Factory Engineer for a period of eighteen months with zeal and efficiency.

The staff at the Government Factory has been increased by the addition of a Superintendent of Works, the Government having decided that in future all work in connection with electrical installations in Government buildings and premises should be carried out by this Department. Mr. Rylands was appointed Superintendent of Works on the 1st June, 1901.

Particulars of work done during the year will be found in the Factory Engineer's report annexed, from which it will be seen that works of bridge construction and harbour improvements account for more than one-half of the total expenditure.

In Appendix 5 will be found the particulars of the several bridges constructed at the Factory during the year; in Appendix 6 a statement of the distribution of Factory Expenditure under the several classifications for the years 1900 and 1901; and in Appendix 7 the classification of expenditure on the several classes of work during the years 1898 to 1901, inclusive.

COLOMBO WATERWORKS.

140. *Labugama Reservoir.*—The rainfall registered at Labugama during the year amounted to 145·17 in., rain falling on 228 days. The maximum rainfall during twenty-four hours occurred on the 28th October, when 6·70 in. were registered. The water in the reservoir was 1 ft. 2¾ in. below overflow level on the 27th February; the sluices were opened and the water rose in the reservoir, attaining a maximum height of 1 ft. 4 in. above overflow level. The maximum depth from which water supplied to the town was drawn from the reservoir was 11 ft. below overflow level, the lowest water level reached being 3 ft. 7 in. on the 1st July.

The reservoir and works in immediate connection therewith have been satisfactorily maintained.

141. *Main Pipe Line.*—The pipe line has been satisfactorily maintained, a constant flow being obtained throughout the year. The few leaks which occurred were in the portion duplicated, and were repaired without the flow of water to Colombo being stopped.

142. *Maligakanda Service Reservoir.*—This reservoir has been maintained in a satisfactory state of repair without any exceptional expenditure.

143. *Distribution Works.*—The distribution works were maintained in a satisfactory state of repair. During the year four new standposts or street fountains were fixed and four were removed, the total number in use being 691. 136 new services for domestic supply were constructed, making a total number of 3,071. 53 meters were fixed to services for other than domestic purposes. 28 meters were removed, making a total of 206 in use. 1,269 yards of 3-in. pipe for extended services were laid during the year.

144. *Consumption of Water.*—In Appendix 8 will be found a tabular statement of the consumption of water during each month in the year. In Appendix 9 will be found a monthly return of water supplied by meter in each ward during the year.

It will be seen that throughout the year, with the exception of January, the maximum daily consumption each month exceeded the maximum discharging capacity of the Labugama main, viz., 2,900,000 gallons per diem, necessitating the water being shut off from 8 P.M. to 4 A.M. during the following periods:—

April 1 to 8
August 1 to 31
September 1 to 30
October 1 to 28
December 15 to 28

The average consumption of water per head per diem, taking the population at 150,000, was for all purposes at the rate of 18·5 gallons; deducting the metered supplies reduces the rate to 15·5 gallons.

145. *Quality of Water.*—The results of the monthly analyses available will be found in Appendix 10.

146. Mr. J. Campbell retired on the 17th May last after eighteen years of service. On his retirement the Department lost the services of a very capable and valued officer.

147. The following tabular statement showing the consumption of water during the last six years is of interest:—

	Water supplied by Meter. Gallons.	Total Consumption. Gallons.	Maximum Daily Consumption. Gallons.
1896 ...	38,097,840 ...	762,435,360 ...	2,555,508
1897 ...	51,353,450 ...	780,584,671 ...	2,502,300
1898 ...	82,941,553 ...	805,341,489 ...	2,546,241
1899 ...	105,569,529 ...	877,980,521 ...	2,869,581
1900 ...	129,933,208 ...	981,841,489 ...	3,997,067
1901 ...	162,997,699 ...	1,011,958,277 ...	3,149,578

The great increase in the quantity of water supplied by meter, that is, mainly to shipping and premises used for other than domestic purposes, will be noted: in 1896 it amounted to, say, 5 per cent., in 1901 it amounted to 16 per cent. of the total supply.

148. It is satisfactory to be able to record that apparently the carrying out of the extension of the waterworks to meet the present and increasing demand for water, urged in my special report No. 875, dated 6th April, 1899, Sessional Paper No. XIX. of 1901, is not likely to be much longer delayed.

STAFF.

149. Mr. E. Venning, Provincial Engineer, Southern Province, retired in June after a service of thirty years. By the death of Mr. C. Arunachalam, District Engineer, Passara, on the 19th February, the Department lost an efficient and zealous officer. Messrs. W. A. L. Rowland and B. K. Adams, District Engineers, left the Department in February and May, respectively, having resigned their appointments under Government.

Mr. D. M. Settinayake, Mudaliyar, Clerk, died on the 17th July, and a passed candidate was appointed to succeed him; Mr. K. Chinnatamby, Clerk, was transferred to the Anuradhapura Kachcheri in August, being succeeded by Mr. J. E. Philips from that office.

150. The following officers have been on leave during the year:—

Name.	Commencement of Leave.	Period.	Returned to Duty.
Mr. A. W. Taffs	... June 25, 1900	... 11 months and 27 days	... June 22, 1901
„ A. Clementi Smith	... February 1, 1900	... 1 year and 17 days	... February 18, 1901
„ A. de Courcy Carson	... February 1, 1900	... 1 year, 6 months, and 24 days	August 25, 1901
„ E. C. Davies	... April 6, 1900	... 1 year and 6 months	... October 6, 1901
„ T. H. Chapman	... September 5, 1900	... 11 months and 21 days	... August 26, 1901
„ T. R. Ward	... November 10, 1900	... 11 months and 25 days	... November 5, 1901
„ R. W. Smith	... December 6, 1900	... 5 months and 19 days	... May 25, 1901
„ A. H. Nathanielsz	... January 6, 1901	... 1 year and 5 months	... Absent
„ H. Bucknall	... March 21, 1901	... 8 months and 18 days	... December 9, 1901
„ A. E. Mayes	... May 1, 1901	... 1 year	... Absent
„ R. G. Carte	... June 4, 1901	... 1 year and 6 months	... do.
„ A. Stanley Colls	... June 6, 1901	... 5 months and 20 days	... November 26, 1901
„ W. B. Gregson	... June 16, 1901	... 1 year	... Absent
„ E. G. Eves	... August 4, 1901	... 5 months and 24 days	... do.
„ T. S. Edge	... September 10, 1901	... 8 months and 14 days	... do.
„ H. E. H. Hayes	... October 4, 1901	... 5 months and 7 days	... do.

151. The vacancies in the Engineering Branch referred to in my last Administration Report were filled up during the year by the appointment of four new officers from England, who arrived in the Colony as follows:—Mr. A. P. Brohier in January, Mr. J. F. Fitzsimons in March, Mr. J. A. Moraes in April, and Mr. A. Rothwell in October.

The following officers on service in the Irrigation Department have been appointed District Engineers in this Department:—Mr. E. G. Eves in January, Mr. E. W. Cade in June, and Mr. S. H. Bower in August.

Messrs. A. Clementi Smith and A. de Courcy Carson, who left with the Ceylon Contingent for South Africa, and subsequently proceeded to England on leave, returned, the former in February and the latter in August. Consequent on their return Mr. L. P. Emerson, who had been temporarily engaged, left the Department in December and joined the Irrigation Department.

Messrs. F. H. Bartholomeusz and A. de Livera also left the Department, the former in August and the latter in December, having accepted appointments under the Colombo Municipality. At the close of the year six engineers were on leave.

152. The changes that have taken place during the year in the provincial offices are as follows:—

Western Province.—Mr. H. B. Christie relieved Mr. H. A. Grant as Provincial Engineer in March, and in the same month Mr. H. Bucknall, District Engineer, Negombo, proceeded on leave, being succeeded by Mr. A. Clementi Smith; Mr. E. G. Eves assumed duties as District Engineer, Colombo, in April, relieving Mr. A. E. Mayes, who left on leave; Mr. A. W. Taffs returned from leave in June and resumed duties as District Engineer in charge of Buildings, Colombo; Mr. F. Ludovici, District Engineer, Ragama, was transferred to Kegalla in June, being succeeded by Mr. J. A. Moraes; Mr. E. G. Eves proceeded on leave in August, being relieved by Mr. A. de Livera; Mr. T. R. Ward returned from leave in November and assumed duties as District Engineer, Colombo, relieving Mr. A. de Livera, who was seconded for service under the Municipal Council, Colombo, with effect from the 2nd December; Mr. S. F. Johnpulle, District Engineer's Clerk, Negombo, was transferred to Kandy in June, being succeeded by Mr. S. Ghelliah; Mr. V. A. Loos, Clerk to the Assistant Engineer, and Mr. M. Aaron, District Engineer's Clerk, Colombo, were transferred in January, the former to Passara and the latter to Puttalam, being succeeded by Messrs. C. M. Chellappa and S. Nagalingam; Mr. A. Tambiah, Second Clerk, retired in April owing to ill-health, being succeeded by Mr. Paul Francis from Ratnapura.

153. *Central Province.*—Mr. A. Stanley Colls, District Engineer, Nuwara Eliya, proceeded on leave in June, being succeeded by Mr. R. W. Smith. On Mr. Colls' return on the 30th November he resumed duties at Nuwara Eliya, and Mr. R. W. Smith proceeded to Kurunegala to resume his work in connection with the water supply to that town. Mr. J. G. Weinman, Inspector, who was on six months' leave, died on the 13th August, and Mr. A. H. Auwardt, District Engineer, retired in September on being condemned by a Medical Board as unfit for service; Mr. A. Cathiravalupillai, Head Clerk, was transferred to Batticaloa in February, being succeeded by Mr. Poopalapillai from Kurunegala; Mr. C. V. Theuring was transferred to the District Court, Colombo, in June, Mr. S. F. Johnpulle succeeding him; Mr. N. M. Rasarathnam was appointed to succeed Mr. S. Chelliah, who was transferred to Negombo.

154. *Northern Province.*—Mr. C. H. de Silva, District Engineer, Pallai, was transferred to Puttalam in May, being succeeded by Mr. A. P. Brohier; Mr. K. Kanthavanampillai, District Engineer's Clerk, Mannar, was condemned by a Medical Board as unfit for service and retired in September; Mr. K. Navaratnam was appointed to succeed him.

155. *Southern Province.*—Mr. H. A. Grant assumed duties as Provincial Engineer, Southern Province, in March, relieving Mr. E. Venning, who went on three months' leave preparatory to retirement; Mr. E. S. de Silva, District Engineer, Hambantota, was transferred to Galle in October, Mr. J. Jeffery succeeding him at Hambantota; Mr. H. Bucknall, who returned from leave on the 9th December, relieved Mr. Jeffery at Hambantota, and the latter resumed duties at Galle on the 30th December, relieving Mr. E. S. de Silva, who was appointed District Engineer, Ragama.

156. *Eastern Province.*—Mr. R. G. Carte, District Engineer, Trincomalee, proceeded on leave in May, and was succeeded by Mr. E. H. Vanderstraaten; Mr. J. F. Fitzsimons performed the duties of District Engineer, Batticaloa, till September, when he was relieved by Mr. A. de Courcy Carson; Mr. Fitzsimons was appointed to Kurunegala in October as District Engineer; Mr. S. H. Bower, who was transferred from the Irrigation Department in August, was attached to the Provincial Engineer's Office, Batticaloa, till December, when he was appointed District Engineer, Maradankadawela; Mr. A. Sanmugam, Head Clerk, was transferred to Kurunegala in January, being succeeded by Mr. A. Cathiravalupillai from Kandy; Mr. S. W. V. Arumogam, District Engineer's Clerk, Batticaloa, and Mr. G. Sivapragasam, District Engineer's Clerk, Kalmunai, were also transferred, the former to Koslanda and the latter to Ratnapura, being succeeded by Messrs. S. Swaminather and C. Chithamparapillai; Mr. G. F. Buultjens, Inspector, was transferred for duty in the Eastern Province in February.

157. *North-Western Province.*—Mr. B. K. Adams, District Engineer, Puttalam, resigned his appointment under Government in May and was succeeded by Mr. C. H. de Silva; Mr. H. E. H. Hayes, Provincial Engineer, proceeded on leave in October, and was succeeded by Mr. R. W. Crabbe, Mr. J. F. Fitzsimons from Batticaloa succeeding Mr. Crabbe as District Engineer, Kurunegala; Mr. S. Poopalapillai, Head Clerk, was transferred to Kandy, being succeeded by Mr. A. Sanmugam from Batticaloa; Mr. S. Nagalingam, District Engineer's Clerk at Puttalam, was transferred to Colombo in January, being succeeded by Mr. M. Aaron; Mr. P. Valayuthenpillai, Draughtsman, left for Ratnapura in June, being relieved by Mr. C. E. Anthony.

158. *North-Central Province.*—Head Overseer Mr. Ondatjie was transferred to the Southern Province in February; Mr. L. P. Emerson, District Engineer, Maradankadawela, left the district in December, having obtained an appointment in the Irrigation Department, and was succeeded by Mr. S. H. Bower.

159. *Province of Uva.*—Mr. C. Arunachalam, District Engineer, Passara, died on the 19th February, and Mr. Head Overseer Black carried on the duties of District Engineer until Mr. A. P. Brohier relieved him on the 2nd March. On the 3rd June Mr. Brohier was transferred to Pallai, and

was relieved by Mr. E. W. Cade; Mr. T. S. Edge, District Engineer, Koslanda, proceeded on leave in September, and was succeeded by Mr. T. H. Chapman; Mr. S. Swaminather, District Engineer's Clerk at Passara, and Mr. C. M. Chellappa, District Engineer's Clerk at Koslanda, were transferred in January, the former to Batticaloa and the latter to Colombo, being succeeded by Messrs. V. A. Loos and S. W. V. Arumogam. In July Mr. V. A. Loos was transferred to the Technical College, being relieved by Mr. S. Solomons from the Head Office.

160. *Province of Sabaragamuwa.*—Mr. H. B. Christie, Provincial Engineer, was transferred to Colombo in February, and was succeeded by Mr. P. M. Bingham, Mr. A. N. Robertson, who was attached to the Provincial Engineer's Office, succeeding Mr. Bingham as District Engineer, Ratnapura; Mr. W. B. Gregson, District Engineer, Kegalla, proceeded on leave in June, and was succeeded by Mr. F. Ludovici; Mr. C. Chithamparapillai, District Engineer's Clerk, Ratnapura, was transferred in February to Kalmunai, being succeeded by Mr. G. Sivapragasam; Mr. Paul Francis, Second Clerk, was removed to Colombo in June, Mr. J. P. Cherubim being appointed to succeed him; Mr. C. E. Anthony, Draughtsman, was transferred to the Provincial Engineer's Office, Kurunegala, being succeeded by Mr. P. Valayuthempillai from that office.

GENERAL.

161. The following tabular statement shows the expenditure on Annually Recurrent Works, Extraordinary Public Works, and those chargeable to loans and other funds during the years 1895 to 1901, inclusive:—

Year.	Public Works. Recurrent. Rs.	Public Works. Extraordinary. Rs.	Miscellaneous, including Loans. Rs.	Total. Rs.
1895	1,756,001	1,286,889	—	3,042,890
1896	1,823,558	1,219,106	—	3,042,664
1897	1,726,669	1,838,650	—	3,565,319
1898	1,900,307	1,510,143	369,324	3,779,774
1899	2,040,684	1,707,119	1,250,125	4,997,928
1900	2,029,279	1,610,261	1,074,665	4,714,205
1901	2,112,905	1,348,032	666,028	4,126,965

162. In accordance with instructions received by Colonial Secretary's letter No. 550, dated 27th May, 1901, the construction of several Extraordinary Public Works was postponed, it being found necessary to reduce the sum of Rs. 1,750,000, the estimated expenditure for this service during 1901, to approximately Rs. 1,350,000.

163. The Public Works Commission appointed on the 11th February, 1900, finished its labours and signed their report on the 11th July, 1901.

164. Amongst the more important works carried out in the Drawing Office at the Head Office may be mentioned:—

Design for new offices for the Deputy Fiscal at Hulftsdorp, Colombo. The new building is a two-storey building adjoining the new Minor Courts, and provides increased accommodation for the Deputy Fiscal, his Assistant, clerks, and records, and necessary store space.
Design for new stables, coach-house, latrines, and Jailer's quarters, and general improvements to the south of the Supreme Court buildings.
Preparation of detail drawings for the new Minor Courts in course of construction.
Design for new semi-circular counter in the hall of the General Post Office.
Designs for type police stations.
Revised designs and working drawings for new Technical College.
Design for entrance gateways to Customs.
Design for increased accommodation at the Surveyor-General's Office.
Designs for post offices at Mannar, Kurunegala, Rakwana, and Kegalla.
Design for Modara police station, Colombo.
Design for Inspector's quarters, Fort police station.
Design for Assistant Government Agent's house, Kalutara.
Preparation of the necessary designs, detail drawings, and estimates for the several improvements in course of construction at the Customs premises, Colombo.
Design for new Master Attendant's jetty, Colombo.

FRANCIS A. COOPER, C.M.G.,
M.I.C.E., Fellow of the Sanitary Institute,
Member of the Association of Municipal and County Engineers,
Director of Public Works.

Public Works Department,
Colombo, March 19, 1902.

REPORT OF THE GOVERNMENT FACTORY ENGINEER FOR 1901.

DURING the year 482 orders were received amounting to Rs. 885,620·34, making with Rs. 194,604·54 brought forward from 1900 a total of Rs. 1,080,224·88; to this amount must be added disbursements on account of camps for Prisoners of War and reception of Their Royal Highnesses the Duke and Duchess of Cornwall and York.

The total amount therefore available for expenditure for 1901 was as follows:—

	Rs.	c.
Brought forward from 1900	194,604	54
Factory Orders for 1901	885,620	34
Camps for Prisoners of War	90,359	17
Reception of Their Royal Highnesses	6,333	38
Total ...	1,176,917	43

EXPENDITURE.

The expenditure has been distributed as follows:—

	Rs.	c.
Camps for Prisoners of War	90,359	17
Reception of Their Royal Highnesses	6,333	38
Bridges	286,964	12
Buildings	75,845	12
Harbour Improvements	193,378	94
Miscellaneous Departmental	51,323	76
Irrigation	3,659	99
Other Departments	25,668	90
Railway Castings	27,750	32
Plague Precautions	8,019	3
Waterworks	1,586	64
Ragama Cooly Camps	24,020	98
Total ...	794,910	35

And has been paid in the following manner:—

	Rs.	c.
Daily Labour Check-roll	153,029	72
Fuel	17,860	10
Government Stores	444,625	12
Materials purchased	95,001	65
Piecework	84,393	76
	794,910	35
Carried forward for expenditure in 1902	376,239	72
Balance unexpended	5,767	36
Total ...	1,176,917	43

CAMPS FOR THE PRISONERS OF WAR.

There has been an expenditure of Rs. 90,359·17 in connection with the camps at Diyatalawa, Ragama, Hambantota, and Mount Lavinja. The bulk of the expenditure, however, is for the buildings which were erected during the last month of the preceding year. The buildings supplied during this year are as follows:—

Diyatalawa.

One roof to cover swimming bath, 50 ft. by 19 ft. wide.
One detention shed, 40 ft. by 20 ft. wide.
One shed, 20 ft. by 15 ft., with verandah.
Four buildings, 12 ft. by 12 ft., with verandah.
One building, 10 ft. by 16 ft. wide.
Two buildings, 10 ft. by 10 ft. wide.

Ragama.

One sleeping shed, 10 ft. by 24 ft. wide.
One mess shed, 60 ft. by 30 ft. wide.
Two kitchens, 10 ft. by 10 ft. wide.
One latrine, 21 ft. by 6 ft. wide.

Mount Lavinia.

One shed, 20 ft. by 15 ft. wide.

VISIT OF THEIR ROYAL HIGHNESSES THE DUKE AND DUCHESS OF CORNWALL AND YORK.

The expenditure (Rs. 6,333·38) on account of the reception of Their Royal Highnesses the Duke and Duchess of Cornwall and York was for the building of the reception pavilion at the jetty and other works in Colombo, the Queen's House, and Pavilion, Kandy.

BRIDGES.

During the year 172 iron bridge spans were made of various lengths at an expenditure of Rs. 286,964·12.

Digarolla.—The work of widening this bridge and putting on a new corrugated flooring and roadway, commenced on the 29th October, 1900, was completed early in the year, and the other estimate for additional stays fixed in concrete cylinders is now in hand, and will be completed at an early date.

Battulu-Oya.—The ironwork of the last span of this bridge, 80 ft. by 14 ft., was completed and despatched to site. The whole bridge was being erected under the charge of the District Engineer, Chilaw.

Bentota.—The ironwork of two spans of 14 ft. each by 14 ft. roadway and one span of 124 ft. by 14 ft. roadway was completed in the Government Factory and forwarded to site. The erection of these were taken in hand on the 20th December, 1901, and the work is making fair progress.

Mahamodara.—The ironwork of this bridge, with a span of 152 ft. by 14 ft. roadway, the largest and heaviest ever made or erected in the Colony, has made fair progress, and will be erected early in 1902.

Dandugama.—This bridge, with a total length of 258 ft. and clear roadway of 14 ft., constructed on cast iron cylinder piers, commenced in August, 1900, was completed on the 20th December, 1901, and opened for traffic.

The superstructure consists of three spans of iron lattice girder, each 86 ft. long, rolled steel cross girders 10 in. by 5 in., corrugated iron flooring 5-16 in. thick, with cement concrete and tar macadam roadway, total dead load 342 tons, and constructed for a safe working load of 125 pounds per square foot of roadway.

The substructure consists of four cast iron cylinder piers, two cylinders 6 ft. in diameter sunk to a firm foundation and filled with cement concrete to each, connected together by rivetted plate and angle iron girders and flood plates.

The cylinder piers were sunk to a firm foundation by excavating with a grab and steam crane, and after much trouble from old timber trees sunk in the bed of the river reached the relative depth shown in the following table. The measurements in every case are from road level :—

Pier.		Commenced.	Finished.	Length.	Remarks.
				Ft. in.	
No. 1	Up stream	Oct. 9, 1900	Dec. 17, 1900	55 6	Tested with 60 tons
No. 1	Down stream	Oct. 9, 1900	Dec. 29, 1900	51 0	
No. 2	Up stream	Jan. 4, 1901	Jan. 18, 1901	54 6	Tested with 100 tons
No. 2	Down stream	Jan. 6, 1901	June 1, 1901	55 6	
No. 3	Up stream	June 1, 1901	Sept. 5, 1901	54 0	Tested with 100 tons
No. 3	Down stream	Aug. 1, 1901	Aug. 27, 1901	55 6	
No. 4	Up stream	Nov. 6, 1900	April 25, 1901	62 9	Tested with 60 tons
No. 4	Down stream	Nov. 6, 1900	Mar. 2, 1901	61 3	

The test of 60 tons was imposed on each land end pier and 100 tons on the central piers after twelve days, and finding no settlement the weights were removed and the cylinders filled with cement concrete.

The work of rivetting up the girders commenced on the 8th December, 1900. The first span was erected on staging prepared on the Colombo side of the river, and on the 14th March was launched on trestles erected on iron pontoons and landed on No. 2 pier, when the cross girders and platform were fixed. On this span, already in position, the girders for No. 2 span were rivetted up and the girders for No. 3 span on the staging, from which No. 1 span had been removed. The No. 2 span was launched and landed on No. 3 pier on the 16th September, 1901, and completed with cross girders and platform, when No. 3 span was moved over No. 1 and No. 2 spans on trollies and launched and landed on the pier on Negombo side of the river on the 3rd October, 1901, the cost being as follows :—

	Rs.	c.	
Rivetting up girder No. 1 span	546	51	labour only
Do. No. 2 do.	501	37	do.
Do. No. 3 do.	473	0	do.
Cost of launching No. 1 do.	233	40	do.
Do. No. 2 do.	337	83	do.
Do. No. 3 do.	323	71	do.

The flood plates were then fixed in the stream piers and the concrete put on the bridge and tar macadam, a mixture of 24 gallons tar, 2 cwt. of pitch to each cube of metal broken to a 1-in. gauge, completing the work on the 20th December, 1901.

The total cost on the work has been Rs. 58,233·58, being Rs. 7,411·89 in excess of the estimated amount, due to the rise in price of the materials in England after the estimate had been prepared.

The work was under the immediate supervision of Mr. Jonklaas, Inspector.

BUILDINGS.

The expenditure under this head has been Rs. 75,845·12, principally on account of the new Minor Courts. A small building for cooly tickets was erected at the root of the Breakwater, and the usual supply of doors, windows, and other woodwork for public buildings at outstations.

Minor Courts, situated at Hulftsdorp, adjoining All Saints' Church, having a frontage of 223 ft., with one court at each end 45 ft. by 30 ft., with verandahs 45 ft. by 8 ft., the intervening space, 138 ft. by 38 ft., with upper floor, providing accommodation for Commissioner of Requests, Police Magistrate, their clerks, and records, and two rooms for the members of the Bar, made good progress during the year.

The work was commenced in May, the foundation causing much trouble and extra expense owing to the site being over an old cabook quarry, piles having to be driven in places and a great depth excavated for good foundings. The brickwork, commenced in July, was completed in October. The roof was fixed during November and December. The internal plastering in lime mortar of the office and verandahs was completed, and a large percentage of the external plastering in brick red, all ornaments and enrichments being cast in cement and fixed when plastering. All doors and windows were made, but not fixed. All jak wood joists for flooring were fixed and a few squares of flooring boards laid. The ceiling of the two courts made fair progress. Two latrines, one for clerks of 4 seats and the other for witnesses of 3 seats, have been completed.

The expenditure, Rs. 48,745·77, has been distributed as follows :—

	Rs. c.
Clearing site	457 61
Temporary boarding and office	454 96
Earthwork	921 82
Concrete in foundation	2,608 02
Concrete in floor	214 14
Brickwork	19,761 10
Plastering	2,130 25
Roofing	6,532 59
Wooden flooring	2,314 12
Wooden ceiling	2,464 35
Doors and windows	4,111 95
Iron and lead work	4,014 13
Supervision	869 23
Contingencies	1,891 50
Total ...	48,745 77

The work was under the immediate supervision of the District Engineer Mr. Jayewardene.

HARBOUR IMPROVEMENTS.

The expenditure of Rs. 193,378·94 was for the following works :—

(1) Extending the Kochchikada jetties, 30 ft. by 30 ft. each.
(2) Erecting an iron transhipment warehouse, 150 ft. by 60 ft.
(3) Erecting two new jetties at the root of the Breakwater, each 80 ft. by 20 ft.
(4) Continuing the quay wall round the basin of the Harbour from the Wharfage Company's wall to the Master Attendant's jetty.
(5) One iron shed, 80 ft. by 60 ft.
(6) Extending warehouses B, C, and D.
(7) Trincomalee jetty.

(1) *Kochchikada Jetties : Estimated Cost Rs. 31,796.*—The work of extending the two jetties in front of the grain shed commenced in January, and would have been completed at the end o the year had it not been for the hard nature of the cabook through which the cylinders had t be sunk and the south-west monsoon stopping work for some weeks owing to the exposed position of the jetty. The cylinders of these jetties are sunk to 20 ft. below harbour bed. One jetty was completed during the year, and the other, although greatly retarded by finding in November last a mooring chain 8 ft. below harbour bed and across the last cylinder, will be completed early in March.

(2) *Iron Shed for Transhipment Warehouse.*—This shed, 150 ft. by 60 ft., with iron frame and covered with 18 B.W.G. galvanized corrugated iron, with eight double doors 12 ft. wide hung on rollers, cement concrete floors 6 in. thick, and Jarrah blocks 8 in. by 4 in. by 3 in. grouted in with cement and tar, commenced in May, was completed in December at a cost of Rs. 50,595·93.

(3) *Jetties at the Root of the Breakwater.*—Two jetties at the root of the Breakwater, each 80 ft. long by 20 ft. wide, on concrete cylinder piles 5 ft. in diameter sunk to a depth of 20 ft. below harbour bed, were erected. In this work, instead of the ordinary timber wallings and fender beams being used as in other jetties, steel rolled joists 14 in. by 6 in. lined with Jarrah as per section have been used, and the fenders edged with round back angles 3½ in. by 3½ in. by ½ in. to prevent chafing. One jetty was completed in December, and the other would have been but for the want of angle iron for fenders, which did not arrive in the Colony in time.

(4) *Quay Wall : Expenditure Rs. 34,530.*—Constructing a concrete quay wall round the basin of the harbour inside the Customs premises on concrete cylinder piles sunk to 20 ft. below low water mark, commenced in July, made fair progress during the year, a double row of 5 ft. concrete cylinder foundation for a distance of 100 ft. having been sunk.

(5) *Iron Shed, 80 ft. by 60 ft.*—The expenditure on this work during the year was Rs. 10,002·50, and was for all the pillars, roof trusses, purlins, and frames. This building will be erected as soon as the ground in the Customs premises is available.

(6) *Extending B, C, and D Warehouses.*—The expenditure on this work was Rs. 10,719·88 for all the ironwork of trusses, pillars, purlins, and framing made in the Factory. The extension covers an area of 9,900 square feet, the floor of which is to be of Jarrah blocks 8 in. by 4 in. by 3 in. laid on 6 in. cement concrete. The work of erecting was taken in hand late in December, and is making fair progress. The estimated cost of the work is Rs. 57,802.

(7) *Trincomalee Jetty.*—The expenditure on this work during the year, which was Rs. 4,543·07, provided for all the iron piles, girders, bracings, and wooden platform for a new jetty 300 ft. long by 20 ft. broad on iron piles with a covered area of 60 ft. by 30 ft. The materials were despatched to Trincomalee during the year, and are now being erected at that station by the District Engineer.

MISCELLANEOUS DEPARTMENTAL.

The manufacture of the usual departmental tools and plant, such as hand and water carts, road rollers, ramrods, &c., accounted for Rs. 51,323·76.

IRRIGATION.

The work for this department is very little, and amounts to Rs. 3,659·99, principally for cast iron sluices and water stills.

OTHER DEPARTMENTS.

The expenditure of Rs. 25,668·90 under this head shows a large increase over that of the previous year, and represents orders executed for the Master Attendant, Principal Civil Medical Officer, Government Agents, Provincial Road Committees, Local Boards, Government Printer, &c.

RAILWAY CASTINGS.

There has been a very fair increase of outturn from the foundry, the total representing 4,210 cwt., of which 2,369 cwt. of castings were for the Railway Locomotive, Carriage, and Permanent Ways and Works Departments. The expenditure amounts to Rs. 27,750·32.

PLAGUE PRECAUTIONS.

The expenditure of Rs. 8,019·03 under this head represents the cost of erecting a disinfecting station within the enclosure at the Kochchikada grain sheds in place of the hospital ship, which was handed over to the Police. The cost of repairs to the ss. "Serendib" is also included in the aforenamed amount.

WATERWORKS.

The expenditure in connection with the supply of castings for the Waterworks during the year amounted to Rs. 1,586·64.

RAGAMA COOLY CAMP.

On the 9th May I received instructions to proceed with the supply and erection of the buildings for a segregation camp similar to No. 5 cooly camp. All the materials were despatched within five weeks, when the work was stopped. The work of erection, however, was proceeded with early in December, and is now practically completed. This work, together with other Factory Orders in the same connection, amounted to Rs. 24,020·98, and the buildings are as follows :—

Three buildings, 65 ft. by 18 ft., with two verandahs 7 ft. wide.
One building, 65 ft. by 18 ft., with two verandahs and latrines.
One segregation shed, 65 ft. by 18 ft., without verandahs, but with latrines.
Four latrines with washing-places, 36 ft. by 6 ft.
Four kitchens, 10 ft. by 10 ft.
One mortuary, 10 ft. by 10 ft.
One contractor's kitchen, 20 ft. by 10 ft.
One watcher's shed, 48 ft. by 12 ft.
One watcher's shed, 10 ft. by 10 ft., with verandah.

During this year another branch of work has been added to the Government Factory, being the supervision and repair of electric light installations in public buildings. For this work Mr. Rylands has been appointed, and holds the office of Superintendent of Works. His duties since his appointment have been the installing of the Tyre's Tablet System on the Seaside Line of the Government Railway (estimated cost Rs. 1,000), altering lights in the General Post Office and Customs (estimated cost Rs. 166·45), and the repair of all electrical light installations in the Government buildings, Colombo and Kandy.

The large circular cold saw for cutting iron has been received from England and erected on the Machinery Vote at a cost of Rs. 4,080·32, and is proving a most useful machine.

A temporary covering for carpenters to work under is urgently required. Owing to the increase of work in that department many of the men have now to work in the open.

The expenditure on account of works compares very favourably with that of the preceding year. Market payments in that year on account of the camps for Prisoners of War amounted to Rs. 191,023. In 1901 this account amounted to Rs. 95,001·65, a reduction of Rs. 96,021·35, whereas the total expenditure shows a decrease in expenditure of only Rs. 38,731·16, thereby proving that there has in this year also been an increase of Government Public Works over that of the previous years, being an increase in the four items of labour, fuel, materials, and piecework.

I returned from leave on the 6th October and resumed duties. Up to that date the Government Factory and all works under construction were under the charge of the Mechanical Engineer Mr. Hyde, who, with the assistance of the District Engineer Mr. Jayawardene, has carried on the work in a very satisfactory manner.

All the staff have worked well and cheerfully during the past year, and have discharged their duties satisfactorily.

E. C. DAVIES,
Factory Engineer.

Colombo, February 28, 1902.

APPENDIX.

No. 1.—Statement of Expenditure (Annually Recurrent), 1901.

WEST COAST TRIANGULATION.—KULATHADI STAGE; HEIGHT, 80 FEET.

SURVEY DEPARTMENT.

REPORT OF THE ACTING SURVEYOR-GENERAL FOR 1901.

THE Surveyor-General proceeded to England on leave in April, and I assumed charge of the Department.

General Remarks. — Progress with both the topographical and block surveys was much hampered during the year by the necessity of overtaking large arrears of applications and special questions, and also in keeping up with the large number continually coming in, so that the area under these important works shows a considerable falling off as compared with previous years. It is, however, to be hoped that there will be no cause for a renewal of this policy during the current year, and that the mapping of the Island will be allowed to proceed uninterruptedly for some years to come.

In this connection I would draw special attention to the last sentence in the report of the Superintendent of Surveys, Southern Province.

The staff generally, both in the field and office, worked well. As regards the former, the areas covered were, under the circumstances referred to above very satisfactory, while the office returns show a marked increase over anything yet produced.

The areas covered by the different classes of survey during 1901 were as follows :—

(1)	Block Surveys	200,785
(2)	Topographical	1,871,360
(3)	Application and Special Questions	41,047
(4)	Miscellaneous	612
	Total ...	2,113,804

The result of the last six years' working being as follows :—

	1896.	1897.	1898.	1899.	1900.	1901.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Outturn ...	45,438	296,487	1,255,004	2,372,450	2,885,845	2,113,804
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Expenditure ...	447,674	480,280	567,613	608,757	639,798	656,489

Block Surveys.—These were practically confined to the Southern and North-Central Provinces, though small areas were surveyed in the Western, Sabaragamuwa, Uva, and Eastern Provinces. In the Southern and North-Central Provinces very fair progress was made, though I am not entirely satisfied that the fullest possible outturn per surveyor has yet been reached. The average per month per surveyor during the field season works out at about 700 acres in the Southern Province and 900 acres in the North-Central, but I hope that during the current year both these figures will be exceeded. The features of the country and the nature of the work and climate in these two Provinces are entirely dissimilar. In the former we have much broken ground and in places hills of considerable height, with a healthy climate and a fair rainfall of about 90 inches under the influence of the south-west monsoon ; the country is closely inhabited, and lots surveyed had, in consequence, a very low average. Whereas in the North-Central Province the country is practically dead flat, the climate is enervating at times and always hot, the average rainfall is only some 54 inches under the north-east monsoon, the country is sparsely inhabited, and the average extent of the lots is high. A comparison between the work in the two Provinces will therefore be of no practical benefit, but taken separately it will be seen that, whereas in 1900 the average cost per acre and extent in the Southern Province was 75 cents and 70¾ acres, in 1901 it was 54 cents and 14½ acres—a very considerable improvement. In the North-Central Province we find for 1900 41 cents and 82¾ acres, and in 1901 24 cents and 83 1/16 acres.

In the Western and Sabaragamuwa Provinces small parties were started late in the year, and the surveyors were practically under instruction ; this being their first work criticism would be of no avail.

In Chilaw District some of the surveys asked for by the Government Agent were treated in such a manner that they will eventually be incorporated in the block surveys, but they cannot be entered under this head, as they have to be scheduled as special questions.

I fancy that the number of those who understand really what we are doing is very limited. I therefore publish with this report a copy of one of the 16-chain or 5-inch-to-a-mile sheets of part of the Southern Province, such as is now under publication.

The following return gives the area, &c., surveyed in each Province during the year :—

Province.	No. of Lots.	Area (in Acres).	Cost.	Rate per Acre.	Average Extent (in Acres).
			Rs. c.	Rs. c.	
Western	440	3,882	4,326 94	1 11	8¾
Southern	4,117	60.000	32,411 36	0 54	14½
Eastern	11	2,718	528 44	0 19½	247

North-Central	1,044	86,751	20,982 50	0 24	83 1/16
Sabaragamuwa	252	6,452	4,461 91	0 75	27¾
Total ...	6,085	160,785	69,742 67	0 43	26½

In the five years ending December, 1901, the cadastral parties have surveyed 966,535 acres, or 1,510 square miles, comprising the survey of 1,254 villages, as follows :—

Province.	1897-98.	1899.	1900.	1901.	Total.

In Appendix K will be found a complete list of all Block Survey preliminary plans that have been forwarded to the Government Agents and Special Officer, Waste Lands Ordinances, with the settlements that have been reported. This schedule will be extended annually, and will be a valuable record of the progress in this work by the Survey Department and the Settlement Officer.

TOPOGRAPHICAL SURVEYS.

The topographical survey parties had to contend with a very much larger area of hill-country this year than previously, and in the low-country many of the surveyors were greatly retarded in their work by the scarcity of water. There has also been a greater amount of sickness than usual amongst both the surveyors and coolies. These circumstances naturally tended both to retard progress and increase cost, but did not deter the surveyors employed on the work from prosecuting it with the same vigour that has characterized their efforts since its commencement.

None of the reports bring to light any very important irrigation or archæological remains this year, such as they have previously been enabled to draw attention to, but the surveys will be found to be as valuable as any that have been done, in mapping a tract of country previously practically unknown.

I made a tour of inspection through each party in June, and can thoroughly endorse all that is said in the reports regarding the hardship and difficulties of the work.

The report of the Superintendent gives all the general information required regarding the year's work, while the reports of the officers in charge of parties give interesting data in connection with their own particular blocks.

The survey was divided into four parties during the greater portion of the season, and the following table gives the total results of each, with the total for the year :—

Parties.	No. of Tanks.	Mileage of Roads.	Mileage of Stream.	Square Miles of Country.	Cost per Square Mile.	Total Cost.
					Rs. c.	Rs.
1 ...	880	485	979	706	40 76	28,743
2 ...	251	841	661	776	26 89	20,632
3 ...	218	979	901	1,100	20 21	22,238
4 ...	194	65	437	342	29 18	9,981
Total ...	1,543	2,370	2,978	2,924	27 90	81,594

The area completed per surveyor, exclusive of officers in charge of parties, was about 127 square miles for the season, which must be considered a very satisfactory result, reflecting great credit on all concerned.

An area of 11,955 square miles, or 7,651,200 acres, has now been covered by the topographical surveys, *i.e.*, about half of the Island, as shown in the 24-mile-to-an-inch map at the end of this report, on which is also represented the area proposed to be surveyed during 1902.

It is anticipated that we shall be able to cover a larger area during 1902 than in 1901, as we expect to find considerable areas in the northern portion of the work that will contain but little detail, and as we work southwards into the North-Western Province we shall have better means of communication than has usually fallen to the lot of the topographical surveyor. These advantages, it is hoped, will more than compensate for the rugged nature of the eastern portion of the work and the extra amount of detail that will be required in the North-Western Province Wanni.

We shall soon have to commence operations in the mountain zone proper, which offers a splendid opportunity for the introduction of photo-topography, so successfully practised in Canada and America. We have already found that ordinary half-plate views are a great assistance to the hill

sketcher. The Superintendent made a few experiments of this nature during 1901 under my instructions, but through want of experience and proper apparatus we did not get that amount of benefit from the work that we could with a proper equipment and a season's practice.

The ordinary prismatic compass will have to give way to more suitable instruments, dipping circumferenters will be required, and plane tabling will no doubt take its place on the work; it was not possible to use it effectively in our low-country jungles.

The advance print of a 1-mile-to-an-inch sheet of part of the Northern Province, which is now given, is intended to show the amount of detail we shall be enabled to supply the public with when this survey is completed; it is not intended as a specimen of map reproduction, as I trust the finished article will be much superior in that respect.

Application and Special Questions.—This class of work formed a special feature in the surveys of 1901. An average of sixty-one surveyors was employed throughout the year, a staff that nearly equalled the whole field establishment before the re-organization of 1897, with the result that 2,107 applications and 1,341 special questions were surveyed, with a total area of 41,047 acres.

A large number of these special question surveys were carried out at a cost out of all proportion to their value, and it is hoped that revenue officers will limit their requests for such surveys to only very urgent matters, so that the Department may be able to press on with the block survey.

There is a another branch in which this class of survey seriously affects the progress of systematic work, that is, in the reproduction of the surveys in the form of preliminary plans for the Government Agents to enable them to advertise the land for sale. In my report as Assistant Surveyor-General, published in the Surveyor-General's Report for 1900, I said: "I cannot undertake to keep pace with the field staff under present arrangements," &c. The arrangements referred to have remained unaltered, while the work from the field has continued to pour in at an increasing rate, till I find that, in view of the necessity to push on with the block survey plans for settlement purposes and with the topographical survey plans, the office is blocked with application and special question plans, that it will take over a year to issue to Government Agents, even if no new and urgent work comes in to further delay it, and without any surveys under the same head that may be made during the current year. All this notwithstanding the fact that the Preliminary Plan Department created a record for itself by issuing 1,872 preliminary plans, against 1,073 issued in 1900, which was itself a record. I should like to see a notice issued that no application for the purchase of Crown land will be received for four or five years, except within the area covered by block surveys, and the whole staff thus relieved employed on block surveys. I cannot believe that the public would suffer to any extent; the Government Agents have probably enough in hand with what I could send them in the meantime to keep up the average of what is called "Revenue from Land Sales," and at the end of that time there can be no doubt that block surveys will be the means of replenishing the Exchequer to an extent which those who are not behind the scenes can have no idea of. The scheme is a drastic one, I admit, but if taken in hand seriously it will have a most beneficial effect on the settlement of the country and in simplifying the sale of lands in the area so covered in the future.

Miscellaneous.—Under this title are included all work that cannot be treated under any of the heads already referred to. The most important item in 1901 was the completion of the acquisition surveys for the Kurunegala-Jaffna, Colombo-Yatiyantota, and Nanuoya-Uda Pusselawa Railway lines. Apart from the usual small pieces that are frequently required along railway routes during construction, that work is now happily completed. These surveys take a long time; they have to be very carefully done in the field and plotted to a large scale, while the mere trenching of the boundary lines is an expense that falls very heavily on the Department, though it is not apparent why all such charges should not be defrayed by the line for which the work is done. The Dehigama land claim also demanded considerable attention, and an excellent model of the whole countryside was constructed by Mr. L. Shipton, Assistant Superintendent of Surveys, from surveys made for the purpose. It is a work that does Mr. Shipton great credit, and makes it possible for the most untechnical mind to grasp the lie of the country with the greatest ease. The field work was very much impeded by wind, which at times made it almost impossible to stand on some of the patana ridges, and the party engaged on the work deserve great credit for having completed the 16-chain contour map of 24 square miles of country during a month. This would of course have been impracticable had not most of the details already been surveyed, as, besides wind, the party had a good deal of wet weather to contend with. Various small works are also included under the head of "Miscellaneous," such as definition of boundaries, road surveys, &c., a more detailed reference to which would be of no interest.

Recess.—The block survey parties recessed in Matara, Anuradhapura, Jaffna, Colombo, and Ratnapura respectively, Jaffna being used by the party working in the north of the North-Central Province, the field work having been supervised by the Assistant Superintendent of Surveys, who had his headquarters in the capital of the North. Small recess parties were also instituted in Badulla, Batticaloa, and in camp near Chilaw, in order so far as possible to bring up to date all the plan work of the surveys made during the year, and also to carry out the policy of taking surveyors out of the field during the worst part of the north-east monsoon. Owing to the great block of work at head-quarters, I decided to extend the recess operations beyond the ordinary routine of plotting, drawing up the field plans, and writing tenements. Tracings have been prepared from the field sheets in the style required for reduction by photography to the scale of 5 inches to the mile, and all lots in the Southern Province have been computed. By these means I confidently anticipate being able to supply copies of last year's work to the Special Officer under the Waste Lands Ordinance, the Government Agent, and any other official who may require them at an early date. When once the photographic transfer is on the stone and finally worked up, the number of copies to be supplied is a secondary matter. The greatest cause of delay is the comparison of the new work with the old, and which entails the insertion of title plans and the revision of the areas of lots affected by them. I have, by increasing the amount of work to be done in recess, encroached somewhat on the field season of the current year; but it is, I am sure, good policy, as I shall be enabled to keep the Waste Lands Ordinance Settlement Officer fully supplied with plans, and as this most important work is now being systematically and rapidly attended to, we should otherwise, I feel sure, have seriously hampered his progress from the want of an adequate staff in the Head Office to attend to the preparation of plans.

Great difficulty was experienced in obtaining quarters in which to recess the topographical party in Colombo, and it was only at the eleventh hour that arrangements were made with the Apothecaries' Company for the use of two rooms and a verandah leased by them from the Chamber of Commerce. The rooms will not be available this year, and at present I am unable to form any idea as to where I shall be able to get the required accommodation.

Headquarters.—Notwithstanding the fact alluded to more than once already that the staff cannot keep pace with the field, the report of the Acting Assistant Surveyor-General will conclusively prove that the utmost efforts to do so, as far as practicable, have been made. The use of improved processes and the modification of methods have done something, so that he is able to show "records" from the outturn of work in departments that had already created "records" in 1900. The limit of efficiency appears to have been nearly reached, but we are at the present moment endeavouring still more to improve on both our processes and methods, so I am even hopeful of "going one better" in 1902.

Inspections.—Before leaving for England the Surveyor-General paid visits of inspection to the Northern, North-Central, and Central Provinces in February; in March to the Central and Uva Provinces.

In May I travelled through from Colombo to Batticaloa by road and back *viâ* Haputale early in July, inspecting *en route* surveys in the Western Province, Sabaragamuwa, and Buttala in Uva, the several parties on topographical work from Tanamalvilla to Bibile, the application surveys in the Eastern Province and Uva, and detail surveys of Nuwara Eliya. In July, August, and September I visited the Kurunegala District, went through all surveys being made in the North-Central and Northern Provinces, returning to Colombo by steamer from Kankesanturai, and at the end of September completed my field inspection for the year by a visit to Chilaw and Puttalam. During recess I inspected the offices at Galle, Matara, Kandy, Badulla, Jaffna, and Anuradhapura.

Personnel.—But few alterations occurred in the *personnel* of the staff, apart from the change consequent on the Surveyor-General going on leave, which brought Mr. Hampton into the office to act as Assistant Surveyor-General, Mr. Ridout to Colombo as Acting Superintendent of Surveys, Western and North-Western Provinces, and sent Mr. J. W. Robertson, Assistant Superintendent of Surveys, to Jaffna, in charge of surveys in the Northern Province and the northern party of the block surveyors in the North-Central Province. In May Mr. C. C. M. Fyers had to proceed to England on account of failing health after an uninterrupted residence in the Island of twenty-three years; his furlough was therefore well earned, but it was taken none too soon, as at one time he was not expected to recover from the illness that prostrated him in England. Mr. A. J. Wickwar, Assistant Superintendent of Surveys, was appointed to act as Superintendent of Surveys, Sabaragamuwa.

In the reports by the Superintendents of Surveys that I give below will be found much interesting matter relating to the various works carried out during the year.

Departmental Expenditure.—The expenditure for 1901 was Rs. 15,765 in excess of 1900, which is chiefly accounted for by the following items:—Tents for field parties Rs. 5,996, erection of stages for trigonometrical observations Rs. 2,851, and payment of the cost of copies of valuable old maps from The Hague Rs. 4,638.

Land Sales.—Although the number of lots sold (Appendix A) during the year exceeded 1900 by 852, the amount realized shows a reduction of Rs. 182,411·39. The total receipts under all heads (Appendix A 3) amount to Rs. 522,276, or Rs. 199,557 less than last year. This amount was also exceeded in 1898 and 1899, but it exceeds 1897 by Rs. 8,176.

In view of the fact that the demand for land for large estates is in abeyance, the amount is satisfactory, as the returns show that the small native has been acquiring land instead of the large estate proprietor, and this fact compensates, I think, in a great measure for the reduction, as it tends to settle the rural districts in the most satisfactory manner, apart from block survey settlements.

In the Western Province recoveries on sales and settlement made on block survey plans amount to Rs. 17,165·66, showing what could be accomplished if this class of survey was pushed on vigorously and the settlements kept up to date. I wish particularly to emphasize this matter as a striking proof of the great value to the Colony of the block surveys.

We have this year a new column for lands sold to claimants by the Special Officer while settling claims under the Waste Lands Ordinances; this new departure is doubtless an excellent one, and will be productive of much good amongst the villagers.

The total expenditure of the Survey Department and the revenue from Land Sales have no relation to each other at all, though they are always combined in Appendix F. The column of expenditure is therefore useless and misleading. As, however, it has been regularly entered up since 1846, I make no alteration in the form used, but beg that no estimate of the value of the work of the Department may be founded on the figures given.

P. D. WARREN, F.R.G.S.,
Acting Surveyor-General.

Colombo, March 27, 1902.

REPORT OF THE SUPERINTENDENT OF SURVEYS, SOUTHERN PROVINCE.

THE block survey was carried on in the Gangaboda and Kandaboda pattus of the Matara District and West Giruwa pattu of Hambantota District, five surveyors, under an Assistant Superintendent, commencing operations towards the end of January. The party was strengthened on the 15th April by the addition of four newly trained supernumeraries, from whom not much could be expected, yet they soon grew familiar with the duty, and their work, with one exception, has proved better and more extensive than I had anticipated.

One surveyor on applications had to be withdrawn in April to assist with the survey of main circuit traverses, and at the end of July I was authorized to add to the block survey staff four surveyors who had been engaged on the survey of applications and special questions, which had been reduced almost to vanishing point.

The aggregate months' field work by all the above represents approximately ten surveyors working for the whole season of nine months.

The total area surveyed is approximately 60,000 acres, comprising 4,117 lots, an average of 14½ acres per lot.

The average progress per surveyor per whole field season works out at nearly 6,000 acres in 412 lots, which is not so good as I had looked for, allowing for most of the surveyors being of the lowest grade and hence with least experience. It is to some extent due to the small average extent of lots, yet I trust the outturn for 1902 will be better.

The total cost, including triangulation, travelling, and supervision, amounts to Rs. 32,411·36, or at the rate of 54 cents per acre, a record, I believe, for work in country of the character covered.

One hundred and twenty miles of main circuits were surveyed and co-ordinated, nearly the whole of which was work of exceedingly good quality.

Twenty-four old trigonometrical points and new check points were computed by me and placed on the new fixing, on which the whole of the surveys are based.

Sixty-six villages were completely surveyed and fifteen were left incomplete, as follows:—

In Kandaboda pattu, Matara: thirty-five villages, viz., Beragammula, Belpamula, Balakawala, Bamunamula, Bamunugama, Beruwewela, Beragama, Deyiyansara, Dewalegama, Diddenipota, Ellawela, Eparala, Gonbaddala, Gatetumbe, Gammadegama, Horapawita, Henipella, Ketiyape, Kudapane, Kongala, Mulatiana, Maduwela, Marambe, Makandura, Mipawita, Murutamure, Mahalpe, Neralampitiya, Narawelpita, Panditaporowa, Parapamula, Radawela, Ranchagoda, Wawala, and Wepotnira; Denegama, Pallewela, and others being left incomplete.

In Gangaboda pattu: twenty-five villages, viz., Demattepassa, Devitura, Godapilla, Gatare, Ganegama, Honpa, Iritota, Koramburuwana, Karapiyadda, Kanahalagama, Magamura, Malana, Narandeniya, Peddapitiya, Pandugama, Patramula, Porambe, Sapugoda, Talahagama, Tumbe, Tibotuawa, Urumuttu, Welihena, Wilpita, Wenagama. Those incomplete being Aturaliya, Akuressa, and Karagoda Uyangoda.

In Giruwa pattu: five villages, viz., Godawana, Handugala, Kebbuleketiya, Saputantiri, and Warrapitiya, Kanumuldeniya being left incomplete.

Plans should, by instruction of the Surveyor-General, have been completed and sent to headquarters by the 25th January. This could not be done, later instructions being received for the recess staff to prepare tracings of all plans for immediate reduction by photo process at the Head Office, and in addition the area of each lot had to be twice computed, a duty for the first time thrown on the field staff.

Application and Special Questions.—Fourteen surveyors were employed on the survey of applications and special questions from January to July, when five were withdrawn, as arrears had been overtaken, and there was no work for such a large staff.

Commencing with arrears from the previous year of 283 applications and 464 special questions, and receiving during the year 432 applications and 170 special questions, 685 applications and 610 special questions were attended to and plans sent in, leaving at the end of the year a balance of only 30 applications and 24 special questions, many of which were only received in December.

The total area surveyed under both heads was 9,049 acres in 3,098 lots, an average of under 3 acres per lot, the total cost being Rs. 33,241·99, or an average rate of Rs. 3·67 per acre.

It is worthy of note that this class of work cost, for 9,049 acres, more than the block survey cost (Rs. 32,411·36) for 60,000 acres.

S. J. C. MORE,
Superintendent of Surveys, Southern Province.

REPORT OF THE SUPERINTENDENT OF SURVEYS, UVA AND BATTICALOA DISTRICT.

FROM the commencement of the year the Province of Uva and the Batticaloa District were worked together under one Superintendent, with headquarters at Badulla, the books and registers being kept separately.

PROVINCE OF UVA.

A staff of five field surveyors was employed almost entirely on application work, the only block survey of land unapplied for being undertaken to finish two small villages near Bandarawela left incomplete last year.

Other block surveys were, however, made on applications from the Government Agent, viz., surveys of the extensive villages of Battugammana and Muppane, which require an early settlement of the large claims to the forest and waste lands within them, and surveys under the newly restored tanks in Dambagala pattu.

The total area of the block surveys was 9,082 acres, average extent of lots 37½ acres, and cost per acre for field surveyor's work 77·3 cents.

Application Surveys.—The survey of Government and private applications not included as block surveys cost for field surveyor's work Rs. 5·35 per acre for lots averaging slightly under 3 acres. The total area surveyed in Uva under this head was 1,403 acres.

Miscellaneous Work.—Under this heading Rs. 2,707 were expended for the completion of surveys in the Medagam pattu (left unfinished by an officer who was invalided out of the Province in January) and other minor works.

BATTICALOA DISTRICT.

There were five surveyors employed on application work in this district. Towards the end of the field season this class of work fell short, and three officers were put on to the running of circuit traverses and block survey work.

Of block surveys, 2,718 acres were surveyed in the Chammanturai pattu at a cost of 19½ cents per acre.

Applications were surveyed in all parts of the district, the cost for 2,911 acres being at the rate of Rs. 3·46 per acre.

The District Judge's old bungalow was handed over to the Department from the 1st October, and the smaller building was immediately put to use as a recess office. Being dark and badly arranged it is not very suitable for the purpose, but I hope by next October it will have received the few alterations and repairs needed to make it so.

J. W. VINER,
Superintendent of Surveys, Uva and Batticaloa District.

REPORT OF THE SUPERINTENDENT OF SURVEYS, CENTRAL PROVINCE.

THE surveys in the Province during the year are classed as follows:—Applications, Special Questions, and Miscellaneous.

Applications.—Forty-two applications were in hand at the beginning of the year, 108 received in the course of the year, and 45 were in hand on the 31st December, 1901. Ninety-seven applications were surveyed during the year, comprising 526 acres in 208 lots, at a cost of Rs. 4,142·25. The cost per acre was Rs. 7·87, and the average extent of the lots 2 acres 2 roods and 4 perches. Of the applications surveyed, the plans of four were incomplete at the end of the year; the cost of these has been added to the above total. Eight applications were identified at a cost of Rs. 151·09 as having been previously surveyed.

Special Questions.—Thirty-eight special questions were in hand on the 1st January, 99 were received in the course of the year, and 29 were in hand on the 31st December. Sixty-seven special questions were surveyed during the year, comprising 741 acres in 302 lots, at a cost of Rs. 3,689·73, the cost per acre being Rs. 4·97, and the average extent of the lots 2 acres 1 rood and 32 perches. Twenty-nine questions consisted of re-definition of boundaries, identifying, sub-dividing lots previously surveyed, &c., at a cost of Rs. 2,200·75, the total amounting to Rs. 5,890·48.

Miscellaneous.—Under this heading comes the Dehigama claim, extensions of contours at Nuwara Eliya, the Uda Pussellawa Railway survey, and the Ambawela road survey in Uva.

The Dehigama claim survey was started in July with the primary object of making a model which would show the natural features of the claim and the lands under cultivation, &c., within it. The survey being of an urgent nature, and it being desirable that it should be completed with as little delay as possible, Mr. Kalenberg from the North-Western Province and Mr. Swan from Uva were called in to assist the three officers of my staff who were detailed for the work. I personally supervised the survey, my headquarters for the seven weeks during which it took to complete it being at Pattipola. The model was subsequently completed in Nuwara Eliya by Mr. Shipton.

The Nuwara Eliya contours survey, which had to be stopped during the previous year owing to pressure of other work, was re-started by Mr. Shipton in May, but was again temporarily stopped to allow the Dehigama claim survey being carried through; and on Mr. Shipton going home on leave it was taken up by Mr. Hampton. Subsequently Mr. Nock was put on the work to assist Mr. Hampton.

The Uda Pussellawa Railway survey was in progress when I assumed charge of the Province, and was eventually completed to Ragala, with the exception of that portion running through Military reserve. Certain additional lands to be acquired have, however, been subsequently surveyed. The total area surveyed is 76 acres 3 roods and 7 perches in 287 lots, the cost per acre being Rs. 42·33, average extent of lots 1 rood and 2 perches, and the total cost Rs. 3,217·78.

The survey of Ambawela road in Uva was undertaken by Mr. Hampton towards the close of the year, and as his camp was much nearer to the work than any of the Province of Uva surveyors, it was completed at a cost of Rs. 473·25.

KURUNEGALA DISTRICT, NORTH-WESTERN PROVINCE.

I have only one surveyor in my charge in this district, an officer of the third grade, who, as already stated, was called in to assist my Central Province staff with the survey of Dehigama claim during the months of August and September.

Applications.—The number of applications in hand on the 1st January was 3; 31 were received in the course of the year, and 21 were in hand on the 31st December. Thirteen applications were surveyed during the year, comprising 67 acres in 25 lots, at a cost of Rs. 732·49, the cost per acre being Rs. 10·93, and the average extent of lots 2 acres 2 roods and 28 perches. Of the applications surveyed, the plans of 3 were incomplete at the end of the year.

Special Questions.—Thirteen were in hand on the 1st January, 24 were received in the course of the year, and 5 were in hand on the 31st December. Thirty-two were surveyed during the year, comprising 120 acres and 17 perches in 54 lots, at a cost of Rs. 1,471·81, the cost per acre being Rs. 12·26, and the average extent of the lots 2 acres and 39 perches. The plans of 9 were incomplete at the end of the year.

BURLEIGH CAMPBELL,
Superintendent of Surveys, Central Province.

REPORT OF THE SUPERINTENDENT OF SURVEYS, NORTH-CENTRAL PROVINCE.

Staff.—The staff in the Province at the commencement of the year consisted of seventeen surveyors; subsequent alterations resulted in my having charge of a party of twelve. On the 20th April Mr. Robertson, Assistant Superintendent of Surveys, received orders to proceed to Jaffna to take over charge of work in the Northern Province, and left Anuradhapura on the 5th May. At the same time those officers in the northern block survey party were instructed to place themselves under his immediate supervision. Mr. Meurling, Second Grade Surveyor, who reported himself to me in April, took over from the officer then engaged on town surveys, who joined the southern block survey party.

Block Surveys.—44,200 acres in 558 lots were surveyed at a cost of Rs. 10,084·18, or 22·8 cents per acre, the average extent of each lot being 79 acres. In all sixty villages were wholly surveyed, viz., Nuwaragam korale: Hedogama, Pawakulam, Kaluwella, Kudawewa, Kirimetiawa; Pahala Talawa, Maha Bulankulam, Ullukkulama, Illuppankadawela, Ikiriwewa, Medumagama, Indigaspotana, Meegahawewa, Waduressagama, Mirihena, Kadahatawewa, Kurubukgahawewa, Nabadawewa, Yalagama, Eramaduwagama, Moragoda; Kanadara korale: Athikulam, Gnanekulam, Kudapala-adikulam, Mahapala-adikulam, Unagaswewa, Potupitigama; Kelegam korale: Kodalekulam, Ratmategalla, Kuttekulam, Halmillakulam; Eppawela korale: Nallamudawa, Mawattuwara, Timbiriwewa, Radagama, Rotawewa, Galtenwewa, Aliyawetunawewa, Kudawewa, Ratmalewetiya, Kalegama, Millagahawa, Siyambalagaswewa, Ambagahawewa, Konwewa, Pallewattegama, Tammanagama, Tambutegama, Radagama, Musalpitiya, Ikiriwewa, Kumbukwewa, Pessawewa, Nalachchiya, Eppawela, Konwewa, Kumbukwewa, Medagama, Pottagama, Alutwewa, Kuttikuna, Galmaduwa, Ihalagama, Amunukolla, Nikawewa, Meegaswewa; Ulugalla korale: Kurundankulam, Karawalagaswewa. These include the following villages coming within the Nallamudawa claim (Special Question No. 74):—Nallamudawa, Mawattuwewa, Timbiriwewa, Radagama, Rotawewa, Galkuwewa, Aliyawetunawewa, Kudawewa, Ratmalewetiya, Kelegama, Millagahawa, Siyambalagaswewa, Ambagahawewa, Kuttikulam, Kurundankulam, Karawalagaswewa, Kodalikulam, Halmillekulam, Ratmalegahawewa, and part of Wetankulam and Turuwella.

The following villages were partly surveyed in 1900 and completed this year:—Eppawela korale: Timmagama, Hurigaswewa, Rajaligama, Halmillewewa, Telhiriyawa; Nuwaragam korale: Korakawa; Kenda korale: Maradankulam, Ukulankulam. Four villages were partly surveyed this year, viz., Nuwaragam korale: Turuwella; Eppawela korale: Wetankulam; Kelegam korale: Ulankulam; Wilachchiya korale: Andirawewa, making a total of—

Villages wholly surveyed.	60
Villages partly surveyed last year and completed this year	8
Villages partly surveyed this year	12
Total ...	80

The acreage includes 12,113 acres in 126 lots, which were surveyed during 1900, but not passed. An officer was detached this year to run check traverses across the block in question and thoroughly check and report on the work, which has been done satisfactorily One of the officers engaged in this branch of the work proved so unsatisfactory both in the quality and quantity of work done by him that his services have since been dispensed with. His work is not as reliable as it should be, and he gave me considerable trouble in measuring and checking it. The survey of the Nallamudawa claim proved a thorn in the flesh of the surveyor engaged on it; he was constantly hindered in his progress by objections on the part of the claimants, and deviations in boundaries had frequently to be made to deal with the dispute. This caused delay in the work.

Applications.—The number of applications in hand on the 1st January was 144, the number received during the year 258, and the number in hand on the 31st December 79. 342 applications, comprising 2,365 acres in 701 lots, were surveyed in the course of the year at a cost of Rs. 11,718·33. The average extent of each lot is 3 acres 1 rood and 18 perches, and the cost per acre Rs. 4·95½.

Special Questions.—The number in hand on the 1st January was 19, the number received during the year 24, and the number in hand on the 31st December 10. Thirty-six were disposed of in the course of the year, classed as follows:—

For which acreage is credited	17
For which acreage is not credited	19
Total ...	36

Of these, twenty are included in the town surveys, one is included in the block surveys, *i.e.*, the Nallamudawa claim, six are in the Kelegam and Unduruawa korales, and comprised 1,060 acres in 171 lots at a cost of Rs. 833·10, or 78½ cents per acre, with an average extent of 6 acres and 37 perches per lot, including the survey of the Ranawa village of 970 acres in 18 lots.

Nine special questions were disposed of in the Eppawela, Kenda, Kelegam, and Kadawat korales, consisting of re-definition of boundaries, re-surveys, identification, &c., at a cost of Rs. 594·61.

Town Surveys.—Nine special questions of encroachments and other surveys made within the town limits were disposed of, amounting to 209 acres in 209 lots at a cost of Rs. 1,355·68, or Rs. 6·48 per acre, the average extent per lot being 1 acre. Eleven questions were disposed of, principally re-definition of boundaries, re-survey at Vesagiriya for the conservation of the ruins, and one investigation survey with a view to discover encroachments, main circuiting, and co-ordinating, &c., at a total cost of Rs. 1,382·30.

Railway Surveys.—330 lots of 66 acres were surveyed for railway purposes, completing the survey of all lands required in the Province for the Northern Railway Extension, at a cost of Rs. 1,156·20, or Rs. 17·20 per acre, the average extent per lot being 29 perches. The boundaries of these lots were well defined on the ground by trenches.

Triangulation.—After prospecting for, and deciding on, the points required as check stations for the block survey party and other work in the Provinces, I proceeded to take observations with the 6-in. transit theodolite about the middle of May, accompanied by Mr. Meurling as booker. I concluded the work *pro tem.* at Ritigala at the end of the month, the weather being unpropitious. I succeeded, however, in taking all necessary observations for the fixation of most of the points required, and Mr. W. C. de Zilwa, Supernumerary Surveyor, was detached later to take further observations from Katupota and Ritigala, which he succeeded in doing. Included angles were taken at seven stations, and careful observations of four and five sets of arcs at the following stations :—(1) Ritigala trig., (2) Katupotakanda trig., (3) Manawewa trig., (4) Pahala Halmillawe Weharegala trig., (5) Payindekulam trig., (6) Nikawawakanda trig., (7) Usgala trig., (8) Ranawakanda trig., (9) Alitana trig., (10) Dahiyakanda trig. The observations at Alitana trig. were taken by Mr. Robertson before he left the Province. From the deduced angles I succeeded in satisfactorily fixing the following as check stations on the "new fixing" position :—(1) Manawewakanda, (2) Pahala Halmillawe Weharegala, (3) Usgala, (4) Payindekulam, (5) Nikawawakanda, (6) Ranawakanda, (7) Alitana and Dahiyakanda. Five of these stations were connected to by the block survey party; and one, Ranawakanda, in connection with the Ranawa village survey. The total cost of the triangulation comes to Rs. 1,204·22.

Stadia Survey.—A stadia survey of the Ketakelam village was made for settlement by the Waste Lands Ordinance, the total extent being 295 acres in 3 lots at a cost of Rs. 343·28, or Re. 1·20 per acre, the average extent of each lot being 98 acres 1 rood and 13 perches. This survey could have been made at a much less cost had the officer selected shown more zeal and energy to balance his want of experience in this system of work.

The health of the field staff throughout the year was good until recess, when a considerable amount of sickness in the shape of malarial fever prevailed amongst the officers, and the plan work was in consequence retarded. Both my clerks have been seriously ill and frequently absent from the office, and one left the Province on medical certificate.

From the beginning of the year to the 13th February I was ill off and on with fever and chronic inflammation of the stomach, and on the 14th February had to be removed to Kandy, where I remained till March, returning to Anuradhapura on the 25th, when I took over from Mr. Robertson, Assistant Superintendent, who in the meantime had been acting for me.

R. B. CAMPBELL,
Superintendent of Surveys, North-Central Province.

REPORT OF THE ACTING SUPERINTENDENT OF SURVEYS, WESTERN AND NORTH-WESTERN PROVINCES.

WESTERN PROVINCE.

I WAS in charge of the Western Province until 22nd January, when I handed over to Mr. Hampton, and I took over charge again from him on 26th April, on my return to Colombo.

The work done during the year was principally application surveys. Some work was done in connection with the Kelani Valley Railway, and from Easter three new supernumerary surveyors were engaged on block survey work.

Application Surveys.—At the beginning of the year there were in hand 136 applications and 207 special questions. During the year 488 applications and 54 special questions were received, and 471 applications and 245 special questions were surveyed, leaving 153 applications and 16 special questions in hand at the end of the year. That there were more applications in hand at the end than at the beginning of the year is due to the fact that during part of November and December the surveyors were recessing, and the applications came in with rather a rush, no less than 196 being received by me for attention during the last quarter of the year.

The application work was kept well in hand, so much so that during the second half-year there was little more than a month's work in hand at the beginning of each month ; but new work kept coming in as fast as old questions were worked off, and there was always sufficient to keep the field staff occupied.

As regards special questions, the majority of the 207 in hand at the beginning of the year had been outstanding some time, having been sent in for attention in 1899 and 1900 during the plumbago boom, and concerned lands in the Pasdun korale. All but three of these were worked off, the total number of special questions in the Province unattended to being reduced to 16 by the end of the year.

The total area surveyed in the Province was 2,923 acres, comprising 1,956 lots, the cost of the work being Rs. 20,019·11. This gives the rate per acre Rs. 6·85—a high rate, which is accounted for by the scattered nature of the work and the small size of the lots, the average extent being only 1 acre 1 rood 39 perches.

Railway Acquisition Surveys.—Mr. E. O. de Fonseka was engaged during 131 days in making acquisition surveys in connection with the Kelani Valley Railway. This work mainly consisted of small additional lots, but at the end of the year he surveyed the lands required for the extension to Yatiyantota. The total number of lots surveyed was 156, the extent being 60 acres, and the cost of the work Rs. 902·35.

Block Surveys.—After the Easter vacation three supernumerary surveyors, who had just joined the field staff, and had no previous experience of field work, were put on to do block surveys. The block chosen was in the Hewagam korale, a continuation to the south of the previous year's work. The

villages of Pinnawala, Halpe, and Wewelpanawa in the Meda pattuwa were surveyed throughout; and Diddeniya in the Udugaha pattuwa and Mawatagama in the Meda pattuwa, which had been partly surveyed in the previous year, were completed. Wagga in the Meda pattuwa was partly surveyed. This is a very large village, and will take some time to complete. The area surveyed was approximately 3,882 acres, in 440 lots, giving the average extent of lots 8 acres 3 roods 12 perches. The cost of the work was Rs. 4,326·94, giving a rate per acre of Re. 1·11.

Triangulation.—In connection with the block surveys, I took observations from eight trigonometrical stations, and the following five stations were put on the new fixing:—Miriyagala, Belungala, Ukgala, Elowagala, and Ratagonakanda.

Miscellaneous.—Among the miscellaneous work done during the year, Mr. O. Schokman was engaged in bringing the town map up to date, finishing the survey in connection with the duplication of the railway line to Mount Lavinia, and work in connection with the definition of the boundaries of Crown leased lands within the Municipality.

NORTH-WESTERN PROVINCE.

At the commencement of the year the North-Western Province, with the exception of the Wenda and Hiriyala hatpattus, was for departmental purposes attached to the Western Province. I took over charge on the 26th April.

The work done during the year consisted mainly of application surveys, but some acquisition surveys were made in connection with the Northern Railway. The field staff in this Province working under my supervision consisted of eight surveyors, three of them being under the immediate direction of Mr. G. F. Hepponstall, 2nd grade surveyor.

Application Surveys.—At the beginning of the year the work in hand consisted of 58 applications and 257 special questions. During the year 74 applications and 23 special questions were received for attention, and 93 applications and 232 special questions were surveyed, leaving a balance of 39 applications and 48 special questions unattended to at the end of the year, a satisfactory reduction.

The plans sent in during the year comprised 921 lots, the area being 6,968 acres, and the cost of the work Rs. 15,361·08. This gives the average extent of the lots 7 acres 2 roods 10 perches, and the cost of the work Rs. 2·20 per acre.

It will be noticed that the number of questions attended to per surveyor was small. This was due to the large areas to be surveyed in connection with many of the special questions. If the work be judged by the cost per acre (Rs. 2·20), the outturn is satisfactory, considering the scattered nature of a good deal of the work.

Railway Surveys.—Mr. G. L. Schokman took up acquisition surveys for the Northern Railway, necessitated by a deviation of the line between 38 and 50 miles, and comprising 238 lots. Seventy-six lots, minor deviations between 20 and 30 miles, were also surveyed. The cost of these acquisition surveys was Rs. 1,500.

Levelling.—Mr. G. F. Hepponstall was engaged for part of the year in contouring Maradankulam and Ponnankaniya tank, and ran a line of levels to these tanks from Bingiriya to put the work on the mean sea datum. The cost of this work was Rs. 692·41.

Main Circuit Traverse.—Only one main circuit traverse was run during the year, from Chilaw stage to Kottakanda trig., a distance of 13½ miles. This traverse was run by Mr. G. F. Hepponstall in connection with some large special questions, and closed well.

J. B. M. RIDOUT,
Acting Superintendent of Surveys, Western and North-Western Provinces.

REPORT OF THE ACTING SUPERINTENDENT OF SURVEYS, PROVINCE OF SABARAGAMUWA.

THE block surveys in this Province were confined to the Kukulu korale. The staff of three surveyors, all new to the Department, surveyed approximately 6,451 acres. Work was commenced in the middle of April. Two officers were placed in Ayagama and one in Galatura, but neither village was completed by the end of the year. The area surveyed is 6,451 acres 3 roods and 16 perches, the number of lots 232, with an average extent of 27 acres 3 roods and 9 perches per lot. The total cost of the work was Rs. 4,461·91, excluding supervision. This works out at a cost of 72 cents per acre.

I took over charge of the Province from Mr. Fyers in the middle of May, and as the majority of the trigs. in the cadastral area were not on the new fixing, all traverses were closed temporarily on the approximate new fixing supplied me.

Applications and Government Agent's Questions.—This branch of work has been kept well in hand. At the end of the year there were outstanding in the Province 7 applications and 26 special questions; the latter include 12 Forest Settlement Officer's questions.

The total cost of all surveys in the Province is Rs. 24,151·83, with an average cost of Re. 1·57 per acre.

Miscellaneous surveys cost Rs. 3,735·96. These include questions for which acreage cannot be credited, such as opening old boundaries, fixing title plans, &c.

A. J. WICKWAR,
Acting Superintendent of Surveys, Province of Sabaragamuwa.

REPORT OF THE ASSISTANT SUPERINTENDENT OF SURVEYS, NORTHERN PROVINCE.

IN the Northern Province four surveyors were employed on application and special questions, one being for some time engaged on railway acquisition surveys; the survey of the Pallai fuel reserve was also taken up and completed.

At the commencement of the year there were 135 applications and 8 special questions in hand, during the year I received 252 applications and 37 special questions, 291 and 15 respectively were dealt with, leaving a balance of 93 and 27. Two-thirds of the applications are in the Mullaittivu District, and as 181 were surveyed there during 1901, with an average extent of about 3 acres, it will be seen that a considerable demand for small lots has taken place, presumably in anticipation of the extension of the railway. Seventy acres were surveyed for railway acquisition in 171 lots at a cost of Rs. 1,527·76.

In the North-Central Province a block survey party of four surveyors, increased by one in August, worked under my supervision.

In the Kende korale the following five villages, which were only partly surveyed in 1900, were taken up and completed:—Nuwarawewa, Puliyankulam, Mankadawela, Katupuliyankulam, and Malmariyagama.

In the same korale the following twenty-five fresh villages were taken up and completely surveyed:—Kopakulama, Pandiyankadawela, Anduaketiyawa, Pahalagama, Buddhanagama, Palukumbura, Kolagawila, Nikkawewa, Katukeliyawa, Katugampola, Siyambalagaswewa, Mahagalkadawela, Harakweldamana, Medagama, Siyambalagaswewa, Parasinghawewa, Ambagahawewa, Kadurugasdamana, Ratmala, Ichankulam, Galgedamana, Wiragala, Wirasola, Kudagama, and Kanugahawewa.

In the Kadawat korale the following thirty-four villages were entirely surveyed:—Migahawewa, Diwulwewa, Nahamagama, Rilakadawela, Mahagalkadawela, Namadagaswewa, Konakumbukgollawa, Walpola, Kuda Walpola, Lindahitidamana, Maguruhitikadawela, Dangollawa, Sarakkua, Kongollawa, Maha Kumbukwewa, Wirahurippuwa, Pansalawewa, Dunwattagama, Kulikkada, Madawachchiya, Kuda Madawachchiya, Akirikanda, Kuda Palugollawa, Palugollawa, Veddittibbagala, Irambakulama, Punawakada, Palugollawa, Walahamaluwa, Kadawatgama, Maha Hapenalgollawa, Kuda Hapenalgollawa, Ihalagama, Kelegama, and Wannangala,

The total extent surveyed was 42,551 acres 3 roods and 19 perches, the number of lots being 486. This gives the average extent of the lots as 87 acres 2 roods and 8 perches. The total cost of the work was Rs. 10,898·32, and the rate per acre 25½ cents; if my expenditure is added to the cost of the work, it gives a rate per acre of about 33½ cents. These surveyors came in to recess rather late, as it was found necessary to keep them out to close up gaps in the work; the field season of 1902 will therefore be somewhat encroached upon.

In the Trincomalee District two surveyors were employed throughout the year on application and special questions. The year began with 46 of the former and 11 of the latter in hand, 160 and 26 respectively were received during the year, while 120 and 13 were surveyed, leaving a balance to be carried to 1902 of 86 applications and 26 special questions. The work of 1901 represents 1,052 acres in 437 lots, and cost Rs. 4·63 per acre.

J. W. ROBERTSON,
Assistant Superintendent of Surveys,
Northern Province.

REPORT OF THE SUPERINTENDENT OF APPLICATION SURVEYS.

A LARGER staff was employed on these surveys than in previous years. The average number of surveyors employed was 61, the distribution of whom throughout the year is shown in the accompanying table. The most marked fluctuation in their numbers is shown in the Southern Province, where the number falls from 12 in July to 5 in August, it having been found that the field work in hand was becoming insufficient to keep the larger number employed:—

Application and Special Question Surveys.

Province.	Number of Surveyors employed in each Month.											
	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.

Total ...	63	64	67	71	68	67	64	50	59	52	55	53
	Average 61.											

The number of "fees paid" applications received during the year shows a large increase, while the number of special questions was greatly diminished, as compared with the two preceding years, the totals being as follows:—

	1899.	1900.	1901.
Applications	1,603	1,313	2,021
Special Questions	1,450	838	532
Total ...	3,053	2,151	2,553

The receipts of "fees paid" applications show a fairly uniform rate in all Provinces throughout the year, as will appear in the accompanying table:—

Applications.

In a few cases the monthly average of a Province is more than doubled in one month, but in only one case (Central Province, for October) is it tripled. It has been suggested that the fluctuations of these numbers may be due to a weakness of human nature, causing the villager to postpone his application to purchase until he sees the surveyor in his district preparing to depart. But the figures in hand do not appear to bear out the suggestion.

An exhaustive examination on these lines would hardly repay the labour involved, but a single case may be taken in illustration. In the Southern Province we find the following state of affairs:—

	July.	August.
Number of surveyors in the Province	12	5
Number of "fees paid" applications received from Government Agents	1	63

The significance of this apparent leap upwards of demand for land, coincident with the withdrawal of surveyors, is diminished by the facts that the average monthly demand for the year in this Province was 35 applications; that of the 63 received in August, 27 are dated June, 16 July, and *none* August, and that one of the Kachcheri land clerks was absent from work in July through illness.

The accompanying Tables G and H (see Appendix) employ the word "outstanding" in their 2nd and 5th columns to describe questions received for attention, but not yet received from the field after attention.

From Tables G and H it is seen that the excess "dealt with" over those received is 86 applications and 809 special questions, giving a total reduction of arrears of 895 questions. Comparing this with the accompanying summary of monthly reports the excess surveyed above receipts is (430 + 901) 1,331 questions, of which (162 + 102) 264 were surveyed but plans not

sent to Superintendents, reducing the 1,331 to 1,067. The difference between 1,067 and 895, viz., 172, represents the number of questions under examination in Superintendents' offices and in transit to the Head Office at date of report (31st December) :—

Summary of Monthly Reports of the Superintendent of Application and Special Surveys.

* Excess surveyed above receipts.: 430 applications, 901 special questions, total 1,331 questions. † Average.

But the word "outstanding" has recently been used in another sense in the monthly returns to Government, to include not only questions in all stages from their registration in the Application Department up to the moment before their receipt at Headquarters after attention in the field, but also questions lying in the Surveyor-General's Office awaiting the preparation of preliminary plans. In the present congested state of the office, owing to want of space for additional hands, the number of such questions, once insignificant, has now become considerable. An addition has now been made to Tables G and H to show the number of questions which are outstanding in the larger sense of the term. These are shown to be 2,760 applications and 1,326 special questions. For comparison with these no numbers are available from previous years, but it may be stated that during the seven months from June to December, 1,344 applications and 318 special questions (total 1,662 questions) were entered in the Application Registers, while 1,262 applications and 979 special questions (total 2,241 questions) were finally disposed of under the following heads :—

Preliminary Plans prepared and sent to Government Agents or Colonial Secretary ;
Boundaries defined as requested and Government Agents informed ;
Lands identified with previous Surveys and Government Agents informed ;
Questions cancelled for various reasons ;

showing a reduction of arrears of 579 questions in seven months.

The accompanying table, compiled from figures supplied by the Assistant Surveyor-General, shows that of the preliminary plans forwarded in 1901, 406 plans were drawn upon surveys made in the same year and 616 upon surveys made in 1900 :—

Province.	Surveyed in 1900.	Surveyed in 1901.
Northern ...	57	47
Eastern ...	82	37
Southern ...	198	101
Western ...	88	63
North-Western ...	24	39
North-Central ...	88	68
Central ...	36	27
Uva ...	28	18
Sabaragamuwa ...	15	6
Total ...	616	406

Return I (see Appendix) shows the number of lots surveyed by the Application Staff, with their area, cost, rate per acre, and average extent.

ALFRED E. WACKRILL,
Superintendent of Application and Special Surveys.

REPORT OF THE SUPERINTENDENT OF TOPOGRAPHICAL SURVEYS.

THE Topographical Branch in 1901 consisted at the commencement of the year of the Superintendent in charge, four supervising officers, and twenty-one surveyors. The staff was divided into four parties of one supervising officer and five surveyors each. One surveyor (Mr. Keyt) was employed on revision surveys in the Minneriya district.

Mr. Wickwar took charge of the first party, Mr. Blair the second, Mr. Meaden the third, and Mr. Halliley the fourth. This distribution remained in force until the end of April, when Mr. Wickwar, who was quite unable to exercise the necessary control over his party, as his health had completely broken down, was removed from the branch and a re-arrangement had to be made. One surveyor was taken from the party and sent to Mr. Meaden to supply the place of Mr. Mendis, who retired from the Service. Mr. Keyt was brought down from Minneriya and placed in charge of two surveyors, while Mr. Blair supervised the work of the other two, in addition to that of his own party.

The survey taken up this year was much the most difficult which the branch has yet encountered. The rugged nature of the country, the absence of roads and paths, and the extreme scarcity of water presenting the most serious obstacles to rapid progress. The surveyors and coolies had a very hard time of it as the dry season advanced and the survey extended over the country to the south of the Wellawaya-Pottuvil road. A fair sample of this country is to be found between the Buttala-Kataragam track and the Kumbukkan. I penetrated a considerable distance into this block in August and September on hill-sketching expeditions, and found it a dreadful place to work in. The only water to be found was contained in rock holes, all the streams were quite dry, and the forest trees, having lost nearly all their leaves, afforded little or no protection against the fierce heat of the sun. The total outturn of work for the season amounted to 2,924 square miles, which was surveyed at a cost of Rs. 32·50 per square mile. When considering the outturn of work, it must be remembered that there are only 20 surveyors in the branch at present, instead of 26, which was its original strength. This will account for a reduction in the outturn of over 870 square miles, estimated at the present rate of working.

During the first half of the season the headquarters of the branch were at Passara, but at the end of May the surveys had progressed so far southward that it became necessary to shift my office to Koslanda.

Owing to the many obstacles to travelling throughout the country under survey, the supervision of work became a difficult matter, and in addition to this, I was considerably hampered towards the end of the season by having to sketch in all the hills in the block which had been assigned to Mr. Wickwar. While on visits of inspection to the parties in the field, I tested a large portion of the hill-sketching which had been done by my assistants, and found it excellent. The cost of my supervision was Rs. 3·36 per square mile. This includes the cost of the hill-sketching done by me and my cooly pay.

With regard to the supervision of the officers in charge, cost, and outturn of work of the different parties, I beg to report as follows :—

No. 1 Party.—The headquarters of this party were first established at Alupota on the Passara-Buttala track, but this proved such an unhealthy situation that the site was shifted to Kotamuduna on the Passara-Wellawaya track until the end of April, when Mr. Keyt took over and made Buttala his headquarters for the rest of the season.

The supervision exercised over the operation in block No. 1 was at first very defective owing to Mr. Wickwar's illness, but latterly the supervision was much improved, Mr. Keyt carrying out his duties very fairly for an officer of his limited experience. From what I have seen of the block I do not think that anything of importance has been omitted, with the exception of a few miles in the survey of the upper reaches of the Angurma-aru-oya, which had to be abandoned on account of the illness of the surveyor engaged on it. Owing to the hardships to which they were exposed, the health of the surveyors and coolies suffered severely.

The scarcity of water was much felt by this party. I was afraid at one time that the water at Galge would fail, and that we should have to leave a serious gap in the work, but fortunately it held out long enough to enable the survey of the surrounding country to be completed.

I had to get a line cut from Galge to the Kumbukkan, a distance of 13 miles, in order to obtain access to the streams and other features to be surveyed, as there were no paths to be found, and the only means of getting about in that part of the block was by following winding game tracks.

Mr. Keyt, with his two assistants, surveyed an area of 342 square miles at a cost of Rs. 29·18½ per square mile, and, taking everything into consideration, I think that it was a very fair performance. The cost includes half the cost of Mr. Wickwar's supervision.

No. 2 Party.—The headquarters of this party were at Koslanda until June, when Mr. Blair shifted camp to Hambantota and took up his quarters in the forest bungalow.

The northern part of this block was extremely rough and intersected by numerous small rivers and streams, the clearing and survey of which always take up a great deal of time, especially when it is impossible to employ sufficient coolies upon the work. 706 square miles of country were surveyed at a cost of Rs. 40 per square mile.

Considering that the features in the block consisted almost entirely of streams and palu tanks, and also taking into consideration the large amount of detail shown, the nature of the country, and the limited number of coolies which were placed at Mr. Blair's disposal, I think that the progress was fair, and the cost not more than might have been expected. The supervision exercised by Mr. Blair over the operations of his party was excellent, and nothing of any importance has been omitted in the block.

No. 3 Party.—Mr. Meaden's headquarters were at Kallar during the season. The work in the block was very intricate near the coast, and an immense amount of detail had to be shown. The progress of the party was seriously affected by the unsatisfactory work done by Mr. Mendis, which caused a great deal of trouble and delay. The supervision was not as complete as it might have been had Mr. Meaden enjoyed better health during the year, but frequent illness interfered to a considerable extent with his duties in the field. 776 square miles were surveyed and the estimated area

completed, with the exception of a small block on the coast between the Sillu-aru and the Naval-aru, about 3½ square miles in extent.

No. 4 Party.—The outturn of work by this party was most satisfactory, 1,100 square miles being surveyed at a cost of Rs. 20·21. The headquarters were at Bibile, as no suitable site could be obtained in a more central position, and in consequence it was almost impossible for Mr. Halliley to exercise sufficient supervision over the operations of the surveyors who were working in the more distant blocks, towards the end of the year, and at the same time to carry on the enormous amount of hill-sketching which had to be done. I therefore think that special attention must be directed to this part of the country when the surveys are being revised.

The manner in which the hill-sketching was carried out in this block reflects a good deal of credit upon Mr. Halliley. I tested the positions of a great many of the hills shown by him and found the work excellent.

Field Equipment.

Tents.—The green tents which had been made by the Spinning and Weaving Company proved most unsatisfactory, most of them being now perfectly rotten. I beg to suggest that in future the necessary canvas should be obtained from the Willesden Company, and that the tents should be made in the Department. The pattern of the tents is the outcome of our own experience, and I do not think that for the purposes of the Topographical Branch it can be much improved upon.

Wires.—I attribute the success with which the Topographical Branch has been carried on to a great extent to the introduction of wires, and I think that every endeavour should be made to keep up the efficiency of the equipment in this respect. The result of our experience so far goes to prove that the life of a wire is about 60,000 or 70,000 chains, or about (say) two seasons' work. I do not agree with Mr. Meaden (see his report) that the broad wires will last twice as long as the narrow ones. I trust that a sufficient supply of wires may be provided to supply all our requirements next season, as a return to Gunter's chain work would mean a serious loss of progress.

Aneroids.—I took a great many aneroid readings this season, and I am convinced that with the help of recording instruments at the main camps very excellent results can be obtained for our work.

Plane Tables.—I did a large amount of work this season with the Indian plane table, which was taken over from Mr. Wackrill, and found it much superior to the small tables supplied by Messrs. Orr & Sons. I found the clinometer most useful. I have applied for four tables of the Indian pattern.

Stills.—The stills furnished us this year were a great deal too heavy for our work. They will do very well for permanent camps, but I trust that the lighter ones, for which I have applied, may be supplied before the parties take the field again.

Photography.—I took a good many photographs of hills during the season for hill-sketching purposes, and although most of them were failures, owing to my want of experience in this class of work, I acquired a considerable amount of useful information regarding photo-surveying, and I have no doubt that very satisfactory results can be obtained by this method of surveying, especially in the hills.

Compasses.—The compasses continued to give satisfaction, and there were very few complaints. When surveying in the Moneragalla range we found that the compass was not suited for such steep work, and a theodolite had to be used, as we have no dipping circumferenters. I hope that circumferenters of the above description may be supplied before next year's operations commence, as there will be in all probability a large amount of hill work to do.

Recess.—The parties returned to Colombo for recess at the beginning of October. The plans were drawn up first on the 16-chain scale, the 16-chain plans were reduced by photography to ½-mile sheets and placed on the stone by the paper transfer process. Blue prints were taken and drawn up by the surveyors for final reduction to the 1-mile-to-an-inch scale.

R. S. TEMPLETON,
Superintendent of Topographical Surveys.

EXTRACT FROM MR. BLAIR'S REPORT.

BY the 25th January most of the party had begun field work, and were allotted blocks along the foot-hills of the Haputale range, extending from the Walawe-ganga to the Wellawaya-Hambantota road, the programme being to extend operations from this base southwards towards the south-east coast of the Island. The progress of the work was necessarily slow at first, owing to the rough nature of the country at the foot-hills and to the great number of small streams rising in them. Another cause of poor progress was the small number of coolies allowed to each gang.

The sum allowed to each surveyor permitted of the employment of only eleven or twelve survey coolies. In fairly open country that number would be sufficient, but this year the predominating topographical features were small streams and ancient earthworks, all heavily overgrown with scrub and low jungle, and the clearing of lines along these was the most expensive item in the survey.

By the end of May the party were well into the low-country as far as the Tanamalwilla-Hambagamuwa cart track, and had covered an area of 300 square miles without a cart track through it, or 300 acres of cultivation in it except chenas.

At this time a visit of inspection was paid by the Acting Surveyor-General and the Superintendent of Topographical Surveys. The labour force was then at its lowest. The unhealthy season

had reduced the survey gangs still further, and new coolies could not be obtained to take their places. Villagers were obtained only with difficulty, and the headmen, instead of assisting the surveyors, encouraged the villagers to hold out for exorbitant rates of pay.

It was arranged that one surveyor, Mr. Dharmaratna, whose health had suffered, be allowed to go on two weeks' leave and bring back with him 40 coolies to increase the strength of the survey gangs to 14 for each surveyor. Meanwhile the party went into Hambantota to recess for a fortnight, when the detail of all the survey done was plotted, and the remaining coolies continued jungle cutting. The new coolies were for the most part plumbago miners, who were out of work owing to the depression in that industry and were not accustomed to jungle cutting or survey work. Nevertheless they became of use in time, and by their help the continuance or the work was possible.

The second half of the year's work was for the most part within the Kataragam temple land claim, and, though quite flat, was by no means easy to survey, being all low scrub of old chena land.

In August the health of the party was much improved, but the scarcity of water became a serious drawback, especially in the block between the Kirindi and Menik rivers, where there are no villages and no tanks with water in them after August. The surveyor in that block had to camp beside rock waterholes, and as one dried up he was obliged to move on to another, not always conveniently situated for his work. This necessitated long marches to work along the beds of dry streams or game tracks, and the time of two coolies was taken up in carrying water to the working party. The survey of the upper reaches of some small streams in this block had to be abandoned on this account, when at the end of September the party closed field work for the year and travelled to Colombo for recess.

The total cost of the work amounts to Rs. 28,743, which gives the average cost per square mile at Rs. 40·76 for the 706 square miles covered.

Health of Party.—Sickness among the surveyors this year was quite exceptional, amounting to 118 days, an average of nearly 17 days per surveyor. Among the coolies the sickness was nearly as bad, amounting to 1,210 days in the season, or 21 days per gang per month. Out of the 94 who went to the field in January, only 36 worked throughout the season. So far as I can learn, however, there was only one death (from malaria and pneumonia brought on by exposure), but many were sent to their villages quite incapacitated.

As regards the quality of the work, I am pleased to be able to report a great improvement in it. The traverses were plotted by myself or under my immediate supervision, and I can personally vouch for their accuracy.

Comparisons were made between the readings of the various compasses and true meridian bearings, and the result of these (varying from 15′ to 1° 30′) enabled me to lay down swinging streams and such with tolerable accuracy.

All the longer streams when rising in hills were connected at their sources to checked points, the positions of which were established by calculation from trigonometrical observations, and this of course improved the standard of the whole work.

The plotting of the surveyors is much improved, and the occurrence of clerical errors is now rare. Consequently I experienced little difficulty in compiling the map from their monthly tracings.

The hill-sketching bearings this year were taken entirely by the theodolite, as I was so fortunate as to find an open space where it could be used on every hill I visited.

The foot-hills of the Haputale range gave some trouble to sketch, as the country has a gradual fall into the plains, but the great number of streams rising in them made things easy.

This year I fixed the position of the hills by 3,560 intersecting theodolite bearings from 53 different hilltops.

These figures give some idea of the amount of labour which hill-sketching entails on the officer in charge of a party, and yet it is done quite incidentally while passing through the country to inspect the work of the surveyors.

D. BLAIR,
Assistant Superintendent of Surveys.

Extract from Mr. Meaden's Report.

Communication.—The Coast road and the road leading to Irrakkamam tank are the only ones metalled, and one or two roads in the neighbourhood of these are gravelled, viz., the Chadiyantalawa and the Nindur-Irrakkamam roads; the remaining roads are merely cleared of jungle, and have no side drains. Carts can only be taken along these roads with difficulty, making the task of inspecting the block both tedious and slow.

The survey of the tributaries of the Heda- and the Karanda-oyas brought to light a large number of palu tanks, but I have no doubt there are many still undiscovered that will only be found by the Forest Department when they subdivide the block into working lots. The principal tanks are Sagama, Ambari, Irrakkamam, Lahugala, Malwattai, Vammiaddi, Chadiyantalawa, and Divilana. The remaining tanks are village and palu, none of which are very large.

A large stretch of country to the south of my block is uninhabited, the forest in it is poor, and contains few valuable trees.

Most of the archæological remains are to be found on the hilltops. On Eheanagalla hill, near the abandoned village of Malladi, is a stone wall enclosing an area of 2 square chains. On Kalugala hill, which is near the road leading to Padagoda, stone pillars and the top of a stone table with a bevelled edge are still to be found. An inscription on a rock at Kokunitalawa Vihare on the forest demarcation line was also pointed out to me, and I was told that it had been copied by order of the Government Agent. On many of the hills stone steps have been cut on the rock leading to the top.

The party had great difficulty in recruiting local labour, and what was got turned out bad, except villagers employed as guides and such light labour.

I had to prosecute one of Mr. Jayasekera's coolies for stealing Rs. 230·50, Government money, and after three months' inquiry he was found guilty and sentenced to three years' imprisonment,

During these three months' inquiry much time and money was spent by myself and Messrs. Fernando, Daniel, Jayasekera, and three coolies in attending court as witnesses.

The total outturn for the year was 776 square miles, and the expenditure Rs. 20,632, Rs. 26·59 per square mile.

C. MEADEN,
Second Grade Surveyor.

EXTRACT FROM MR. HALLILEY'S REPORT.

THE survey started from last year's main circuit traverses, and was carried southward till the Muppane-Pottuvil road was reached, when two officers were sent to work along the sea coast, from the Hadda-oya southwards to the Kumbukkan-oya. These officers, after completing the strip between the Province boundary and the coast, worked westwards from the Province boundary to meet the other officers who were working in a south-easterly direction, between the Muppane-Pottuvil road and the Kumbukkan-oya.

Very fair progress was made with the survey till the end of March; after this the weekly progress fell off very much, owing to the lesser number of coolies employed because of the reduction of the amount of money allowed for each gang, but when this restriction was withdrawn in July, there was a very decided improvement in the weekly outturn.

Owing to the scattered nature of the work an officer is obliged to go to out-camps to complete odd surveys, which lie too far from his main camp to be worked from it; this necessitates leaving two coolies in the camps. Two men have to be left in camp to take out breakfast and water to the field, and one man is usually away for tappal, so that in each gang at least five men are non-effective for survey work, and at least ten men are required for this purpose, viz., six men for surveying and four for keeping the country ahead open for the surveyor. So that, at the very least, not making allowances for sickness, each surveyor requires fifteen coolies, if he is to make decent progress.

Weather.—Rain interfered very much with the work till the end of April, after which, till the end of the field season, it was very dry—so dry, in fact, that there was great difficulty in finding water.

Health of Party.—The health of the party, on the whole, has been fairly good this year. Fever and dysentery broke out among the coolies during the beginning of the field season, and Mr. Ondatjie was laid up in hospital for a week with dysentery brought on by bad water. As soon as the dry weather set in nearly all sickness disappeared, and the health of the party continued to be satisfactory.

Accessibility and Means of Communication.—The only road in the block is the Muppane-Pottuvil road. This is metalled only as far as Obbakotta; from there to the Province boundary the road is not yet completed, and is not practicable for wheeled traffic.

Paths.—The greater number of the paths in the block are practicable for a horse; they are well kept by the village authorities.

Rivers and Streams.—The Gala-oya and the Kumbukkan-oya are the only perennial streams. All the others dry up during the fine weather, but in nearly all water of a questionable quality can be obtained in a moderately dry season by digging in the sand to a depth of 3 or 4 feet.

Irrigation.—The most important "palu" tank in the block is the Villagodawewa. It was evidently a reservoir for storing rain water, as the catchment area is not very great, and no streams of any great size fall into it. I was informed that there was a Yodi-ela that brought water to it from the Gallabedda-oya, which falls from the Moneragalla hills. But this channel could not be traced further than a few chains from the Gallabedda village. The bund of this tank has been formed by connecting the Villagoda hill to the hill north-east of it by an artificial embankment three-quarters of a mile long and about 40 feet high. The Villa-oya flows through a breach in this bund where the sluice appears to have been.

The spill of the tank is situated at the southern end of the Villagoda hill, and the water from it is said to have flowed down the valley of the Nambanna-oya to the Kumbukkan-oya. As the breach is only a small one, this tank gets partly filled during heavy rains, and the country within the contour gets flooded to a depth of several feet.

The inhabitants near this tank say that when it was in working order it irrigated a large tract of fields on both banks of the Villa-oya as far as the Nalitta plain. This tank could be restored at very little expense, and there is no reason why a channel to it could not be brought along the watershed, from the east side of the Moneragalla hills to tap the streams that fall from it.

Havanarawawewa.—This is a large breached tank near Buddama. It has no channel into it from any of the streams near it, and it was probably only a storage tank for rain water.

Pallangwewa.—This is also a palu tank. It is situated near Devillagahapitiya. The Pallang-oya runs through it.

Pallagamakandiya.—This is a large breached tank near the village of the same name. The bund is partly artificial and partly a natural ridge of rocks.

Baddagunnawewa.—This tank is situated near Kebilitta. It is said to have been supplied by a channel from the Kumbukkan-oya, as, although the Allakolla-oya runs into this tank, it is not a perennial stream. This Yodi-ela was only surveyed for a few miles from the anicut on the Kumbukkan-oya, as it could not be traced further. There are two sluices in the bund of this tank.

Bakmiwewa.—This tank has a Yodi-ela to it from the Allakolla-oya. It is a large tank, but, judging from the nature of the country below, it cannot have irrigated a very large area.

The above are the principal tanks in the blocks, but there are a large number of others that are insignificant. There are several working tanks in the block, which have been restored lately, the chief of which are the Nellunwewa, the Dambagallawewa, the Kattupellellawewa, all of which are situated near Dambagalla.

Most of the paddy fields in the district are known as "mallan kumburu," *i.e.*, fields dependent on rain for their water; they are only cultivated during the rainy season, from October to March. A few are cultivated at other seasons in places where water is available, especially under the Gala-oya channels, the tanks near Dambagalla, and under the natural springs near Bibile.

Hills and Hill-sketching.—There are a great number of hills in my block this year, some being small isolated rocks that rise a few feet only above the tops of the jungle, others great mountains that rise several thousand feet above the plains. Great difficulty was experienced in the sketching of them. Owing to the very limited view obtainable from the plains, it was necessary to visit nearly all the peaks where very heavy clearing had to be done before any view could be obtained, as in nearly every case the vegetation on the hilltops was dense and rank.

It was too wet during the beginning of the season to do any hill-sketching, as it was impossible to see any of the hills because of the rain and mist, and it was not until the 20th March, on which day I climbed up Kontiavetti hill, that I got any idea of the task that lay before me; in the place of large plains which I expected to see, range after range of forest-clad hills extended as far as the eye could reach.

The travelling on this work was extremely hard, everything had to be carried, as it was not possible to take a cart anywhere. Guides were not obtainable, except in a few instances, and the coolies had to find their own way up most of the hills, which meant loss of time.

I was much handicapped in the work by the primitive plane table at my disposal and from the want of a good telescope.

Mr. de Zoysa was able to help in the work by sketching in some small hills near the coast. I checked his work before accepting it, and found it to be very good. This officer has a good idea of the work, and should make a very fair sketcher.

Forests.—The forests in this block are very poor, all the good forest having been felled by the chena cultivator, and only what happened to be on poor soil, or covering steep rocky hills, or bordering a path or stream, or lying at some distance from habitations, has been spared by him. The appearance of the trees along a path or stream gives the impression that magnificent forest lies on both sides. But on looking down from a high point, such as Wadiagalla or Marragalla, one is disillusioned, the different growths of chena giving the country the appearance of a chess board, while the courses of streams and directions of paths can be clearly traced by the high forest trees that have been left, and what was supposed to be a dense forest when below is seen to be only a belt.

The only large tracts of forest are to be found near the Kumbukkan-oya. In the northern part of the block the forest and scrub give place to grass and scattered clumps of forest and kahata trees; there are also a lot of aralu trees growing on these patanas, from which gallnuts are collected in large quantities by the natives. This part of the district is known as the "Park Country." The rest of the country is covered with scrub and chena.

Archæology.—There are no ruins of any great interest in my block this year. A few stone pillars standing up in the jungle and some dressed stones in places were all that were seen in the way of ruined buildings. A large number of small dagobas were seen, mostly on hilltops. There is a large dagoba built of brick, 75 feet in height, with a lot of stone altars round it, inclosed within four brick walls in the shape of a square, at Wattegama. Also at Maligatenna there are some ruins of an old Buddhist temple and the remains of an erect image of Buddha, which appears to have been knocked down quite lately; the head of the image, which lies some distance from the trunk, is 6 feet in diameter.

The Kalugalbemma, which was described in my annual report for last year, was traced and surveyed for 5 miles this year. I examined the stones in it, near Nilgalla, for some miles, and found that they were all of the same sort, viz., ironstone (limonite), the outer layers of which, corroding away gradually, give the water-worn appearance. I picked up a typical specimen, submitted it to an authority on minerals, and he gave it as his opinion that the sample was excellent iron ore. Probably, if the Kalugalbemma were to be examined by a geologist, it would be found to be only a reef of iron-bearing rock, which having been split up by natural causes, and the pieces having corroded, gives the peculiar appearance to the stones.

Game.—Elephants were very numerous in the plains round about Nilgalla, where they do great damage to crops and cocoanut gardens, sometimes devastating a whole village in one night, rooting up cocoanut trees, knocking down jak trees, and damaging houses. There are large herds of wild buffaloes at the same place, and at Kumana on the coast near the mouth of the Kumbukkan-oya. At the latter place they can be seen at all hours of the day lying on the beach. Sambur and spotted deer roam in herds near the Kumbukkan, but are very scarce in the northern part of the block. Pea-fowl, too, are very plentiful in the southern extremity of the block, but they are very wild and hard to approach. The patanas near Nilgalla abound with partridges and two or three varieties of quail, said by the natives to have been introduced there by Sir Samuel Baker.

Travelling and Inspection.—During the hill-sketching operation I was able to get a very fair knowledge of the nature of the country in which my assistants were working and thus detect any glaring omissions. Besides this, I inspected as much of the work done as the time at my disposal would permit, as experience shows that many of the assistants cannot be entirely trusted. This in itself greatly increases the responsibility of the officer in charge. Also, whenever possible, I visited my assistants at their camps and examined their field books and surveying instruments. I had on several occasions to complain of the state field books were kept in and the work. The giving of bonuses on the chainage has the effect of making officers inclined to be careless and skip bits of difficult work, such as the sources of streams, &c.

Area.—The area of the block surveyed by my party this year is 1,100 square miles; had it not been for the large gangs of coolies employed I doubt very much whether the block would have been completed at all, and I attribute the progress made entirely to having a large labour force to keep the country ahead of the surveyor open for surveying.

Cost.—The total cost of the survey is Rs. 22,238·02, the rate per square mile being Rs. 20·21. The cost this year is higher than that of previous years, because of the detail in this year's block, being greater than that in the previous blocks.

G. F. W. HALLILEY,
Second Grade Surveyor.

EXTRACT FROM MR. KEYT'S REPORT.

FROM February to April I was engaged in surveying omissions in the Tamankaduwa district, North-Central Province. The omissions surveyed were a gap in the Yan-oya, a Yodi-ela running parallel to it about 5 miles in length, and 8 miles of a Yodi-ela flowing from the sluice of Minneriya tank. I am of opinion that there are several other Yodi-elas in the Tamankaduwa district left unsurveyed; these, I admit, are difficult to trace, but yet are deserving of investigation. My attention was drawn to the subject by Mr. Booth, the Government Agent of the North-Central Province, and Mr. Jayawardena, the Revenue Officer and Mudaliyar.

The Work in the Province of Uva.

Mr. Wickwar's illness necessitated a change in the work being carried on in the Province of Uva, and I was in consequence brought down from the North-Central Province to take temporary charge of his work. It was originally intended that Mr. Wickwar, with five assistants, was to map a block of about 860 square miles in area, but owing to my lack of experience in supervising a party the party was split, Mr. Meaden getting one officer, Mr. Blair two, and the remaining two, Mr. Fonseka and Mr. Daniel, were left in my charge. A portion of the block, too, had to be cut off and given to Mr. Blair.

The want of water was felt very keenly; the only streams in the block which had any water in them were the Kumbukkan-oya and the Menik-ganga, the vast tract of country between these rivers being practically waterless, unless the little water holes which Nature has provided for the beasts of the forests be taken to account. The surveyors surveying long dry streams and abandoned tanks were obliged to pitch their tents by these water holes, which were after all only natural receptacles for collecting rain water. It could not be expected that any of these water holes could supply a surveyor and a gang of coolies with water for more than a week, so the men had to keep continually moving from one water hole to another, and they were thus invariably long distances from the centre of their work. Early in September nearly every water hole known in the block was reported to be dry, and even the large natural cisterns in Galge were nearly emptied. It was at this juncture that we felt the want of water most, and sickness broke out badly in the several camps. It was not unusual for a surveyor to report eight out of thirteen coolies sick throughout the week in fact there was a steady average of five coolies of each gang reported sick every day in that month.

Physical Features.

Practically the whole block was previously unknown country, but our surveys now show a large number of tanks which have for centuries fallen into disuse. The only tanks deserving of any mention are Halmillagollewa, near the village of Horabokka. The bund of this tank is about a mile in length, and is about 15 feet high. It is badly breached by the Maha-aru. Another important tank, also breached by the Maha-aru, is Handagalla. This is perhaps about the best and most important of the abandoned tanks in the district. It has an artificial bund of about a quarter of a mile in length, but it has a natural bund at each end extending to some distance. The bund is built up with large rocks nicely cut, and gigantic pillars standing near about the breach led to the supposition that they are the remains of an ancient sluice. Deakirinda, an isolated tank in the forest, is also a tank of good proportions, having a bund of about 60 chains in length. It had only one breach, which has lately been restored by the villagers of Buttala.

Rivers.—The two principal rivers in the block are the Kumbukkan-oya and the Menik-ganga; both take their rise in the hills of Uva and fall into the sea; both these streams flow for miles through a wild and unpopulated country.

Roads.—With the exception of the Wellawaya-Buttala high road and the narrow cart track from Buttala to Kataragam, there are no other tracks or roads of any description within the block.

A 13-mile traverse through dense forest from Galge to the Kumbukkan-oya, cut and surveyed by me, served as an excellent path, which the surveyors and coolies utilized for purposes of tappal and provisions. My attention was drawn to an ancient road said to lead to Kataragam (where there is an ancient temple) from Wellawaya. It is a pity my attention was drawn to this subject too late, or else it may have been surveyed. We would have had much difficulty in following it up, however, as it is only distinct where there is high forest. The road is said to be about 4 feet broad, and I was told that the drains on either side of it are yet in evidence in some places. The villagers say that the road was abandoned about twenty-five years ago when the villages of Handagalla and Gadulgamua were abandoned.

Forests.—The whole country is covered with jungle varying from low scrub to high forest, the latter being usually found along the valleys of large rivers. The most valuable timber found is satin, palu, ebony, and halmilla. The last-mentioned is found largely near the Kumbukkan-oya.

Hills.—We were fortunate in not having as many hills in our block as the other parties. The Ulgalla range of hills was perhaps the only long one worth mentioning. Several observations were taken to the surrounding isolated hills from the peaks on this range. The hill-sketching was wholly done by the Superintendent.

Irrigation Schemes.—There are really no irrigation schemes of any importance in the whole block, the only channel we came across being one 4 miles in length, flowing from an anicut in the Kumbukkan-oya, near the village of Kehelwatta. The channel was cut with a view of carrying water to the Bindunkoda tank. The surveyor was only able to follow it up to a small tank midway between Kehelwatta and Bindunkodawewa. The villagers told me that the channel could not be properly followed, as the earthwork had been washed away in several places.

Archæology.—There were not very many ruins found in the course of our surveys, but those at Habessa are deserving of some mention: The many ruins of dagobas and vihares indicate that Habessa must have long years ago been quite a populous town. A natural rock cave is of great interest, as it shelters a recumbent image of Buddha 27 feet long. The image is built of brick and mortar, and is in a very well-preserved condition; unfortunately though it was broken into lately by some villagers, who were keen on getting at the treasures supposed to be concealed in the head and stomach of the image. The paintings on the inside of the cave are yet visible in some places, and

remind one of the frescoes of Sigiriya rock. Another interesting temple is in Kataragam, to which temple pilgrims from all parts of the Island find their way to make their vows, &c.

The Health of the Party.—The health of the surveyors as well as the coolies was anything but good. We could not afford to have any intermediate recess, as there was very little work done till June, and there was yet much in hand to be done. Both my assistants suffered very badly with fever, and had to be carried in at different times to the field hospital in Badulla. The coolies suffered considerably from malaria. I feel it my duty to make special mention of the very kind services rendered us by Dr. Tillekeratne, who put himself to great inconvenience in seeing to the comforts of the surveyors brought into hospital.

Progress.—342 square miles were surveyed at a cost of Rs. 9,981·45, or Rs. 29·18½ per square mile. The cost includes Mr. Wickwar's expenditure of Rs. 1,269·03 on supervising from January to April.

E. KEYT,
Supernumerary Surveyor.

REPORT OF THE ACTING SUPERINTENDENT OF TRIGONOMETRICAL SURVEYS.

I TOOK over charge of the Trigonometrical Branch from Mr. H. O. Barnard on the 11th January, 1901, and carried on the usual routine work during the year. The number of points placed on the new fixing amounted to 7. I have placed 9 points temporarily on the new fixing from observations taken by me on the Dambadeniya scheme, in the North-Western Province, for use in the block surveys proposed to be taken up in 1902, as it would be impossible to wait for the completion of the north-west coast triangulation, to which I refer later on in this report, as that scheme will not be finished for at least two seasons, and I do not anticipate any serious shifting of the secondary points already fixed south of the line Chilaw, Medagama, Yakdessa. The number of scored positions worked out for the field during the year amounted to 118, besides many others issued from former workings. The large demands from the Topographical Branch makes this part of the work particularly heavy.

North-West Coast Triangulation.—The chief work of the year consisted of the erection of four double stages required for the completion of the north-west coast triangulation. The first one started was at Kulatdimalla on the 1st March, a hill I selected as far back as 1894, which has proved to be the key to the solution of this triangulation. Mr. A. H. G. Dawson was entrusted with the work, and, though he had no previous experience of it, successfully completed the stage on the 25th May. To help him he had several old coolies who had previously been on similar work with myself, and soon after the commencement of the work I visited him and remained for a week watching the progress. I had designed the stage to be carried up to 100 feet if necessary, but while I was there we erected a temporary structure up to 80 feet, and decided that it was sufficiently high to observe all points required. The hoisting apparatus designed by me was first used on this work and proved extremely useful, saving much time, but it could be considerably lightened by substituting T iron for the wooden beam, as it is somewhat heavy. The erection of the stage took about three months, which was good work, considering the wild part of the country in which it is erected—34 miles north from Puttalam. Transport over a roughly cut jungle track for 5 miles and the usual difficulties met with are well known to all surveyors, the chief ones in this case being sickness of both Mr. Dawson and his coolies (his horsekeeper died from fever and his horse succumbed); provisions of course were scarce and the water bad. I must here mention the great pluck shown by Mr. Dawson in the way he stuck to his work and kept his coolies together; they had to fell trees and drag them hundreds of yards in some cases It was a sight not easily forgotten to come suddenly upon him and his men in that desolate country in a large clearing made by themselves, all busily at work, some jointing timbers, others hauling them up, and the great double staging with its huge timbers rearing upwards above the surrounding jungle. To push on with the work it was necessary to work from daylight until dark. Rice had to be brought 34 miles from Puttalam. Only one accident happened during the erection of this double staging, a cooly having his nose badly broken by a falling branch of a tree; he was sent to the Puttalam hospital, and on recovery returned to work. The cost of this stage, including cooly hire, contingencies, and materials exclusive of timber, was Rs. 2,123.

The Kumpudu Stage.—The next stage taken in hand was that at Kumpudumalla, one of the points on the principal triangulation of the Island. The stage was started on the 5th June and completed by the end of the month; a 40-ft. double staging was all that was necessary here. The cost of this stage, exclusive of timber, amounted to Rs. 756·41.

The Crow's Nest Stage.—"Crow's Nest," about 5 miles north-east of Puttalam, was the next point taken in hand. Here an 80-ft. double staging was necessary, mainly to overcome the local jungle. It was commenced on the 13th July and finished seven weeks after.

The Bogahawewa Stage.—The last point, Bogahawewa stage, was commenced on the 12th September, and completed by the 20th October—quick work, as the double stage was 60 feet high. It is built on a hill north-west of Andarawewa Dagoba (formerly used as a trigonometrical station, but now abandoned owing to the Buddhist priests objecting to having staging erected on it); from the top of the new stage all points for many miles round can be observed. The cost of this work amounted to Rs. 998. This completed the preparation for the actual triangulation, all other points required being situated on more or less prominent hills, and two being completed masonry towers on the west coast. This work will be undertaken by myself as early as possible in 1902, after the return of Mr. Barnard from home furlough. It will last through at least two observing seasons, as they are of very short duration.

Minor Triangulation.—Small schemes for minor work were formulated, both for the Province of Uva near Lunugala and Sabaragamuwa near Madampe and also Kukulugala, but were never completed owing to exigencies of weather and other causes. Five stations were placed on the new fixing in the Western Province from observations taken by the Acting Superintendent of Surveys, Mr. J. B. M. Ridout.

Miscellaneous.—There is still an enormous amount of buried information in the archives of the Trigonometrical room, which requires time and patience in digging up, but the duties of the Superintendent are so various that little of this work can be done. Conducting the Licensed Surveyor's Examination occupies several months, to say nothing of the Technical College Diploma and Departmental Examinations, besides supervising the Meteorological Branch, which is growing more important every year.

W. C. S. INGLES,
Acting Superintendent of Trigonometrical Surveys.

REPORT OF THE ACTING ASSISTANT SURVEYOR-GENERAL.

I WAS appointed to take over the duties of Acting Assistant Surveyor-General on the 9th April, 1901, on the departure of the Surveyor-General on European leave.

Requirements at Headquarters.—The Assistant Surveyor-General in his report for 1900 dealt so exhaustively in every detail on the requirements at Headquarters that I feel that I am left with very little to say or suggest in the matter. I can, however, after ten months' experience at Head Office, emphasize his demands for (1) more draughtsmen, (2) better office furniture, (3) more office accommodation.

Although it is close on a year since the Administration Report of 1900 saw the light, yet we are in the same undermanned state, the same office furniture (tables of all sizes, heights, and measures), and the same lack of accommodation for the topographical recess.

It was found necessary, to prevent the confusion that was caused during 1900 recess by the topographical surveyors' stores being placed in the charge of the storekeeper, to engage more room at the Chamber of Commerce buildings at a cost of Rs. 225 per mensem. These rooms are not likely to be available for this year's recess, as the present tenants are extending their printing establishment, and it is hard to say where suitable rooms will be found for recess elsewhere.

I verified the departmental stores and found the duty a labour of considerable difficulty, owing to the unsuitable almirahs and racks in which valuable instruments and all sorts of odds and ends were stored regardless of class or system. This, however, will not happen again, as a new teak almirah 18 feet long is now being supplied from the Government Factory on special design by Mr. Warren.

The staff at Headquarters, consisting of 83 clerks and draughtsmen and 50 volunteers, worked well and smoothly during the year, as will be seen by reference to the following reports on the separate departments, but I must sound the note of warning again that it is absolutely necessary to increase the staff of draughtsmen in order to keep abreast of current demands and the hands themselves from overwork, which invariably leads to ill-health and discontent.

The Block Survey Department deals with block survey sheets, tenements, and correspondence, and sketches for the Waste Lands Ordinance.

The final computations of 4,075 lots amounting to 62,694 acres (including the re-computation of 4,215 acres of certified sketches in Sabaragamuwa and 3,852 acres in the North-Central Province) and the first computation of 8,568 in the North-Central Province were completed, while the table below gives the preliminary plans supplied to the revenue officers :—

Province.	No of. Plans.	No of. Lots.	Extent. A. R. P.
Western ...	7	1,291	4,158 3 7
Sabaragamuwa	2	280	10,847 1 6
Southern ...	18	2,284	36,535 3 38
Uva ...	1	52	799 0 32
North-Central	10	54	2,305 3 35
Total ...	38	3,961	54,647 0 38

Two hundred and forty-three certified sketches of land claims under different extracts were issued as per table below: —

To whom.	No. of Sketches.	No. of Lots.	Extent. A. R. P.
Special Officer, Southern Province	234	354	18,792 0 17
Government Agent, Province of Sabaragamuwa	9	9	417 1 0
Total ...	243	363	19,209 1 17

The Special Officer, Southern Province, was supplied with plans and tenements of twenty-one villages, in extent 38,914 acres, and large uncoloured tracings of preliminary plans of seven villages.

One hundred and twenty-nine copies of certificates of ownership and 102 registers under the Land Registration Ordinance were issued to the Registrar-General.

Forty-four advertisements for sale or settlement, within block areas, containing 2,531 lots, received from the Government Agents, were gazetted.

Ninety-one old preliminary plans were amended and 298 ferro-gallic prints of block sheets were issued to the field staff.

Eighty-five preliminary plans and tenements of villages in different Provinces were prepared for computation some considerable time back, but for want of computers these surveys are practically pigeon-holed. Block survey plans delayed for lack of a sufficient office staff is bound to affect the sale and settlement of land, judging from the high prices realized in the North-Western Province lately.

The Record Map Department deals with the records of all surveys made by the field staff on the scale of 16 chains to an inch. 10,892 lots were placed on these record sheets during 1901, 2,009 were in connection with railway extensions, 237 were compiled from surveys by licensed surveyors, while 8,646 were of applications for purchase of lands, special questions made by revenue officers, &c. See table below for details. In comparison with 1900 the applications show an increase of 1,868 lots, railways show a decrease of 2,637 lots, licensed surveys a decrease of 15 lots.

Mr. J. R. de Silva, the head of this important Department, is to be congratulated on the effort he made in getting so many as 1,868 application lots dealt with and out of hand in excess of last year's work.

New Work inserted on 16-Chain Sheets Record Maps during 1901.

Total ...	8,646	2,009	237	10,892

Preliminary Plan Department.—The total number of all preliminary plans prepared during the year was 1,872, covering an extent of 25,290A. 0R. 21P. with 10,514 lots. 212 acquisition plans for 182A. 1R. 9P. in 1,886 lots were also sent, out of which 133 plans for 340A. 0R. 8P. in 1,505 lots were in connection with railway extensions.

The preparation of Waste Lands Ordinance plans amounted to 245 tracings, 95 being for the Special Officer, Southern Province, and 150 for revenue officers; 54 were amended. 127 true copies of preliminary plans were supplied to various departments, 99 of which were for Government Agents, while 318 plans were amended. Throughout the year 558 notices for 17,515 lots were examined, with the result that 235 lots were struck off for various causes.

The progress in this Department throughout the year was good, the number of preliminary plans issued being 799 more than in 1900.

The Title Plan Department.—The issue of title plans to revenue officers (6,286 sets) shows a considerable increase over 1900, the difference in the totals being 380; this includes 423 sets for leased and acquired lands. The area covered by these plans is 29,473 acres, an increase of 8,441 acres over last year—the record one claimed by this Department.

Great credit is due to Mudaliyar F. de Fonseka, the Second Clerk of this Office and head of this Department, for the manner in which he has stuck to his work throughout the year. In spite of failing eyesight he dealt with 19,092 plans, the largest issue of title plans ever made in one year from this Office. A comparison of Table D in the Appendix with last year's shows that the issue of plans to the Western Province was much the same number, the Southern has increased from 2,685 to 5,025, the Eastern has fallen from 3,021 to 1,815, the Northern has increased from 639 to 1,185, the Sabaragamuwa has increased from 138 to 822, the Central has fallen from 801 to 693, the North-Western has increased from 750 to 834, the Uva has fallen from 885 to 282, and the North-Central has increased from 471 to 555.

Photographic and Ferro-gallic Department.—The whole of the Topographical surveys of 1900, in area 4,107 square miles, were reduced by photography to half size, transfers supplied to the Lithographic Department.

During the year 10,179 ferro-gallic prints were made, an increase of 2,726 over 1900. Out of this total, 6,661 were for preliminary plans with tenements, 301 were copies of the block survey sheets for Government Agents and office records, 870 were plans on various scales, and the balance maps of various scales. 307 negatives were made for photo transfers.

The want of more accommodation is greatly felt both in the ferro-gallic and photo rooms, as work is rapidly increasing, and a much larger studio with a proportionate increase in implements is urgently required.

The weather throughout the year was generally favourable for the work. The following table shows the yearly outturn :—

Year.	Prints.	Year.	Prints.
1891 ...	217	1897 ...	4,401
1892 ...	503	1898 ...	6,259
1893 ...	499	1899 ...	6,819
1894 ...	918	1900 ...	7,453
1895 ...	2,196	1901 ...	10,179
1896 ...	2,052		

Credit is due to Mr. de la Harpe, who is in charge of this Department, for the manner in which the above work was carried out.

Lithographic Department.—The outturn of this important Department shows a considerable increase over that of last year of 9,198, giving a total of 37,490 copies of maps, plans, and diagrams.

The total number of transfers prepared was 280, from which 37,490 copies were printed :—

Colonial Secretary	7,895
Archæological Commissioner...	4,500
Other	5,980
Survey	4,800
Spare copies	4,070
Surveyor-General's Report	7,050
One-mile-to-an-inch Maps	2,500
16-chain Diagrams	120
Blue prints for photo reductions	575
Total ...	37,490

7,013 letters, circulars, &c., were printed in the Remington Duplicator.

Mr. Saldin, the officer in charge of this Department, complains of the noise and dirt made by the gas engine, and I trust that next year's Estimates will include the money to replace it with an electric motor.

Twelve new lithographic stones were procured from England, and they have proved very satisfactory so far.

The Miscellaneous Department deals with all sorts of plans and tracings required by the public and others. In its charge are all lithographed and ferro-gallic copies of plans, which are issued for public purposes. 719 plans and tracings were supplied to the public, realizing Rs. 2,420·01 in fees, against 929 supplied last year at a cost of Rs. 3,392·78. 885 plans were issued to Government officials free of cost, in value Rs. 2,242·50. The area of copies of 4-chain plans issued was 5,881 acres. Besides these, the surveyors in the field were supplied with several diagrams on the 5-in., 1-in., ½-in., and ¼-in. scale.

The following are the Government officials to whom plans have been supplied free of charge, &c. :—His Excellency the Governor ; the Government Agents ; the Directors of Irrigation, Public Works, and Public Instruction ; the Resident Engineer, Harbour Works ; the Archæological Commissioner ; the Commanding Royal Engineer ; the Registrar-General ; Colonel A. C. Vincent ; the Conservator of Forests ; the Irrigation Board ; the Superintendent of Convict Establishment ; the Special Officer ; the General Manager of Ceylon Government Railways ; the Superintendent of Technical College ; the Hon. the Attorney-General ; the Principal Civil Medical Officer and Inspector-General of Hospitals ; the Master Attendant, &c.

The Field Sheet Department has charge of all the field sheets, save the block and topographical. The issues to the field during the year amounted to 6,752 on 1,876 requisitions from surveyors, an increase of 2,380 and 691 respectively over 1900. The three clerks in charge of the nine Provinces were kept very busy to meet the increased demand for field sheets from the Application Staff in the field and office.

Instrument Repairing.—The electric motor referred to in last year's report has been fitted to drive the new lathe, and by its use the instrument repairer has been able to make some very delicate repairs to damaged theodolites, &c.

Store.—I have touched on this under the head of "Requirements at Headquarters."

Bookbinders.—A considerable variety of work was carried on in this room, ranging from mounting maps to patching damaged plans, stitching up files, &c.

J. L. HAMPTON,
Acting Assistant Surveyor-General.

IRRIGATION.

REPORT OF THE DIRECTOR OF IRRIGATION FOR 1901.

THE Administration Report for 1900 gave a brief statement of what it was proposed to do in the future. That for 1901 will contain a short account of what has been done during the year.

2. The total expenditure for the year was Rs. 766,594·68, and the services for which it was appropriated as compared with the two previous years were as follows :—

	1899.	1900.	1901.
	Rs. c.	Rs. c.	Rs. c.
Works of survey and investigation ...	12,126 0	21,594 1	29,811 30
Works of construction ...	125,249 52	199,417 62	390,194 42
Works of maintenance ...	69,881 58	74,556 16	68,502 7
Minor works and repairs ...	68,042 45	54,724 16	40,201 71
Establishment : salaries and allowances ...	90,153 81	132,093 35	205,914 13
Miscellaneous : tools, instruments, &c. ...	8,188 93	21,639 51	31,971 5
Total ...	373,642 29	504,024 81	766,594 68

3. To meet this, a sum of Rs. 417,254·33 was available, as the balance of previous accumulations of the Irrigation Fund and the balance was debited to the loan of Rs. 5,000,000.

WORKS OF SURVEY AND INVESTIGATION.

4. The expenditure under this head was distributed as follows :—

	Rs. c.
Northern Province.	
Karachchi ...	2,000 0
Vavunikkulam ...	1,323 42
Pavatkulam ...	1,575 82
North-Central Province.	
Mahagalkadawala ...	5,014 32
Nachchiyaduwa ...	5,706 52
Eastern Province.	
Kendavaddavan ...	3,299 32
North-Western Province.	
Mi-oya scheme ...	7,048 70
Tinapitiyawewa ...	722 45
Southern Province.	
Magam Pattu scheme ...	3,120 75
Total ...	29,811 30

5. The result of this expenditure was the completion of the surveys and sections for the Karachchi scheme, which will provide a storage tank near Iranamadu of 4,530 acres, holding up a head of water of 26 feet, having a capacity of 2,449 million cubic feet, and a catchment area of 227 square miles, with rainfall of 48 inches annually, and a supplementary tank impounding the waters of the Dri-aar and further supplied by the main western channel from Iranamadu tank, on which it is situated near the 154th milepost on the North road. The necessary surveys were made and the levels necessary completed for the designing of these two tanks, with a system of 20 miles of channel and the contouring of 40,000 acres of land irrigable by the scheme, in the heart of which the Paranthan station on the Northern Railway will be situated, by Messrs. Brown and Fraser, and the plans were commenced in Colombo. The designs have since been completed, and the estimate amounting to Rs. 1,105,714 and the scheme have received the approval of the Central Irrigation Board, and the Government Agent has been asked to hold the necessary meeting.

6. At Vavunikkulam, which is an ancient tank about 10 miles west of Mankulam railway station, Mr. C. F. S. Baker made a commencement with the surveys and sections. The tank will, when restored, impound the waters of the Pali-aru and water one of the most fertile valleys of the Northern Province. Progress, however, so far has been slow, owing principally to the difficulty of obtaining labour, the villagers near being very few and unused to work as well as unwilling, and the country dense jungle. At the commencement of the rains all work was stopped and re-commenced in February this year. There is therefore but little information yet available as regards this scheme.

7. The next scheme in this Province proceeding southward is that called Pavatkulam. Pavatkulam is an ancient tank situated about 5 miles to the west of the North road, and about 10 miles south-west of the proposed Vavuniya railway station. The area of the tank is 2,029 acres, the head of water 18 feet, with a capacity of 779 million cubic feet, catchment area 110 square miles, and rainfall 50 inches annually. It is estimated that with its existing water supply 7,500 acres of land can be irrigated. Before the designs of this tank were made, levels were taken over the country to the north as far as Vavunikkulam and south to Mahagalkadawala (which will be the next tank mentioned), in order that the levels of the spill might be so fixed as to admit of a further supply to Pavatkulam being carried into it from the valleys and watersheds of the south, and also passed

onwards to the valleys northwards should the future requirements need such provision. The required levels were taken by Mr. Bradley, and the plans commenced by him in Colombo for the restoration of this work. Nearly all the land under it is Crown land. The estimate amounting to Rs. 224,422 is before the Central Irrigation Board awaiting its decision.

8. *Mahagalkadawala.*—The surveys and levels necessary for the designing of the restoration of this tank and a smaller one called Sangilikanadarawa above it were made by Messrs. Park and Chute, and the former came to Colombo to draw out the plans and frame the estimate, while the latter proceeded to the Eastern Province to relieve Mr. Watts of charge of the anicuts under Rugama tank, Mr. Watts proceeding to Madawachchiya to continue the surveys there.

The level of Mahagalkadawala spill has been fixed so that it may be possible to supplement its natural supply where deficient from the waters of the Malwatu-oya, which will be impounded in Nachchiyaduwa and Nuwarawewa near Anuradhapura, and also to pass on the surplus to the valleys to the north of it, and it is hoped that the irrigating capacity of Pavatkulam and its utility may be largely increased by this supplementary supply.

The area of Mahagalkadawala is 3,011 acres, the head of water at the sluice 16 feet, and its capacity 8,944 million of cubic feet, the catchment area is 295 square miles, and annual rainfall 54 inches.

9. The area of the Sangilikanadarawa is 646 acres, its head 12½ feet, and its capacity 137 million of cubic feet, the catchment area is 64·2 square miles, and the annual rainfall 51 inches. It is calculated that the area of land which these two tanks will be capable of irrigating will be 13,000 acres. There are two rivers supplying this tank, which unite just below the bund and have made two breaches, the Weli-oya and the Kanadara-oya. Their drainage area is approximately 162 and 133 square miles respectively.

10. On the former river, *i.e.*, the Weli-oya, about 15 miles south-east of Mahagalkadawala, is another very large and important ancient tank called Mahakanadarawa, evidently a part of the same ancient scheme, and it is now about to be surveyed and investigated with a view to future restoration.

11. South-east of Anuradhapura railway station, at a distance of less than 10 miles, the Malwatu-oya was formerly dammed with an earthen embankment, and a tank called Nachchiyaduwa was formed. Messrs. J. A. Balfour and L. C. J. Doxat took up the surveys and sections required for the preparation of plans and estimates for the restoration of this work, and worked together until Mr. J. W. Nunn returned to India on the completion of his term of service in Ceylon, when Mr. Balfour took charge of the works that Mr. Nunn had been supervising, viz., the improvement of the Kalawewa Yoda-ela and the repairs to Kalawewa sluices, as well as the maintenance of the Anuradhapura tanks, and Mr. Doxat completed the surveys alone, and after completion proceeded to Colombo to plot the work and prepare the designs and estimates, at which he is still working.

The area of Nachchiyaduwa tank is 3,900 acres, the head of water is 23 feet, and its capacity 1,600 million of cubic feet, the catchment area is about 195 square miles, and the annual rainfall 58 inches. It will, it is estimated, be capable of irrigating 20,000 acres of land. From Nachchiyaduwa there is a channel 5 miles long leading to Nuwarawewa. It is proposed hereafter to raise the present spill of Nuwarawewa to the ancient level, and from Nuwarawewa to take a new channel into Mahagalkadawala (or restore an ancient one), feeding many village tanks by the way.

The watershed of Nachchiyaduwa cannot be accurately calculated, because the topographical surveys of this part of the country are not yet completed.

12. A channel connecting the Kalawewa Yoda-ela with Nachchiyaduwa *vid* Turuwilla will also be considered.

13. In Appendix A will be found a list of the tanks mentioned above, with the area of their respective watersheds, the depth of water at their sluices it is proposed to hold up, and their approximate capacities at that depth, and the average annual rainfall over their several watersheds as nearly as can be ascertained.

14. In the same Appendix I have included such similar particulars of existing tanks as are available, and I propose to continue and correct this list annually as further information may enable it to be done.

15. The above description shows what progress in investigation was made last year, and includes the tanks that will be in course of construction for the next five or six years.

16. Except the first, all are restorations of ancient works, and although they will when restored irrigate an immense tract of country, their restoration is but a step in the direction of the complete scheme that was worked out by the ancient engineers in their centuries of experience and industry.

17. From Nalanda northwards the country is intersected with channels, whose remains are in many cases traceable for miles, and the object of which is now imperfectly realized. It seems almost certain that the supply of any one valley was in ancient days, if too much for itself, passed on to the next, and the next, and the next, and the ideal aimed at for the dry north of the Island was then, what it should be now, to use up all the rivers for watering the land and leave little or nothing to run into the sea.

18. The water of the Nalanda-oya was turned into the Mirisgoni-oya, which supplies Kalawewa, and the surplus waters of the Mirisgoni-oya ran in a 50-ft. channel behind Kekirawa resthouse into the Malwatu-oya, which in its turn supplied Nuwarawewa and the valley of the Kanadara-oya, and the surplus waters of that valley went northwards past Pavatkulam (for we find a large channel passing above that tank), northwards again possibly to Vavunikkulam or some intermediate valley, and this connecting chain of channels still remain to be rediscovered and put to the test of a business undertaking, to be carried out when the water supply of some particular valley proves insufficient for its growing needs. The construction of these channels will be simple engineering works, not involving, as a rule, the dealing with heads of water above 6 or 7 feet, and as such in many cases within the scope of village works.

19. In the Eastern Province, in the south of the Batticaloa District, is situated the finest irrigation scheme in the Island, known as the Pattipolai-aru scheme. Mr. de Kretser completed the necessary surveys and sections for the proposed extension of this scheme by the formation of a new tank at Kondavaddavanvillu adjoining Amparai, including an anicut and supply channel from a branch of the Pattipolai-aru as well as a connecting channel with Amparai tank, and also for an anicut and supply channel to a small twin tank called the Velattipattikulam, which, when restored and

supplied from the river, will irrigate all the land immediately below it, amounting to some 1,500 acres. The area of Kondavaddavan will be 890 acres, depth at the sluice 19 feet, capacity 394 million cubic feet. Velattipattikulam: area 360 acres, depth at sluice 10 feet, capacity 90 million of cubic feet.

20. It is estimated that the construction of these works upon the design and estimate for which Messrs. de Kretser and Fraser are now working will enable an additional 9,000 acres to be added to the 23,604 now irrigated by this scheme.

21. At Kanthalai, in the Trincomalee District, a new channel under the tank was required to serve land already sold, as well as for a large extent of Crown land irrigable beyond it. Information was collected, which enabled an estimate for this work to be framed and sanctioned amounting to Rs. 12,750; while at Allai in the same district information was collected to enable a scheme to be made out for improving the water supply. The estimate is about to be submitted to the Central Irrigation Board. It is stated that an additional 1,200 acres of Crown land can be irrigated, if this supply channel is carried out. The amount of the estimate is Rs. 39,517, and the Government Agent, Eastern Province, has been requested to confirm the estimate of irrigable land.

22. South of the dividing range in the North-Western Province, about 40 miles from Kurunegala, the Mi-oya crosses the railway to the north, 2½ miles south of the proposed Galgamuwa station. West of Galgamuwa station, at a distance of 2 miles, is Galgamuwa tank, which at present has an area of 668 acres, and a head of 22 feet, and a capacity of 240 million cubic feet, but the watershed is a small one, and the tank seldom fills.

23. About 3 miles to the south-east of it and nearer to the Mi-oya is Palakadawala, another tank of similar description, somewhat smaller, but not yet surveyed.

24. Half a mile to the south-east of this tank, and still nearer the Mi-oya, is the breached tank of Attaragalla, very similar to the two above described.

25. These three tanks water the land through which the Northern Railway runs, and undoubtedly the two latter were in ancient days filled by channels from the Mi-oya, traces of which remain to this day.

26. Messrs. Berwick and De Vos during the past year were engaged in tracing this channel. Mr. Hilton supervised the work during the last seven months. The country is exceptionally feverish, and the work has been greatly delayed by frequent sickness among the engineer and his assistants and also the coolies. A practicable trace, however, was found during the year, and Mr. Emerson has taken Mr. Hilton's place and is now engaged in improving the trace and sectioning the river to get a better site for the anicut. About 9 miles of channel and a small anicut will, I think, make the three tanks mentioned above capable of supplying any extent in the irrigation that is likely to take place during the next decade.

27. Tinapitiya tank, Madampe, and its fields, as well as the fields above the anicut across the Lunu-oya, were surveyed and levels for contours taken by Mr. Vasagam, Irrigation Surveyor, at a cost of Rs. 722·45.

28. *Southern Province.*—In the Southern Province and in the Magam pattu Mr. Llewellin, assisted by Mr. Bowden and Mr. Kirthisinghe, made surveys for the utilization of the Liyangahatota anicut across the Walawe-ganga for irrigating some 10,000 acres of fertile soil on the left bank of the river.

29. This also is land that was irrigated in former days, although the source of supply then was higher up than the present anicut, but the channel alongside the river bank is still clear, and would be used when deepened for nearly 4 miles.

30. The scheme was surveyed and the levels of the irrigable land taken, and Mr. Llewellin came to Colombo to put the work on paper. It included the construction of a storage tank at Koggala, which when surveyed and contoured was found to include a large tract of existing fields, for which I ascertained from the Assistant Government Agent, Hambantota, a large sum of money would be necessary as compensation. An alternative line was therefore decided upon for the bund of the tank, and several alterations in the trace of the channel appeared desirable, and surveys and sections are now being made to effect these modifications, which, it is hoped, will bring the scheme down to a commercial basis.

31. The estimate for the extension of the Kirinde-oya scheme, whereby the irrigating capacity will be increased to 7,600 acres, amounting to Rs. 91,559, was also completed and sanctioned. This will make the total cost of this scheme reach the sum of Rs. 203,455, and when the whole 7,600 acres under it are cultivated, the expenditure per acre will be Rs. 26·77. If it is borne in mind that practically all these 7,600 acres have been raised in value by such irrigation from nothing to over Rs. 100 per acre, the value of irrigation may be estimated; the fact that the public revenue is not proportionately benefited is another question, and one it is not proposed to discuss here. I mention this because Tissamaharama was long held up as an example of unprofitable irrigation, whereas it has turned out one of the most successful schemes in the Island.

WORKS OF CONSTRUCTION.

32. The expenditure under this head was as follows:—

	Rs. c.
Northern Province.	
Giant's tank	114,423 2
Kanukkeni tank	22.268 17
North-Central Province.	
Kalawewa Yoda-ela	68,179 37
Maha Illuppallama	15,772 2
Minneri	46,106 85
North-Western Province.	
Deduru-oya scheme	14,013 51
Eastern Province.	
Kanthalai	1,918 49
Vakaneri	50,223 34
Rugam anicuts	13,647 80
Pattipolai-aru	2,834 45
Sakamam-Vammiyadi scheme ...	13,900 8
Tempittiya	4,910 32
Unichchai	6,699 63
Southern Province.	
Walawe-ganga	15,297 37
Total ...	390,194 42

33. The restoration of Giant's tank proceeded steadily and without incident, and the health of the force was better than in previous years, due to the more healthy open country in which they were working. The restoration of the bund of the alvakka or supply channel and of the tank itself made good progress, and nearly 60,000 cubes of earthwork were done during the year. Six sluices were completed, and two remained over for the present year. Water was able to be held up to a certain extent, and the full benefit of the supply channel was experienced. In 1900 this was so far completed as to permit of water being given to the village tanks below the Giant's tank just in time to save the crops that had been sown, and to mature which the rain had failed, and they would certainly, but for the timely supply of water from the Arivu-aru at the end of the year, have perished. In 1901 the rainfall over the district was so distributed and deficient that no cultivation could have taken place without the assistance of Giant's tank. With its aid an abundant harvest is being or has been already reaped over 10,000 acres; while the inhabitants of the lands on the left bank of the river have had no cultivation, and petitions and memorials were presented for the restoration of a scheme on that bank also, which will, I hope, in due course be taken up. The total expenditure on the Giant's tank works will be about Rs. 586,862, and the total revenue from the irrigation rate at Re. 1 per acre will amount to over Rs. 13,000 per annum, allowing Rs. 3,000 for annual maintenance. There will remain Rs. 10,000 to pay interest on capital, or approximately 2 per cent. Had the rate at the time of the inception of the works been raised to the present limit of Rs. 2, which would have been willingly and easily paid, the interest would have been more nearly 5 per cent. Had the paddy tax remained in force 8 per cent. would have been recovered.

34. The expenditure on Kanukkeni, amounting to Rs. 22,268·17, has been confined to the construction of the spill; the cutting of the distribution channels, and the building of the guardian's quarters. 4,100 cubic feet of the timber for the piling, of which some 5,200 cubic feet were required, were felled and sawn and partly transported from the forest about 7 miles distant. 1,016 cubic feet still remained to be felled, sawn, and transported. No other works were in hand in the Northern Province.

35. *North-Central Province.*—The expenditure of Rs. 68,179·37 on improvements to the Kalawewa Yoda-ela was confined to the 29 miles of the lower end of the ela, and enabled 33,753 cubes of excavation to be taken out of the channel or put into the bund to improve the gradients. Stone was also prepared for raising and altering the spills where necessary, but the masonry work was much delayed by sickness, whole gangs being in some cases down with fever at the same time. There was very great scarcity of local labour on this work. The villagers in the North-Central Province are very chary of working when their work is tasked and they are paid proportionately, and they value their work very highly, and in May I was obliged to move 500 Coast coolies from Giant's tank to the Yoda-ela works in order to get the work fairly started.

36. On the restoration of the Maha Elluppallama Rs. 15,772·02 was spent. One sluice and spill wall was completed, and the stone for the other sluice partly prepared and 2,400 cubes of earthwork put into the bund. In this case local labour did an appreciable quantity of work and cut 900 cubes of earthwork, but the bulk of the work had to be done by Tamils.

37. On Minneri tank Rs. 46,106·85 was spent. The masonry of the low-level sluice valve tower was raised 28 feet, and only 9 feet more remained to be done. Four miles of the channel were in hand, 1½ was completed, and 2½ more nearly so. 10,000 cubes of earth and rock were excavated, 20 cubes of concrete laid, and 56 of masonry in the spills and distributing gates of the first mile, and the masonry of the 2nd mile is now proceeding.

In the spill at 12¼ mile over 2,000 cubes of earthwork were excavated and it was nearly completed. That at the 12th mile was not commenced. An inspection bungalow was built. 200 Indian coolies were imported in May from Cuddappah, landed at Trincomalee, and marched to Minneri. Previous to that the labour had been excessively scarce, the villagers in the locality refusing to work for 50 cents a day, although reported by their headmen to be in want and famine-stricken. After May Tamil coolies were also obtained, and a labour force of 400 approximately was kept up.

The rate per cube of earthwork was reduced from Re. 1·75 to a little over Re. 1, and although a good deal of the profit was absorbed by the cost of obtaining the labour, satisfactory advance was made in a work that had been stationary for a long time. The health of the force was fairly good in the dry weather, but when the north-east rains set in fever and pneumonia caused much sickness and many fatalities. The apothecary in charge was himself sick and unable to attend properly to the coolies' wants.

38. *North-Western Province.*—At the Deduru-oya works a sum of Rs. 14,013·51 was expended on construction. Of this, Rs. 169·87 was utilized for a light cart bridge over the Dolukanda channel, Rs. 2,527·09 in further work in opening a distribution channel for 4 miles from the end of the Dolukanda channel towards Uyangalla, Rs. 2,748·51 on work in building two inspection and one guardian's bungalows, and Rs. 8,568·04 on the estimate for completing the channel works. The latter includes Rs. 3,459·45 expended on the works at the deep rock cutting at Nelawa on the main channel, which will be completed in 1902, and Rs. 1,587·82 expended on replacing the planking of footbridges with sheet iron.

39. *Eastern Province.*—At Kanthalai tank a sum of Rs. 1,918·49 was spent on the building of a guardian's bungalow, which was commenced, and on the opening of a channel to irrigate further land not yet reached, this work was also commenced.

40. At Vakaneri Rs. 50,223·34 was expended in excavating the northern channel and in putting in the puddle trench and raising the main embankment. Under the site of the bund is a layer of quicksand from 6 to 8 feet thick, and to excavate through this and fill in with good puddle has proved a difficult task, the excavation for the puddle trench being carried to a depth of 16 feet below the tank bed. More than half the excavation of the puddle trench has been completed, and over one-fourth of the puddle filling has been put in, 15 acres of forest and jungle cleared and uprooted.

The excavation of the northern channel is about two-thirds completed. It has proved harder than was anticipated, as the decomposed rock contained beds of solid rock, which the trial pits did not disclose. The permanent quarters for the guardian were completed. The service road was extended 3 miles towards the anicut, and forty-nine stone culverts built on the 8 miles previously done.

This service road is a permanent one, and it is very desirable that it should be carried through to Tamankaduwa to meet the principal road which now terminates at Pollonnaruwa. The country throughout is flat, and a ferry could be provided at the Mahaweli-ganga crossing. It would greatly facilitate the moving of gangs of labour from the west coast to the east and *vice versâ*.

On an average 350 coolies were daily employed on the works, 250 of them being specially imported Indian coolies, and the remainder belonging to contractors and local labour.

The immigrant coolies have repaid their advances and returned to their villages and more are required. I had hoped that some of them would have settled here, but they have not apparently approved of the country sufficiently to do so. More must be procured for this year's work, or the execution will be much delayed, local labour here also being exceedingly scarce. When the route from India to the Eastern Province becomes better known, I hope the coolies will come with their own kanganies as they have done at Gaint's tank.

41. On the anicuts under Rugama tank Rs. 13,647·80 was spent in preparing stone, breaking metal, making bricks, building a guardian's house, and opening service roads. The progress is not as satisfactory as I wished, but I hope that this working season will give better results.

42. On the Pattipôlai-aru scheme Rs. 2,834·45 was spent on completing the guardian's bungalow at Irakamam and carrying out certain repairs to sluices which did not come under the head of Annual Maintenance Works.

43. *Sakamam and Vammiyadi Tank.*—The earthwork on the bund of Sakamam tank has been raised to the height required, but the slopes were not trimmed. About 6,000 odd cubes of earthwork had been put into the bund. The new inlet channel had been commenced, 14 cubes of stone wedged and transported for the head sluices. In the new western spill wall 8 cubes of masonry in cement was built, 8 cubes of stone dressed, and 36 cubes wedged and transported, and practically all the jungle cleared for the work. Nothing has been done towards altering the eastern spill yet.

At Vammiyadi there was little done. Labour and water were both scarce. 7 cubes of masonry was built in the southern spill, and about 2 miles of the service road cleared of jungle. Vammiyadi will be pushed on in 1902.

44. The expenditure on Tempittiya amounted to Rs. 4,910·32. The scarcity of labour has prevented more substantial progress on this work, which is dependent on local labour, no imported labour being available. 1,300 odd cubes of earthwork and 172½ cubes of clay puddle have been put in well and cheaply, 9½ cubes of stone wedged for the sluices and spill wall, 2¼ miles of road opened, quarters for the Sub-Inspector have been built, as well as twenty rooms of cooly lines and overseer's quarters.

45. On Unnichchai tank Rs. 6,699·63 have been spent on preliminary works only. The service road has been cleared and formed, side drains cut, and eight culverts built. The bungalow has been commenced and cooly lines have been put up. The meeting of proprietors has not yet been held, and as soon as this has been done and the rate in perpetuity satisfactorily settled, labour from India must be obtained to push on this work also, local labour being inadequate.

46. On the Walawe-ganga scheme an expenditure of Rs. 15,297·37 was incurred in improving the channel by deepening it in some places and blasting out rock, which interfered with the flow of the water, dressing slopes in deep cutting, diverting surface drainage, raising the Liyangahatota road where it was submerged, raising the embankment on the river side in the 1st and 3rd miles, and providing safety spills at Wetiya, Pallerota, Elikata, and Mamadola. A new channel was also cut diverting the surplus waters that have been flowing from Beminiyanwila to waste into the river, to Oluwila, where they will be usefully employed in irrigating about 1,000 acres of very fine paddy land on either side of the main road near Ambalantota. The progress made was satisfactory, when it is considered that all the work in channel had to be done in the period between the reaping of one harvest and the sowing of the next, less than two months.

There must be considerable improvement in the flow down the channel, due to the improvements made, but the cultivation of the land in the scheme is badly managed and not under proper control, and much waste of water and complaints of want of water and bickering among the cultivators is the consequence.

Works of Maintenance.

47. The expenditure on the maintenance of irrigation works amounted to Rs. 70,501·43, of which sum Rs. 57,674·96 was spent under the direction of the Director of Irrigation and Rs. 15,237·49 under the direction of the Government Agents of the several Provinces.

48. In the Northern Province the Director of Irrigation controlled the upkeep of the Giant's tank works, Kanukkeni, and Periyakulam at a cost of Rs. 2,299·74 ; while the Government Agent, through the Chief Irrigation Inspector, maintained the following at a cost of Rs. 2,247·89 :—

Vavuniya tank.	Iratperiyakulam.
Maha Irambaikulam.	Periya Ollukkulam.
Mandukottai tank.	Sluiced village tanks, Vavuniya District.
Mamadu tank	Vengalacheddikkulam.
Kanakarayankulam.	

49. In the Southern Province the Director of Irrigation, with an Irrigation Inspector specially appointed for that purpose, took charge before the end of the year of the maintenance of all the Crown tanks in the Province at an expenditure of Rs. 17,625·70, leaving none in the charge of the Government Agent and his Assistants.

50. In the Eastern Province the Director of Irrigation, with an Irrigation Inspector specially appointed for the purpose of supervising the maintenance of the larger works, took over charge during the year of all the important Crown tanks and works, on which an expenditure of Rs. 13,980·53 was incurred ; the Government Agent, with his Chief Inspector and staff, taking charge of one or two small tanks, on which an expenditure of Rs. 144·83 was incurred.

51. In the North-Central Province the Director of Irrigation has charge of the the maintenance of all the Crown tanks and works, upon which an expenditure of Rs. 16,972·43 was incurred. The Government Agent has, however, one ela in his charge, on which was expended Rs. 199·96.

52. In the North-Western Province the Director of Irrigation has charge of the maintenance of the principal works in the Kurunegala District, upon which a sum of Rs. 6,796·56 was expended; and the Government Agent, with the aid of his Chief Irrigation Inspector and staff, takes charge of the maintenance of those in the Chilaw District and the more distant from Kurunegala, upon which was spent Rs. 2,550·23 in 1901.

53. In the Western Province the Government Agent has charge of the few small works that have been carried out in the past. The expenditure amounted to Rs. 323·87.

54. In the Central Province the Government Agent, with the assistance of two Sub-Inspectors, has charge of all Crown works, which are small, and upon which an expenditure of Rs. 1,983·19 was incurred. He has the assistance also of the officers of the Public Works Department.

55. In the Province of Uva the Government Agent has taken charge, with two Sub-Inspectors, of the Crown tanks and works in that Province, upon which an expenditure of Rs. 2,736·99 was incurred.

56. In Sabaragamuwa the Government Agent, with the assistance of a Sub-Inspector, has charge of the maintenance of Crown works there. His expenditure last year was Rs. 2,731·50.

57. From the above it will be seen that the maintenance of nearly all the principal Crown works is now in the hands of the Irrigation Department, as well as all the works of construction and repair of any importance. The only exceptions to this are the Western, Central, Uva, and Sabaragamuwa Provinces. In the second of these the tanks are very small, the elas and channels are very small and often very steep, and the amount of land irrigated compared with the expenditure incurred is also excessively small. There are no works of construction of sufficient importance to occupy the time of an Engineer at present contemplated there, and there is consequently difficulty in providing technical supervision for this Province.

58. In Uva and Sabaragamuwa the conditions are much the same, and special visits of an Engineer for collecting the necessary information to enable estimates and designs to be prepared are necessary before any special work can be undertaken. This course had to be followed in the case of the Alut-ela near Badulla, as, after various attempts and over a year's delay, it was found that the Irrigation Sub-Inspector was unable to obtain and supply the necessary information.

59. In Appendix B I have shown for reference the Crown works in each Province, the maintenance of which is supervised by the Director of Irrigation, and the expenditure in 1901, and also those under the care of the Government Agent of the Province and his staff and the expenditure.

Control of Cultivation of the larger Tracts.

60. Much difficulty has been experienced in efficiently and satisfactorily regulating the cultivation of the fields and fairly distributing the water to the cultivators of lands under the large tracts that are irrigated by such schemes as the Deduru-oya, Kalawewa, &c. The matter was brought to the notice of Government by the Government Agent, North-Central Province, where very considerable difficulty is experienced. The fields under that scheme are in many valleys, and what is not wanted in one tract does not necessarily pass on to the next tract, but runs into the river and is lost and wasted, so far as the fields under the Yoda-ela are concerned.

61. The cultivators under the upper part like to have abundant supplies and care nothing for others lower down. The Ratemahatmaya and headmen have other duties to attend to and give orders to the best of their abilities doubtless, but of necessity in most cases without a personal knowledge of the circumstances, and guided naturally by the best information available, which is generally of an *ex parte* character. In order therefore to have the cultivation properly regulated, and the distribution of the water carried out with an equal hand, it is necessary that an upright man of ability and energy should have the direction of affairs. He should have the social position of a Ratemahatmaya or its equivalent. He should pay personal visits to each and every tract and become thoroughly acquainted with the wants and capabilities of every village. He should control the vel-vidanes, and have the powers of Gansabhawa President to try and punish irrigation offences and breaches of the rules and law, and annually to correct the lists of rateable lands.

62. *Controlling the Cultivation of the larger Works.*—The office is no sinecure, but it is one that is, in my opinion, necessary, if all the people interested are to benefit fairly by the works for which they pay water-rate. Such a position is held by the Irrigation Vanniah of the Kalmunai district, where under the Pattipolai-aru scheme nearly 25,000 acres are successfully managed and cultivated and the best use made of the water, both when the supply is ample and when in seasons of drought it is scanty. He is assisted by the Village Council of local knowledge and experience. Such an appointment should, I am strongly of opinion, be made under the Kalawewa Yoda-ela, under the Deduru-oya channels, under Giant's tank, and under the Walawe-ganga scheme, and later on at Tissamaharama in the Southern Province.

63. *The carrying out of Repairs to Minor Works.*—It frequently happens that considerable repairs are necessary to minor works, *i.e.*, works in charge of Government Agents and their staff of Inspectors. In many cases these repairs are such that their effectual and economical carrying out require knowledge and supervision of a nature that the Irrigation Inspectors under the Government Agents do not possess. I have tried again and again to obtain the necessary information in the way of sections, plans, and sketches to enable the estimates and designs to be prepared in the Head Office, but in most cases unsuccessfully. It has been necessary to send an Irrigation Engineer to see to the work. This has been arranged without much difficulty in the North-Central, North-Western, and Eastern Provinces, where there are works of investigation or construction being carried out, and where an Engineer can be spared for a few days at a time from his work. But in the Central Province, in Uva, and Sabaragamuwa, where there are no Engineers stationed, there has been more difficulty, and works have been unavoidably delayed.

64. This difficulty has been got over by the appointment of an Engineer attached to the Head Office, who from there visits the works in question, obtains the necessary information, and returns to the Head Office where he prepares the necessary plans and estimates. In carrying out the work he again visits the spot, and with a Sub-Inspector sees the work fairly started, and visits in the course of construction as required. There are many intelligent and efficient men in the ranks of the Sub-Inspectors, but they have not the necessary knowledge to carry out these works by themselves. By this means they will gain experience and become more efficient as time goes on.

Staff.

65. *Establishment.*—The following changes took place during the year :—

Messrs. Brown and Fraser having completed the surveys and levels for Karachchi scheme proceeded to Colombo to prepare the designs and estimates, which are now under the consideration of Government.

Messrs. Park and Chute completed the surveys of Mahagalkadawala and Sangilikanadarawa. The former came to Colombo to prepare the plans and estimates, while the latter proceeded to Batticaloa to take over from Mr. Watts the construction of the anicuts under Rugam, Mr. Watts proceeding to the North-Central Province to carry on the surveys of the connecting channels between the valley of the Kanadara-oya and Pavatkulam.

Mr. Bradley having completed the surveys of Pavatkulam came to Colombo and prepared the estimate and design for its restoration, which is now before the Central Irrigation Board.

Mr. Doxat having finished Nachchiyaduwa surveys came to Colombo to plot his work and prepare the designs and estimates, which are still under preparation.

Mr. de Kretser having collected the required information for the extension of the scheme of the Pattipolai-aar commenced the preparation of the plans and estimate for the work.

66. Mr. Llewellin was appointed to succeed Mr. Cade in charge of the Walawe-ganga and Tissa schemes, the latter being compelled by ill-health to leave the low-country, and he reverted to the Public Works Department as District Engineer, Passara.

Mr. Halliley was appointed at Sagamam in the place of Mr. Bower, who continued his service in the Public Works Department.

Mr. Hilton was appointed as Irrigation Engineer and proceeded to take charge of the surveys for the scheme in the Mi-oya valley, but was twice compelled by ill-health to stop work before the end of the year, and has since been removed to another district.

Mr. Henman was appointed as Irrigation Engineer, and on arrival was attached to the Head Office, from which he visits such minor works as require the presence of an Engineer temporarily, for report, examination, or repair.

Messrs. de Vos, Direkze, Misso, Chelladurai, Murugasoe, and Van Houten were appointed Assistant Irrigation Surveyors.

Messrs. Nagamutto and G. B. de Zilva were appointed Inspectors, the former to take charge of the larger Crown works in the Eastern Province, and the latter those in the Southern Province. The officers of the Public Works Department had previously performed these duties when they could spare time from their departmental work, and the result was unsatisfactory.

67. *Health of Staff.*—The health of the Irrigation Engineers, employed as they are in all the most malarious districts in the Island, gives much cause for anxiety, and with one or two exceptions they have all suffered more or less severely from malarial fever. They are all stationed in the low-country, and have no opportunity of obtaining change up-country without special leave. Malarial fever is the most common form of sickness. Boils and ulcers on the feet and legs have incapacitated some for a considerable time, and affections of the liver have figured among the diseases of the Engineers.

Legislation.

68. *New Legislation.*—The Ordinance under which the works of construction and repair of irrigation works was carried out, No. 23 of 1889, having been found in many of its clauses defective, it was amended by Ordinance No. 10 of 1901.

69. Under the original Ordinance the Crown had no representative voice at any meetings held under the Ordinance, where the decisions of such meetings were of vital importance to the welfare or otherwise of the lands possessed by the Crown. Under the new Ordinance, when Crown lands are affected by any proposed work, the Government Agent can nominate any person or persons to represent the Crown at such meetings, and the representation is proportional to the relative areas of Crown and private lands.

70. The executive functions of the Provincial Irrigation Boards being no longer required, having been replaced by the Irrigation Department, all such Boards were abolished. Their executive functions are now performed by the Director of Irrigation and his staff, and their recommendations and local knowledge are obtained through the Government Agents of the several Provinces, who formerly filled the posts of Presidents of the Provincial Irrigation Boards also.

71. Under the original Ordinance there were two methods of repayment to Government of the money spent on irrigation works :—

First.—By an annual rate per acre for ten years, in which time the whole cost of the work was supposed to be recovered, after which a payment per acre in perpetuity was leviable for the cost of maintenance not exceeding 10 cents per acre.

Second.—By a payment in perpetuity per acre which was supposed to be sufficient to cover the payment of interest on the capital expended and the cost of maintenance. This second payment was limited to Re. 1 per acre. Both these rates were found insufficient to meet the purposes for which they were levied, but it must be remembered that when the limit was first fixed the paddy tax was also in existence, and yielded in addition an annual return of from Re. 1 to Rs. 3 per acre, and it was doubtless this payment that caused the limit to be fixed at the low rate it was.

Now there is no paddy tax nor any payment in its stead, and works that were constructed formerly and would have yielded good returns are now causing an annual loss.

72. The rate in perpetuity for maintenance alone in cases when the repayment of the cost is being made in ten annual instalments has been raised from the limit of 10 cents or 1·6*d.* to 50 cents or 8*d.* per acre, and the maximum rate in perpetuity for interest on capital and maintenance has been raised from Re. 1 to Rs. 2 per acre. This, though a very low rate in consideration of the benefits given, will, it is hoped, be sufficient to cause most of the works to ultimately pay about 3 to 4 per cent. on the expenditure as well as provide for the maintenance.

73. Certain penal clauses were also added for actions causing damage to works, waste, or misappropriation of water used for irrigation, &c.

Future Schemes.

74. It is presumed that the carrying out of the works that are at present being designed and the maturing and completing of the systems will occupy the present staff for some years to come, but there are many more ancient schemes far more important and extensive than any yet touched awaiting restoration. They are at present buried in the dense jungles of the North-Central and Eastern Provinces.

75. There are other schemes also that have already been favourably considered by the Central Irrigation Board. They are less imposing, but present better prospects of early development and utilization. One is the Maha Kandiya above Viragoda and Chadayantalawa and Amparai, and another the construction or restoration of a channel from the Tekkam at Perianalankulam to the Akatti-murippu tank on the left bank of the Arivu-aru, where there is considerable cultivation when the rainfall is sufficient, and great want when the rainfall fails.

76. In the North-Central Province the Government Agent urges the consideration of some means of increasing the supply of Kalawewa, and this increased supply is a very important factor when the possibility of passing its waters northwards to the string of storage reservoirs that it is hoped will be restored alongside the Northern Railway is considered.

77. In the Magam pattu of the Southern Province the ruined tank of Badagiriya is pressed for by the Government Agent, and the more promising scheme of fully utilizing the Elagala anicut across the Kirinde-oya by constructing a channel on the right bank, and also restoring such tanks as it will serve, of which there are a number more or less known. There is therefore ample work for many Engineers for many years to come in the restoration of ancient tanks alone, without considering the new works that may be designed to meet new wants and conditions.

Village Tanks and Channels and Minor Works and Repairs.

78. *Minor Works and Repairs.*—The village tank restoration made steady progress under the Government Agents of the several Provinces.

79. The Government Agent of the Northern Province reports of the village tank work in that Province that—

Village Tank Restoration.—The annual labour due by the shareholders was performed during the year. The number of village tanks is as follows :—

District.	Tanks in 1900.	Tanks in 1901.
Jaffna mainland	30	32
Mannar	179	179
Mullaittivu	282	290
Total ...	491	501

There is an increase of ten tanks on the roll, of which eight are in the Mullaittivu District and two in Jaffna District. The number of days' labour was 59,472 days, which at 37½ cents a day is equivalent to Rs. 22,302.

On the whole, the work done was satisfactory, and there was less default than in previous years. The greatest progress has been made in the Musali division of the Mannar District. In the diary (August) I made the following remarks:—.

"I may here summarize my opinions on inspection of the village tank work in Musali and Nannatan divisions. I have not seen these tanks for three years. I made several attempts, but as there are no roads, and rain makes the place impassable, as it is a succession of tanks and fields, I was prevented from getting into the district.

"I was simply *amazed* at the extent of work done. When I first saw these tanks (about five years ago) it seemed hopeless to think they would ever be restored. The bunds were more like paddy field ridges than those of tanks, and extend more than a mile long in most cases. I calculated that at least 20 miles long of solid, broad, and substantial earth-work has been done. Several of the tanks I saw will be completed next year, and most of them within three years, if the present state of progress is maintained. In no Province or district have I seen so much good work done. This is, I think, entirely due to the exertions and influence of the Adigar of Musali, who is Sub-Inspector of Irrigation for his division. He has got the Moors to work three times more (annually) than the rules provide."

Four permits were issued during the year for restoration of abandoned Crown tanks. One tank, Munaimadu near Vavuniya, was taken up for restoration in 1900, and it has been so successful that I expect 200 acres will be open for rice cultivation in 1902.

Sluices.—The Chief Inspector reports that the cement concrete pipes worked well, and 71 of these sluices were fixed during the year.

Tanks already restored by Government.—These tanks, eight in number, were transferred from the charge of the Public Works officers to that of the village tank staff.

80. In the North-Central Province about Rs. 100,000 worth of earthwork is reported to have been done by the villagers on their village tanks, and in several cases where masonry works and works of repair have been required of a nature requiring technical knowledge and supervision they have been carried out by the Irrigation Engineer whose station was the most convenient to the work required. The Government Agent describes the past year's working in the following words:—

A.—*Village Tanks.*

1. *Nuwarakalawiya.*—There are 1,419 village tanks in charge of the Chief Irrigation Inspector and his five Assistant Inspectors under the supervision of the Government Agent. During the year 12 tanks were added to the list of tanks under restoration; 825 tanks are classed as completed; the remaining 594 are in various stages of restoration.

Of the tanks added to the list during the year, Rampatwilla in Kanadara korale of Nuwaragam palata is by far the most important. It is the second largest tank in the Province. No work had been done on this tank, the shareholders labouring under a mistaken idea that they could not be compelled to work. They would not work voluntarily,

though their fine tank had fallen into a positively dangerous state, as they themselves admitted to me when I visited it in June. Finding persuasions useless, I reported the state of affairs to Government, and with its approval took measures in accordance with the village rules to compel the shareholders to work. The Chief Irrigation Inspector now reports that after some slight resistance at first they have performed almost all the work ordered.

The quantity of earthwork done during the year was 407,296 cubic yards. This is 60,608 cubic yards less than the quantity performed in 1900, but it must be remembered that in 1900 a great deal of leeway had to be made up owing to the short quantity done in 1899, when the villagers neglected their work under the idea that the end of the world was at hand. There have, however, been defaults. For some there is no excuse; for others the villagers are not altogether to be blamed. Many of them have work to do on more than one tank, and must therefore let some of it wait till late in the season. This year the unusually early rains took them by surprise before they had finished all.

The unsatisfactory position in which the issue of permits for restoration of abandoned Crown tanks stood was referred to in my report for last year. During this year the matter has been under the consideration of Government, and a new form of permit, with strict, though very liberal terms, was issued in December. The new conditions define precisely the amount of work to be done each year, and the period within which the restoration must be completed. They also provide for provisional grants of land under the tank each year in proportion to the value of the work done, to be made final when the restoration has been satisfactorily accomplished. Should the restorer fail to faithfully carry out his agreement, his permit and any provisional grants of land made to him will be liable to cancellation. Steps are being taken to call in the existing permits and re-issue them in the new form. There will be no difficulty about this on account of the attractions offered by the prospect of provisional grants of land during restoration, for which the old permits did not provide. Numerous new applications are also likely to be received. It is satisfactory to feel that this important matter has now been placed on a sound footing.

The estimate for making cement concrete pipes for sluices of village tanks referred to in my previous report was sanctioned in March. The equipment of a factory, building sheds, making appliances, and procuring materials engaged attention till August, when actual pipe-making commenced. At the end of the year 1,555 4-inch pipes of 2 feet length, 573 4-inch pipes of 1 foot length, 46 4-inch junction blocks, and 448 6-inch pipes of 2 feet length had been manufactured. Mr. Balfour, Irrigation Engineer, very kindly assisted the Chief Irrigation Inspector, in whose immediate charge the factory is, with advice as to the proportion of the different materials and the methods to be used in the manufacture of the pipes, with the result that the Chief Irrigation Inspector reports that considerable improvement has been effected in the quality of the pipes turned out. As soon as the tanks are sufficiently empty sets of pipes will be supplied to those requiring sluices.

The rainfall, though the total for the year was slightly less than that of 1900, was concentrated, and therefore more favourable for tank filling purposes. After three years of short supply most of the village tanks had filled by the end of the year. There are therefore excellent prospects of an abundant harvest in 1902.

Twenty-five tanks breached during the year. Some of the breaches were due to leaks in the bund, and others to the bunds being overtopped by floods. In all the cases but one coffer dams have been put up across the breaches so as to retain water in the tanks. The breaches will be filled in as early as possible.

A statement of works in progress and undertaken during 1901 is annexed. The erection of quarters for the Chief Irrigation Inspector, North-Central Province, and the culvert on the Mannar road near the 49th mile post will receive attention in 1902. The upkeep votes of village tanks and Talawe-ela anicut were expended for the repairs of the sluices and spills and the anicut. The votes for surveys were also expended, and the works were completed. Besides the works undertaken during 1901 in connection with the restoration of village tanks, estimates for the repair and rebuilding of three other tanks, viz., those of Muwaetagama, Mannankettiya, and Relapanawa tanks, in Kadawatu, Uddiyankulama, and Kalpe korales, respectively, were sanctioned, and their execution was entrusted to the Irrigation Engineers. Estimates for improving other works have been submitted and are now under consideration (*vide* return marked E).

Returns marked F, G, H, and K, showing the quantity of earthwork performed, the number of tanks under supervision, the number of pipes manufactured, and the prosecutions instituted during the year, are annexed.

2. *Tamankaduwa.*—There were fifty-two village tanks and seven small Crown tanks under restoration by the villagers during the year. All are in a more or less advanced stage of efficiency, but none are yet fully restored. Forty-seven of them are sluiced. These tanks are in charge of the Revenue Officer, subject to the orders of the Government Agent.

Earthwork is performed annually on all of these tanks, and their bunds and spills are kept clear of jungle. The quantity of earthwork done in 1901 was 17,784 cubic yards. There is a default of about one-fourth of this quantity; the Revenue Officer reports that the defaulters are pushing on with the work as fast as they can in order to avoid prosecution.

These tanks were half full at the end of the year. Prospects for meda and yala harvests next year are reported to be good. No tanks in this division breached during the year.

81. *Eastern Province.*—In the Eastern Province the number of village tanks is less than in either of the two preceding ones, and the earthwork performed is also less. There were, however,

about Rs. 4,700 worth of work reported to have been done on village tanks during the year, and the quantity compares favourably with previous year's work. The Government Agent describes the work on village tanks in the following words :—

Village Tanks.—The village tanks in the Province are worked by a Chief Irrigation Inspector, assisted by an Inspector and four Sub-Inspectors, under the direction of the Government Agent. There are three Sub-Inspectors in the Batticaloa District, viz. :—

(1) Mr. A. J. Schaffter in charge of tanks in the Bintenna, Rugam, Eravur, and Koralai pattus ;
(2) Mr. P. B. Weerasinghe in Panama pattu ; and,
(3) Mr. H. N. de Hoedt in charge of tanks in the rest of the pattus, viz., Manmunai north, Manmunai south, Eruvil, Porativu, Karavaku, Nintavur, Sammanturai, Nadukadu, and Akkaraippattu.

The charge of the last-named Sub-Inspector is considered too large, and it is proposed to relieve him of the village tanks in the Akkaraippattu and transfer them to the charge of the Sub-Inspector of the adjoining Panama pattu, who at present looks after only a single pattu.

Registers of both the village and Crown tanks in the Province are being opened with a view to systematizing work, on the former under Village Committee rules, and on the latter under the Government Circulars issued during the year.

The cement pipe factory, which was temporarily closed during the year, has again been started for the manufacture of sluices for village tanks in the Batticaloa and Trincomalee Districts on estimates sanctioned by the Central Irrigation Board.

82. *North-Western Province.*—In the North-Western Province, where in parts for many years the work of restoration had been going on, and many tanks that should have been finished years previously were still incomplete, the Government Agent, Mr. Murray, concentrated nearly all his staff in two pattus, and the villagers were induced to complete in one year no less than 375 tanks, which would otherwise not have been completed for years. I have visited a number of these, and the work is well done and the amount of it unprecedented, in many instances five years' ordinary work was done in one. A sum of Rs. 10,694·67 was spent on village works in addition. The Government Agent reports on the work as follows :—

The policy of the late Government Agent, Mr. Fisher, has been followed with regard to the village tanks in this Province. The work of restoration was confined to the Dewamedi hatpattu and the southern portion of the Hiriyala hatpattu in the Kurunegala District, where 291 tanks were completed. In the Demala hatpattu of the Puttalam District eighty-four tanks were finished, but in the Chilaw District little was done.

Cement pipes have to be transported from Kurunegala to Chilaw, and owing to the transport vote falling short, it appears that very few pipe sluices were sent to that district. It would be desirable to have a pipe factory in some central and suitable place to avoid this difficulty in the future.

New Works.—As was reported last year no new work of any magnitude was taken up during the year, though preliminary surveys have been made in connection with the scheme for filling Galgomuwa tank. A start has also been just made in respect of Pandewewa, a scheme strongly advocated by Mr. Fisher.

During the course of 1901 the Provincial Irrigation Boards were abolished, as it was found that work was not expedited by their existence.

The Chief Irrigation Inspector experienced difficulty in getting skilled labour on account of the attraction of higher pay on the railway. This difficulty will of course be only temporary, but it accounts for the large balances on estimates brought forward for expenditure in the following year.

The bund of Meddekketiya tank was strengthened, but there is still a considerable balance left for expenditure this year. The following statement gives details respecting the estimates on which work has been carried out during the past year.

83. *Central Province.*—Work on the village tanks and channels was carried on in the Central Province under the Government Agent by two Sub-Inspectors, one in the Nuwara Eliya and one in the Matale District. In the former there are numerous channels, and in the latter a number of village tanks. I have not received a report from the Government Agent of the work done, but both the Sub-Inspectors were, I believe, fully employed.

84. *Southern Province.*—In the Southern Province work on the village tanks is now being carried on in the Hambantota District in the manner similar to that in the Northern, North-Central, and North-Western Provinces, and the Assistant Government Agent states :—

Work on the village tanks was carried out under the superintendence of Mr. Ferguson, Chief Irrigation Inspector, and very satisfactory progress made considering that the work has been so recently started. More work may be looked for as the people become more habituated to the regular yearly labour.

In the Matara District, the village works are apparently well managed by a District Irrigation Committee under the Assistant Government Agent. The report on them runs as follows :—

No large works of construction were undertaken during the year. Special attention was given to village works, and the operations of the year were on the whole satisfactory.

The estimate passed by the Committee amounted to Rs. 3,461·70, of which a sum of Rs. 1,592·39 was spent. The sums voted were as follows :—

	Rs.	c.
Kumbalgama tank, for repairs	159	20
Dediyagala anicut, for repairs	500	0
Makawita channel, for constructing gates	75	0
Hittetiya-ela, for constructing a dam...	200	0
Kekeriwela-ara, for constructing gates	400	0
Galmulla, for constructing sea gate	75	0
Tallalla, for constructing sea gate	20	0
Dikwella, for constructing sea gate	535	50
Pita-ela, for constructing culvert	100	0
Dangahakumbura anicut, for repairs...	250	0
Mahamulana, for constructing a flood outlet	400	0
Telijjawila culvert, for constructing	50	0
Disawe-ela, for clearing	178	0
Walasgala road culverts (3), for constructing	300	0
Dandeniya road culvert	89	0
Pitaduwa-ela, for clearing	100	0
Naimana road culvert	30	0
Total ...	3,461	70

Besides the several masonry flood gates and culverts constructed in the course of the year, the following were some of the important works carried out :—

Dediyagala Anicut.—This is in Weligam korale. The retaining wall of this anicut had been washed away by floods. It was rebuilt with granite and cement and doors fitted up at a cost of Rs. 367·07.

Dangahakumbura Anicut.—Repairs to this important anicut at Kitalagama in Gangaboda pattu was effected at a cost of Rs. 249·12.

Disawege-ela.—This is an old Dutch canal, forming a deviation of the Polwatta-ganga shortening its course by about 3 miles. It has proved very useful in times of flood. The embankment, which was partly washed away, was rebuilt. The canal was cleared and put into proper working order at a cost of Rs. 178.

Pitaduwa-ela.—This is a small tributary of the Nilwala-ganga, and is about a mile from the town. It was cleared and widened under the supervision of the Gravets Mudaliyar.

Galmulla Sea Gate.—The construction of a double sea gate at Galmulla near Dikwella was taken in hand towards the end of the year. The estimated cost is Rs. 535·50. The work is being done under the supervision of the Superintendent of Minor Roads.

The Government Agent, Southern Province, also reports that in November, 1901, Kottawa and Walawe divisions in Talpe pattu of the Galle District was proclaimed under section 11 of Ordinance No. 23 of 1889 as an irrigation district for the encouragement and extension of paddy cultivation therein, and for the better enforcement of the ancient customs of such district in regard to the irrigation and cultivation of paddy lands and the maintenance of the water rights of such proprietors.

85. *Western Province.*—In the Western Province the Government Agent reports as follows :—

1. The following amounts were apportioned for the maintenance of irrigation works during the year :—

	Rs.	c.
Polgaha tank	50	0
Kadurugaha tank	50	0
Dikmaga Ihala tank	50	0
Dikmaga Pahala tank	50	0
Attidiya sluice	45	0
Nikatu-ela sluice	136	0
Boralesgomuwa tank	12	31
Total ...	393	31

The amounts expended were as follows :—

	Rs.	c.
Polgaha tank	50	0
Kadurugaha tank	50	0
Dikmaga Ihala tank	50	0
Dikmaga Pahala tank	50	0
Attidiya sluice	7	9
Nikatu ela sluice	115	68
Boralesgomuwa	11	92
Total ...	334	69

3. The following works were done during the year :—The bunds of Polgaha tank, Kadurugaha tank, Dikmaga Ihala tank, Dikmaga Pahala tank were cleared of jungle and gravelled. The sluice gates of the Attidiya sluice were tarred and oiled. The weeds in the Nikatu-ela sluice were cleared. The sluice gates of Boralesgomuwa tank were cleaned, tarred, and oiled, and the jungle around the tank was cleared.

4. *Attidiya Sluice.*—The assessment rate of 10 cents per acre per annum referred to in my report for 1900 was recovered during the year 1901.

5. *Boralesgomuwa Tank.*—The bund of this tank was damaged in November, 1901, in consequence of the rains, and the Director of Irrigation has been requested to make the necessary repairs.

86. *Province of Uva.*—For the works in Uva the Government Agent's report runs as follows:—

The expenditure during the year was Rs. 10,212·93, as against Rs. 10,506·31 in 1900, as follows:—

	Rs. c.
For maintenance of existing work	1,851 99
For works of construction	1,425 77
For irrigation surveys	329 49
Expenditure on staff	4,710 0
Repairs and improvements	1,895 68
Total ...	10,212 93

Details are specified in the annexed statement:—

Maintenance.

Name of Work.	Expenditure. Rs. c.
Okkampitiya Yoda-ela	1,507 77
Horabora and Kudawewa	344 22
Total ...	1,851 99

Construction.

	Rs. c.
Katupelewewa, building sluices and spills	736 9
Irrigation Sub-Inspector's quarters (temporary)	550 0
Katupelellewewa, building sluices and spills (supplementary estimate)	139 68
Total ...	1,425 77

Irrigation Surveys.

	Rs. c.
Survey of Alut-ela	329 49
Survey of Komarika-ela	
Survey of Nagalawewa	
Datagamuwa survey	
Hambegamuwa survey	
Survey of Usgamayawewa	
Survey of Kadadora-ela	
Survey of West Gal-oya	

Expenditure on Staff.

	Salaries. Rs. c.	Allowances. Rs. c.
First Irrigation Sub-Inspector	1,000 0 ...	500 0
Second Irrigation Sub-Inspector	720 0 ...	240 0
Clerk	360 0 ...	—
Two earthwork overseers	720 0 ...	—
Two messengers	240 0 ...	—
Hambegamuwa Guardian	120 0 ...	—
Sudupanewela-ela Guardian	60 0 ...	—
Gal-oya anicut Guardian	120 0 ...	—
Horaborawewa and Kudawewa Guardian ...	120 0 ...	—
Okkampitiya Guardian	480 0 ...	—
Cement pipe factory watcher	30 0 ...	—
Total ...	3,970 0	740 0

Repairs and Improvements.

	Rs. c.
Dikwella-ela: supplying deficit planks	51 0
Medabeddawewa: repairs to sluice	110 0
Irrigation bungalow, Hambegamuwa: rethatching the roof ...	72 10
Mawella-ela near Dikwella: repairs to the retaining wall attached to the masonry anicut	123 67
Debigolla Maha-ela: minor repairs	24 48
Hanwella-ela: minor repairs	84 4
Badullapitiya-ela: repairs to the damaged portion	10 0
Hingurugamuwa-ela: improvement	272 90
Yapame-ela: minor repairs to the masonry and replacing the washed away plankings	236 61
Mahatalawewa: repairs	144 35
Gal-oya anicut: repairs	165 10
East Gal-oya channel: building distributing gates	281 18
Hambegamuwa tank: repairs to the sluice	116 52
Hambegamuwa bungalow: repairing the roof and damaged wall of the irrigation bungalow	203 73
Total ...	1,895 68

As regards the future, the following is a list of the works proposed for 1902:—

Alut-ela: reconstruction of stream crossings.
Nagalawewa: entire restoration.
Komarika-ela: restoration of head works.
Gadugudawewa: restoration.

Gal-oya west ela : repairs to masonry wall.
Aranamuna : repairs to existing ancient anicut.
Hambegamuwa tank : repairs to masonry.
Wahugoruwewa : restoration.
Hewanarawewa tank in Maha Wedirata : construction of sluice and spill.
Manufacture of cement pipes.
Iron trough to Usgamayawewa.

87. *Province of Sabaragamuwa.*—In Sabaragamu wa the Government Agent states that—

During the year no works of any importance were undertaken.

The unexpended balances of the under-mentioned estimates were brought forward for expenditure during the year :—

No. of Estimate.	Name of Work.	Amount brought forward. Rs. c.	Remarks.
195	Iron trough for Kaltota	779 16	Completed
260	Mulgama tank	375 0	do.
113	Embilipitiya tank	103 10	do.
114	Walalgoda channel	82 12	Not done.
115	Alutwewa sluice	66 35	Not completed
210	Embilipitiya tank	110 0	Completed

New Works.

A sum of Rs. 5,000 was apportioned for the Province for new works, against which the following estimates were sanctioned :—

No. of Estimate.	Date of Sanction. 1901.	Name of Work.	Amount. Rs. c.	Remarks.
70	April 20	Tunkama bungalow	150 0	Not taken up
71	April 20	Panamura bungalow	100 0	Not completed
230	Nov. 27	Panamura south channel	284 63	Not taken up
234	Dec. 16	Kitulaboka-ganga anicut	237 0	do.

Minor Works.

Out of the irrigation fines in deposit, a sum of Rs. 260 was spent on account of minor irrigation works during the year, on the authority of Government Rs. 160 for galvanized spouting for several places in the Kukul korale, and Rs. 100 as an advance on the minor irrigation works at Meda korale, out of which some minor repairs were carried out by the Ratemahatmaya.

Maintenance Works.

The following estimates were sanctioned for the maintenance of irrigation works during the year :—

No. of Estimate.	Date of Sanction. 1901.	Name of Work.	Amount of Estimate. Rs. c.
53	March 28	Opanake aqueduct	20 0
54	Do.	Kinchiguna anicut	180 0
55	Do.	Mulgama anicut	50 0
56	Do.	Malwatta irrigation works	165 0
57	Do.	Ugalkaltota irrigation works	500 0
58	Do.	Rajawaka bungalow	120 0
59	Do.	Tunkama bungalow	120 0
60	Do.	Kaltota bungalow	120 0
61	Do.	Panamura bungalow	120 0
62	Do.	Rakwana-ganga irrigation works	500 0
63	Do.	Kolonna korale irrigation works	1,500 0
64	Do.	Batugedara irrigation works	260 0
		Total	3,655 0

Mulgama Tank.—For certain repairs to this work an estimate of Rs. 375 was sanctioned in 1899, but the work was only carried out in 1901.

Ugalkaltota Irrigation Works.—Except the completion of the trough, no improvements were carried out during the year. In July serious damage happened to the channel, and the Sub-Inspector was ordered to proceed to Kaltota and to make his report. Mr. E. de Kretser, Irrigation Engineer, was sent from Colombo to take the necessary observations and measurements to frame an estimate, but the estimate was not sanctioned during the year.

Rakwana-ganga Scheme.—No steps have as yet been taken to asweddumize the lands already sold under this work to Mrs. Obeyesekere under Sir Henry Ward's Minute. The owner's coolies, who were engaged to cut and remove the satinwood trees on the lands, were obliged to quit the place owing to prevalence of fever.

87. The following appendices accompany this report :—

A.—List of tanks, areas, &c.
B.—List of Crown works in each Province under the Director of Irrigation and under the Government Agents, with expenditure on maintenance during 1901 in each case.
C.—List of staff and dates of appointment corrected up to December, 1901.
D.—Distribution of expenditure.
E, F, G, H, K.—Statements attached to the report of the Government Agent, North-Central Province, on minor irrigation works.
L.—Map showing irrigation works near line of Northern Railway, existing and proposed.

Colombo, May 7, 1902.

H. T. S. WARD,
Director of Irrigation.

APPENDIX.

A.—List of Tanks.

Name of Tank.	Area in Acres.	Head over Low-level Sluice.	Capacity in Million Cubic Feet.	Catchment Area in Square Miles.	Average Annual Rainfall.	Width of Spill in Feet.	Top of Bund above Spill.	Depth of Highest Flood over Spill.
